| Two years ago | 48 | .. | 274 | ... |

The cattle run for Monday was barely heavy enough to take care of the usual demand at the week's opening. Few heavy steers came in, the predominating classes were of light weights, and while they were too light for government contract specifications, their fair quality and medium covering made them handy for local consumption. A number of drafts of good cows were sorted from the she offering and were freely bid on at top prices quoted in their respective classes. Best cows offered demanded $8.50 per hundredweight, and from this figure down to $6 were included the bulk of the offering. Light veal calves brought $9.50, $9 and $8.50. Best bulls sold at $7 and the plain, bologna kinds went at $6.25 and $6.50. The market closed strong on all good heavy stuff and remained steady on the medium and commoner grades.

General cattle range:

| | |
|---|---|
| Prime steers | $12.25@13.25 |
| Good to choice steers | 11.00@12.00 |
| Medium to good steers | 10.00@11.00 |
| Fair to medium steers | 8.50@ 9.50 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 8.25@ 9.25 |
| Medium cows and heifers | 6.25@ 7.75 |
| Common to medium cows and heifers | 5.00@ 6.00 |
| Canners | 3.00@ 5.00 |
| Bulls | 5.00@ 7.25 |
| Calves | 7.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

While an extremely light run of hogs was offered, the declining condition that has prevailed on all other markets for the past 10 days forced a drop here of 50 cents per cwt. Much activity centered among the hog section, and after the pens had been entirely stripped of everything that would kill buyers were still wanting. The movement of stock hogs has slowed up slightly, especially noticeable on the lighter pigs. Market on hogs is steady at the following reduced quotations:

| | |
|---|---|
| Prime mixed | $19.50@19.75 |
| Medium mixed | 19.00@19.50 |
| Rough heavy | 17.75@18.75 |
| Pigs | 18.00@18.75 |
| Stockers and feeders | 17.00@19.00 |
| Bulk of sales | 19.50 |

The sheep division was practically free from sheep for the local trade. What few were offered were but the odd ends of mixed shipments, but were sufficient to keep the market felt out on the various classes. Steadiness prevails, as the following:

| | |
|---|---|
| Prime lambs | $14.00@15.00 |
| Fair to medium lambs | 11.50@12.50 |
| Prime yearlings | 10.00@11.00 |
| Prime wethers | 9.50@10.25 |
| Best mutton ewes | 8.00@10.00 |
| Breeding ewes, 1 to 4 years old | 14.00@18.00 |

Monday's shippers:

L. R. Phillips, Molson, Wash., 2 loads mixed cattle and hogs; Doust & Stradley, Addy, Wash., 1 load mixed cattle, hogs and sheep; J. P. Helphrey, Curlew, Wash., 2 loads mixed hogs and cattle; B. Dyer, Troy, Idaho, 1 load cattle.

Driven in:

O. A. Bittrick, S. M. Nixon, Don Adams, R. C. Tune, C. C. De Ford, William Hislop.

## Portland Market.

PORTLAND, Ore., Sept. 7.—City creameries advanced print butter prices 1 cent, but are paying no more for butterfat. Cubes are scarce and firm, with sales of extras at 52 cents.

The egg market has weakened because of a slower demand and large eastern supplies.

The peach season is practically at an end, as over 90 per cent of the crop has been moved. Prices have lately strengthened, with the best Elbertas bringing $1.50. Pears are also stronger, Bartletts selling up to $1.75.

Onions are weaker, with receipts of California browns and Walla Walla stock has declined about 25 cents, selling at $2.25@2.50.

Potatoes are also easier. Oregons are quoted at $2.75@3.25 and Idaho Rurals at $3.50@3.75.

Butter—Cubes, extras, 51@52c; prints, 54@56c; butterfat, No. 1, 58c, delivered.

Eggs—Oregon ranch, candled, 48@51c; selects, 52@53c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 27c; Young Americas, 28c per lb; Coos and Curry, f. o. b. Myrtle Point, triplets, 28½c; long horns, 28½c per lb, ¼c discount to Portland trade.

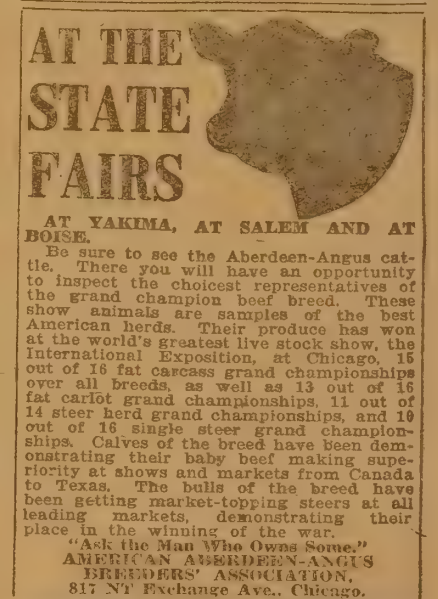
Poultry—Hens, 26@27c; broilers, 28@30c; ducks, geese and turkeys, nominal.

Pork—Fancy, 26½@27c.

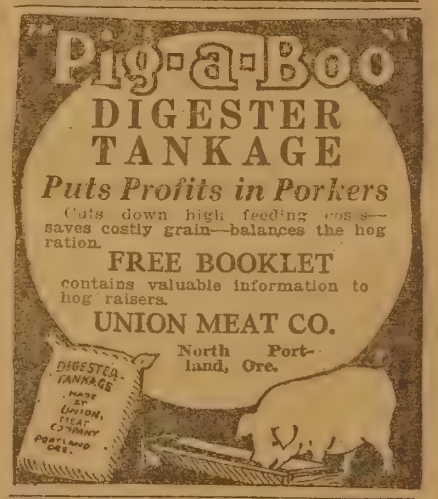
Veal—Fancy, 20½@21c per lb.

Potatoes—Oregon, $2.75@3.25 per cwt.

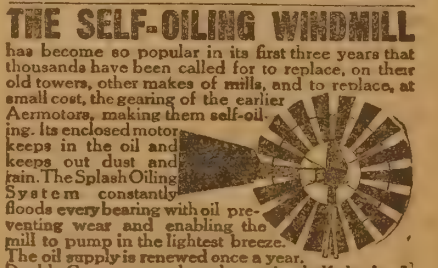
Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $34 per ton; valley timothy, $29; alfalfa, $26@27; valley grain hay, $26@28; clover, $26@28c; straw, $9@10.



## Butter and Eggs.



PORTLAND, Ore., Sept. 9.—Butter—Prints extras, 54@56c; cubes extras, 52c; prime firsts, 49c; dairy, 36c; butterfats, Portland delivery, No. 1 sour cream, 58c.



CHICAGO, Sept. 9.—Butter—Higher. Creamery, 44 1-2@45c. Eggs, steady; receipts, 6643 cases; firsts, 41@42c; ordinary firsts, 8@50c; at mark, cases included, 37@41c.

# FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

## Get a Farm Service War Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

PUBLISHED WEEKLY.

# THE WASHINGTON FARMER

SUCCESSOR TO

THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

## Home Service Flags Betoken War-Time Activities

THE first flag, on the top of this page, is the farm service war flag, designed by the Pacific Northwest Farm Trio, and dedicated to the farmers of the entire nation. Already this flag is widely displayed on the farms of Washington, Oregon and Idaho. The central star stands for the farm and small stars may be added to represent every wartime farm worker in the family.

The remaining four flags are reproduced in original colors. At the left is the Y. M. C. A. flag. In the center is the shipping flag, which may be used in honor of the member engaged in shipbuilding. In the upper right-hand corner is the flag used where some member of the family is engaged in work exclusively for the United States government. The remaining flag will be readily recognized as the Red Cross flag.

# A WONDERFUL DISCOVERY

## *Pure Condensed Buttermilk*

**Lactein for Chickens.**

Lactein is a scientific product produced under perfect sanitary conditions from fresh buttermilk and whey at the creameries. cheese and casein factories on the Pacific Coast.

The solids of both buttermilk and whey are very rich in the one greatest tonic known for chickens, LACTIC ACID. They are also rich in protein (albumin and milk sugar or carbohydrates). Lactein is produced by separating the water from the solids at a temperature and in a manner that not only thoroughly Pasteurizes and sterilizes the solids, but retains and stimulates the Lactic Acid which in buttermilk is practically lost if either is brought to a high temperature or reduced to a dry state.

**Lactein is buttermilk and whey without the water.**

Lactein retains all the health-giving food values and a uniform acidity without the useless bulk of water encountered in either whey or buttermilk and will keep pure and fresh under any condition or in any climate for any length of time.

**Lactic Acid is a tonic.**

For years the greatest poultry experts in the world have recognized the value of sour milk as a food tonic—a regulator for poultry, but when they have undertaken to use raw buttermilk have run up against objections which more than offset the many advantages for its use in poultry feeding. In the main these objections were the excessive cost, inconvenience, trouble and expense of handling and the poor keeping qualities. Lactein eliminates every objection to the use of raw buttermilk and reduces the cost to a mere trifle.

**One gallon Lactein equals thirty gallons buttermilk.**

One gallon of Lactein when mixed with 29 gallons of water has a tonic value for chickens equal to 30 gallons of the best buttermilk and will give better results than 30 gallons of raw buttermilk when fed according to our directions, not to mention the convenience in handling and the saving in price. Lactein is prepared by the chicken raiser in this manner each day in the amount required, and fed as drinking water or in mash feed or both.

**Lactein saves the baby chicks.**

Lactein will cut your heaviest losses 90% in baby chicks. It prevents the dreaded white Diarrhoea and will show much more rapid growth in weight than for chicks given the same food without Lactein. This has been proven many times. Lactein is equally valuable for the entire feathered family —turkeys, ducks, geese, pigeons, etc.

Lactein is a tonic, appetizer, liver and bowel regulator, body builder and egg producer.

Any chicken raiser who will feed Lactein as directed for 30 days will thereafter never be without it, for it means more healthy chickens, more rapid growth, more eggs and more money.

**Lactein for Hogs.**

Lactic acid is the best appetizing agent known. It not only keeps the digestive tract free from putrefying bacteria, but it promotes the growth of acid-forming bacteria and maintains and regulates normal digestion. There is nothing that compares with Lactic acid in making a grain ration palatable for hogs.

**Better Than Buttermilk.**

Lactein has proven to be much better than raw buttermilk, because the acidity is always the same, having been sterilized and heated to such a degree that all pathogenic bacterial life has been destroyed and the concentration with the special treatment has increased the Lactic acid that makes it the most safe, reliable and profitable supplement to grain when fed to poultry and hogs.

**Lactein Is a Muscle Builder.**

Lactein, on account of its easily assimilable protein and high content of nutritive salts, is of great value as a muscle and bone builder, and especially for young pigs and brood sows. It creates appetite, increases assimilation and is a splendid conditioner.

**Lactein Increases Profits.**

Lactein is not only a safe feed, but considering its high factor in weight production and in adding food value to grain feed is the most valuable and economical feed to be secured.

**Lactein Prevents Disease.**

Lactein is both a tonic and a laxative. It keeps the hogs strong and healthy and reduces the death rate to a minimum. In fact if pigs are fed on Lactein they will not be subject to cholera or other diseases, as the Lactic acid destroys all poisonous bacterial growth in the intestines, thereby making disease impossible, but nothing will convince you of the value of Lactein like feeding it for a few months to your own hogs—and see them "kink their tails" and "squeal" when they come to feed. Try it.

**How to Feed Lactein to Hogs.**

There are no set rules for hog feeding, but we all must acknowledge that hogs should have a balanced ration. They must also be fed something they like, for hogs, like individuals, have appetites and know what they like or dislike. There is nothing so good as Lactein to keep a hog's appetite at the top notch. It may be fed as a slop or drinking water by mixing one part Lactein to 30 parts water, or it may be first mixed as follows: Lactein one part to water 10 parts and then added to grain in the ratio of one gallon to 10 pounds of grain, or it may be fed both ways at the same time. It can be used with any feed where you would use raw buttermilk, and in the same way when the water has been added, as we only remove the water and you get the full feed and tonic value of the buttermilk with the added advantage of this product being thoroughly sterilized and Pasteurized, thereby killing all injurious bacterial growth which is only too common in raw buttermilk.

LACTEIN is a tonic, appetizer, liver and bowel regulator, body builder, flesh and bone producer. It is real buttermilk condensed.

Always keep one or two inches of water over Lactein in barrels or kegs. This prevents the air coming in contact with it and keeps it fresh. Always keep the sides of barrels scraped down and clean.

GUARANTEE—LACTEIN MUST BE USED ACCORDING TO OUR DIRECTIONS AND WHEN SO USED WE GUARANTEE RESULTS OR RETURN WHAT YOU HAVE PAID.

## LACTEIN

is put up in wood barrels holding five, ten, twenty-five or fifty-two gallons. Should your local feed dealer not have LACTEIN, write us direct and we will see that you are supplied without delay, or better yet, fill out and mail the coupon below or a copy of it, and we will send you a five-gallon keg by express, prepaid. This when diluted with water as per instructions is equal to 150 gallons of the best fresh buttermilk, and is sufficient to acquaint you with the wonderful merit of LACTEIN. The price in 52-gallon barrels is 60c per gallon, or 2 cents a gallon when the water necessary for feeding is added.

Cut this out and mail today.

LACTEIN FOOD COMPANY,

405 Lowman Building, Seattle, Wash.

Ship me a five-gallon trial order of LACTEIN by express, prepaid, for which I hand you herewith $4.00. Send full directions for feeding.

# Break Deadlock in Grain Shipments

## *Should Permit Farmer to Ship Direct to Grain Corporation and to Draw Advance Money on Bill of Lading, Says Chairman E. A. Bryan, of the Idaho State Council of Defense.*

(Points From the Interview With Dr. E. A. Bryan.)

We are facing the great danger of serious losses of millions of bushels of wheat in Idaho, where the increased production has been quite large and where the storage capacity in southern Idaho is wholly inadequate.

In my judgment the solution of this problem is simple and easy. Permit the farmer or dealer to ship direct to the grain corporation and to draw on the bill of lading for 50 to 80 per cent of the amount.

We are facing a deadlock all around. The banks borrowed money payable this fall when the harvest should mature, with which to loan money to the farmer with which to buy the third Liberty loan. The banks must now pay that money back. To do that the farmers must pay their notes with money received from the grain and from the same source they must be ready to purchase the fourth Liberty loan.

The public generally understands that the grain corporation was created for the purpose of making such purchases and it seems a little strange that after having been created for that specific purpose, it can not act except by buying grain from a commission merchant at Chicago, Portland or other such point.

It occurs to me that the government can own grain at Twin Falls just as well as in Chicago or Portland. If the law is defective in this particular, can not congress remedy the defect inside of 48 hours?

By RAY W. FELTON.

Southern Idaho has more than 14,000,000 bushels of wheat to market this fall. Less than 1,000,000 bushels have been sold at this writing. Growers in many cases are in a quandary. They have met with unsatisfactory results in trying to deal with warehouse companies. Turning then to the food administration grain corporation they have found its mode of procedure impractical. In an effort to provide relief—and that quickly—the state council of defense and the extensive department of the University of Idaho, are acting jointly in a movement to secure a modification of the grain corporation's ruling as to advancing money on bills of lading. In short these two organizations are putting forth a determined effort to bring about a method of paying for southern Idaho wheat similar to the system employed by the government in buying wool from the sheepmen.

Appeals have been made to the grain corporation which, it is hoped, will result in permitting the farmer to ship direct to the United States Grain corporation and to draw on the bill of lading for from 50 to 80 per cent of the amount due him. M. H. Houser, vice president of the corporation, has advised that the grain corporation can pay for wheat only after it is placed in store at designated terminals, thereby making it impossible for the corporation to make advances. This, of course, makes it necessary under the present syster for the grower to deliver his wheat in store at one of these designated points, which, for southern Idaho, is Chicago, in order to secure the $2 f. o. b. guaranteed price. The grower, of course, has the privilege of shipping to any other market, but he will then not get the guaranteed price.

Serious difficulties have presented themselves in marketing locally. Nearly every elevator in southern Idaho is privately-owned. They store only their own wheat. The owners buy but do not store for the public. When the farmer brings in his wheat he must sell at the price offered or take his wheat home, and if he has no farm storage facilities, it may rot before it can be moved.

Dr. E. A. Bryan, chairman of the state council of defense, has been advised that elevators at Jerome, Wendell and other points, have ceased to buy because the dealers or owners of the elevators have received no returns from the government corporation for shipments made even as far back as 10 weeks. Money for purchasing is exhausted, and the owners, not being able to hypothecate bills of lading, are not able to obtain money with which to make further purchases.

"One of the worst results of this situation," said Dr. Bryan, in discussing the matter the other day, "is to leave our meager storage capacity partly filled. If the elevators were public, not private, we could at least fill them full; being private, either the lack of money or the indisposition of the owners may leave them far below their capacity and a bad storage situation is made worse thereby."

L. W. Fluharty, director of the extension department, tells me he knows of many warehouses and elevators in southern Idaho which are filled only to one-half or two-thirds of their capacity.

Discussing the situation further as it relates to the forwarding of grain shipments direct to Chicago, Dr. Bryan said:

"Mr. Houser, in a circular lately issued, suggests that shippers ship to the grain corporation, through some grain commission merchant who will charge 1 per cent for looking after it, and will permit the shipper to draw, charging 6 per cent from the time the draft is made until final settlement for the wheat. That is good so far as it goes. But if the farmer or small dealer ships in this way, he must know the name of a reputable dealer in Chicago whom he can trust with his business and he must have arranged with this firm to honor his draft. There is a very small percentage of farmers or small dealers who know the name of any grain commission merchant in Chicago, and they are much less acquainted with the reliability of any one of them. The grower is not able to make a trip to Chicago to investigate, and I can readily see that the grain corporation does not care to assume the responsibility of giving a list of such reputable firms, so for all practical purposes the farmer is stopped from making a shipment upon which he can make a draft.

"In my judgment the solution of this problem is simple and easy. Permit the farmer or dealer to ship direct to the grain corporation and to draw on the bill of lading for from 50 to 80 per cent of the amount. If the government fears there is risk in a draft for 80 per cent, let it be down to 50 per cent. If the government fears loss on a railway which it controls, let it insure or require the shipper to insure the grain in transit. The public generally understands that the grain corporation was created for the purpose of making such purchases and it seems a little strange that after having been created for that specific purpose, it can not act except by buying grain from a commission merchant at Chicago, Portland or other such point.

"Of course it is plain that the grain corporation has no warehouses, elevators or terminal facilities of its own for the handling of grain, but there is nothing to prevent it from leasing or even commandeering these facilities for its own use until after the war. This plan could be worked out in a thoroughly practical and satisfactory manner with no hardship to the warehouse or elevator companies."

Mr. Houser has stated that the legal department has held that advances are not authorized under the law creating the grain corporation.

"The question is," Dr. Bryan continued "what is an 'advance'? If anything is to be called an advance prior to the grain being received at Chicago, it might as well be called an 'advance' prior to its being received in France or at Liverpool. Is there anything in the act which forbids the government to buy and own the grain at the shipping point, subject, of course, to subsequent fixing of the grades at any point named? When the grain companies used to buy from our people in the Palouse country, they did not 'advance' us the money and the deal did not contemplate its becoming their grain after it had reached Portland or Liverpool. They gave us the money and we gave them the warehouse receipts. The grain was theirs and the money was ours. Instead of bringing about a congestion at the shipping point on the seaboard, they moved their grain when their ships were ready to receive it. It occurs to me that the government can own grain in Twin Falls just as well as in Chicago or Portland. If the law is defective in this particular, can not congress remedy the defect inside of 48 hours?

"In discussing this matter I wish to make it plain that the state council of defense does not take a point of view based upon our representing the interests of the farmer, or the dealer, or the banker or the people of southern Idaho. It is based upon the point of view of representing the government. We are faced with a grave danger of serious losses of millions of bushels of wheat in this state, where the increased production has been quite large and where the storage capacity in southern Idaho is wholly inadequate. The saving of that loss for our armies and our nation is our first concern.

"We take this point of view solely in the interests of the government. Of further concern to us is assurance that farmers who subscribed for the third Liberty loan, borrowing the money from the banks with which to pay it, may have the cash with which to pay the banks, and that they may have the cash promptly with which to purchase the fourth Liberty loan.

"We are facing a deadlock all around. The banks borrowed money payable this fall when the harvest should mature, with which to loan money to the farmer with which to buy the third Liberty loan. The banks must now pay that money back. To do that the farmers must pay their notes with money received from the grain and from the same source they must be made ready to purchase the fourth Liberty loan. Unless something can be done to meet this situation, we have a deadlock in which the grain which the farmers produced for governmental use, can not move, the money can not move and the bonds can not move."

## Letter From Mr. Houser on Wheat Shipments Direct to Grain Corporation

To the Editor: I see by your issue of September 12 that there still seems to be some doubt in your mind. I thought I had made myself clearly understood by fully covering your question that we were receiving direct consignments from the farmers, in fact we receive several cars every day. These we distribute around to the various docks in proportion to their facilities to unload and store.

The labor situation here is anything but what it might or should be at this time, but please rest assured that so long as there is room for a carload of wheat on any of the terminal docks all farmers' shipments will be taken care of the same as they have been.

We have capacity here on the terminal docks for between five and six million bushels of wheat. This, of course, does not include the terminal mill storage and what they are receiving. Taking the two together should approximately take care of eight to ten million bushels of wheat, and unless we get a greater allotment of tonnage than we have been receiving to keep either the wheat or the flour moving, the terminal facilities will sooner or later become congested, the same as they were last year.

FOOD ADMINISTRATION GRAIN CORPORATION.

By M. H. HOUSER,
Second Vice President.

Portland, Ore., Sept. 13, 1918.

## Wheat at Seattle

Announcement comes from Seattle that Puget Sound millers have withdrawn all buying in the country and temporarily abandoned future purchases, owing to the overcrowded condition of the bulk and sack wheat storage spaces at the terminal. Approximately 5,000,000 bushels of bulk and bag storage at the mills and in public warehouses has been filled, and with a scarcity of ocean tonnage for moving wheat and flour to the Atlantic millers have no alternative but to get off the market.

Friction has been generated because of the fact that the port commission of Seattle, whose properties were built under a special legislative enabling act authorizing an issue and sale of bonds to be paid by Seattle taxpayers, has leased all its bulk wheat storage space, consisting of 1,500,000 bushels, to the Tri-State Elevator company, an outside farmers' organization, and Kerr, Gifford & Co., nonresident exporters. Millers have demanded that this space be prorated, on the grounds that both the wheat and flour which it is desired to store are for the armies in foreign fields and is a war emergency measure. The port commission in reply holds that the lessees were first to apply and that it has no authority to alter the conditions of the contract.

M. H. Houser, second vice president of the grain corporation, has been appealed to to offer a remedy. Other governmental authorities will be sought out for relief. The chamber of commerce wired Chairman M. H. Hurley of the United States shipping board of the situation, urging him to supply some of the ships now so frequently built and launched at the Seattle yards for the flour and wheat carrying trade in the Atlantic. It was pointed out that the mills already have more than enough flour to overload all the three vessels scheduled to sail from this port during September, and that it was accumulating to a serious degree. Farmers in the three north Pacific states, it was urged, would be affected, and live stock, which can not be fed because of the scarcity of millfeed in the event that the mills shut down would be rushed to market and the industry uprooted.

Mr. Hurley's reply was to the effect that both himself and Julius Barnes, head of the grain corporation, were at work on the problem. Millers declare that if relief is postponed for more than 10 days a majority of the mills will be compelled to close down.

### RECORD PRICE FOR HOGS.

The highest price ever paid on the Kansas City market for both cattle and hogs was reached September 11, when steers were quoted at $18.80 and top hogs sold for $20.50.

## *Twenty-Three Million Men*

Former Ambassador Gerard was once scoffingly told by a German official that America would not fight and that therefore Germany had nothing to fear from this country regardless of her insults and her inhuman offenses against mankind. Fifteen months ago nearly 10,000,000 of this country's best young men registered for war against the offender. Nearly 2,000,000 of them have crossed the seas, and several hundred thousand of them have participated in actual battle against the proud Prussians. Last Thursday nearly 13,000,000 more of America's men registered for service against the kaiser's fiendish horde, and before next June 2,000,000 or more of them will be on European soil ready for the great military tidal wave that will inundate and destroy forever the autocracy that has menaced the peace of the world since the family of Hohenzollern ascended the throne of Germany.

What would that German officer say to Ambassador Gerard now? What are the war lords saying among themselves just now, with the allied manpower doubled by the peace-loving nation that "would not fight"? There was a time, not so far back, when William Hohenzollern and his aides believed they had a chance to win the war, and when, in fact, they did have a chance. But that time is past. Germany can not win, and no nation knows it better than she herself. The end may be near or it may be distant; it is unwise to predict victory before next summer's sun moves southward, but victory will come. America has 23,000,000 men registered to bring victory, and if need be other millions will register. America's entire resources are back of those men as the resources of France and England and Italy have been back of the men of those nations who have borne the grievous burden of battle so long. America is in the war, soul and body, and it is well that the foes of humanity reflect upon the fact that America has never lost a war.

It doesn't take genius to discover imperfections, and less than genius to talk about the imperfections of others.

## *No Contaminating Alliance*

Governor Ernest Lister of Washington, in a recent address, told his hearers that no military victory could end the war, but that the war would be over only when the whole woof and warp of the undemocratic governments of Germany and her allies were made over and the world guaranteed for all time against the injustices that such governments make possible. He illustrated his point by reference to Turkey, reminding his hearers that recently there was a threatened break between Germany and her Turkish ally and that some people had predicted that Turkey would withdraw and join France, England, Italy and the United States. "Whatever attitude Turkey might take against her present ally," said the governor, "she can never become an ally of this country. No nation with her history for inhumanity can suddenly become a part of the world's great humanitarian army. There is no place for the soldiers of Turkey alongside the Stars and Stripes."

## *One of the Great Results*

Catholics, Protestants and Jews work together in one great movement to serve the common good. Humanity is greater than doctrine or creed. Last week, at a meeting in Washington, D. C., the object of which was to coordinate the effort to raise a total of $170,000,000 for war relief work, John G. Ager, representing the National Catholic War council, proposed that John R. Mott, national head of the Young Men's Christian association, be made director general of the united campaign. Mortimer L. Schiff, representing the Jewish Welfare board, seconded the motion. Mr. Mott was chosen as national leader of the movement.

There is something more than mere efficiency for raising money in this cooperative agreement. It is typical of the spirit of liberality that is seizing the minds of all people, regardless of religious beliefs or creeds or doctrines. This spirit of liberality rests upon a fundamental that transcends creed, the fundamental principle of humanity. Suffering is a thing to be relieved; wrong is a thing to be righted. It is one of the great results of the war that all denominations are enabled to lay aside differences and unite on the one great principle of unselfish service to suffering mankind.

This fall's elections will expose genuine and sham patriotism.

## *Too Few Citizens Voted*

The returns from the primary elections in various states this fall indicate that an unprecedentedly light vote was cast. There are reasons for this, but voting is not only a privilege, but a duty. No citizen should neglect to register and cast his ballot if it is physically possible for him to do so. It is especially urgent this year when hundreds of thousands of voters are practically disqualified because of military service. It is regrettable that no method by which the soldiers abroad may vote has been provided, but their absence should be only a greater inducement to the citizen at home to study the political problems and cast intelligent ballots. There is still opportunity for those who failed to qualify for the primary election to register for the general election in November, and it is to be hoped that the poll then will be truly representative of the people of the nation.

Recognition, rather than praise, gives fullest encouragement.

## *Poise in American Life.*

More than ever before in our history there is need of poise in American life. Poise is being willing to listen earnestly and patiently to what the other fellow has to say. Then you may expect the other fellow to listen earnestly and patiently to your own side of the question. When the two sides of the question are stated plainly, for instance, between the producer and consumer, there is less occasion for denunciation on the one side or the other. Technical language of the trade will not bring about this needed understanding between the parties. Facts must be stated plainly and simple language used.

The times are less auspicious than ever before for "putting one over."

As President James Foust said at the recent meeting of the Association of American Dairy, Food and Drug Officials at Chicago: "While we aid in readjustment let us continue to insist upon honesty. Let food be sold for exactly what it is. To encourage or permit one part of the people to fool the rest of the people is not to be excused under any circumstances and is especially reprehensible in these critical times."

Opportunity spells big for the young American today—girl or boy.

## *Food Supply Conditions*

The food supply depends on production and distribution. The production depends on labor; but labor is scarce because so many men have enlisted as fighters, and because so many others are working in factories at wages higher than the farmer has been able up to this time, to pay. The manufacturers have generally been able to fix the prices of commodities, while the farmer could not fix the prices of his products. Therefore, the manufacturer has been able to pay more for labor than the farmer could pay. However, the movement on the part of the men, women and children of the whole country, to economize time, land, labor and to cut out luxuries, will very nearly solve the problem.

After the labor problem comes the question of distribution, which means cars to transport the products to the markets, and a sane system of marketing. The government will not likely permit any man or corporation to corner any necessary article of food supply. The workers and the fighters will not be permitted to starve because some moneyed speculator wants to enrich himself while the workers suffer. Further, if the sentiment that seems to be growing takes form, there will be no groups of loafers on our streets and the old law, "if a man will not labor neither let him eat," will be revived and made effective. It will be hard on the parasites, but while the body politic or social group is fighting for its life there should be no social parasites.

Every one should be a worker or suffer the penalties that the bees inflict upon their drones. They sting them to death in order to save the food supply for the workers, fighters and young bees.

G. L.

## *Safety Depends Upon Fundamentals.*

Men and women must be fed and clothed and sheltered in the days to come as well as in the days that are passed. There are certain fundamentals in food and clothing and shelter. He who supplies any of these fundamentals is assured of a better demand for his products year in and year out than he who caters to the fads of the moment.

Bread made from wheat will remain a fundamental article of diet. The potato as a vegetable will remain in continuing demand. There may be days of scarcity and there may be days of plenty, but throughout it all milk will remain a food necessity. So will eggs; so will apples, and so will meat. To the starving man no heaven is more alluring than one whose tables are bountifully provided with bread and meat and potatoes.

Wool and cotton and leather can not be abolished from the civilized demands of mankind. Wood and iron and coal will remain permanent factors in human progress.

## *All Are Made of One Clay*

When L. W. Hill, president of the Great Northern road, was in the northwest recently, he traveled at least part of the time in an upper berth in a public sleeping car. Railroad presidents usually travel in private cars and sleep in little palace-like bedrooms on board their trains. But these are war times. Why shouldn't President Hill or any other man be glad of an upper berth in a public car? Over yonder there are thousands and thousands of rich men and poor men sleeping the eternal sleep side by side in shell holes in France. In army camps all over this country rich and poor are marching side by side, getting ready to go over there and offer their sacrifices. War is no respector of persons, and after the war is over the men of different classes are going to look with different eyes upon each other. Men who can fight and bleed side by side for a common cause, can live and cooperate together for common good.

## *Exhibitors Now in the Service.*

Here is a news item that applies to other than poultry exhibitors:

"Kegley Brothers, who have exhibited Barred Rocks at the Southwest Washington fair and other poultry shows for years, are both in the army and their flock was not represented this year. The young men were popular and are much missed."

# German Soil Is Jeopardized

## *American Troops Threaten Invasion of Lorraine Province*

Not since the launching of the allied drive two months ago has a more significant week been passed on the battle front than that just closed. Immediately following the announcement that the allied drive had paused came the report of the launching of a gigantic attack by the American first army under the leadership of General Pershing on the St. Mihiel salient, southeast of Verdun. Less than 36 hours later it was officially announced that this salient had been completely wiped out, the American forces covering approximately 155 square miles of territory, with the capture of 20,000 German troops and a large quantity of guns and munitions. The St. Mihiel salient is one of the relics of the early days of the war, when the Germans drove a sharp wedge deep into the French lines in an encircling movement about the fortified positions of Verdun. With its elimination the last of the wedges in the allied lines disappeared, the battle line at this writing being in the form of a smooth curve from the Belgian channel ports to the Swiss border, with the allies on the convex side of the curve and gradually but apparently surely pushing it back toward a straight line.

**ALLIED ARMY ON GERMAN BORDER.**

The drive by the Americans, who were assisted by French troops, is especially significant, as it places the allied army on the German border. Metz, one of the greatest German frontier forts, is directly in front of the American drive, only a few miles distant, some of the outside fortifications being only four miles from the American line at this writing. Whether it is the immediate intention of General Foch to use the Americans in an attempt to capture this position is conjectural, but it does not seem improbable that before this reaches the readers an attack will be made on Metz with a view to reducing its fortifications. Metz lies in the province of Lorraine, which was taken from France by Germany at the end of the Franco-Prussian war in the early '70s, since which time the population of that province, together with that of Alsace, have been restless under the burden of German rule. The advance of General Pershing's men brings within view of these people their first chance of deliverance from bondage in nearly 50 years. The position of the Americans at this time is approximately 380 miles from Berlin.

**FOCH LAUNCHES NEW DRIVE.**

Marshal Foch, pursuing his policy of giving the Germans never a minute's rest, followed up the incisive stroke of the Americans which wiped out the St. Mihiel salient in two days' time, by launching an offensive Saturday morning on the French front along the bend in the line around Laon. The blow took immediate effect on the German lines, pushing them back from one to two miles at points in this important sector where it is well nigh vital for the Germans to hold fast if they hope to retain control of any considerable part of northern France during the coming winter.

**SECRETARY BAKER AGAIN ON BATTLE FRONT.**

Secretary of War Newton D. Baker is again on the European battle front, making his second visit. He was with General Pershing at the time of the launching of the big drive near Verdun. Together with General Pershing the secretary made a tour of some of the captured villages in the St. Mihiel salient, and was warmly welcomed by the inhabitants. Even every American in their villages experienced a like reception. Aged men and women seized and kissed the hands of officers and correspondents, crying and laughing, the curiously aged children imitating their elders unknowingly. The inhabitants of the salient had been kept absolutely ignorant of affairs in the last four years, knowing only what their captors had told them.

**GERMANS TALK NEW PEACE OFFENSIVE.**

That the German leaders are losing no opportunity to sow the seed of a desire for peace among the allied peoples is evident by numerous statements and addresses recently given publicity. There apparently is no doubt that this is an organized movement, as there appears a manifest agreement between the German and Austrian statesmen in the messages that have been scattered broadcast. Allied leaders, however, are prompt to recognize the movement and forewarn the people of their countries against placing faith in the enemy utterances.

**U. S. PROMPTLY REJECTS PEACE PLAN.**

The United States, as was fully expected, has unconditionally rejected Germany's peace feeler. In doing so the government has spoken for all the cobelligerents. Almost immediately after receiving the Austrian government's note from the minister from Sweden, Mr. Ekengren, Secretary Lansing tonight issued this formal statement: "I am authorized by the president to state that the following will be the reply of this government to the Austro-Hungarian note proposing an unofficial conference.

"The government of the United States feels that there is only one reply which it can make to the suggestion of the imperial Austro-Hungarian government. It has repeatedly and with entire candor stated the terms upon which the United States would consider peace and can and will entertain no proposal for a conference upon a matter concerning which it has made its position and purpose so plain."

**MANY MILLIONS ADDED TO U. S. FORCES.**

Preliminary estimates of the number of men between the ages of 18 and 45 years who would register last Thursday under the new draft act show a realization not very far above or below the first estimate of 13,000,000. Provost Marshal General Crowder has announced that questionnaires will be sent immediately to all men newly registered between the ages of 19 and 21 and 32 and 36. These questionnaires will be filled out by the men in detail, giving to the draft boards complete information concerning all points to be considered in selecting men for service or exempting men, and upon the basis of these returns the first call under the new act probably will be made early in October.

**WILSON WANTS NO INDUSTRIAL STRIKES.**

When a considerable group of workmen at Bridgeport, Conn., members of the National Association of Machinists, went on strike last week, refusing to abide by the award of the national war labor arbitration board in settlement of certain disagreements between themselves and their employers, who were engaged in government work, President Wilson sent to them an official statement deploring their attitude and concluding with the following statement of the government's attitude:

"Therefore, I desire that you return to work and abide by the award. If you refuse, each one of you will be barred from employment in any war industry in the community in which the strike occurs for a period of one year. During that time the United States employment service will decline to obtain employment for you in any war industry elsewhere in the United States, as well as under the war and navy departments, the shipping board, the railroad administration and all government agencies, and the draft boards will be instructed to reject any claim of exemption based on your alleged usefulness on war production."

**BUTTE I. W. W. TRY TO START STRIKE.**

An unsuccessful attempt to strike in the production of copper and other materials essential to the progress of the war was made in Butte, Montana, district Friday morning by the I. W. W. The movement was said to be national in its scope. Eighty arrests were made by the police. Practically all the prisoners admitted membership in the I. W. W. Only a small proportion of miners, according to mining officials, abandoned their tasks, the majority of these resuming their labor Saturday morning. A high government official discloses that the strikers, I. W. W. and labor agitators of Butte are face to face with the same ultimatum which President Wilson issued to the strikers of Bridgeport, Conn.

**TO CREATE A COTTON COMMITTEE.**

President Wilson announced a plan Friday to create a cotton committee, and "if after investigation it is found necessary, a fair price will be fixed." This caused a wild and sensational opening on the New Orleans cotton exchange Saturday, trading prices dropping an average of $11.50 per bale. Senators and representatives from southern cotton growing states declared there was no authority for the president or any government agency to fix cotton prices without additional authority from congress. There has been growing dissatisfaction, especially throughout grain growing sections of the country, at the speculative privileges enjoyed by the cotton growing industry and denied to the wheat industry.

**GETTING READY FOR FOURTH LIBERTY LOAN.**

Both national and local workers are preparing for a vigorous campaign for the fourth Liberty loan, to begin Saturday, September 28, and continue for three weeks. The loan is to be for $6,000,000,000, the largest yet attempted. Preliminary work done by the banking interests throughout the nation indicates a ready and liberal response on the part of the people of the nation.

**NOTED SOCIALIST CONVICTED BY JURY.**

Eugene V. Debs, for many years leader of the socialist party in America and several times their candidate for president, was convicted by a federal jury at Cleveland, Ohio, last week on a charge of violating the espionage act. He was found guilty of attempting to incite insubordination and disloyalty in the military and naval forces; of attempting to obstruct recruiting, and of uttering language tending to incite resistance to the United States in its prosecution of the war. He was given a sentence of 10 years in federal prison. In imposing sentence Judge Westenhaver said: "Any one who obstructs the recruiting service does just as much injury and wrong to our country as if he were a soldier in the ranks of the German army." A writ of error was granted to United States supreme court, and Debs was admitted under $10,000 bail.

**FEDERAL LICENSE FOR PACKERS.**

Operations of packers in live stock markets were made subject to federal license in the same manner as those of other stockyard dealers by a proclamation issued September 13 by President Wilson under authority of the food control act. Licenses must be obtained September 19.

## A Crooked Trail—See Page 14

### Here Is the Synopsis of Last Week's Instalment

On another page of this issue is found the second chapter of the new serial story, "A Crooked Trail." The first chapter was published last week. This is a story that will run for many weeks, and those who like a good, wholesome story of adventure should not let the fall and winter evenings lengthen without having kept up with the story of "A Crooked Trail" during the first weeks. Every chapter is an interesting narrative in itself, but it is worth much more if all that has gone before is familiar to the reader.

Chapter I described the situation—Texas in the days before civilization had actually come west and possessed it—pioneer life on the frontier. The story follows a lad still in his 'teens as he and his pony and dog travel up and down the country searching for a stray ox and as they struggle with fate trying to get him back home. The opening chapter last week showed the young fellow starting out bareheaded, before daylight, without breakfast and on foot to bring in the calves and the yoke of oxen with which he intended to break virgin sod on his father's place that day. Little did he dream that he would discover old Lep gone, and even less did he dream that he would catch his pony and start out bareback and without bridle to hunt for the stray. But these things he did, and late afternoon found him pushing on into the wilderness with borrowed saddle, bridle and lariat, sending word back to his father and mother to look for him when they saw him. From the frontiersmen he gathered evidence that convinced him that the runaway ox had five days the start of him, but he determined to defy the dangers of the wilds. He camped that night on the prairie, with no covering but the starlit heavens. During the night—but that is a part of the story as told in the second chapter, which is found in the magazine section of this paper, and to which you can turn and get the full story of a night that would try the nerve of even a pioneer lad of the early west.

## *Washington Gleanings*

The last bit of paving on the Monroe-Sultan road is finished, and the pavement is now complete from Everett to Gold Bar, about 33 miles.

Threshing has started in the earlier section of the Molson country, with winter wheat making an average of 20 to 25 bushels to the acre.

The harvest crew on the Richardson ranch, near Pomeroy, contained about 18 hands, and one-third of it was composed of boys 17 years and under.

The Whitman county fair will be held the week beginning October 12, under the management of C. L. MacKenzie, John Bloom and C. N. Hinchliff.

About 25 business men have reported on the night shift at the Grays Harbor Motorship corporation's yard at Aberdeen. The shift starts at 11 o'clock, and is for four hours.

Freda Anderson of Nelson's Siding was awarded $50 by her father this summer for having obtained 10 certificates of merit for being neither tardy nor absent during 10 school terms.

Cedar Falls, north of Seattle, where the plant which furnishes electric power for Seattle's $5,000,000 lighting system is situated, was almost completely swept away by a forest fire recently.

About 30 pounds of butter and 20 pounds of cheese are being made at the state prison creamery daily at Walla Walla. That not used at the penitentiary will be shipped to other institutions.

Three miles of the new grade of Sunset highway in Lincoln county will be surfaced, as well as four miles of county roads in the vicinity of Almira. The rock crusher has already started work.

A $50,000 building, including lodging places, dining room, rest rooms, gymnasium, etc., is to be erected for the enlisted men at Bremerton by the war community commission, acting for the government.

The Lewis county commissioners awarded to Charles G. Hughes of Seattle the contract for building a concrete pier and straightening and raising the steel bridge across the Tildon river, near Morton, for $7897.

W. H. Mead, owner of an orchard near Wenatchee, recently sold his apples to the Wenatchee Products company for $30 a ton. This is one of the few sales in the valley where apples have been sold in bulk.

The report comes from Pacific county that a conservative estimate of the cranberry crop in that county alone is about 13,000 barrels. The growers' associations have placed orders for 36,000 box labels, which represent 12,000 barrels.

At a recent meeting of the citizens of Tonasket the Tonasket Community Council of Defense was organized. J. A. Merva was elected chairman, L. D. Burrus secretary and George Bailey and Mrs. A. J. Nickle members of the executive committee.

A. C. Amon, a pioneer rancher of the Horse Heaven country, near Kennewick, has traded his 320-acre wheat ranch, with two city residences, to G. E. Swartz for a 240-acre ranch at Day's Creek, Ore., in the Umpqua valley, 30 miles from Roseburg.

Because hay is scarce and the price higher than has ever been known, the farmers of Adams county are cutting and stacking Russian thistles for stock feed for the winter. It is said that if the thistles are cut before they get too old stock will eat them readily.

One of the best berry picking records in eastern Lewis county was made by Frank McMahan and family, of Swofford. Besides taking care of all his regular farm work, and with not more than three picking at one time, the family gathered $206 worth of evergreen berries in 11 days.

A. Ferguson, a Los Angeles capitalist, has purchased six 160-acre claims and taken options on two others in the Queets river valley, about 60 miles northwest of Hoquiam. He expects to expend about $40,000 on improvements, and will put a large herd of blooded stock on the property.

The Yakima committee for carrying out the government's plan for regulation and distribution of labor in that district has been completed by the selection of W. F. Calvert as government representative and H. M. Gilbert as representative of the employers and J. B. Williams as representative of union labor.

The first carload of California barley ever shipped into Garfield county for stock feed arrived recently at Pomeroy. The barley was consigned to F. M. Robinson, and was shipped in because it could be delivered for less money than the local product. The barley crop is almost a failure in Garfield county this year.

Two hundred and fifty grade school pupils of Yakima participated in the fifth annual school garden exhibit, held under the auspices of the welfare committee of the women's auxiliary of the commercial club at Yakima. Several of the girls proved themselves better growers of vegetables than the boys, while some of the boys walked off with prizes for growing flowers. All prizes offered were either war savings stamps or thrift stamps.

In view of the critical feed situation which confronts dairy and live stock men in Oregon, a feed committee has been organized at the Oregon Agricultural college at Corvallis with E. L. Potter, professor of animal husbandry, as chairman. Other members are E. B. Fitts, G. H. Hyslop and Paul V. Maris. The committee will make a thorough investigation of conditions with the assistance of the county agents and will indicate the best methods of meeting the situation.

# Walla Walla Fair "Comes Back"

## *Cooperation With Farmers and Stockmen Brings Surprising Results*

By HORACE ADDIS.

The Walla Walla fair "came back" September 9-14, in a way to make its sponsors feel much pride, and to the surprise of those who thought it could not be revived. For three years no fair has been held, and prior to that debts and other troubles had made it a precarious proposition. But with characteristic Walla vived. For three years no fair had been Walla energy the commercial club, including practically all the business organizations of the city, cooperated with the farmers and stockmen, and the result has been a most commendable and successful fair.

Secretary L. L. Lynn of the commercial club acted as secretary of the fair, and was on the job every minute with an able corps of assistants. Forest Supervisor L. E. McDaniels superintended the stock show. Through his efforts a far larger exhibit was secured than any one thought possible, including some of the finest herds and flocks in the Inland Empire. A unique feature was the carloads of range cattle, of which there were six entries and the stock was shown in good condition.

The forestry exhibit in the pavilion was one of the most interesting. Camouflage was such as to give the appearance of a regular camp in the woods, with cooking outfit and a campfire. A running spring and other touches of nature went to make up the illusion. The pioneer cabin alongside the camp was equally interesting.

There were a number of distinct agricultural displays, notably those of Burbank and Attalia, in which the finest of fruits and vegetables greeted the eye.

The state penitentiary had a notable exhibit of garden, field and dairy products, including butter, cheese and other dairy products from their own factory, as well as useful handiwork of the inmates. Warden Drum also deserves praise for the display of wild fowl from the state game farm. Rare as well as useful birds were shown, and the crowds along the cages proved the interest in the exhibit.

The canning demonstrations every day, in charge of Miss Mazie Wilson, county leader of girls' industrial clubs, deserve much praise. Ten canning clubs of quite young girls competed. The creditable work done was judged by Miss Edna Walker, assistant state leader of home demonstration agents. The sewing demonstrations, under the same management, had several entrants, and the girls competing had done excellent work.

The Washington State college had a useful and interesting demonstration of the value of drying both fruits and vegetables, with simple home methods, to secure the best results.

A display of sugar beets from several different farms seemed to leave no doubt of the adaptation of the Walla Walla valley to this profitable crop. Corn was shown in all its glory, and there was a good exhibit of wheat, both in grain and sheaf.

The fruit and vegetable display of the Walla Walla Gardeners' association and the competitive exhibits of fruit and vegetables were all good.

Tractor demonstrations were on all week. Farm machinery and autos were shown, and there were a number of interesting mercantile displays.

While one had to run the gantlet of a mammoth "carnival," with "barkers" on all sides to reach the stock show yet when it was reached a display of fine stock was seen, of which the management had great reason to be proud this dry year of scarce labor.

In their determination to make the fair a success and reawaken interest in live stock free entry and stall room and free bedding and hay were furnished, and the first two days of the fair visitors were admitted free. Thousands took advantage of the opportunity, and I know of nothing for which the association deserves greater credit, yet it must be admitted crowds were just as large the last three days, when 75 cents was charged with the "Border Days" program as the big attraction. Whatever may be thought of the utility of this "roundup," "stampede" or "border days" feature, there is no question of its drawing power.

### STOCK SHOW.

The size, as well as the excellence of the stock show both pleased and astonished those who know of the struggles of this fair in past years, and those who came expecting to see little except the "border days" program. In every department was the quality of stock shown very high, and only in the horse division was there any shortage in numbers. Even here there were a few choice entries. Both the Shire and Percheron stallions were in good condition and very creditable specimens of the breed.

The beef cattle show was exceptionally strong. Shorthorns were shown by five different exhibitors and competition was very sharp. The Day & Rothrock herd, fresh from Spokane winnings, was the most highly fitted and carried off a majority of the blues. Their grand champion heifer, Hercules Topsy, is a full sister to the one that won champion honors at Portland last winter. She has an even sweeter head, is smooth as well as growthy and seems to be still improving. But she had a close call in W. G. Cordiner's 2-year-old Helen's Pride and Cordiner's senior champion cow had just as close a call in class by G. W. DeLay's Scottish Jane 3d. And so it went all down the line.

Henry Thiessen's Herefords from Sweetwater, Idaho, were the only ones shown, but they are such an outstanding herd they made a show by themselves. In this herd the most superior animal is probably the 2-year-old champion heifer Lady Rex 20th, that really seems invincible in any company.

The Washington State college showed three very sweet Aberdeen Angus heifers, besides some good fat steers, and J. W. Harbert of Walla Walla showed a small herd of milking Shorthorns, the cows just off pasture, but presenting a good show of Shorthorn type with big, well-placed udders.

Dairy cattle were almost as well represented as beef. Three exhibitors showed Holsteins. The Walla Walla college had a full herd including their great cow, Clothilde Nita Jessie, her every outline, from her clean, thin throat to her great udder, indicating her A. R. O. record of over 31 pounds of butter in seven days. The state penitentiary had a grand lot of cows with good udders and good Holstein type, but not competing, because not registered. The champion cow was found in Ralph Tuttle's Uneda Korndyke, a little thick in the throat, but with a very perfect udder, and good lines.

Three different local exhibitors showed each a few Guernseys, several of them high class show animals, especially the champion cow and champion bull.

George Cochran, who made the Jersey show, had only a few, but they were typy, in good condition and well represented the breed.

The sheep show was perhaps the greatest surprise. Jaursand & Sons' pens of Hampshires, fresh from the Salt Lake sale, as well as those of Harry Riffle, and both the Jackson and Craig Rambouillets, together with the state college fat sheep, helped make up a surprisingly good sheep show, that had also a few good Polled Rambouillets and Oxfords.

The swine show was also very good and all from near home. Clifford Rigg's big type of Poland Chinas, headed by his great boar, Mouw's Touchet, and the Stubblefield Home Berkshires, headed by Rival's Duke 37th, were the center of most interest. But there was quality in the entire show.

The boys' pig clubs were represented by 16 entries and in many cases competition was very close. The boys did their part in a strong swine show.

William Daughtrey, president of the North Portland stock yards, judged beef cattle, and proved that he is a judge of breeding cattle as well as killers. Professor D. E. Willard, development agent for the Northern Pacific railroad, placed the ribbons for the dairy breeds; Professor C. E. Monroe, assistant state leader of county agriculturists, for the horses and hogs, and Adrian Magallon of Walla Walla, who has one of the best Rambouillet flocks in the country, for sheep. The following is a complete list of awards:

**Shire Horses.**

Stallion, three years or over—1 and 2, W. H. Laur, Walla Walla, on March Alma and Bon Klingor.

**Percherons.**

Stallion, three years or over—1, J. L. Revis, Walla Walla, on Rousseau. Filly, two years old—1, J. L. Reavis, on Ninette and Anita. Grade Percheron gelding—1, Mr. Palmer.

Three thoroughbreds were shown by J. Z. Smith of Walla Walla, and a few Shetland ponies were also shown and premiums awarded.

**Shorthorn Cattle.**

Bull, three years or over—1, W. J. Townley, Union, Ore., on Good Prospect. Two-year-old—1, Washington State College, on Village Excelsior. Junior yearling—1, Day & Rothrock, Sprague, Wash., on Hercules Villager; 2, W. G. Cordiner, Walla Walla, on Hercules Duke; 3, D. W. DeLay, Hot Lake, Ore., on unnamed. Senior bull calf—1 and 3, Day & Rothrock, on Hercules Diamond and Silver Cloud; 2, W. J. Townley, on Linwood Baron. Junior bull calf—1, Day & Rothrock, on Hercules Knight; 2, G. W. De Lay, on Scottish Plate.

Senior and grand champion—Day & Rothrock, on Hercules Villager. Junior champion, Day & Rothrock, on Hercules Diamond.

Cow, three years and over—1, G. W. Cordiner, on Fork Branch Meredith 13th; 2, G. W. De Lay, on Scottish Jane 3d; 3, W. J. Townley on Ringleaders' Rose. Two-year-old—1 and 3, W. G. Cordiner, on Helen's Pride and Violet's Princess. 2, G. W. De Lay, on Rushes Queen. Senior yearling heifer—1, Day & Rothrock, on Lady Missy 10th. Junior yearling—1 and 2, Day & Rothrock, on Hercules Topsy and Golden Light; 3, G. W. De Lay, on Mounds Rose. Senior heifer calf—1, Day & Rothrock, on Hercules Matchless; 2, Washington State College, on Village Queen; 3, W. J. Townley, on Mounds Maid. Junior calf—1, Day & Rothrock, on Hercules Topsy 2d; 2 and 3, W. J. Townley, on Radiant Rose and Mounds Maid.

Senior champion bull—W. J. Townley, on Good Prospect. Junior and Grand Champion—Day & Rothrock, on Hercules Villager. Senior champion cow—W. G. Cordiner, on Helen's Pride. Junior and grand champion—Day & Rothrock, on Hercules Topsy.

Get of sire—1, Day & Rothrock; 2, G. W. De Lay. Produce of dam—1, Day & Rothrock; 2, G. W. De Lay. Aged herd—1, Day & Rothrock; 2, W. J. Townley. Young herd—1, Day & Rothrock; 2, G. W. De Lay.

**Dairy Shorthorns.**

J. W. Harbert, Walla Walla, was the only exhibitor. His awards were: Two-year-old bull—1, Golden Rock. Bull calf—1, on Allo. Cow, three years and over—1 and 2, on Hazel Morris and Emaroy. Two-year-old—1, on Orleans Heart. Yearling heifer—1, on Golden Lass, champion bull and cow.

**Herefords.**

Henry Thiessen, Sweetwater, Idaho, was the only exhibitor. His awards were:

Senior yearling bull—1, on Royal Perfection. Senior bull calf—1 and 2, on Ideal Perfect 2d, and Ideal Perfect Jr. Junior bull calf—1 and 2, on Rupert's Model and Perfect Beau 5th. Two-year-old cow—1, on Lady Rex 29th. Junior yearling heifer—1, on Vanity Belle. Senior heifer calf—1, on Mildred Belle. Junior calf—1, on Ideal Belle 3d.

**Aberdeen Angus.**

The Washington State College, the only exhibitor, received awards as follows: Senior yearling heifer—1, on Enright's Queen. Junior yearling—1, on Pullman Inez 2d. Senior calf—1, on Enright's Queen 2d. Champion heifer—Enright's Queen.

**Fat Cattle.**

Pure bred, grade or cross bred steer, two years or over—1 and 2, Washington State College; 3, Roach Bros., Pendleton.

Range cattle, in lots of twenty; two years old—1, Asotin (Wash.) Live Stock Association; 2, Troy, (Idaho) Live Stock Association. Yearlings—1, Asotin Live Stock Association; 2, Touchet Live Stock Association.

**Holsteins.**

Bull, three years or over—1, Washington State penitentiary, on Sir Maldeta Segis. Two-year-old—1, Walla Walla College, College Place, Wash., on College Belle Mercedes. Bull calf—1 and 3, Walla Walla College, on unnamed; 2, Ralph Tuttle, on unnamed.

Cow, three years and over—1, Ralph Tuttle, Walla Walla, on Uneda Korndyke; 2 and 3, Walla Walla College, on Clothilde Nita Jessie and Cornelius Colanthe DeKol. Yearling Heifer—1, 2 and 3, Walla Walla College. Heifer calf—1, 2 and 3, Walla Walla College.

Champion bull—Walla Walla College, on College Belle Mercedes. Champion cow—Ralph Tuttle, on Uneda Korndyke. Get of sire and produce of cow—1, College.

**Guernseys.**

Bull, three years and over—1, V. R. Brown, Walla Walla, on Capt. Sam.

Cow, three years and over—1, A. H. Reynolds, Walla Walla, on Beatrice of Chicona. Yearling heifer—1, B. E. Ladue, Walla Walla, on Pansy. Heifer calf—1, V. R. Brown, on Veda; 2, A. H. Reynolds, on Linetto of Chicona.

Senior and grand champion bull—1, V. R. Brown, on Capt. Sam. Senior and grand champion cow—A. H. Reynolds, on Beatrice of Chicona. Junior champion—V. R. Brown, on Veda.

**Jerseys.**

George Cochran, Dixie, Wash., was the only exhibitor. His awards were: Bull calf—1, name not given. Cow, three years and over—1, 2 and 3, on Bonnie Marie, Calico Amelia and Amelia Calico. Also champion bull and champion cow.

**Rambouillet Sheep.**

Ram, one year or over—1, and 2, Mrs. A. R. Jackson, Turner, Wash.; 3, C. H. Craig, Walla Walla. Ram lamb—1, C. H. Craig; 2, Mrs. Jackson.

Ewe, one year or over—1, Mrs. Jackson; 2 and 3, C. H. Craig. Ewe lamb—1 and 3, C. H. Craig; 2, Mrs. Jackson.

Champion ram—Mrs. Jackson. Champion ewe—1, C. H. Craig. Pen of rams—1, Mrs. Jackson. Pen of ewes—1, C. H. Craig.

**Hampshires.**

Ram, one year or over—1, Harry Riffle, Walla Walla; 2 and 3, Jessaud & Son, Walla Walla. Ram lamb—1 and 2, Harry Riffle; 3, A. H. Reynolds, Walla Walla.

Ewe, one year or over—1 and 3, Jaussaud & Son; 2, Harry Riffle. Ewe lamb—1, 2, and 3, Harry Riffle.

Champion Ram—Harry Riffle. Champion ewe—Jaussaud & Son. Pen of rams and pen of ewes—1, Jaussaud & Son.

**Polled Rambouillets.**

Ram, one year or over—1 and 2, Byron Reser, Walla Walla.

**Oxfords.**

Ram, one year or over—1, G. G. Schueller, Walla Walla.

**Fat Sheep.**

Middle wool, long wool, and fine wool breeds—All awards went to Washington State college, besides champion pen, any breed.

**Poland China Swine.**

Boar, two years and over—1, Clifford Riggs, Touchet, Wash., on Mouw's Touchet. Boar pig—1, 2 and 3, Clifford Riggs, on unnamed.

Yearling sow—1, Clifford Riggs, on Minnie Wonder. Sow pig—1 and 2, P. H. Tomlinson, College Place, Wash., on unnamed; 3, Clifford Riggs, on unnamed.

Senior and grand champion boar—Clifford Riggs, on Mouws Touchet. Junior champion boar—Riggs. Senior and grand champion sow—Riggs, on Minnie Wonder. Junior champion sow—P. H. Tomlinson.

**Berkshires.**

Boar, two years and over—1, Stubblefield Home, Mr. Campbell, manager, on Rival's Duke 37th. Boar pig—1, Stubblefield Home, on Champion Elbertips.

Sow, two years or over—1, W. F. Devine, College Place, Wash., on Bonnyvale. Yearling sow—1, Stubblefield Home, on Silberfa Elbertips. Sow pig—1 and 2, Stubblefield Home; 3, Dan Toner, Walla Walla.

Champion boar and sow—Stubblefield Home, on Rival's Duke 37th, and Silberfa Elbertips.

**Hampshires.**

Sow pig—1, 2 and 3, Stephen Thomas, Freewater, Ore.; also champion sow.

**Boys' Pig Club Awards.**

Hampshire pig—1, Francis Cook; 2, Harold Cook, both College Place, Wash.

Duroc pig—1, Ena Cochran, Dixie, Wash. Sow and litter—1, Lloyd Watt, Walla Walla, Wash.

Berkshire pig—1, Connelly Kinehelve, of the Bernice Pig Club, Walla Walla.

Grade Poland China pigs—1, William Bunce, Dixie, Wash.; 2, Ewen Clancy, Dixie, Wash.

# Cattle Men Meet

## Work for a Stricter Brand Law

A legislative committee to draft a brand law and one to prevent any but registered bulls from running on the range, with a determined effort to have the laws passed by the next legislature, were the most important actions taken at a meeting of cattle men who graze stock in the Wenaha forest at the commercial club rooms in Walla Walla, Wash., the evening of September 10.

The meeting was called by District Forester L. E. McDaniels, who considered fair week an appropriate time for getting the cattlemen together. He presided at the meeting, and first introduced William Daughtrey, president of the North Portland Union stockyards, who told of the accomplishments of the Oregon Cattle and Horse Raisers' association; how it had broken up stock rustling, secured enactment of a good brand law and purebred range bull law. Mr. Daughtrey was followed by E. E. Faville, who spoke along the same lines, strongly urging the value of organization.

Mr. Welland was elected temporary chairman and C. A. Wynn secretary. Later they were elected president and secretary of the permanent organization. The board of directors elected is as follows: Mrs. Ada Wilbur, Gibbon, Wash.; P. A. McBride, Weston, Ore.; C. E. DeMaris, Milton, Ore.; Robert Lee, Touchet, Wash.; Albert Dick, Pomeroy, Wash.; Edward Walters, Asotin, Wash.; W. A. Moore, Troy, Idaho; A. P. Glenn, Summerville, Ore.

The organization is to include all who range stock in counties adjoining the Wenaha forest reserve, and the standard bylaws recognized by the forest service were adopted.

The legislative committee elected consists of C. Halsey, Asotin; Robert Lee, Touchet; A. Dick, Pomeroy. A committee to try to secure a change to the word "registered" instead of "purebred" in the Oregon brand law was appointed, as follows: J. D. Woodell, Union, Ore.; B. W. Murchison, La Grande, and J. Llewellyn, Adams, Ore.

A motion to hold a bull sale in the spring was carried, and a committee consisting of Charles DeMaris, J. Llewellyn and Robert Lee was appointed to assist Mr. McDaniels with the sale.

A motion of thanks to the Portland Chamber of Commerce for its support of the Pacific International Live Stock show was made by Mr. McDaniels and unanimously passed.

Before adjournment it was agreed to hold a general meeting of the association the second Saturday in February.

# Changes Name

## Wenaha Wool Growers' Association

A change of name from the Washington Wenaha Wool Growers' association by eliminating the word "Washington" and the securing of a large number of new members, as well as a much better feeling of cooperation between sheepmen of the states of Washington and Oregon, was accomplished at a meeting of sheepmen at the Walla Walla Commercial club rooms September 11.

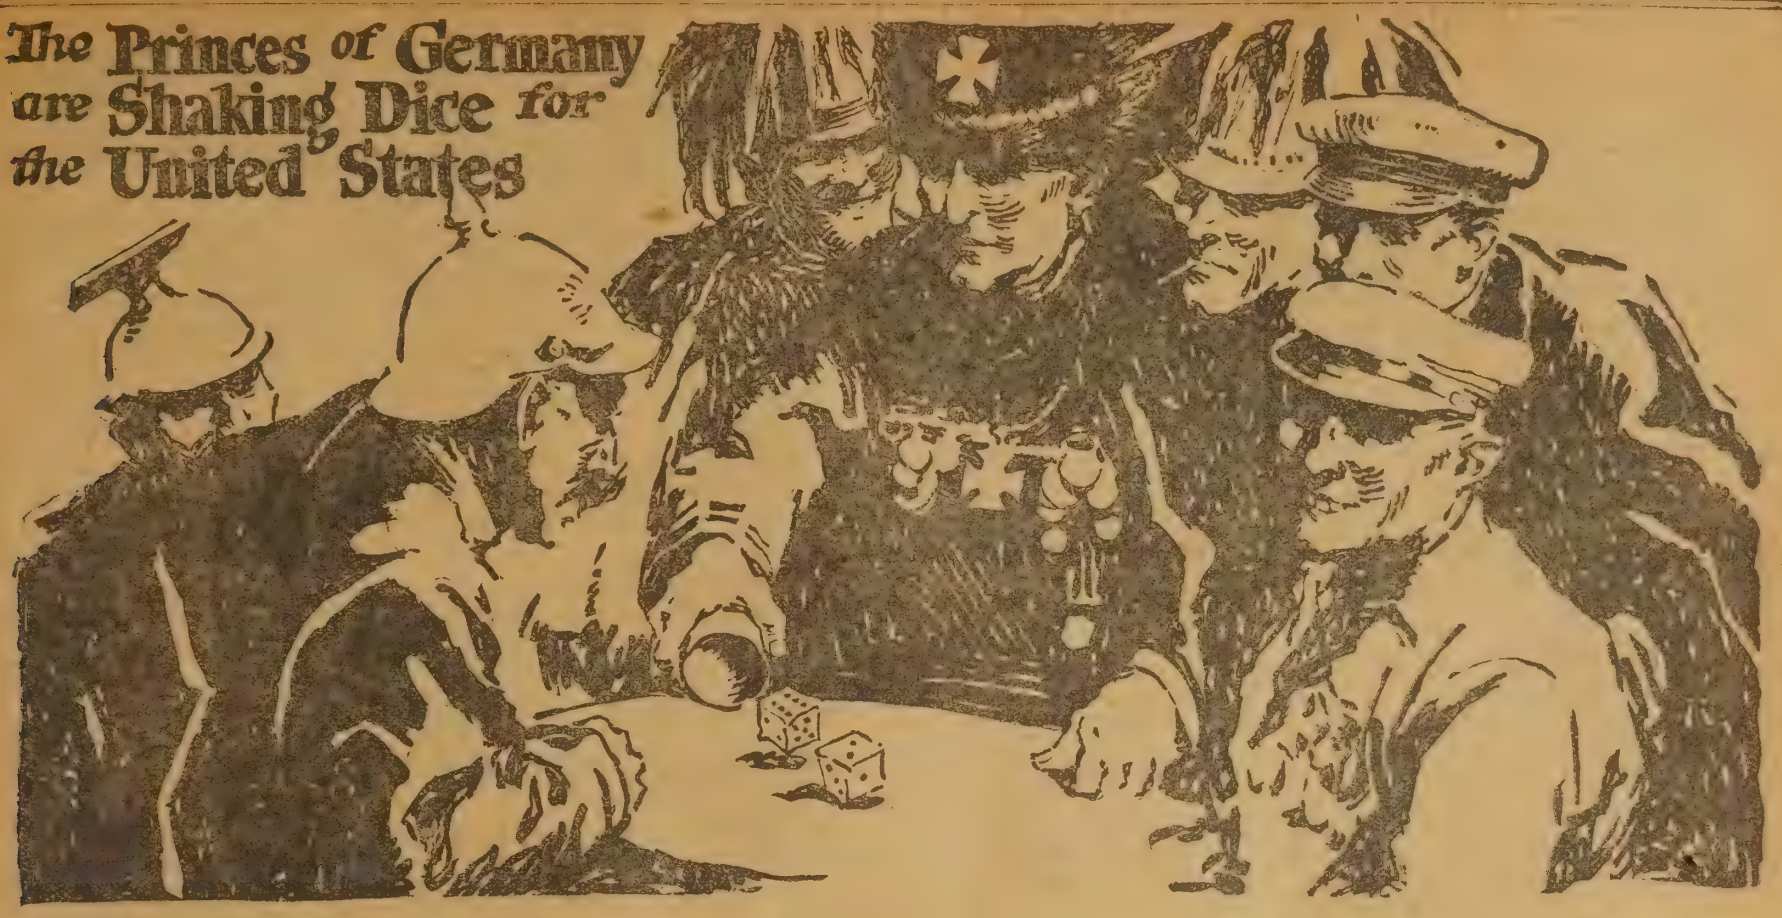
District Forester McDaniels called the meeting, which was largely attended by sheepmen of both states. A legislative committee was authorized, which will attempt to secure the passage of a law by the next legislature along the lines of the Oregon law providing for a stricter supervision of a band of sheep by the herder.

An invitation was extended by F. M. Rothrock of Spokane to attend the state wool growers' meeting at Yakima this winter, and 23 signified their intention of going.

The meeting was addressed briefly by C. D. Minton of the Pacific Homestead and Horace Addis of the Farmer, emphasizing the value of organization. Mr. McDaniels told of a few necessary rules for sheepmen to follow, and expressed the belief that fair dealing and good fellowship would prevail.

# Less Print Paper

Fifteen per cent reduction in the consumption of print paper by agricultural periodicals, beginning October 1, has been ordered by the pulp and paper section of the war industries board, Chairman Baruch of the board announced September 16.



The order was issued after recommendations had been presented by a committee representing the publishers of such periodicals, who agreed to use lighter body paper, discontinue subscriptions in arrears, cut off free exchanges, restrict sales to advertisers and advertising agencies and to abandon the issuing of special or holiday numbers.

**Remember Those Waists?**

"I want a pair of button shoes for my wife."

"This way, sir. What kind do you wish, sir?"

"Doesn't matter, just so they don't button up the back."—People's Home Journal.

## By HERBERT QUICK

***WE MUST buy Liberty bonds to the last cent of our ability, because our country is fighting for its very life. Make no mistake, citizens of America, the crisis is just that—we are fighting for our very life.***

We must fight this war through. We must fight it through to a peace the basis of which will be written by us and our allies.

Germany must not write a single clause in the treaty. She must be whipped until she will sign a treaty every word of which will be drawn by the allies. Germany must not be allowed to dot an i or cross a t.

Why?

Because Germany has become nothing but a robber empire, a murderer empire, an empire every purpose of which is the enslavement of the rest of the world. Such purposes admit of no compromise. We must conquer or die. If we do not conquer we shall, nevertheless, die—and die slaves.

Germany began with the intention of robbing France of her iron, her coal, her best land and her great factories; of making Belgium with her rich mines, great cities and immense factories a part of Germany; of gaining the Belgian coast, from which she might conquer England, and of combining under her flag the hordes of Mohammedan Turks, and all the Balkan states, so that she might train soldiers in countless millions, build navies to sweep the oceans, and conquer the world.

This war was to be a step toward world conquest.

If we do not fight the war through to complete victory she will still keep on and she will succeed! She will surely succeed!

Russia with her nearly 200,000,000 people lies prostrate at Germany's feet. Germany could now give up the Balkan states, give up Belgium, force Austria to yield up the Italian territories, give up conquered France, yes, she could give up these, and even Alsace-Lorraine, and if allowed a free hand in Russia, she would still have won a victory greater than any of which she ever dreamed at the beginning of the war.

Give her control of Russia and she can, and will, within a few years come back with power to take back Alsace-Lorraine, crush poor Belgium once more and destroy exhausted France, sweep every vestige of resistance from Europe, Asia and Africa, and then what?

Then she will thunder at our doors—from Asia she will invade us on the west, from Europe on the east, and from Mexico on the south.

If Germany has control over the terms of peace, we who read this will live to see one of the kaiser's six sons Emperor of America.

***The time to whip Germany is now!***
***It is now or never!***
***The Princes of Germany are shaking dice for the United States!***
***It will take money, money, money, that we may send men, men, men!***

**Be Prepared to Buy Liberty Bonds, for so only can the war be won. Unless it is won, everything you possess is lost, and with it the American soul is lost.**

# Harvest Work Finished

## Most Farmers Have Their Wheat Already in Warehouse; Crops Average 15 Bushels to the Acre; Pastures Need More Rain

LA CROSSE, Whitman County, Wash., Sept. 6.—Harvest is practically finished with a few exceptions, and the later ones will finished next week. Weather conditions have been most ideal for harvesting the last 15 days with cloudless days, not a drop of rain, cool nights and high day temperature for season. Most farmers have completed hauling their wheat to warehouses. Crops were fair, probably 15 bushels would be a safe estimate as an average for wheat. Barley was very poor and oats a failure. Potatoes, although much improved by cool weather in August, are below normal. Pasture situation is somewhat relieved by turning stock into stubble, but unless early fall rains start green feed in stubble, the feed situation may become critical before spring. La Crosse vicinity is well supplied with fall wheat seed and with a few exceptions it has been a fairly prosperous year.

M. E. SCHRECK.

IDEAL HARVESTING WEATHER.

SOUTH BEND, Pacific County, Wash., Sept. 9.—The fall weather continues dry and warm and is ideal weather for harvesting the late crops. Evergreen blackberries are ripe and women and children are sending them to the local cannery by the ton. Cranberries are ready to pick beginning this week. We have the largest crop in the northwest, and it is estimated that it will take 700 people to harvest the berries. The first sweet corn is in the markets. Dairymen are looking after the "boarders" in their herds, for alfalfa is already $32 a ton. There will be a number of small fairs throughout the county at various places. Two fairs will be held in the Bay district, one at Leham, one at Menlo, one at South Bend and possibly one at Willapa. The largest fair will be that of the county schools and will be the children's fair. It will not be held until the first week in November. In some communities the boys have raised pigs; in other places their whole energy has been directed toward raising rabbits; but everywhere they have had their gardens. In garden work they have been encouraged to raise only three or four of the main crops such as peas, beans, corn and potatoes. The council of farmers meets Friday evening at Menlo.

MRS. WINNIFRED BUCKINGHAM.

ALFALFA YIELD IS GOOD.

NEPPEL, Grant County, Wash., Sept. 9.—The third crop of alfalfa is being saved here and the yield is good. There will not be much shipped out as the local people need what they can afford to buy, and some can not afford to buy alfalfa and are shipping out their stock, or selling for what they can get, and there is some talk of killing the horses that can't be fed through the coming winter. Unless it rains soon the sowing of fall wheat will not be undertaken by the farmers, and most of them have no fall wheat to sow. Local banks are not optimistic or able to finance all needing seed and feed, but may at an exceptionally high rate of interest, and this does not look good to any of the numerous farmers of the wheat section I have talked with. All ideal conditions usually present, are entirely absent this season. No fairs are to be held as every one is too busy to think of it. Every effort is required to harvest the local irrigated crops, while the wheat farmer is at work or leaving to go outside to get work.

MARTIN PENHALLICK.

FARMERS ARE OPTIMISTIC.

CATHLAMET, Wahkiakum County, Wash., Sept. 7.—The farmers of Wahkiakum county are optimistic as far as the coming winter is concerned. We are having considerable difficulty in supplying the wants of the farmers as regards concentrates and succulent feeds. Many farmers have a good supply of roots available for winter feeding. The hay problem is more serious in other sections than in this county and since it is giving so much concern elsewhere our farmers are satisfied to not grumble. We have been without a county fair for over two years. At present there are not immediate prospects for a fair. There is no farmer in the county, however, who does not feel that we are handicapped without the fair, and when

(Continued on page twenty-three.)

# Milk a Most Necessary Food

## *It Contains an Essential Element Not Yet Analized*

Dr. E. V. McCollum of Johns Hopkins university, whose experiments and lectures on diet have excited much comment, visited the northwest recently, delivering addresses of the most vital importance, particularly at this time.

He hesitated, he said, on entering on the study of diet because nothing had been done that was of value for 50 years, and the idea was pretty firmly fixed 11 years ago that any diet which furnished a proper amount of protein, starch, sugars, oils, fats and mineral salts was all that was necessary. This was not the opinion of Dr. Babcock of the Babcock test fame. He began experiments a number of years ago with groups of dairy cows. These tests were carried on for three years, when anthrax destroyed some of the herd and put an end to them. In these experiments a balanced ration was formed of wheat, the seed, stalk and leaves, another of oats and a third of corn. The results of these experiments indicated that animals fed exclusively on wheat, even properly balanced as to protein, starch and so forth, that the progeny was born dead a month before the proper time for dropping, and they were undersized. Those fed on oats were born dead without exception, but came at the right time and were fairly well formed. Those fed corn were dropped alive and were properly formed and of normal size.

This was a starting point for years of experimenting. Hundreds and thousands of experiments have been conducted through from six months to several years, and while much remains to be discovered certain well established and indisputable facts have been found out. There is some element needed to the proper sustaining of life in animals which can not be analyzed, so far. It is not found in seeds of plants. It is not found in tubers or edible roots. It is not found in meats. It is found in milk and eggs. Further, there is another essence or element which is almost as important which is not found in seeds, roots or meats, but is found in the leafy foliage of plants.

What results when the first of these unknown elements is omitted from the diet? The first thing that he noticed in his experiments was that the flesh around the eyes became sore and swelled up. Finally the eyes swelled shut. If milk or eggs were supplied the animal got well unless the experiment was conducted too long. Then when the animal recovered

## DAIRY AND FOOD MEET

### Unnecessary Waste in the Shipment of Cream.

At a meeting of the Association of American Dairy, Food and Drug Officials just held in Chicago it was declared that a great and unnecessary waste attends the collection and shipment of cream for manufacturing purposes, and recommendation is made that the federal food administrator and director general of railroads investigate and take action to remedy the situation. The members also agree to pledge their support and assist Herbert C. Hoover by all means in their power.

Municipal food and drug control officials are made eligible to membership in the association. Heretofore the organization has been limited only to federal and state officials.

Benjamin L. Purcell, dairy and food commissioner of Virginia, was elected president, John B. Newman, superintendent of foods and dairies in Illinois, was elected secretary.

In order to more clearly set forth the objects the constitution was amended to read: "The object of the association is to promote and foster the enactment and enforcement of such legislation as will protect public health and prevent fraud and deceit in the manufacture and sale of foods and drugs, to promote uniformity in such laws and cooperate in their enforcement."

## CREAM TESTS AND CREAMERIES.

My cream tests from 40 to 45 per cent. My neighbors, whose cream tests from 18 to 30 per cent, tell me I would get much more for mine if I made it much thinner. Will you kindly straighten us out on this matter? SUBSCRIBER, J. W. G. Prosser.

Cream that tests as high as 45 per cent is really too heavy to handle nicely. There is always a chance for a loss through carelessness in mixing before the sample is taken. There is also a chance for a loss by having this thick cream stick to the containers and dippers. The creameries would prefer to handle cream that tests around 30 per cent, and so far as the farmer is concerned it would be to his advantage for the cream to test between 25 and 30 per cent. Cream testing lower than 25 per cent takes with it too much skimmilk, which should be left on the farm.

A. B. N.

## Milk Is Most Necessary

(Continued from the preceding page.)

it was blind, and never regained sight. When the other element was omitted paralysis ensued. With birds the paralysis was all over, but with mammals it affected the hind legs. If these experiments continued beyond a certain point the animals died.

A perfectly balanced ration so far as proteins, fats and carbohydrates and minerals, chemically pure, fed to animals resulted in the patients living just about as long as they would if they got no food at all.

Animals lacking these constituents sometimes lived, but they were undersized, sickly and from the first looked and acted old.

Dr. McCollum then drew an analogy between animals and man. In New York, in a negro settlement, almost without exception the children have rickets. Their spines are affected; their legs are bowed, their chests cave in. The diets of their mothers are made up of wheat flour, corn meal, potatoes, rice and meat. They use no milk and eggs. In Baltimore the mortality from tuberculosis is very great among the negroes. Their diet is similar. The whites of Baltimore are not particularly subject to tuberculosis. In the south the spread of pellagra is very alarming. After considerable study and experiment he is satisfied that this terrible disease is due to lack of proper nutrition. It appears chiefly among poor people. All these troubles come in congested districts, where improper food is supplied.

The milk products, eggs and leafy foods such as spinach, cabbage and turnip tops he called protective foods. We have had them in abundance in the past, and they have made us what we are. Take the oriental races; he did not think they are inferior by nature, but by food. They are nearly all undersized and shortlived. They are not progressive or original. The races which show the largest size, the greatest age and the best mental growth are those races which live largely on dairy products. What has saved the oriental races from extinction entirely has been the fact that they do consume very large amounts of leafy vegetables, though they have no milk to speak of.

A disease closely approximating that of the blindness in the animals lacking one of the unknown elements is said to be prevalent in Russia and Japan.

The accepted treatment for tuberculosis today is getting them in pure, cool air, keep them quiet and feed them food which is largely made up of milk and eggs. Degeneration follows lack of these food elements.

Having discovered these facts, the doctor said that he learned that in April, 1917, the normal consumption of milk daily in Chicago was 1,250,000 quarts. This year at the same date the consumption of milk had fallen off 40 per cent. Why? Because the people will not buy milk when it advances in price, but they will buy meat at any price, because, he thought, meat has a higher flavor. It is unreasonable to expect milk to remain as cheap as it has been.

A farmer in Des Moines told him that 30 years ago he sold milk at 5 cents a quart and paid $4.50 a ton for bran. Today he gets 12 cents a quart and pays $30 a ton for bran. Milk is not merely a good food, but it is almost a necessary food if we are to retain race-superiority, physically and mentally.

At the close of his address he invited questions, and replied as follows to them:

Processing milk, heating it and freezing it, does not affect these unknown elements unless the milk is alkaline. In that case they disappear.

Certified milk is cleaner milk. He doubted the wisdom of urging all people to buy certified milk, but he believed that clean milk is vital.

He believed that a quart of milk a day should be the quota of every human being, child or adult.

**"What Can I Reasonably Expect of a Tractor?"**

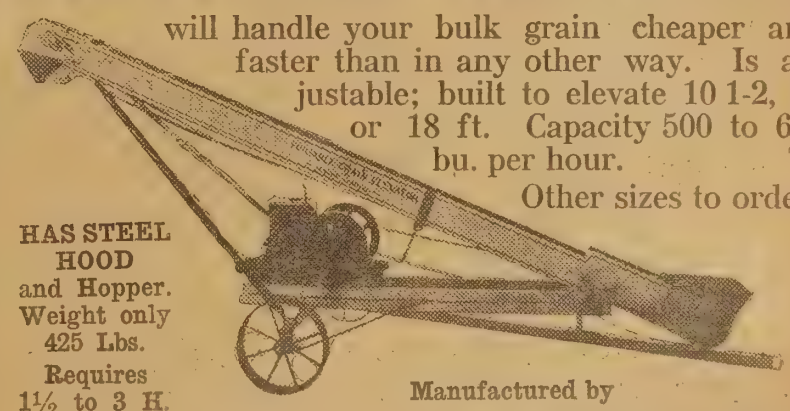
SO MANY farmers ask us this question that it deserves a public answer. When you buy an International kerosene tractor you can expect—

**Plowing,** as deep as you need, as fast as good plowing can be done, at low cost because your tractor operates on kerosene.

**Good work on plowed ground.** This is important. You can use your tractor for all the seed bed work, giving your crops a better start and a better chance.

**All kinds of belt work.** Individual threshers, ensilage cutters, feed grinders, hay presses, and many other useful, labor-saving belt machines soon follow an International tractor because it does good belt work at low cost.

An International will haul your crops to market, clear your land, grade and level roads. In any size or style it is a true "general purpose" tractor, useful for all kinds of farm power work, built by a Company that has built farm machines and tractors in large numbers for many years.



That is what you may reasonably expect from an International kerosene tractor. The local dealer can give you any further information you want. See him or write direct to us.

### SHEEP FUTURE GOOD.

**Growers Should Stick to the Business.**

William Hislop, formerly head of the live stock department of the State college of Washington, but now engaged in the sheep business for himself, told the live stock men at their banquet in connection with the Interstate fair at Spokane recently that he believed a great future lay before the sheep producer. The war has not only depleted the herds of Europe, but has virtually commandeered all the wool and mutton of the country, and labor shortage and feed shortage have contributed to make it exceedingly difficult to maintain normal production in America. He does not believe that the value of sheep will greatly decrease with the coming of the end of the war, but that the profits will probably be equally great, if not greater, than those now.

### MORE SCOTCH BOYS NEEDED.

C. M. McAllister, of the Portland union stock yards, is a great believer in the Scotch as animal husbandmen. He adds the shortage of the Scotch "lads" to the shortage of feed and labor as one of the handicaps with which the live stock industry must contend. The war has called so many of these stockmen as to make serious inroads into the supply of this class of help.

**Do This For Your Hogs**

Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. The **DIP** will kill the lice and cleanse the skin, and as the hogs pass back and forth from the wallow to the feed trough, the **DRIP** will destroy the disease germs and the worms that pollute the ground. That will mean a clean, healthy skin, freedom from lice, a safeguard against disease and larger, better porkers. Also sprinkle freely about poultry houses, pens and stables to destroy germs and avoid contagious diseases. An excellent disinfectant for the home.

Dr. HESS & CLARK
Ashland Ohio

DR. HESS DIP and DISINFECTANT

## VETERINARY

By DR. S. B. NELSON.

**Rubs Hair Off**—I have a 7-year-old mare which I bought last fall. She has rubbed her mane and the hair on her tail out completely. She also rubs her ears and head. Can you tell me what to do for her,
Freewater, Ore. R. J.

The trouble with your mare may be a simple eczema, or it might possibly be due to a parasite. It might be a true mange due to the scab mite or due to a mite infection the chickens. It is quite possible that you may get good results from the following treatment: Apply once daily to the affected parts one part of corrosive sublimate in solution in 1000 parts of water. This is very poisonous and must be kept where children can not get it.

**Tuberculosis in Cattle**—I have a Holstein-Freisian cow 5 years old which has a slight cough. She had what was called a blood boil on the back of her hip last winter. She is three months pregnant now. She eats well, is not overfat, but in good flesh. She gets nothing but dry alfalfa hay to eat. She has been milking 16 months, and gives about three quarts at a milking. Would this cough indicate tuberculosis? Whom does one have to get to test a cow for tuberculosis? Is there any cure for tuberculosis in cattle?
Hermiston, Ore. A READER.

I doubt that your cow is affected with tuberculosis, as just a simple cough is not sufficient cause to base a diagnosis of that disease. The symptoms of tuberculosis are a constant cough when the lungs are affected in advanced stages, a loss of flesh, the hair is turned toward the front and has a hard dry appearance. There is generally a disturbance of the bowels, either constipation or diarrhea. If the animal is put to mediumly violent exercise she shows considerable breathing disturbance. To get the cow tested for tuberculosis you should write to your state veterinarian, at Salem. There is no cure for tuberculosis.

**Sores on Cow's Udder**—Can you tell me what is the matter with my cow and what I should do for her? She has a sore on the udder. One year ago this summer, shortly before she went dry, a scab formed on the front udder near the junction of the udder with the belly. As far as I know there was no bruise or external injury. I used iodine. The scab would peel off, leaving a fresh sore, then a new scab would form and peel off again, and so on till the cow was dry. It healed then. Shortly after she was fresh this time the scab formed again, but in two or three places. About the time it heals up in one place it starts in another place, but always close together and on the front part of the udder. The cow is not sick, and eats well. I feed her alfalfa hay and such kinds of mill feed as can be had in the market. She gives two callons at a milking, and it tests high. She is never with other cattle. Has a small pasture of level land, so there is very little chance of being bruised. There are no blisters or pus that I can notice. W. R. H.
Vancouver, Wash.

It is quite possible that your cow is affected with the disease known as necrophorum, which is caused by the bacillus of the same name. I would suggest the following treatment: After each milking paint the sores which you describe with a one-half per cent solution of picric acid in water.

**Heifer Has Running of Bowels**—I would like to know what ails my heifer. She was 2 years old this spring. I had her bred to a young sire and she has been getting weaker ever since. She had running of the bowels about a month ago and now she has it again. It is clear and slimy at times, then green water. She won't eat at all now. We fed her flour and water before and gave her a dose of salts once, then flour and water to stop it. Could she have been injured inside when being bred? She seems to want to urinate all the time. Can you tell me what to do for her? C. E. R.
Boyds, Wash.

I am not sure what the trouble with the heifer is, but as a tentative remedy I would suggest that you give her a tablespoonful of turpentine in four ounces of raw linseed oil morning and evening for a few days, also give her a tablespoonful of listerine in a pint of water at noon for a few days.

**Horse Has Kidney Sores**—I have a saddle horse with what we commonly call a kidney sore on the back. The sore will scab over and does not seem to heal up no matter how long the animal is allowed to go out of service. Sore seems to be unhealthy. What treatment is advisable?
S. B. S., Walla Walla, Wash.

The saddle sores or kidney sores on the back of the horse are growths which have to be removed by surgical interference. I would suggest to you that you consult one of your local veterinarians and have him operate on your animal. That is generally the only way that a recovery from the trouble can be secured.

**LOUDEN BARN PLANS**

*Louden Planned and Equipped Barn of Hon. Thos. Taggart, French Lick, Ind.*

This book will save you time, trouble and money if you expect to build or remodel a barn, now or later. Write for it today. Consult it before you make your plans.

**112 Page Book—Not a Catalog**
**74 Representative Barn Plans**
**28 Pages General Building Information**
*(Sent Postpaid Without Charge or Obligation)*

This book embodies the barn building information gained in over 50 years specializing in this line by Mr. Wm. Louden and a corps of able assistants. Every phase of modern barn designing and construction is discussed fully in a simple, practical way, with many illustrations of working details, also estimated cost.

Chapters on roof and floor construction; drainage, ventilation, lighting, concrete work, strength of materials, what size silo to build and where to locate it to best advantage, general arrangement of farm buildings, etc.

**Louden Expert Barn Plan Service** is yours for the asking. Write us what size and kind of barn you have in mind, number and kind of stock you wish to house. We will give you the full benefit of our knowledge, whether you want a small or large barn—with blue prints in which your ideas are worked out to best advantage.

**Save Half Your Barn Work This Fall**

Louden Labor Saving Barn Equipment is a necessity on every farm. It saves man power—enables you to do your barn cleaning, stock feeding and watering and other chores, with less help, in less time, with less effort.

We would like also to send you **The Louden General Catalog, a 224-page book** finely illustrated, showing Cow Stalls and Stanchions, Feed and Litter Carriers, Water Bowls, Animal Pens, Hay Tools, Barn and Garage Door Hangers, Ventilators—in fact the entire line of Louden *Labor Saving Barn Equipment*, which is recognized as standard by leading dairymen and U. S. Government experts. No charge, no obligation, write for it.

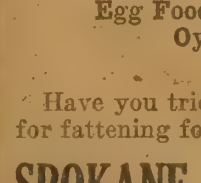
## A Good Start

### Usually Means a Good Ending



In noting in the December 13, 1917, issue the fact that a pen of White Leghorns entered by the Hollywood farm at the Storrs contest was first during the first two weeks of the contest which began November 1, the statement was made that "a good beginning in an egg-laying contest is a pretty good indication of a pretty good ending."

At this date, August 31, this pen is tied for third place. During the winter it went back considerable, but it is now showing the come-back.

A good beginning usually means a good ending, with hens. It is not because they get a start which makes it hard for contending pens to catch up, but because it means an inherent ability to perform well for the year. If the pen makes a good start, and then in two or three months drops back and allows a dozen other pens to pass it, it should not be concluded that because they have won and lost they may not win again. The "come-back" is a real fact with egg-laying hens. A good start means a good end, though between the start and the end there may be a quagmire.

Now, then, the hens that are laying now and continue to lay until November, are the hens that began to lay first last fall as pullets. Early laying maturity means long-laying capacity. Not only is this true of the beginning and end of the first year. It is true also that the hen that makes a good record or a good start the first year will make a good second-year record. Don't discourage the early starter when it comes to hens and say she is too good and won't live long. The reverse is true. Whether it be true of boys and pigs, I will leave to the hog men and the human men to argue. This is a hen story.

### SUPPLEMENT GRAIN.

**Hens Need Protein Concentrates in Their Feeds.**

Hens can not produce eggs profitably on grain alone. The grain ration must be supplemented by protein concentrates. Recent investigations show that the source of protein also influences egg production. That is, protein concentrates of animal and vegetable origin differ in ability to stimulate laying. A series of tests have been conducted at the University of Missouri to determine the relative efficiency of animal proteins, represented in experiments with meat scrap and sour milk and vegetable proteins, represented by oil meal, gluten meal and cottonseed meal, in rations for egg production. Feeding tests have shown that:

1. Meat scrap and sour milk are the most economical sources of protein for laying hens.

2. It is poor economy not to furnish the laying hen a protein concentrate of animal origin.

3. Vegetable proteins alone can not be fed economically.

4. Twenty-five per cent meat scrap is sufficient amount of animal food in a dry mash.

5. There is no evidence that vegetable proteins alone or in combinations with animal food, increase egg production.

6. One pound of eggs can be produced with every four pounds of feed if the proper ration is fed.

7. According to these tests; 100 pounds of sour milk is worth 5.4 pounds of meat scrap.

### FEED THE BEST STRAINS.

**Britain Eliminating Unprofitable Layers.**

The British government, according to a correspondent in England of the Iowa Egg Reporter, has set aside 50,000 tons of feeding stuffs "for the preservation of the best utility strains of poultry in this country. The selection of the best strains for preservation is to be made by committees formed in various localities among the poultry keepers themselves. These committees will be connected with the feeding stuffs committees of the ministry of food, which are already in existence for the rationing of horses and cattle. These poultry committees are a very democratic form of administration, all the poultry keepers in a district selecting their own representatives to administer the scheme."

It has taken the war and the scarcity of foodstuffs in Great Britain to bring about the elimination of the unprofitable layers. Poultrymen everywhere should take note and set his house in order, for if the war goes on there is no telling but what some governmental action may be necessary in this country to prohibit the feeding of grain to slacker hens.

### GROW WHEAT ON SWAMP LAND.

A report from Sacramento, Cal., tells of the reclaiming of 20,000 acres of land in that section for the growing of wheat after it has stood useless for decades, owing to the flood waters of the Sacramento and American rivers. The reclamation was made possible by the cooperation of the federal government and the state of California. The reclamation project will eventually cost some $42,000,000, and is designed to reclaim 60,000 acres or more from the river flood waters. In addition the navigability of the Sacramento river will be greatly improved, it is stated. The report says that a first-class crop of wheat is this year being harvested from the 20,000 acres already reclaimed.

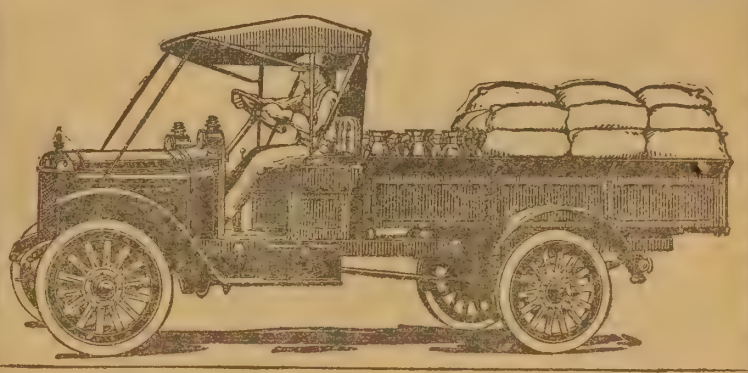
### Feeds the Orphan Lambs

The above photo shows Frances May Kershaw and her orphan lambs, Frances May is 18 months old and lives on a ranch in Yakima county.

### STUDY SHANK COLOR.

**The More Eggs Laid the Greater the Fading.**

Poultrymen who keep yellow shanked chickens have an excellent guide as to what the previous egg record of the hen has been. It is safe to state that the absence of shank color in yellow shanked varieties indicates that the hen has been a good producer, while an abundance of yellow color in the legs indicates just the opposite. This is true except in localities where the soil is of such a nature as to bleach the shanks. According to H. L. Kempster of the University of Missouri, the shank color is due to a yellowish pigment in the fat known as xanthophyll. When a hen lays there occurs a movement of this fat into the blood circulation, and as a result the yellow pigment is taken up and deposited with the fat in the yolk of the egg. Consequently the shanks fade. The more eggs laid the greater the fading. Of course, this does not occur all at once but gradually. By August 1 a good laying hen will show pink shanks, says Mr. Kempster, while the shanks of a poor layer will be yellow. After a few weeks, in which the hen is not laying, the color will return; but if a person wants to pick out good layers as breeders for next year he should select those with pink shanks.



### Hash.

War has not changed the American darkey. A dusky cook of an American regiment now in France was being quizzed by an officer about the cleanliness of that free-for-all army product known as hash.

"How do you make your hash?" dutifully inquired the officer.

"We don't make it, boss," was the answer. "It just accumulates."

Haul your produce to the best market

A Republic Motor Truck makes it possible for you to deliver whatever you have to sell to the *best* market.

You are not limited to the markets which lie within a six or seven mile radius of your farm. Many farmers are hauling their produce with Republics, twenty miles, forty miles and even further. They go where they can get the best prices and make the trip quickly and economically.

Republic Motor Trucks will make money for any farmer if given the opportunity. They combine every feature necessary or desirable for farm use.

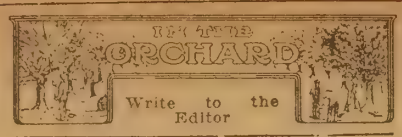
The Internal Gear Drive delivers more power than any other form of drive. It permits the use of a separate load carrying axle of solid forged steel—the lightest and strongest axle known to engineers. It gives 45% greater road clearance, preventing stalling in mud or snow. There is less unsprung weight which means big savings in gasoline, tires and all upkeep expense.

The Internal Gear Drive delivers 92% of the motor power to the wheels. We know of no other drive that delivers as much.

Republic Trucks are easy-riding and easy to drive and care for. And there are seven models from ¾ ton to 5 ton capacity so that you can select just the truck needed on *your* farm.

Republic Trucks are built by the largest manufacturers of motor trucks in the world who build nothing but trucks and know just what is required for every kind of hauling. Last year more than twice as many Republics were produced and sold as any other make.

1300 Service Stations, distributed all over the United States, insure prompt efficient service no matter where you may be located.



See the nearest Republic dealer and write us for latest booklet.

# Orchard Troubles

## Diseases, Pests and Remedies

By GRANVILLE LOWTHER.

I have reached the close of a series of articles on apple pests. There are many other fruits besides apples, and each and every species and variety have their diseases and pests. Those affecting the apple generally affect other fruits, and some of them affect garden vegetables as well. Take, for instance, the green aphis. It is found on nearly all fruits, vegetables and farm products. There are others of a general character in so far as their ravages are concerned. The following conclude the list of apple pests:

**Trumpet Leaf Miner**—This pest is of very little importance in the northwest.

**Unicorn Prominent**—The technical name of this pest is Schizura unicornis. It is a chewing insect and may be controlled with the codling moth spray.

**Western Tussock Moth** — This pest is confined mostly at present to the Pacific coast and its work is very similar in feeding habits to that of the tent caterpillar. However, they do not build tents or nests, as do the caterpillars. They are chewing insects and may be killed with the arsenate of lead spray used for codling moth.

**White Dotted Apple Worm**—This is a light green worm about an inch long, marked with five white longitudinal lines and numerous whitish dots. They feed mostly on the under side of the leaves. When fully grown it draws together a portion of the leaf with silken threads to form a hollow tube. This is lined with a layer of silk and the caterpillar then passes into the pupal stage. The chrysalis remains in the fallen leaf until spring, when it issues as a gray moth. Remedy, arsenate of lead.

**Yellow Necked Dantum**—This pest is a chewing insect and may be killed with the arsenate of lead spray.

### The Subject Simplified.

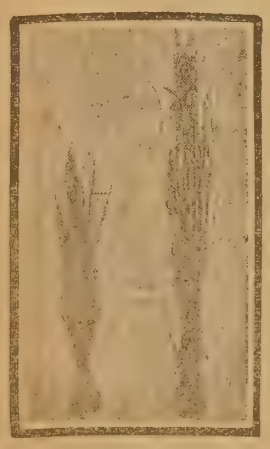
It would be impossible to remember all the names, descriptions and methods of treatment for all the pests catalogued in this series of articles, unless the orchardist gave more time to the subject than is reasonable to suppose he could give. I will therefore divide them into three parts, viz., boring (or puncturing), chewing and sucking. These are killed by two kinds of sprays, called the contact spray and the poisonous spray.

(1) All kinds of insects that chew stems, leaves or fruit may be killed by spraying the foliage and fruit with arsenate of lead or some other poison.

(2) The sucking insects are those that insert their bills into the leaf, bark or fruit and suck the substances or juices. To this class belong scale, for which we spray with lime sulphur. The boring insects may be killed with any good contact spray, and no doubt lime sulphur kills a great many. But the best contact spray I have ever tried is the tobacco spray, generally put up in cans and labeled "Black Leaf 40." It will also kill codling moth, caterpillars and other chewing insects, provided it reaches them; but they are often so protected that they can be reached only by the use of poison. The only objection I have found to the use of the tobacco spray is that it is expensive. I am of the opinion that tobacco could be grown in this country and the spray manufactured at a cost much less than the present cost. But we have not reached that point yet in the development of aids to the fruit industry. One reason why we have not known more of the great army of pests is that we kill the chewing insects when we spray for codling moth, and the sucking insects when we spray for scale.

### Fungus Diseases.

The fungus diseases are all, in so far as I know, controlled by the fungicide sprays, of which one of the best is sulphate of copper, generally called Bordeaux. Powdery mildew may represent this class of diseases.



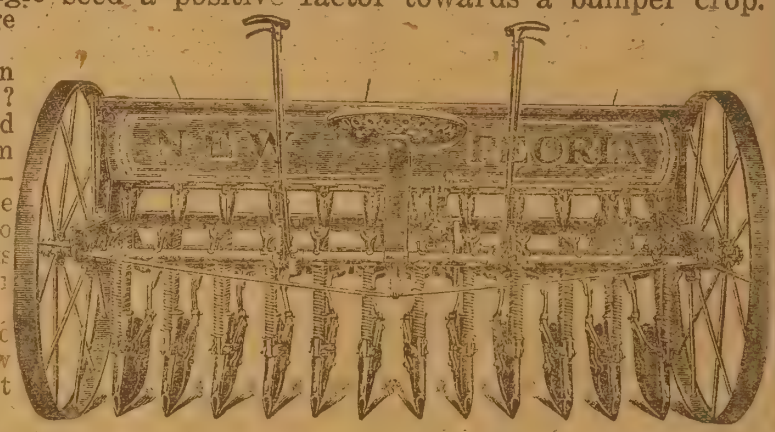
### Bacterial Diseases.

Bacteria are just as real and just as much alive as insects, trees or animals; but they are not so large. Because we can not see them with the naked eye, we judge of their presence by the effects. In some cases the only remedy known is to cut out the diseased portions, as in the case of pear blight. In other cases spraying with Bordeaux or copper sulphate is a remedy. The remedy in most general use is the Bordeaux.

---

Other articles under the same head of "Orchard Troubles" will be given in coming issues of this paper.

# Do You Know How The PEORIA DISC SHOE DRILL Can Increase YOUR Crop Production?



These Two Stalks Show a Close-up View of Peoria Drilled Oats and Oats Drilled With an Ordinary Seeder.

THE famous Disc Shoe is the secret, because every seed is laid in a packed seed bed—at the very bottom of the furrow. The soil is then released, covering the seed perfectly at a uniform depth below the surface. Seed can't be picked up by the birds, frozen in the ground, or blown away by the wind. The Disc Shoe makes every single seed a positive factor towards a bumper crop. There is absolutely no waste. The result is a large crop production from a smaller amount of seed.

Can you afford NOT to take advantage of a proven method to increase your crops in times like these? The New PEORIA DRILL means a bigger yield, and the profit to which you are rightfully entitled from your land and efforts. Note the two photographs—the difference between the work of a PEORIA and the ordinary drill is plainly seen. Time has proven that no other drill can duplicate the New PEORIA. It works in any soil. Use it for any of the small grains—or peas, beans or corn.

With the high price of grain you can well afford to discard any other drill, or any seeder, for the New PEORIA. Bigger and better crops pay back its cost quickly.

## Peoria Successes Made in the Northwest—Read Them

**Arthur Cole, Pullman, Wash., says: "I consider the New PEORIA DRILL the best drill on the market. I would not consider anything but a PEORIA DISC SHOE DRILL."**

**P. N. Huffman, Green Creek, Idaho, says: "Since 1903 I have sowed an average of 200 acres a year with my NEW PEORIA. I have also loaned it to my neighbors and it is safe to say they have sown 500 acres with it, making a sum total of over 2500 acres. I have never bought one repair. It feeds perfect, sows even and does as good work NOW as it did the first year I bought it."**

**G. L. Paxon, Madras, Oregon, says: "I consider the New PEORIA DRILL at least all that is claimed for it by those who make it. Chief among its features is the lightness of its draft. It can be easily regulated to sow from 18 lbs. of wheat up to any desired amount."**

**Sam J. Carlisle, Bonanza, Oregon, says: "I have used a good many different drills, but I have never used any that is equal to the NEW PEORIA DISC SHOE DRILL. The grain is all planted at the same depth and comes up even. A farmer will use no other drill after he has tried the NEW PEORIA."**

The Light Strips Are the PEORIA Drilled Oats. The Dark From Competitors' Drilling. The PEORIA Drilled Oats Average 12 Inches Higher, Are Much Heavier, Finer Quality and More Mature than the Competitors.

## $249.33 Extra Profit on 100 Acres of Wheat by Using the "New Peoria"

The average seed required for spring seeding is approximately 40 pounds to the acre, the average price of wheat $2.20 per bushel. The New PEORIA requires 20 per cent less seed than any other form of seeding, which means a saving of 29 1-3c cash saved per acre.

A farmer who sows 100 acres of wheat ordinarily would use 4000 pounds, or 66 bushels and 40 pounds. One-fifth, or 20 per cent, of this amount saved by the New Peoria Disc Shoe Drill would be 800 pounds, or, at $2.20 a bushel, would mean $29.33 he had saved in cash on the 100 acres sown.

While many farmers who use the NEW PEORIA say that grain will yield from 2 to 3 bushels more per acre when sown with the PEORIA DISC SHOE, we will be conservative and give the estimate of one bushel per acre, which on 100 acres would mean 100 bushels, or $220; together with $29.33 of seed saved at the time of seeding, would mean a total saving of $249.33.

# Patriotism of the Farm Family

## *Deserves Insignia of Recognition in Speeding Up Food Production*

Believing that the speeding up of food production is a war measure of first importance and believing also that every member of the patriotic farm family is deserving of recognition in the form of a special insignia, the Pacific Northwest Farm Trio, consisting of The Washington Farmer, The Idaho Farmer and The Oregon Farmer, designed a farm service war flag, distinct from the war service flag.

As will be seen by the several flags pictured on page one in this issue, other emblems of wartime patriotic service outside of the army and the navy are being recognized the country over.

It is difficult to understand how the triangular, pennant-shaped flag with a red border, blue field and white stars in the field can be confused with a rectangular war service flag having white center and blue stars. They are entirely distinct in outline and color scheme.

Some little time ago a letter was received at this office from H. A. Meyer, director of the University of Missouri experiment station, in which he said: "I think your idea of the service flag is a most excellent one, and since the flag has already been adopted in the four states of the Pacific northwest it might be used as a national emblem, provided that it gets the approval of the Washington authorities." Following out this idea Mr. Meyer wrote to C. B. Smith, of the states relations service of the U. S. department of agriculture, Washington, with regard to the matter, as will be seen below. This same matter was taken up with Mr. Smith by Senator W. L. Jones of Washington. The advisability of a farm service war flag was also submitted to a number of other persons throughout the country. Abstracts from their letters follow:

### Senator Jones Interested.

Senator W. L. Jones of Washington has taken much interest in the farm service war flag, writing: "This flag looks to me like a very good thing, and I am glad to know that it is taking so well in our state. If there is anything I can do to assist in promoting the matter of having the flag adopted generally I will be very glad to do it. I have today taken up the matter with Dr. C. B. Smith of the states relations service, and caught him just as he was about to leave his office on his way to Chicago to attend a conference of the extension directors of 11 of the agricultural states. He intends to submit this proposition to these directors and see how they view the proposition to have the flag generally adopted. When he returns he is to submit a report to me in the premises, and I shall be very glad to write you again at that time as to what, if anything, is done looking toward the adoption of this flag."

Returning from the Chicago conference Dr. C. B. Smith of the states relations service communicated with Senator Jones as follows: "You called recently at this office to make inquiry with reference to a farm service flag which is being used in some of the states in the northwest and promoted by the editors of the agricultural press of that section. I told you that this matter had been called to our attention from another source and would be considered at a meeting of our extension directors which was being called in Chicago. We had the Chicago meeting, but I found no unanimity among the directors as to the desirability of urging upon the farmers the use of a service flag. If it seems desirable to the nation to recommend such service flag or other emblem, it was the judgment of those present that something distinctive should be designed, and doubt was expressed as to the desirability of the federal government taking up and pushing an emblem of some organization or institution of local character.

"As I indicated to you on the occasion of your call at the office, we now have under consideration the possibility of a national campaign of a week or more in the interests of our agricultural extension organization, at which time it may seem desirable to recommend to the states a national emblem, badge or button, but it is impossible at this time to tell what this will be until those who may have charge of the work shall have been assembled and had time to consider the matter."

With reference to the same Chicago conference T. A. Coleman, acting superintendent of the extension service of Indiana Extension college, writes:

"Replying to your letter of July 16 addressed to Professor Christie, which has been referred to me, I will say that a sample of your flag was exhibited and a general discussion of this matter was indulged in by the Washington officials and extension representatives from 11 of the middle west states held in Chicago. The general concensus of opinion was that since the flag was, in a measure, a copy of the personal service flag now used in connection with the army, it was unwise for the agricultural people to use it in this form as a national flag. The matter of some insignia for the man who is rendering an agricultural service was discussed somewhat. Expressions generally favored a button instead of a flag. Nothing definite was decided upon."

### "Looks Good to Me."

S. B. Doten, director of experiment station, Nevada: "Looks good to me."

In Tennessee they are using red, white and blue posters to indicate farm production work.

Edwin T. Coman, president Exchange National bank, Spokane: "The idea is a most excellent one."

Marco Morrow, director of advertising, Capper publications: "The idea appeals to us as a good one."

V. O. Gilbert, state superintendent of education, Kentucky: "This proposition appears to be very interesting."

Charles H. Lugg, superintendent of education, South Dakota: "Let me say that I like your idea and I believe the flag will become popular."

A. E. Bowman, director extension service, Wyoming Agricultural college: "I believe the flag would appeal to the people of Wyoming."

J. B. Borden, executive secretary, state council of defense, Wisconsin: "I am much interested in the proposition, and I believe the idea to be a good one."

C. Larsen, director of extension, South Dakota Agricultural college: "I think this is an excellent motto. I should think that it might become a national emblem."

Dr. Oscar Dowling, president Louisiana state board of health: "I believe this would appeal to the farm homes not only in Louisiana but throughout the states."

Paul V. Maris, county agent leader, Oregon: "My conclusion with reference to the farm service emblem would be that it would depend entirely upon the method of distribution."

F. S. Harris, director state experiment station, Utah: "On first thought it appears to be an excellent idea, and I hope you will be able to arouse sufficient interest to put the idea into operation."

Robert Withycombe, director of eastern Oregon experiment station: "I feel that your idea of a farm service flag is a splendid one, and yet I realize that there is a possibility of having too many service flags."

### Incentive to Boys and Girls.

Alva Agee, secretary state department of agriculture, New Jersey: "If a farm service war flag proves an incentive to boys and girls in food production it surely serves a good end and is worthy of commendation."

M. P. Shawkey, state superintendent of schools, West Virginia: "The device has merit, obviously, and I see no reason why it could not be used to good effect in West Virginia as well as in your great state."

S. P. Cary, state superintendent of education, Wisconsin: "The plan suggested in your publications of a use of a farm service war flag appeals to me. I would be pleased to hear more about its use in the Pacific states."

E. E. Flood, Exchange National bank, Spokane: "While it may seem a small service to us who are engaged in the other lines of war work, it no doubt will appeal greatly to those on the farm who are bearing the drudgery of this work."

F. L. Houghton, secretary of the Holstein-Friesian Association of America, writes that he is pleased to receive the farm service war flag, adding: "It seems especially appropriate, and I trust may be widely used."

W. W. Long, director of extension work in the Agricultural College of South Carolina, says: "We are in receipt of your sample of the farm service war flag, and I think our people would be very much pleased in having one."

F. R. Gooding, Gooding, Idaho: "I wish to congratulate both yourself and the Cowles Publishing company for your enterprise and patriotism in the development of the idea of the farm service flag. I feel that this flag should be made a national emblem."

C. A. Bosworth, director of the state laboratory of Arizona: "I have no hesitancy in saying that I think the idea suggested is an excellent one, and can see no reason why it should not make the same appeal in Arizona as in the Pacific northwest."

### Will Make Strong Appeal.

E. J. Iddings, dean and director University of Idaho: "I was very much struck with the significance of this flag when it was first called to my attention, and I feel sure that it will make a strong appeal to the farm homes in our state."

A. B. Cordley, dean and director Oregon Agricultural college: "The fundamental importance of farm service in the promotion of the war deserves recognition. Your farm service war flag is a beautiful and appropriate emblem of such service."

J. C. Kendall, director extension work, New Hampshire Agricultural college: "The plan has much to commend it, and if the flag should be adopted as a national emblem no doubt the plan would meet with favor among the farmers of this state."

H. T. French, director of extension service, Colorado Agricultural college: "I know of nothing that would give our agricultural people a better rating among all the people who are interested than to see this pennant streaming from every farmhouse or gatepost throughout the country."

B. H. Heide, secretary-general superintendent, International Live Stock exposition, Chicago: "The farm service war flag idea is an excellent one, and should serve to stimulate food production. It should certainly be exhibited as a gratifying recognition of the loyal services rendered by the young people on and off the farm."

C. E. Allred of the extension work bureau in Tennessee writes: "I have noticed with interest your campaign to secure and establish a farm service flag. This seems to me a splendid thing to do, and I wish you the best of success in making this a national movement. The flag which you have suggested is a very attractive one."

J. L. Morris, executive secretary of the Ohio branch of the council of national defense: "This flag has real merit, in our opinion, and would appeal to a lot of rural people, provided, first, that the design is appropriate, and, second, that the flag is given only for some definite service in food production."

### Encourage Patriotism.

President S. B. L. Penrose, Whitman college: "It seems to me that this flag would make a decided appeal to people on the farm, and although I am not in general inclined to favor anything which emphasizes class distinction and throws one set of people apart from others, nevertheless I approve the idea of a war flag for farm service as likely to encourage a spirit of conscious patriotism on the part of farmers and their families."

N. D. Showalter, president state normal school, Cheney: "I received a sample of this flag some time ago, and I am glad to say that I believe it is serving a splendid purpose in the four northwestern states. I believe, too, that this service could be extended to the whole nation by adopting it as a national emblem, and therefore give my hearty approval to the move you have made. I may say that I have talked with several leading farmers since receiving your letter, and find them all enthusiastic about the matter."

W. S. Thornber director of extension work of the State College of Washington: "While I had seen this design illustrated in your valuable paper, I did not realize its beauty until I opened the sample. The idea of a farm service flag appeals to me very strongly because in all of our work we are meeting with the one factor that almost every phase of war preparation and war activity is receiving definite approval and recognition with the exception of the farmer and his family."

### Fear of Confusion.

Director James W. Wilson of the South Dakota experiment station fears that the farm service war flag would be confused with the war service flag. This is also the opinion of Dean R. F. Shaw of Michigan Agricultural college and Assistant Director K. L. Hatch of the extension work, University of Wisconsin. This symbol of war service on the farm does not appeal to Dean R. L. Watts, Pennsylvania State college, because the sacrifice made by the mother and father of the boy who goes to the trenches is far greater than that made by the boys who stay at home. C. G. Schulz, Minnesota state superintendent of education, also does "not believe any one at home particularly deserves to be commended or rewarded for work in any nonmilitary service." The director of the extension work in Virginia, Jesse M. Jones, sees so many flag emblems and cards that he does not think it would appeal to the farmers of his state. Professor W. D. Lyman of Whitman college is pleased with the farm service war flag, and believes it worthy of all commendation if we would avoid unnecessary duplication in these matters. While realizing the possibility of having too many service flags, Robert Withycombe of the Oregon experiment station thinks the idea of a farm service flag is a splendid one. State Commissioner of Public Schools Walter E. Ranger of Rhode Island reports that at least two farm and garden service flags are in use in that state and he does not know what appeal a third would make. Dean Henry G. Knight of Oklahoma Agricultural college thinks "the idea is a good one, provided the giving of these flags is placed in the hands of a committee in each county who would be the judge as to whether such flag was deserved. And Paul V. Maris, county agent leader in Oregon, thinks the value of the farm service emblem would depend entirely upon the matter of distribution.

# SIDELIGHTS

### Seizing the Chance.

Auntie—It is a very solemn thing to be married, dearest Ethel.

Ethel—It's a great deal more solemn not to be married, dearest Auntie.—Cassell's Saturday Journal.

### Did Better.

"Please lend a hand, my dear," we said,
"To help the boys who fight."
"Lend?" she said coyly, "why, I gave
My hand to one last night."

### Reforming a Crank.

He used to be an awful crank.

Yes, but he's turned since he got married and his wife took him in hand.—Philadelphia Bulletin.

### Dollar Alley.

"Why do they call this Dollar alley?" asked the stranger.

"Because there are 100 cents in it," answered the native.—Boys' Life.

### Mystery of War Soup.

"What's this, waiter?"

"It's bean soup, sir."

"I don't care what it's been—what the deuce is it now?"—Cassell's Saturday Journal.

### Slightly Twisted.

"What did the doctor do for your wife when he found her in such pain?"

"Oh, he eased it off at once. He gave her a epidemic interjection."—Baltimore American.

### Spreading Corruption.

"You will have to graft these trees before they will pay," said the country man.

"Alas!" moaned the city man. "Even old Dame Nature has learned the trick."—Baltimore American.

### Definite Information.

The recruit was both sulky and stupid and strongly resented the inquisitorial character of the questions put to him. At last the sergeant turned to him and sternly said:

"Look here, young fellow, you've got to give a straight answer to questions put to yer. Now, then, where were you born?"

Then came the answer slowly, as if the information imparted were grudged.

"London—right hand side, going in."—Liverpool Post.

### Embarrassing.

A man who had made a huge fortune was speaking a few words to a class at a business college. Of course, the main theme of his address was himself. "All my success in life, all my financial prestige," he said proudly, "I owe to one thing alone—pluck. Just take that for your motto—'Pluck, pluck, pluck!'"

He made an impressive pause here, but the effect was ruined by one student, who asked inquisitively, "Yes, sir, but please tell us how and whom did you pluck?"—Tit-Bits.

### Demand on Demand.

"The war is demanding great things of us, but it's a holy war, and we don't mind."

The speaker was a representative. He continued:

"No, we don't mind, on the contrary we're glad—but the war's demands, somehow, remind me of Smithers.

"Smithers entered a hatter's and produced a very dirty check for $20 which he asked the hatter to cash for him.

"'Can't do it, Mr. Smithers,' said the hatter. 'I couldn't possibly do it.'

"'All right,' said Smithers. Iron the durn thing for me, then.'"—Washington Star.

### Strenuous Work.

In a certain home missionary movement every participant was to contribute a dollar that she had earned herself by hard work. The night of the collection of the dollars came, and various and droll were the stories of earning the money. One woman had shampooed hair, another had made doughnuts, another had secured newspaper subscriptions, and so on.

The chairman turned to a handsome woman in the front row.

"Now, madam, it is your turn," she said. "How did you earn your dollar?"

"I got it from my husband," she answered.

"Oh," said she, "from your husband? There was no hard work about that."

The woman smiled faintly.

"You don't know my husband," she said.

# A CROOKED TRAIL---By Lewis B. Miller

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

(For the synopsis of Chapter I. see page 5.)

## CHAPTER II.

### A Night at Lookout Gap.

The far-stretching prairie which my hunt for the runaway ox had led me out upon, was dotted over with lone live-oak trees and little live-oak groves—dark-green islands in a sea of brighter green. Numerous bunches of long-horned cattle could be seen grazing here and there, or standing or lying in the shade of the live-oaks. Thinking that Lep might have sought companionship among some of these, I spent all the rest of the forenoon riding from one bunch to another, but without finding him.

When at length my shadow, pointing due north, indicated the hour of noon, sharp hunger had attacked me, but not a bite of anything had I to appease it. Dick, I knew, must be even hungrier than I was. So I dismounted in the shade of a big, thick-topped, spreading-topped live-oak. After removing saddle and bridle, I tied one end of Kelly's lariat around the pony's neck and the other to a low-hanging limb. Luxuriant grass crowded close up to the tree, and even under it, and the little horse was soon eagerly filling himself.

It was a splendid summer day. Now and then a slight breeze rippled the sea of grass around me. The sun shone brilliantly, hotly down, and the whole prairie was ringing with the voices of grasshoppers and other cheerful sounds. After gazing at prairie and mountains for a while, as they shimmered in the heat, I threw myself down on the thickest grass, in the thickest shade. My little dog came and sat close by.

"Vic," I said, "we can't eat grass; so we might as well take a nap."

Vic wagged her tail responsively, and I stretched myself at full length, with my arm for a pillow, and was soon fast asleep.

I must have slept an hour or two. When I awoke, Dick had grazed his fill and was standing quietly in the shade Vic was lying near me. The day was now at its hottest, and I waited half an hour or so longer before saddling up. While waiting I climbed to the very top of the live-oak and took a survey of the whole country, but failed to discover the object of my search.

When at length I was riding on, my general course was toward the mountains, but I kept zigzagging across the road, going out to every bunch of cattle I came in sight of for a mile or two on both sides.

The sun was not very high when I arrived at Lookout Gap—a break or pass through the mountain-range. Old settlers insisted that it had been so named because, from the first settling of the country until a year or two ago, one had to look out for redskins if he went over there. In the gap I stood and gazed both ways, but not in search of Indians. They would never come again. Finally I dismounted, and while the pony grazed I climbed one of the broken, jagged ends of the mountain for a wider view.

From this elevated position I could make out a little drove of cattle south of the mountains, but a mile or two east of the gap. They were grazing near the foot of the range, and among them could be distinguished two spotted animals that bore some resemblance to the one I was looking for. So I slid and stumbled down the steep slope, sprang into the saddle and trotted away to investigate. While riding along the foot of the mountains, I frightened several small herds of deer grazing in the coves. One herd numbered a dozen or more. Once, in a little patch of woods, I scared up some wild turkeys. There was an abundance of game here.

Again, for perhaps the twentieth time today, disappointment met me. Neither of the spotted animals was Lep.

The sun was near to setting by the time I got back to the gap. Now I was in a serious quandary as to what to do. The nearest house was ten miles ahead. If there had been anything to eat here, I would have camped at once, for I had already ridden many miles, and Dick, hardy as the little fellow was, was showing signs of weariness. It looked very much as if I should either have to go supperless or ride on. If I had had my gun I would have tried for a deer or a turkey; but my only weapon was a pocket-knife.

While sitting in the saddle, debating the matter, I heard a squeaking close by; and presently Vic came out of the tall grass, dragging a mule-eared rabbit that she had pounced upon and killed as he sat in his nest. The little dog was hungry, too, and looked up at me as if to say: "Here's something for our supper."

Quickly I dismounted and examined the game. It was a young animal, only about two-thirds grown, and plainly both fat and tender. Now I thrust my hand first into one pocket and then into the other. I did not smoke—I have always detested tobacco—but I had been burning brush on our cleared ground recently, and perhaps I still had a match.

All that my most careful search could discover was a broken piece of a match. But it was the right end. After examining it closely, I decided that there was fire in it.

"Dick and Vic, that settles it!" I exclaimed enthusiastically. "We're going to camp somewhere close by tonight. Vic, we'll have broiled rabbit for supper, but no bread or salt."

Vic wagged her tail, stuck up her expressive ears and looked up at me, as much as to say that if she had plenty of broiled rabbit she could get along without anything else.

Tying the game behind my saddle, I led Dick through the live-oak grove where we had camped the fall before, and up into a cove where some timber grew. Here I gathered up an armful of dry wood and brush, tied them with the end of Dick's lariat, and hung the bundle to the saddle-horn. Then, after collecting another and bigger armful, I started for the open prairie, leading the pony.

There was plenty of wood in the cove, and ordinarily it would have been the best camping-place. But, for different reasons, I did not care to camp here tonight. One reason: there was no water here, and I had no vessel to carry any in. But a far stronger reason was that the mountain-top was covered with dense, impenetrable thickets of scrub-oak, in whose thorny fastnesses, I had been informed, numerous wild animals of prey, such as wolves and wildcats and mountain-lions, and a few bears, had their hiding-places. The wolves and wildcats I did not particularly fear, but the bears and mountain-lions I much preferred to have no dealings with, especially while unarmed.

Before leaving the cove I noticed Vic nosing excitedly in the grass among some bushes, and on making an investigation found that she had discovered a wild turkey's nest, with six speckled, freckled eggs in it. These would make a valuable addition to our meager bill of fare, and I transferred them from the nest to my pockets.

A few hundred yards south of the mountain was a scattering line of small willows, and there I found a little stream. Throwing down my wood on its bank, I removed Dick's saddle and bridle, and after tying the end of his lariat to a bush, left him to help himself to water and grass.

By this time darkness was settling down, and the loneliness of my situation was already upon me. I now began my preparations for spending the night here.

Selecting a suitable place, I carefully pulled all the grass for a yard or two around. This was to keep my campfire from spreading. But the grass itself I put to one side, to be used for a bed later. Then I arranged my kindling and some of my wood, and soon a cheerful, crackling fire was blazing up. Now I felt less lonely.

First I skinned the mule-ear. After washing it in the stream I cut it into pieces, impaled each of the hams on a willow stick, and held them over the fire to broil. All the while, to keep from getting lonely, I carried on a one-sided conversation with Vic.

"Smells delicious, don't it, little dog. Won't take long to broil it now. Wish we had a sprinkle of salt to rub on it. But, salted or not, there won't be a smell of it left when we get through."

Vic was sitting near me, with her ears pricked up alertly, while she eyed the broiling game with hungry solicitude. When talking to her I could hear her tail rustling the grass as she wagged it sociably, responsively.

After the hams had been appetizingly browned, I laid them on the grass; and having thrust other parts of the rabbit through with the sticks, I stuck the sticks well into the ground, over the fire, and left them to take care of themselves. Now I gave Vic one of the hams and myself went to work on the other. We were both hungry, and the hams were not half enough. The other pieces were broiled by this time, and I divided them between us. Soon the mule-ear's bones had been picked clean.

**The two eggs that I had buried in the embers exploded loudly.**

I had intended to save the turkey-eggs till morning; but my hunger was still unsatisfied, and the temptation to eat them tonight was very strong.

"Vic," I remarked, "we'll have a square meal now, and try to reach the settlements in time for breakfast."

The two eggs that I first buried in the embers to roast exploded loudly, one after the other, scattering ashes and fragments of themselves for yards around. With the others I was more careful, making holes in the shells, and standing them in the embers open ends up. They were soon roasted to perfection. Vic ate one and I the other three. There was enough, but not a bite too much.

Supper finished, I leaned back with a sigh of satisfaction. Night had long since closed down upon the scene. The steep, wild mountain, veiled in gloom, seemed to overhang me. Somewhere over to the west a wolf kept yelping; and on the mountain-top close by two wildcats were engaged in a bitter quarrel, snarling and screaming at each other defiantly. Sometimes Vic, excited by their clamor, ran off into the darkness to bark at them.

Once more, a few weeks later, I should look upon this scene as it was now. After that 20 years would pass ere I should return. And then I should stand upon the broken end of the mountain and look down into the gap—upon something very different. The mountains themselves would be unchanged, but all the surrounding country would be netted over with barbed-wire fences, dividing it into farms and pastures, and dotted over with farmhouses. And in the gap, the wild, rugged break in the mountain-range which I could now see dimly, would stand a busy little town—in the very gap, and spreading out on each side of it like a fan. There would be stores and shops, and a schoolhouse and churches. What a change—what a wonderful change.!

And as I should stand and gaze down upon the changed scene, though my judgment would tell me that that was better, something within me would keep saying, as I recalled this night: "They have spoiled it all—they have spoiled it all!"

And even now, while I am writing this story, far from these scene of that night's lonely camp, and amid a great city's bustle and din, there comes over me a feeling of deep regret, amounting almost to sadness, for the old wild days—the days that will not return.

But tonight, as I sat in the ring of light encircling my campfire, I was not thinking of the distant future. My thoughts were busy, rather, with the task ahead of me—the task of overtaking and bringing back my runaway ox. Lep had a decided advantage; for while he could keep traveling the greater part of the time, I was under the necessity of searching the country on both sides of the road, lest I should pass him. This advantage, and the fact that he already had three or four or even five days' start of me, made my undertaking a peculiarly difficult one.

But I was tired after a long day in the saddle, and soon began to think of sleeping. All that I had to sleep on was the grass—the grass I had already pulled and some more; but I arranged it carefully, and soon had a fairly comfortable bed. At the head of the bed I placed my saddle for a pillow, and some grass on it to mitigate its hardness. My saddle-blanket I unfolded and placed near me, for use only in case the night grew cool enough for cover. As yet, however, there was no indication of that.

Then, after moving the pony to fresh grass, beyond the stream, and lying down for a drink, I came back and went to bed—my cool, fragrant, grassy bed. Vic lay down in reach of my head, where she could run her sharp little nose about in my hair.

As I lay there, with the blue sky and the innumerable host of stars above me, and the nearest human habitation 10 miles away, I felt a sense of loneliness, and at the same time a peculiar sense of satisfaction over my wild surroundings. The cries of prowling animals of prey on the mountain were mingled with the voices of night-birds and the shrill singing of harmless insects in the grass around me, and—then I was fast asleep.

Once or twice, I know not how long afterwards, I remember being half awake and sitting up and looking about me drowsily, to recall where I was. But I saw only the dim prairie, and the dark mountain overhanging me, with Vic lying at my head and the pony cropping the grass busily but a few yards away. Then I dropped down and was asleep again.

It must have been a good while after midnight when I was awakened once more, this time very differently. The pony was snorting in alarm, and Vic, backed up against the saddle, was growling fiercly, while every hair seemed standing on end in angry defiance. I leaped to my feet.

Following her gaze, I detected the outline of some large-sized animal, which I quickly recognized as a mountain-lion! The beast had its gaze fixed upon both me and the dog, and kept growling ominously in reply.

My first impulse was to make a dash for Dick, spring upon him and take flight. But before I could do so I happened to notice that some small sticks of my nearly dead camp-fire were still blazing slightly, though not enough to give much light.

Following another impulse, I snatched up a stick and thrust it into the high, thick grass close by. The grass was mostly green, but there was plenty of dry grass in it—of last year's growth—to burn readily.

The blaze leaped upward out of the grass with a frying, crackling sound, and quickly began to light up the surrounding prairie. As the flames rose skyward and the circle of light widened, the lion was soon in plain view.

But only for a few moments. The unexpected flame was too much for him. With one disappointed snarl the brute turned tail and fled toward the mountain, quickly vanishing into the outlying darkness.

The fire, though burning slowly in the green grass and the motionless air, soon spread till it was lighting up the prairie for hundreds of yards around. Presently it occurred to me that it had served its purpose, and that I ought not to allow it to sweep the whole country.

Breaking off a willow bush, I fell to thrashing the flames with that. But it proved too light, and I caught up my saddle-blanket, plunged it into the stream, and went to work vigorously. The blanket was far more effective, but so thick was the grass that not till after an hour of the hardest, hottest fighting I ever did was the fire completely subdued. And then a black, smoking area lay like a big ink-spot in the green prairie.

The sweat was now driping from my face, and I washed and splashed in the water till I had cooled myself. Then I carried my saddle across the stream, to the unburnt prairie, and sat down by it. The excitement of fighting the fire and the fright from the mountain-lion had banished all thoughts of sleep.

For perhaps an hour I leaned against the saddle and gazed off into the semi-darkness. Vic did the same, and kept up a pretty regular barking at what she heard. I half expected the mountain-lion to return. But now I was closer to the pony, and Vic would not fail to give me timely warning.

Finally, becoming weary, I lay down with my head on the saddle, and before I knew it was asleep again.

Vic's barking awoke me. I sprang up suddenly looking around in fright for the lion. But no lion was to be seen. A waning moon had risen during my last sleep, and was now bathing prairie and mountain in a dim, soft light. I stood, gazing about me, feeling like one in a dream.

Now I became aware that there was no indication of danger in Vic's barking. All she heard was the baying of some hounds.

The baying drew rapidly nearer. Soon two deer, a doe and her half-grown fawn, came into view through the hazy moonlight. Both, it was easy to see, had run far and were failing in strength. There were other mountains a few miles to the southeast, and they had probably run all the way from there.

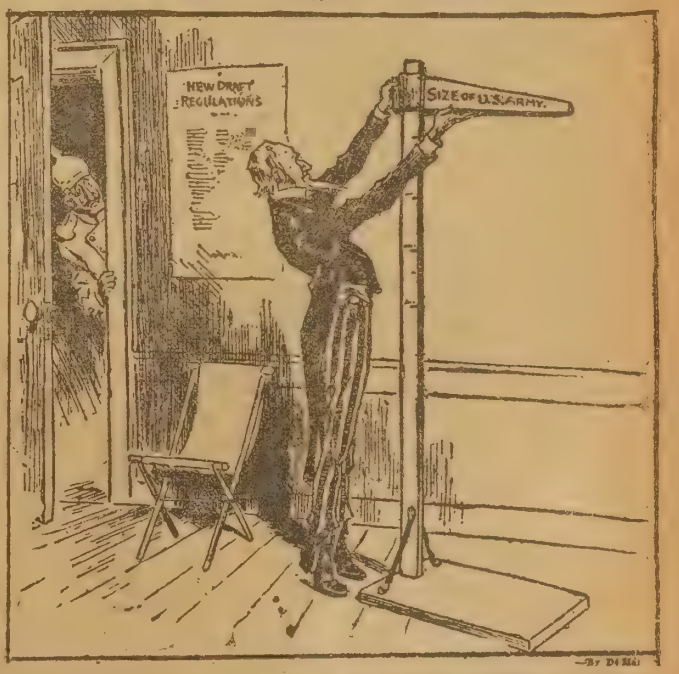
(Continued on page eighteen.)

## Uniform of Food Administration

The uniform of the food administration is particularly adapted for summer. It is a one-piece dress of blue cotton with a front which buttons either way. With it are worn cuffs which button on and a high peaked cap of pique.

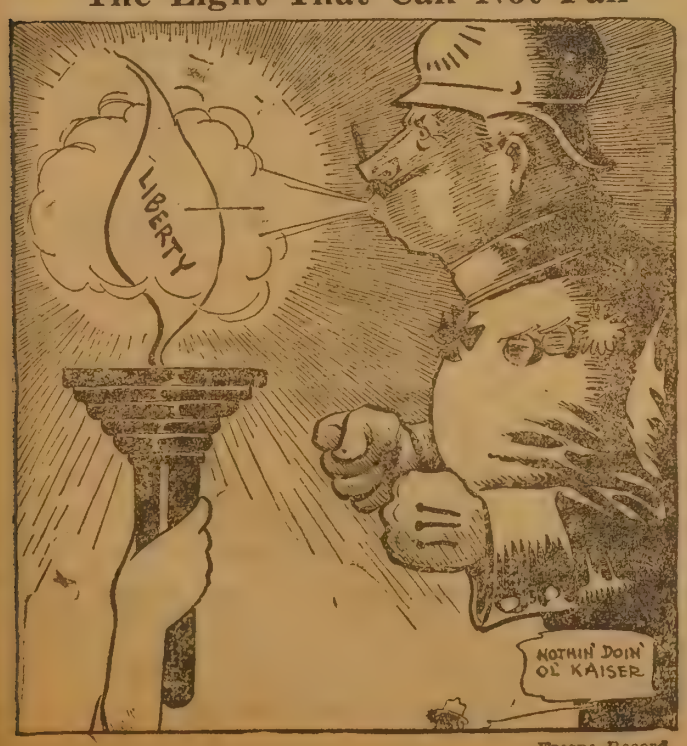
## Help to Save the Bumper Wheat Crop in Kansas

When the Kansas war council faced the situation of a bumper wheat crop and man power entirely inadequate to handle it, thousands of women with their army of children and girls, sprang up from all over the state, and the wheat crop was saved. If this volunteer army had not, unbidden, come to the rescue, a great part of this tremendous crop would have been lost. The above illustrations show them at their work.



## Yankee Soldiers Comfort French Refugees

Copyright Comm. on Public Information, Supplied by I. N. S.



The above picture shows some of our American soldiers over in France befriending a family of French refugees, who are high in their praise of the Yankees.

## Removing the Limit

—De Mar, in Philadelphia Record.

## Hyperperexia

### Too Much Heat for Human Engine

Few of us ever take time to consider the great change which has come over our dietetic habits since the day, say, of our great-grandfathers. Fifty or 100 years ago the present use of highly concentrated and refined foods was unknown. Coarse meal breads, the grain for which often was ground at home as it was used; plenty of vegetables, raised in the home garden; milk, eggs ant meat in moderate abundance—these were the things our ancestors worked on in the days when the average man had his share of manual labor to do.

Today refined wheat flour and refined sugar are regarded almost as necessities—so much so that when Mr. Hoover asks us to cut down our consumption of these concentrated foods we make as much fuss as if we were required to do without food altogether. The odd point about it all is that we do not perceive that while we have cut down our muscular exercise almost to the vanishing point within a few decades we have come to depend more and more upon a high-energy diet suitable only for men engaged in vigorous outdoor work. We are stoking our engines for strenuous labor, but the trolley car and the elevator and electricity and steam heat have taken most of the real labor out of life.

The result of all this overeating is an alarming increase in the number and the intensity of the diseases of mankind. New complications to the business of living are discovered every little while. Among these is one apparently directly attributable to the increased use of caloric foods. It is called hyperperexia, which literally means too much heat. The theory is that an overconsumption of such things as sugar and starch, both of them valuable principally as fuel for the human engine, leads to the gradual accumulation in the blood and tissues of oxidized material. This accumulation can go just about so far. Eventually an acute inflammatory process starts up, either local or general, and the rubbish is burned up within the body.

The application of all this theory is not hard to find. If you are blessed with a good digestion you certainly will be able to eliminate sugar and wheat flour from your bill of fare without hardship. If, on the other hand, you have a capricious stomach and have a tendency to colds and influenza and similar acute inflammatory troubles, a very decided cutting down of the concentrated fuel foods, among which sugar and refined flour are usually classed, will certainly be of benefit to you. Hooverize for your stomach's sake, if for no worthier motive. P. E. T.

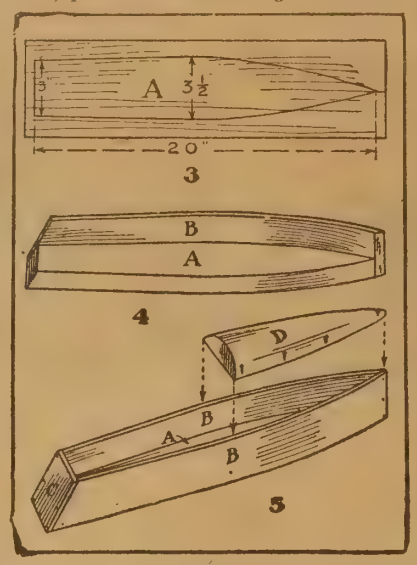
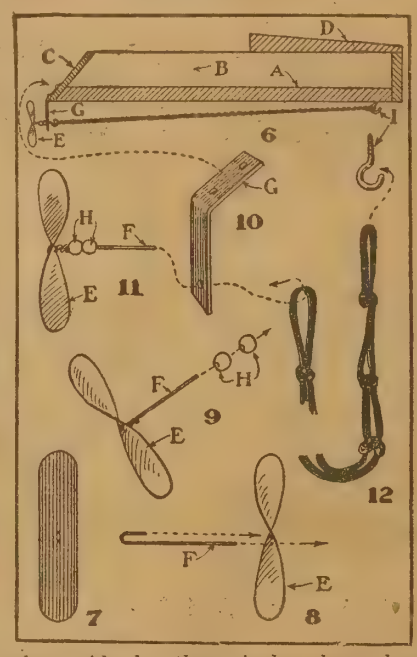
### A TOY MOTOR BOAT.

The toy motor boat shown in the illustration is propelled by a tin propeller run by a rubber-band motor.



First cut out the hull from a piece of wood one inch thick, making it of the shape and dimensions shown in figure 5. Be careful to curve the side edges

the same. The stern end should be sawed off on a bevel as shown in figure 4.



The sides of the boat (B, figures 4 and 5) are thin strips two and a half inches wide. Nail one to one edge of the hull, then saw off the bow end on a line with the bow of the hull, and the stern end on the same slant as the bevel cut on the stern of the hull. With one side in place, nail on the second side and trim off its ends. The stern piece (C, figures 5 and 6) should be cut next to fit the slanted ends of the sides. The deck piece (D) extends from the bow almost to the center of the boat. Its top surface should be tapered off lengthwise, as shown, and be curved from side to side. The piece may be whittled or planed to this shape. Fasten it with brads to the top edges of the sides of the boat.

The propeller (E, figure 6) is cut from the side of a tin can. Cut a piece three inches long and three-fourths inch wide, round its ends, and, with the point of a nail, pierce a hole through it each side

of the center of the length of the piece (figure 7). To finish the propeller, it is only necessary to take hold of the two ends and twist the piece into the shape shown in figure 8. The propeller is mounted upon a short wire shaft one end of which is bent into a hook (F, figure 8). Stick the long end of this shaft through one hole in the propeller, and the hooked end through the other hole, then twist the hooked end over on to the main part of the shaft, as shown in figure 9.

The propeller is supported upon the bearing plate G (figures 6 and 10). Cut this out of a piece of tin one and a half

inches wide by three inches long, bend it in half crosswise to give it stiffness, and then bend it lengthwise to the angle shown, so it will fit over the slanted stern of the boat. Punch two holes through the upper end for nailing to the stern, and a hole at the lower end for the propeller shaft to run through. A couple of beads must be slipped over the shaft between the propeller and plate G, to act as a "thrusts bearing" (H, figures 9 and 11). Probably you can find a couple of glass beads in your mother's button bag. After slipping the beads on to the shaft and sticking the shaft end through the hole in bearing plate G, bend the end of the shaft into a hook; then screw a small screw-hook into the bottom of the hull of the boat at the bow end (1, figure 6), and you will be ready for the rubber-band motor. Rubber-bands about one and a half inches in length are best for the purpose. Loop these together, end to end, (figure 12) to form a strand that will reach from hook 1 to the hook on the propeller shaft; then form three more strands of this same length and slip the end loops of all four strands over the hooks.

The motorboat now is ready for its maiden trip upon a lake, river or pond. Wind up the motor by giving the propeller about 100 turns. Then keep hold of the propeller until you launch the boat.

### GOVERNMENT REQUISITIONS BUTTER.

Announcement has been made that the government will take over 60 per cent of all the butter now in cold storage in the United States for army and navy uses. It is predicted that this will have a marked effect upon the fresh butter market as the 40 per cent remaining in storage will scarcely be enough to steady the market.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**
For Subscription to The Washington Farmer
**25c** For 1 Year
**50c** For 3 Years
**$1** For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

# PUP CATCHES A CRIMINAL WITHOUT DELAY

# PATTERNS

2216—Dress for misses and small women. Cut in 4 sizes: 14, 16, 18 and 20 years. Size 16 requires 6 3-8 yards of 44-inch material. The dress measures about 3 yards at the lower edge. Price, 10 cents.

2598—Lady's dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 7 1-2 yards of 40-inch material. The skirt measures about 2 yards at the foot. Price, 10 cents.

2321-2319—Lady's costume. Waist 2321 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2319 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It will require 9 yards of 44-inch material for the entire dress for a 36-inch size. The skirt measures about 2 5-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2595-2597—Lady's costume. Waist 2595 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 yards of 36-inch material for a 38-inch size. Skirt 2597 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. Size 24 requires 3 1-4 yards of 36-inch material. It measures 2 yards at the foot. Two separate patterns, 10 cents for each pattern.

2515—Girl's coat. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. Size 12 will require 3 3-4 yards, of 36-inch material. Price, 10 cents.

1614—Child's set, comprising a yoke dress, a slip, and one-piece drawers. Cut in 4 sizes: 1, 2, 4, and 5 years. The dress requires 2 1-2 yards, the slip 2 yards, and the drawers 3-4 yard of 36-inch material, for a 2-year size. Price, 10 cents.

2601—Girls' dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 requires 4 yards of 36-inch material. Price, 10 cents.

Please fill in this order and mail with remittance to:

Be sure to give the pattern number and the correct size.

2592—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5 yards of 44-inch material. The dress measures about 2 3-8 yards at the foot. Price, 10 cents.

2606—Girl's dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 8 requires 3 yards of 36-inch material. Price, 10 cents.

2583—Lady's combination. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 2 1-2 yards of 36-inch material. Price, 10 cents.

2593—Boy's blouse suit. Cut in 4 sizes: 2, 3, 4 and 5 years. Size 4 requires 2 3-4 yards of 40-inch material. Price, 10 cents.

2357—Lady's cover-all apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 5 1-4 yards of 36-inch material. Price, 10 cents.

# The Crooked Trail

(Continued from page fourteen.)

The fugitives passed very near. To me there was something pathetic in their terror-filled eyes. Vic was eager to join in the chase, but I held her back.

Scarcely had the hard-pressed fugitives passed when the leading hound came by, soon followed by nearly a dozen others. So eager were they that they scarcely noticed me, even when I tried to scold them back.

Now for the first time I discovered a little drove of cattle lying between me and the the mountain—30 or 40 head. As the hounds approached the drove were all quickly upon their feet.

At first I thought the hounds had left the deer and were attacking the cattle; but a little later I discovered what was the matter. The doe and her fawn, being too nearly exhausted to climb the steep mountain, had taken refuge among the cattle. When the hounds came up, the cattle confronted them with a threatening array of horns. The dogs ran around, but everywhere they encountered that horned ring.

In vain the hounds tried to reach their intended victims. Not only could they not break through, but the moment a dog came too close a cow or a steer would rush out of the circle and chase him furiously for a hundred yards.

Public sentiment was against hunting deer at this time of the year; and as the owner of the pack did not come, I inferred that the hounds had gone hunting of their own accord.

Finding they could not penetrate that defensive ring, the dogs stationed themselves around the cattle, at a safe distance, and sat down to wait. Every now and then one of them would bay in that dismal, doleful way that only a flop-eared hound can bay. While I was still watching the interesting situation, moonlight began to give place to daylight.

Now I walked out toward the cattle and tried to call off the dogs. The one I approached only barked at me, which so provoked me that I moved around him to the foot of the mountain where stones were plentiful and began to let fly at him. Once started, I hurled stone after stone till the whole pack abandoned the chase and fled back the way they had come.

Soon afterwards the cattle moved off, and the doe and her young one, having rested, broke out of the group and bounded away up the mountain-side. Quickly they disappeared among the scrubby timber that covered those upper slopes.

While walking back to my camp, I was wondering how the deer had learned to avail themselves of the cattle's protection. Was this the first time the doe or any of her kind had made use of that experiment? Or had the deer learned long ago that the hostility of the horned animals towards beasts of prey was something that could safely be depended upon? Perhaps they had learned that when the first cattle came into the country. Possibly it was something they had known for ages, having found it out while the buffaloes were here, and when the wolves, the common enemies of both, had made it necessary for the defenseless deer to seek the companionship of their horned friends. But, however and whenever learned, it was certainly an ingenious and useful expedient.

By the time daylight had fully come, I had saddled Dick and was riding on in quest of my lost ox. With the dawning of morning my courage and determination, both of which had weakened a little during the hours of darkness, returned with full force. That ox must be brought back if I had to follow him to the "jumping-off place." And I should have need of all my determination; for, as the sequel proved, a long, difficult and even dangerous chase was ahead of me.

(To be continued.)

ECLIPSE

Your water tank always full—

for $1.65 a year

"It's a mighty still day when the Eclipse Wood Windmill will not pump some water into your tank." That's what one farmer said who has had an *Eclipse for 38 years.* It is still pumping *to day with no repair expense.* Figure the Eclipse water supply cost on the basis of service for at least 38 years—not the first cost—and you will have water the year 'round for about $1.65. The Eclipse is powerfully built—few parts—automatically controlled—all wood oil treated—practically storm-proof. Now go to your dealer and get all Eclipse Windmill and Tower facts.

YOU'LL GROW WALNUTS

if you see our nut crop this season. Our trees are loaded to the breaking point with nuts worth 30c per pound. If walnuts are ever to come out of the luxury class it is up to the farmers of the Northwest to plant more trees. We have an unusually good lot of Vrooman Franquettes grafted on California black roots with scions from our own bearing orchard. Wholesale and retail.

1009 First Ave., Seattle.

My Dear Corner Children: There is something I want to tell you about unless you have noticed it yourselves. So many of the cousins have hoped I had a pleasant vacation. I know every last one of you did, but so many spoke about it. That is courtesy and thoughtfulness.

Those who are thoughtful and courteous to others have a great advantage over those who are not. People like them better, and will do more for them. A kind heart, a bright smile and a thoughtful mind are good things to have, and every one of us can have all three. Lovingly, AUNT NELLIE.

**Belongs to the Red Cross.**

Dear Aunt Nellie: This is my first letter to the Corner and I hope it will not be the last. I am 10 years old. My birthday is March 19. My chum is Effie Luddington. My dolls' names are Marie, Della and my kewpie's name is Lester. I have five brothers and two sisters. My brothers' names are Clyde, Ralph, Paul, Howard and Harley. My sisters' names are Lottie and Ethel. Lottie is married. She has a baby four months old. He is very cute. His name is Virgil Louis Johnson. Clyde is my oldest brother. He will have to go to war soon. I like to have the Corner grow. I think the other cousins do, too. The flowers are going to seed fast. I have a war garden. The things I planted are lettuce, carrots, beets, tomatoes and cucumbers. I belong to the Red Cross. I am in the fourth grade. I will write more next time.—Evelyn Blye Kellogg, R. F. No. 1, Baird, Wash.

**Buying Thrift Stamps.**

Dear Aunt Nellie: My father takes the Farmer and I read the cousins' letters and enjoy them very much. I want to join the Children's Corner. May I? I like our cousin Gean's letters very much, and I wish she would write and tell us of her home in Alaska. My birthday is the fourth of June. I was 11 years old. I am in the fifth grade. Have I a twin? If I have I wish she would write. I would answer. I am a member of the Junior Red Cross. I have knitted 13 hospital mops. I have bought war savings stamps and I am buying thrift stamps. —Ena G. Cochran, Dixie, Wash. (Cousin Geanie has written to us about Alaska. The letter will be printed soon, so keep watching for it.—Aunt Nellie.)

**Marguerite Knows How to Knit.**

Dear Aunt Nellie: This is the first time I have written to the Corner. We take the Farmer and I like to read the letters. We live about eight miles from Twisp. I am 10 years old now and my birthday is January 15. Have I a twin? I go to school at Frazier Creek and am in the fourth grade. There are 20 scholars in our school. I have two sisters and three brothers. Their names are Alice, Gertrude, Henry, Albert and Eugene. We have quite a few cows and six horses. We have two dogs and five cats. We walk about a mile and a half to school. I know how to knit.—Marguerite Selde, Twisp, Wash.

**Boat and Horseback Rides.**

Dear Aunt Nellie: Will you admit another cousin to your little circle? I have never written to the Children's Corner before, but I always read the letters, which are very good. Last year we moved onto an Indian ranch of 320 acres. As we live near the Columbia river and have five horses we have lots of boat and horseback riding in the summer. Clista Casey, I don't blame you for liking Leta Houch, as she was also my constant friend and playmate for over two years. I was 13 years old October 21. Have I a twin? I will close, wishing the Children's Corner good luck.—Bertha Hardlick, Covada, Wash.

**Six Cute Little Bantams.**

Dear Aunt Nellie: I was nine years old May 27. This is the first time I have written to the Children's Corner. Have I a twin? If so I wish he or she would write to me. I have one sister. Her name is Bernice. She will be 13 years old July 19. My papa takes the Farmer. I enjoy reading the Children's Corner, also the story of "Trappers of the Ozarks." I live two and one-half miles from Latah. We have a little black pony named Dolly. We drive her to school. I have six little bantams. They are so cute.—Marguerite Anderson, Box 97, Latah, Wash.

**Two Sisters and a Brother.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I have two sisters and one brother. I am 10 and Carmen is 7. My birthday is December 27. Have I a twin? We live on a 160-acre farm. Papa has six horses. I have one two-year-old colt named Blossom. Papa is plowing.—Edwin Anderson, Corfu, Wash.

**Still Snow on the Mountains.**

Dear Aunt Nellie: This is my first letter to the Corner. I am 11 years old. I am in the sixth grade. My birthday is January 12. Have I a twin? If so, I wish they would write to me. We came to Dryden in our auto. We have great fun climbing the hills. There is a big hill right back of our house. We have a great big strawberry patch. The Wenatchee river is half a mile from our place. There is still some snow on top of some of the hills. We had a shower yesterday. Everything is fresh and green.—Martha Weber, Dryden, Wash.

**Skates on the Lake in Winter.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it won't be the last time. I was 12 April 21. Have I a twin? If so, I wish she or he would write to me. I have two brothers and three sisters. My brothers' names are Roderick and Willie, and my sisters' names are Iva, Alice and Mildred. We have two dogs, four kittens, about two dozen chickens, about 50 cows and 40 horses. We have a big house and there is a lake in front of our house that we skate on in the winter time.—Violet Gray, Wauconda, Wash.

**Pick Flowers on the Way.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it will not be the last time. I am 8 years old. My birthday is July 28. I have black hair and blue eyes. I have one sister. Her name is Florence. She is 2 years old and I have one brother named Albert who is 6 years old and goes to school with me. I am in the second grade and he is in the first. We go to school two miles. We walk and pick flowers on the way to school.—Rosie Wietz, Lancaster, Wash.

**Live With Grandpa on His Farm.**

Dear Aunt Nellie: There are three of us in our family besides mama. Our names are Edwin, 9 years old; Marion, 7 years old, and my name is June. I am 11 years old and was born the second of June. Have I a twin? We live with our grandpa on his farm. My uncle takes the Farmer. He lets me read it. May we become members of the Children's Corner?—June, Edwin and Marion Foster, Naches, Wash. (Three new cousins all in a bunch, and we welcome you all. Come again soon, won't you?—Aunt Nellie.)

**Brother Enlisted on His Birthday.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner, and I hope it won't be the last. I have one brother in the coast artillery. He enlisted on his birthday. I will be 12 years old August 25. Have I a twin? If I have I would like to hear from her. I know how to knit. I am going to knit a sweater right away for our soldier boys.—Eva Hickman, Farmington, Wash.

**Gladys Broke Her Arm.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, and I hope it will not be the last. I am 10 years old. My birthday is August 26. I have found one twin. Have I another one? Her name is Mildred Buxton. I will write to her. I broke my arm Monday, May 6. Well, as my letter is getting pretty long I will stop, with lots of love for Aunt Nellie and the other Corner cousins.—Gladys Strong, R. F. D. 1, Deer Park, Wash.

**In the Third Grade Next Year.**

Dear Aunt Nellie: I am a little girl 9 years old. My birthday is August 5. I have two brothers and three sisters. Their names are Ruth, Harold, Herbert, Mary, and Bertha. I will be in the third grade next year. We live on a 720-acre farm. We have 25 horses and 25 pigs. We have 15 cows and five milk cows.—Ella Sherfey, R. F. D. 3, Colfax, Wash.

**Fun to Write to the Corner.**

Dear Aunt Nellie: I will write again as my letter was in print. I have planted a war garden. How many of the cousins have war gardens? Some of my garden is up. I go to the Darden school. It is hot here today. My sister is writing to you. It is lots of fun to write to the Children's Corner. I will write again.—Eula Manis, Waitsburg, Wash.

**Auretta's First Corner Letter.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old. I have blue eyes, brown hair and a light complexion. My birthday is January 30. Have I a twin? If I have, I would like to hear from her. I live on a farm. I have one brother. His name is Verl. I am in the fourth grade.—Auretta Barnes, Route 1, Dixie, Wash.

**Mildred's Third Corner Letter.**

Dear Aunt Nellie: This is the third time I have written to you. I am 9 years old and will be 10 November 27. I have one brother in the war. I am in the third grade. Have I a twin? If I have I wish they would write to me. I have six sisters and three brothers. —Mildred Weaver, Wapato, Wash.

**Passes Into the Fourth Grade.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 7 years old. I passed into the fourth grade. My papa is working on the road crusher. I have a little brother 6 years old. We have two horses named Don and Maud.—Florence Whitney, Goldendale, Wash.

During the past week Aunt Nellie has received letters from the following cousins: Carl Tubb, Agnes Liere, Henry Besel, Ruth Noah, Mae Noah, Evalena Crouch, Hazel Emmett, Effie Van Potter, Elizabeth Cook, Bertha Walker, Alice Clifford, Alberta Raymond, Dessie Jones, Donald McDonald, May Sanders, Grace Yowell.

## Yearling Lambs on Stafford Farm

The above photo shows five Shropshire yearling ram lambs, owned by W. E. Stafford of Junction City, Ore., that sheared an average of 12 1-2 pounds of wool each. The flock averaged 11 pounds. Mr. Stafford has been breeding Shrops 18 years. He has a good type flock, but makes wool his first consideration and has never bred to a ram unless he knew how much wool it had sheared. The result is, he has a flock of Shrops that shear decidedly higher than the average flock of Shrops in these days when wool is so important, as well as profitable. H. A.

## News for Breeders

A stock-judging contest for boys was held at the Southwest Washington fair. There were six entries. Three breeds of dairy cattle were judged. Jens Svinth won first, with a score of 255 out of a possible 300, with Fred Gallup second, score 250.

George Bertrand of Castle Rock, Wash., had an object lesson in breeding with his herd of Shorthorns at the Southwest Washington fair the last week in August. Mr. Bertrand had a heifer calf sired by his herd bull, Gold Mine, out of a grade Jersey cow. The heifer, nearly a year old, had been well cared for, and could scarcely be told from a purebred Shorthorn. It has a good red color, with a little white, a Shorthorn head and a good beef conformation, yet with a good udder. Mr. Bertrand points to it as an example of what a good bull can do in a grade herd, and says it is the man with grades who most needs a high-class bull.

The Lewis County Pure Breeders' association has a good plan of meeting every month at the farm home of some member. It helps to keep up interest and invites friendly rivalry. The August meeting was at the home of Nathan Hamilton, Holstein breeder, near Chehalis. The regular midwinter meeting will be held in December at Chehalis.

Owing to the scarcity of men for cow-testing work in Belmont county, Ohio, a young lady is holding down the job for one association and is reported to be making good. H. A.

### OFFSPRING TO BE SHOWN AT FAIR.

The photo above shows the Poland China sow, Long Model, owned by Ray Fox, the Poland China breeder of Lyons, Ore., which was purchased from the Sievers herd of Iowa, and is not only a show sow of great quality, but has already proved herself a great brood sow by the litter she has raised for Mr. Fox. Her offspring will be shown in the futurity at the Oregon State fair.

Golden Lady 3d is another big type Iowa breed sow that Mr. Fox has a litter from, and they are almost, if not quite, as good as those out of Long Model. Besides these Mr. Fox has pigs sired by his great boar, Ike Knox, that will show well in any kind of competition.

Mr. Fox's pigs were growing rapidly, and just putting on flesh nicely when I was there. He will not only have the two classes allowed in both futurity and open competition this year, but will show some barrows sired by Ike Knox. H. A.

### BRUNK TO JUDGE HOGS.

Thomas Brunk, the veteran Poland China breeder of Salem, Ore., will judge all breeds of hogs at the Oregon State fair again this fall. This will make four years in succession that Mr. Brunk has judged at this hog show, where he began exhibiting about thirty years ago.

Mr. Brunk judged hogs at the Interstate fair at Spokane, Wash., also and both hogs and sheep at Salt Lake, Utah. This makes the eleventh time in twelve years that Mr. Brunk has judged at Spokane. He will act as judge at the Pacific International at N. Portland for the third time.

### FINE YOUNG BULL CALF.

M. J. Walthers, superintendent of Von Heim farm, at Kent, Wash., reports that Von Heim Mary Hartog, the world's record Holstein for butter production, has just become the mother of a fine young bull calf, sired by Finderne Mutual Fayne Valdessa, the junior herd sire of Von Heim farm for which Von Heim farm bid $21,000 at a Portland sale, nearly two years ago.

### RAM SALE AT FILER.

About 2000 head of imported stuff, consigned by H. L. Finch of Soda Springs, Idaho, and R. S. Blastock of Walnut Hall farm, Kentucky, were disposed of at the recent ram sale of the Southern Idaho Wool Growers' association recently.

### HEAVY YIELDS OF BARLEY.

Reports from Minnesota and South Dakota speak of exceptionally heavy yields of barley and oats as a source of supply for western North Dakota and Montana, where the feed crops have been a failure.

## SHEEP

# Breeders' Department

## JERSEY CATTLE

### A GRANDLY BRED CALF

Doerfler Farms offers a great line-bred Jersey calf, dropped August 17, 1918. Solid color, dark tongue and switch, and very typy.

His sire, GERTIES POPPY'S ST. MAWES, is by Poppy's St. Mawes, sire of 5 register of merit daughters, including Poppy's KOFFEE ROSAIRE, 575.18 lbs. FAT at 2 years, 1 month; Poppy's Olga, 427.10 lbs., at 1 year 11 mo., and Poppy's St. Mawes Waltz, 436.98 lbs., at 2 years.

**POPPY'S ST. MAWES** is by **ROSAIRE OLGA LAD,** sire of St. Mawes Beauty, 773.93 lbs. fat; St. Mawes **TISHA BABE,** 731.51 lbs.; St. Mawes **SUSIE OLGA,** 698.49 lbs.; **ST. MAWES BLOSSOM ROSAIRE,** 685.11 lbs.; **ST. MAWES WALTZ,** 678.62 lbs.; **ST. MAWES ROSE,** 667.79 lbs., and 19 others, five producing bulls and one producing daughter.

**ROSAIRE OLGA LAD'S** sire is Pride Olga 4th's son, sire of 12 R. of M. daughters, and his pedigree contains the names of the great foundation cows, **GERTIE OF GLYNLLYN, PRIDE'S OLGA** and others, and such great bulls as **STOKE POGIS OF PROSPECT, MELIA ANN'S STOKE POGIS,** etc.

**POPPY'S ST. MAWES'** dam is the great cow, **ST. MAWES POPPY,** 952.58 lbs. fat, from 15,782 lbs. milk at 9 yrs. 2 mos. She is dam of one R. of M. daughter and two other producing sons. Won **A. J. C. C.** gold and silver medal for production 1914, and champion cow 1916. She is by **ST. MAWES,** sire of 20 R. of M. daughters, with average of 572.95 lbs. fat, highest average for Jersey breed for bull with 20 or more tested daughters and one of the greatest bulls in the history of Jerseydom.

The calf's dam, **GWENDOLA ROSAIRE,** is by **ROSAIRE OLGA LAD,** mentioned above. On her dam's side are such great bulls as **KING KOFFEE'S COUNT, CROTON'S TORMENT,** etc. She has an official record of 648.14 lbs. fat and 11,415.3 lbs. milk in 354 days, made at 4 yrs. 5 mos., and had this calf 2 months before finishing this test, which reduced her record at least 100 lbs. fat. She has an average test of 5.68. She won the $50 silver cup presented by R. L. Burkhart for the highest cow in 1917, being a new official test member, 1916. She is now milking as high as 54 lbs. a day and promises to produce 800 lbs. fat for this year's test.

**GWENDOLA ROSAIRE'S** full sister produced a daughter that made over 800 lbs. fat and we have a full sister in blood to the 800-lb. cow.

DOERFLER FARM JERSEYS have the highest herd average in the world, considering size and entire herd on test. The 11 head average 599.42 lbs. fat, 11,352.5 milk. WE STAND BACK OF EVERYTHING LEAVING THIS FARM. See us at the Oregon State fair. For price and further particulars write

### DOERFLER FARMS

F. A. DOERFLER, PROP. SILVERTON, ORE.

### HE MUST BE SOLD

Bull calf, dropped July 26, 1918; sire, St. Mawes Koffee Violet Lad, whose dam's official record is 777 lbs. fat, or 914 lbs. 85 per cent butter, or 971 lbs. 80 per cent. He is a show bull, and his sire, Rosaire Olga Lad, has 27 Register of Merit daughters. The calf's dam is a Register of Merit cow, and he should be worth $200.
Will be sold for only $75, if taken at once.

WARD L. HULL. Ballston, Ore.

## HOLSTEIN CATTLE

# OPPORTUNITIES IN HOLSTEINS

**October 16, 1918 Scappoose, Ore.**

Seventy head registered Holsteins at auction, including herd bulls, cows, heifers and calves, both sexes—some good enough to win in any show ring and heavy producers.

The blood from this herd is represented in most of the herds in the west and this sale gives YOU an opportunity to secure your choice at prices set by the public. Catalogue giving full description of the cattle to be sold and how to reach the sale will be published. Send request to sale manager and one will be mailed when published.

Certificate of health for each animal will be given by federal inspector.

### FEED FEWER COWS— BUT FEED BETTER COWS

With Von Heim High-Testing Holsteins your revenue is not alone in milk and butter; the really big profits are in the increase of the herd. Some fine young bulls and females from world's record stock. Photos, pedigrees. Information gladly given. Address

H. J. WALTHER, SUPT.
**VON HEIM FARM**
KENT, WASH.
HOME of HIGH-TESTING HEAVY PRODUCING HOLSTEINS

### The HOLLYWOOD FARM Offers Four Registered Holstein Bulls

**Ready for service** **Well marked**
**Bred for production** **Straight on top**

Their Dams have official records of 20.3 lbs., 21.02 lbs., 23.02 lbs., 22.7 lbs. butter in 7 days, with lots of milk.

The average of the official records of their 4 nearest dams is:

**Bull No. 779—7 days' milk, 523.5 lbs.; butter, 26.1 lbs. Average test, 4.0% fat.**
**Bull No. 780—7 days' milk, 553.8 lbs.; butter, 28.8 lbs. Average test, 4.1% fat.**
**Bull No. 784—7 days' milk, 542.4 lbs.; butter, 28.69 lbs. Average test, 4.4% fat.**
**Bull No. 785—7 days' milk, 461.0 lbs.; butter, 26.3 lbs. Average test, 4.5% fat.**

To make room for our increase, these Bulls are priced to sell. Consider the high feed prices and raise only high producers.

Near Seattle.

**HOLLYWOOD, WASH. HOLLYWOOD FARM.**

### TEN GOOD HOLSTEIN COWS

All of excellent breeding. Three extra heavy producers, and all good. Seven safely in calf to Tobie DeKol 2d's Johanna Duke, a 75 per cent brother to Lady Tobie DeKol, once world's record senior 3-year-old, and sire of Jantilna Colantha Johanna, 22.5 pounds butter in seven days as junior 2-year-old, besides other A. R. O. heifers of fine type. Come and see them or write for full particulars and pedigrees. Will be sold below their value together or singly.

**HERMAN KEUNZI, Silverton, Ore.**

### 365 DAY HOLSTEINS

We are offering a bull calf, born June 27th, the two nearest dams of which average 19,866 lbs. milk, 855 lbs. butter for their yearly A. R. records. One a Jr. 2, the other a junior 4-year-old. The herd with yearly records.

**WESTERNWOLD RANCH, Prineville, Ore.**

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

**H. R. BOOMER, New Plymouth, Idaho.**

### HOLSTEINS

Well bred young bulls for sale.

**THOS. CARMICHAEL, Gaston, Ore.**

## PERCHERON HORSES

### Hunter Ranch Percherons

The Grand Champion KROUMIR at head of herd. Young stallions for sale at all times at breeders' prices.

**A. B. HUNTER, Island City, Ore.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Sept. 14.—Favorable war news and better weather gave a decided advantage today to the bears in corn. Largely as a result the market finished nervous, 1c to 3c net lower, with October at $1.52½@$1.52⅝ and November at $1.49⅞@1.50⅛. Oats lost ⅛c to ⅜c. The outcome in provisions varied from 10c decline to 12c advance.

Higher quotations on hogs strengthened provisions. In the late dealings, however, pork evinced something of a tendency to sag.

**Cash Quotations.**

CHICAGO, Sept. 14.—Corn—No. 2 yellow, $1.65; No. 3 yellow, $1.64@1.65; No. 4 yellow, $1.57@1.59.

Oats—No. 3 white, 70½@71½c; standard, 71¼@71¾c.

Rye—No. 2, $1.63@1.61.

Barley—93c@$1.04.

Timothy, $7@10; clover, nominal; pork, nominal; lard, $27.07; ribs, $23@23.60.

**Pacific Northwest Grain.**

PORTLAND, Sept. 14.—Grain—September delivery bids: Oats, No. 2 white feed, $60.25; barley, standard feed, $51.50; A, $52.50. Eastern oats and seed corn in bulk: Oats, No. 3 white, $52.50; 38-pound clipped white, $52.50; corn, No. 3 yellow, $69.50; mixed, $68.50. October bids: Oats, No. 2, $60; barley, feed, $52; A, $53; oats, No. 3, $52.50; clipped, $53.50; corn, yellow, $69; mixed, $68.

Today's car receipts—Wheat 48, barley 7, flour 9, oats 2, hay 3.

SEATTLE, Sept. 14.—Yesterday's car receipts—Wheat 25, oats 5, corn 2, hay 16, flour 7.

TACOMA, Sept. 14.—Car receipts—Wheat 8, oats 3, hay 9.

**Minneapolis Wheat.**

MINNEAPOLIS, Minn., Sept. 14.—Flour unchanged; shipments, 73,636 barrels.

Barley—84@89c.

Rye—$1.59½@1.60½.

Bran—$29.31.

Wheat receipts, 550 cars, compared with 279 cars a year ago. Cash, No. 1 northern, old, $2.22.

Corn—No. 3 yellow, $1.62@1.65.

Oats—No. 3 white, 68¼@69¼c.

Flax—$4.12.

## Spokane Livestock Run.

SPOKANE, Wash., Sept. 14.

| | Cattle. | Calves. | Hogs. | Sheep. |
|---|---|---|---|---|
| Saturday, Sept. 14.... | 139 | 18 | 29 | 8 |
| Friday, Sept. 13..... | 173 | 75 | 144 | 5431 |
| Thursday, Sept. 12... | 78 | 7 | 208 | 167 |
| Wednesday, Sept. 11.. | 331 | 18 | 201 | 2061 |
| Tuesday, Sept. 10.... | 270 | 1 | 169 | 1194 |
| Monday, Sept. 9..... | 134 | 19 | 101 | 13 |
| Week ago ..... | 114 | 19 | 13 | 245 |
| Year ago ..... | 145 | 4 | 38 | .... |
| Two years ago..... | 79 | .. | .. | 67 |

Six carloads of cattle offered Saturday and the trading was quick and active. Most offerings were canner cows, with but few good animals in either the cow or steer classes. The offering being a little one-sided, the regular demand seemed wanting. The cattle market remains unchanged at the following:

| | |
|---|---|
| Prime steers ..... | $12.50@13.25 |
| Good to choice steers..... | 11.00@12.00 |
| Medium to good steers..... | 10.00@11.00 |
| Fair to medium steers..... | 8.50@ 9.50 |
| Common to fair steers..... | 5.50@ 8.00 |
| Choice cows and heifers..... | 8.25@ 9.25 |
| Medium cows and heifers..... | 6.25@ 7.75 |
| Canners ..... | 3.00@ 5.00 |
| Bulls ..... | 8.00@ 7.25 |
| Calves ..... | 7.00@10.00 |
| Stockers and feeders..... | 6.00@ 8.00 |

The run of hogs was extremely light. A few bunches of stocker and feeder hogs met sale at $18 per cwt. Former quotations remain unchanged as follows:

| | |
|---|---|
| Prime mixed ..... | $19.85@20.00 |
| Rough heavy ..... | 19.25@19.60 |
| Pigs ..... | 18.25@19.00 |
| Stockers and feeders..... | 17.00@19.00 |

The sheep division was almost entirely free of offerings. A few lambs averaging 93 pounds were weighed at $14 per cwt. The sheep market is active and steady as follows:

| | |
|---|---|
| Prime lambs ..... | $14.00@15.00 |
| Fair to medium lambs..... | 11.50@12.50 |
| Prime yearlings ..... | 10.00@11.00 |
| Prime wethers ..... | 9.50@10.00 |
| Best mutton ewes..... | 8.00@10.00 |
| Breeding ewes, 1 to 4 years old... | 14.00@18.00 |

Saturday's shippers: I. J. Davis, Trout Creek, Mont., 1 car of cattle; George Brown, Trout Creek, Mont., 1 car of cattle; W. D. Johnson, Quincy, Wash., 1 car of cattle; H. C. Miller, Ephrata, Wash., 1 car of cattle; B. C. Beard, Ephrata, Wash., 1 car of mixed cattle, hogs and sheep.

Driven in: Baker & Hadley; W. F. Runkle.

## Seattle Market.

SEATTLE, Sept. 14.—Inclination of Puget sound potato growers is to reject bids of $30 to $35 and hold in dirt pits until spring unless they can realize $35 to $40. As a result, the market is unsettled. There is a big crop.

Fall pears are superseding the summer offerings, d'Anjou predominating at $3 per box. Jobbers are storing heavily good keeping fall pears for the winter trade, and surplus stock is being well taken care of. The local Bartlett season is closed. Oreas Island winter pears, a 10-carload crop, are soon due.

The tendency of the apple market is stronger. Prices that prevailed during the early trading have receded slightly as between various dealers without affecting the f. o. b. quotations due to too much slack in the profits. The decline of the week of 25c has adjusted this condition. Cash buyers are again becoming active.

The coloring process in the orchards is proceeding at a much slower pace than expected, and in place of an early delivery growers now state that they will be on the market at the customary time. General start in picking will be made Monday.

The butter, egg and cheese markets closed for the week at a much firmer tone. The supply of fresh ranch eggs has not been out of line with the five-year average, but the demand continues to be abnormal. Jobbers recalled that the market for fresh eggs is today 15 cents per dozen higher than for the same date last year.

Storage eggs are selling more freely, the spread between fresh and Aprils having become so marked that a heavier movement was obvious. Notwithstanding the buoyancy of the quotations for fresh stock the prices of storage eggs have remained unchanged.

There was so pronounced a shortage all week of fresh butter that the market, according to jobbers, should have advanced 2 to 3 cents over the one-cent incline, but quotations were held stationary while rigid.

Poultry prices to producers will remain unchanged for next week. There is a heavy demand for hens and light springs. The bulk of the poultry offering on the market comes from eastern Washington.

The high egg returns has been something of an inducement in preventing ranchers from selling off their poultry, as indicated earlier in the season, due to high and scarce poultry feed. Jobbers in reviewing their receipts for the last week declare that there is no visible increase in the arrivals of good laying hens.

The cheese market is firm, with the bulk of selling of Oregon and Washington triplets at 39c. Some of the sharp stock remaining in the hands of jobbers and bought in a lower market is selling at 28c.

**Purchasing Prices.**

Eggs—Select ranch, 59@60c per doz.; Oregon, eastern Washington and Idaho, nominal.

Butter—Fresh dairy, 31c per lb.; butter fat, 50c per lb.; bakers', 38c per lb.; raw milk, $3 per cwt.

Poultry—Broilers, live, 1918, 30c per lb.; hens, 3 1-2 to 4 lbs. and up, 27c per lb.; under 3 1-2 lbs., 25c per lb.; old roosters, 17@18c per lb.; ducks, live, fat, 23c per lb; squabs, large, $3.50 per doz.; geese, fat, live, 21@22c per lb.; Belgian hares, 12@16c per lb.; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 30@35c per lb.

Hogs—Light, 21@22c per lb.; heavy, 19@21c per lb.

Beef—Steers, fat, 14@15c per lb.; heifers, fat, 14@15c per lb.; cows and bulls, 11@14c per lb.

Veal—Fancy, light, 20@21c per lb.; do, heavy, 13@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

## Livestock Quotations

**At Portland.**

PORTLAND, Ore., Sept. 19.—Cattle—Firm; receipts, 100 head. Steers, prime, $12@13; good to choice, $11@12; medium to good, $9.75@11; fair to medium, $8.25@9.25; common to fair, $5.75@8.25; cows and heifers, choice, $8@9; medium to good, $5.75@7.25; fair to medium, $4.75@5.75; canners, $3@4; bulls, $5@8; calves, $9@12; stockers and feeders, $6@8.

Hogs—Steady; receipts, 237 head. Prime mixed, $19.50@19.75; medium mixed, $19@19.25; rough heavy, $18@18.35; pigs, $16@17; bulk of sales, $19.35@19.50.

Sheep—Steady; receipts, 3216 head. Prime lambs, $13.50@14.50; fair to medium, $11@12; yearlings, $10@11; wethers, $9@10; ewes, $6.50@8.50.

**At Chicago.**

CHICAGO, Sept. 14.—(United States Bureau of Markets.)—Hogs—Receipts, 8000 head; market 5c to 10c higher than yesterday's average; top, $20.90, a new record; butchers, $20.30@20.85; light, $20.60@20.90; packing, $19.65@20.20; rough, $18.75@19.50; pigs, good to choice, $18.75@19.50.

Cattle—Receipts, 3000 head; compared with a week ago: Prime native steers, steady to 15c higher; steers selling between $16 and $18 25c to 50c lower; cheaper grades and western, steady to 25c lower; cows and heifers, 25c to 40c lower; calves, 25c to 50c higher.

Sheep—Receipts, 1000 head, compared with a week ago: Top lambs and yearlings, weak to 25c lower; feeding lambs, 50c to 75c lower; fat and breeding sheep, steady; feeding sheep and yearlings, firm to 25c higher.

**At North Salt Lake.**

NORTH SALT LAKE, Utah, Sept. 12.—Cattle—Receipts, 45 head. Choice heavy steers, $11@12; good steers, $9.50@10.50; fair steers, $8@8.50; choice cows and heavy heifers, $7.50@8.25; fair to good cows and heifers, $6.50@7.25; cutters, $5.75@6.25; canners, $4.75@5.50; fat bulls, $6.50@7; bologna bulls, $5.50@6.25; veal calves, $9@11.

Hogs—Receipts, 75 head. Choice fat hogs, 160 to 250 pounds, $19.25.

Sheep—Choice spring lambs, $14@15; wethers, $9@10; fat ewes, $8@9.

**At Seattle.**

SEATTLE, Wash., Sept. 14.—Cattle receipts were 240 head, all on the open market. A mixed shipment from Montana was the feature of the trading, although the lot was secondary. Two bunches of steers brought $12.65. Packers are willing to bid up strong for prime finished steers and cows and would pay a bonus for good quality.

Hog receipts, 175 head, all on contract direct to packers. Quotations are steady.

Cattle—Best steers, $11@13; medium to choice, $10.50@11.50 common to good, $8@8.50; medium, $5@7.50; bulls, $5@7.50; calves, $5@10.

Hogs—Prime light, $19.75@20; medium to choice, $19.50@19.60; medium heavy, $19.50@19; rough, $17.50@18; pigs, $17.50@19.

Sheep—Spring lambs, $13@15; yearlings, $9@12; ewes, $6@9.

## Portland Market.

PORTLAND, Ore., Sept. 14.—Print butter prices were raised 2 cents by city creameries, and the buying price of butter fat is also up 2 cents. This has likewise strengthened the cube butter market.

Sales of fresh Oregon eggs are dragging, with 51 cents the outside price. Shortage withdrawals are on a larger scale and offered at 43@45 cents, the legal limit. Eastern eggs are also plentiful.

Poultry cleaned up well at the close of the week on account of the Jewish holiday. Dressed meats held steady.

Yakima cantaloups are in the market and offerings at $2@2.50. Oregons are bringing $1.75@$2 and Californias $1.75.

There is no new feature to the potato trade, the market being well supplied. Burbanks are quoted at $2.50@3.25, according to quality. Onions continue weak.

Hop picking is under way in a number of yards, but fully half the crop will be abandoned. It is figured that 15,000 bales may be picked. About 10,000 bales represent contract sales. Other growers who are saving their crops will store them in the hope of some kind of a market after the war.

Wool valuing will be resumed by the federal administration here on September 24.

Butter—Cubes, extras, 53c; prints, 56@58c; butterfat, No. 1, 60c, delivered.

Eggs—Oregon ranch, candled, 48@51c; selects, 53c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 29c; Young Americas, 30c per lb.; Coos and Curry, f. o. b. Myrtle Point, triplets, 28 1-2c; long horns, 29 1-2c per lb., 1-4 discount to Portland trade.

Poultry—Hens, 26@27c; broilers, 26@28c; ducks, geese and turkeys, nominal.

Pork—Fancy, 26 1-2@27c.

Veal—Fancy, 20@21c per lb.

Potatoes—Oregon, $2.50@3.25 per cwt.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30 per ton; valley timothy, $29; alfalfa, $27; valley grain hay, $26@27; clover, $28; straw, $9@10.

## Butter and Eggs.

PORTLAND, Ore., Sept. 14.—Butter—Prints, extras, 56@58c; cubes, extras, 53c; prime firsts, 49c; dairy, 36c.

Butterfat, Portland delivery, No. 1 sour cream, 60c.

Potatoes, selling price, locals, $2.50@3.25.

CHICAGO, Sept. 14.—Butter unchanged. Eggs—Receipts, 5515 cases; unchanged.

SAN FRANCISCO, Sept. 14.—Butter 55@58½c.

Tomatoes, $2@2.50 a lug; celery not quoted; Australian brown onions, $1.50@1.70 cental; green corn nominal.

## SHEEP SCAB IS DISCOVERED.

The discovery of sheep scab in at least two of the large flocks on the ranges of central Washington resulted in a conference of the Washington Wool Growers' association in Yakima recently, the object of the meeting being to devise ways and means of stamping out the trouble and preventing its spread. Dipping of sheep will be used as a preventive and curative measure and sheep men are cautioned not to cross the trails used by the infected flocks. Representatives of the state department of agriculture are cooperating with the sheepmen.

## CORRECTION.

The August 29th issue of this paper contained an advertisement of Hayward O. Bair, featuring Dayton Airless Tires. The add was run without an address and should have mentioned that replies should be sent to Mr. Bair at W619 Second Ave., Spokane, Washington.—Adv.

# Stockmen's Smoker

## Is Well Attended at Walla Walla

The stockmen's smoker at the commercial club rooms Thursday evening September 12, during the Walla Walla fair, was quite largely attended by both club members and stockmen. And from it undoubtedly the good feeling already existing was increased, the fair spirit made stronger and the live stock industry encouraged.

E. L. Smalley, former president of the club, presided. He first called on E. C. Burlingame, who spoke of the growing interest in purebred stock and said we must have better stock on high-priced land.

Professor Willard, Northern Pacific development agent, expressed surprise at the quality of the stock and said it could show in the strongest company. He believed the time would come when there would be some kind of live stock on every Walla Walla valley farm.

Forester L. E. McDaniel, who was superintendent of the stock show, while complimenting the stock exhibited, said he was surprised that more stockmen did not realize the advantage of the Walla Walla fair. He said Walla Walla is the geographical center of the northwest live stock industry and must grasp the opportunity.

F. M. Rothrock of Spokane spoke in the highest praise of the show and of the treatment accorded himself and other exhibitors.

Horace Addis of the Washington Farmer referred to the high quality of individual animals and spoke of the educational value of stock shows.

Secretary L. L. Lynn told of some of the trials encountered and expressed gratitude for the cooperation of all. He promised a still better fair next year.

C. D. Minton of the Pacific Homestead told of the great opportunity Walla Walla has to become a live stock center. He urged encouragement of the boys and girls.

The chairman told of the manner in which $35,000 had been raised in city and county to finance the show.

Professor C. E. Monroe, assistant state leader of county agents, paid a high compliment to the stock shown.

Mr. Hanna, in charge of the W. S. C. herd, told of the fact that all the animals he was showing but one were bred at the college, and this one was calved on the college farm. He urged support of this college.

Major D. F. Powell said he had learned something, and now hoped to see Walla Walla stockmen go and win at other fairs.

Mr. Robinson, a sheep breeder and director of the old fair association, was proud to see what a good show had been made. He was glad of this spirit of fellowship, and said the man who sticks to the live stock business will win.

S. V. Davin, a sheep breeder, and several others spoke briefly. Punch was served, and several musical numbers were greatly enjoyed.

**SHIP** your cattle where they will bring you the most money.

OUR northwestern customers have found Kansas City their best market. We specialize on Oregon, Washington and Idaho cattle.

WRITE or wire us for market information at any time.

**WITHERSPOON-McMULLEN L. S. COM. CO.**

**Stockyards Station, Kansas City, Missouri.**

**HIDES** **WOOL, PELTS, MOHAIR, CASCARA BARK**

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day as goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not inflated values.

**THE H. F. NORTON COMPANY**

206 Third Ave. So., SEATTLE, WASH. PORTLAND, ORE. NAMPA, IDAHO.

The surface of any spindle shows rough through the microscope. But the powdered mica in Mica Axle Grease fills up this roughness and makes spindles smooth as glass. Then the grease works better and lasts twice as long. No hot boxes. Get a can from your dealer today.

STANDARD OIL COMPANY (California)

**MICA AXLE GREASE**

# Harvest Work Finished

(Continued from page eight.)

road connections are once established between the different communities of the county, our organizations will take up the fair proposition. On the whole our community is a very prosperous one. We may be able to show some of our prosperity when the fourth Liberty loan comes to us the latter part of the month. While we should like to be able to ship in some of the above stated classes of feed, we are not hard hit and if necessary we can sail through the winter without undue hardships. Farmers and business men are responding remarkably well to support a new organization known as the Wahkiakum County Development league. Through this organization it is hoped that sufficient pressure can be brought to bear on the powers that be, to the end that recognition can be given to this corner of the state, and road connections with the outside world granted. A. T. FLAGG.

**FEED IS SHIPPED IN.**

STEVENSON, Skamania County, Wash., Sept. 6.—Our crops are poor; no grain worth mentioning. Hay is short and feed is now being shipped in in quantities. Why is it with a much better crop of grain than last year, we can not get any shorts or mill feed as we did last year? The shorts are nothing but ground bran, but we pay the price for them all right. Our section is hard hit by the conditions of the times as we do not produce much grain hay or farm products and with the exorbitant prices prevailing, it is proving a serious handicap to the lumbering and timbering interests which are our main resources. Interest in fairs is completely "nil" in this county. W. T. JACKSON.

**Raise Record Corn Crop.**

GRANDVIEW, Yakima County, Wash., Aug. 23.—Some are preparing exhibits for the fair at Yakima. There should be a splendid exhibit of corn from this part of the valley, as there has never been better corn raised here. This vicinity is fairly prosperous. There is not more than one-third of an apple crop; pears are a short crop, and there are no peaches. Hay is pretty good. There are not many hogs. Those that feed grain and mill feed will have to ship in most of that kind of feed. E. H. FAULKNER.

**Production Is Below Normal.**

CHIMACUM, Jefferson County, Wash., Aug. 26.—In this part of the state the interest in fairs is overlooked this year to some extent. This county is going to have a small fair this year, but on account of a poor growing year, etc., we do not look for many exhibits. This year will not nearly be in proportion to the premiums offered at the fairs. This community has been hit hard this year by the drouth. Threshing is just starting and yields are not up to the expectations of what they should be. Some hay is being bought now, but on account of high prices much of the stock will be wintered on straw. There seems to be grain enough raised to supply seed enough and more, too, for this locality. The women are doing their part to help the labor shortage, a number milking cows and are doing very satisfactory work. JOHN VAN TROJEN, JR.

# Steamers for Wheat

## Shipping Board Will Allot Ten

News that the shipping board will allot 10 steamers to move flour and wheat cargoes from north Pacific coast ports has relieved millers, who feared the plants would have to be shut down. Large flour stocks have accumulated, owing to the government's delay in buying export flour. The order also means that the mill-feed situation will be improved. At the present time there is no millfeed on the local market. Country mills are selling all their output in their own territory.

The coarse grain markets at Portland were about steady at the close of the week. Bids were posted of $60@60.25 for sacked oats, $52.50@53.50 for bulk oats; $68@69.50 for bulk corn, $52 for feed barley and $53 for standard A barley.

The hay market is barely steady. Receipts have been running very large, but have been fairly well absorbed.

**MOHAIR TOO HIGH FOR GOVERNMENT.**

Lewis Penwell, chief of the wool section of the war industries board, explaining why the government has decided not to take over the mohair crop, says it is entirely due to the price. Mohair growers declared they could not afford to take less than 85 cents a pound, and that is more than it is worth to the government, according to Mr. Penwell. The government, he said, does not feel justified in fixing an arbitrary price below the cost of production.

**FREE FRENCH WORD BOOK.**

By enclosing a two-cent stamp for return postage every reader of The Washington Farmer may receive free a booklet of French words and phrases. Direct your letter to The Washington Farmer Information Bureau, Washington, D. C.

HIDES WOOL FUR

RUBBER METAL SACKS

We pay full market value, correct weight and assortment, prompt returns. Write for prices. We want your business.

PACIFIC HIDE & FUR DEPOT

Your Local
HOME PAPER
and Your State
FARM PAPER
at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

YOUR HOME PAPER
brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

YOUR FARM PAPER
brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |

A group of Adcox students.

# What Are You Going to Do?

Otto R. Daniels, now instructor for Uncle Sam.

If you go can you serve Uncle Sam in the auto, gas engine, or aviation department.? What are you going to do if you stay? The other fellow that goes must quit his job in the garage or repair shop. Can you take his place? Have you the knowledge? If not read this page.

18th Aerial Squad, Rockwell Flying Field, North Island, San Diego, California, February 2d, 1918.

Adcox Auto & Gas Engine School.
Union Ave. and Wasco Street, Portland Oregon.

Dear Mr. Adcox:

When you handed me my diploma as a graduate from your school, I went home to the farm near La Crosse, Washington, and repaired a few small engines, such as one-cylinder, and at harvest time got a job running a threshing engine and got by with it fairly well. I enlisted in the Aviation Signal Corps in November, 1917, and was sent to Fort George Wright, Spokane; from there to Kelly field No. 1, San Antonio, Texas, where I passed a trade test as gas engineer, and transferred here.

While only a private, I am assistant instructor and am teaching first-class sergeants. I am in the magneto department, where most of the magnetos are Berling, with some Bosch and Dixie. I give your school and you credit for these results.

Otto R. Daniel.

## IF THE MOTOR CAR PRODUCTION IN THE U. S. WAS STOPPED RIGHT NOW

**there would not be enough mechanics left to keep the 5,000,000 autos and 400,000 trucks now in use in repair, not to say anything of the 70,000 tractors now in service. After the war the auto and tractor business will be greater than ever. Auto and gas engine men can readily see why the wages will be better than ever before. Because after the war is over the opportunities all over Europe will be so alluring that thousands of the best mechanics will go to new fields. To keep mechanics here will be almost impossible, regardless of how big the pay. Automobile concerns, realizing they are confronted with this problem, are already beginning to train women. We, too, are aware of this necessity, so we have opened a**

## Special Department for Women

**Look at the proposition from any angle. Think what it means to you! If you take my course of instructions you will be prepared. IN THE ARMY or OUT OF THE ARMY, DURING THE WAR and AFTER THE WAR your services will be in demand if you have gas engine knowledge. This knowledge is yours if you want it. What I have done for Otto Daniels, Grant Farris and many, many others I can do for you. Clip the coupon below and mail it to me today and you will immediately receive my new 100-page catalog and a letter from me that will make you a friend of mine from the start.**

Camp Holibird, Baltimore, Md., August 17th, 1918.

Dear Mr. Adcox:

I enclose a picture of myself in uniform and wish to advise am working in the Ignition Department, which is composed of a unit of 44 men. It is the best detail in camp, and I am extremely lucky to get in this unit.

We have charge of all electrical work on trucks and automobiles, including carburetors, except storage battery.

When I first came here and was classified, I told them I had a diploma from your school, which I feel sure is the reason I was picked for this class of work, for I know it was not on account of the experience I had had previous to entering your school.

I certainly am glad I took the course in your school, and will gladly recommend it to any one wanting to go to an auto school.

By the time this reaches you our department will have a space to itself in the new shops that are equipped with the most modern equipment for testing and repairing trucks and automobiles.

I am glad your school is growing, and wish you the best of success in every way.

Grant Farris

A. M. M., R. S. U. No. 306, Company No. 3, Bks. 417.

Grant Farris—read how he is serving Uncle Sam—says my course did it.

First graduating class women's department.

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

BERKELEY, CALIFORNIA,
Sept. 10, 1918.

TO THE AMERICAN FARMER:

American farmers will buy Liberty Bonds with all the money they can spare from their patriotic business of food production because their country needs their money to protect human civilization, which is embodied in American national life and purposes, from the correlated menaces of autocracy and anarchy.

American farmers will lend their surplus earnings to their government because the birth of the United States, its early development, its survival of dangers at middle life and the greatness of the attainments of its national maturity are due more largely to the devotional and constructive patriotism of American farmers than to the acts of citizens of all other vocations combined.

American colonial farmers won the Revolution and declared the land free of feudalism; their grandsons won the Civil War and declared manhood free from slavery; their great grandsons won the war with Spain and declared all Americans free from foreign domination; their great, great grandsons are now at war to win world-freedom and democracy. What four generations of American farmers have created and maintained is now up to the fifth generation of them to make universal and securely establish for all time to come.

All these generations are not of the flesh; they are generations of the spirit which makes all American farmers of 1918 yearn for service and sacrifice for human freedom and equal opportunity—whencesoever from world-streams of true humanity their ancestral blood has been drawn. Thus the American farmers of 1918 are the spiritual offspring of the colonial farmers of 1776 and the obligation rests upon them to complete the world-work which their spiritual ancestors began. They owe to God and their country generous return for the ancestral service which made them free and prosperous!

Uncle Sam calls upon the American farmers to lend their surplus earnings and profits to make human liberty secure. He does not commandeer their gains from them, as from citizens in some other vocations because he is assured that these gains have been well, honestly and patriotically earned. He calls upon you farmers as loyal sons of the soil to lend your surpluses for the good of all mankind and he promises to pay you as wages for your money what your country can reasonably afford to pay and to recognize national obligation for your patriotic service—just as he pays for and honors service on the field or on the sea. And he offers you security, the best in the world: American good faith and American wealth—which you have yourselves largely created.

Uncle Sam says to American Farmers: "Sons, lend me your idle money; accept partnership with me that by our strenuous effort we may make the world fair to all mankind in the American way!"

Very sincerely,

C. J. Wickson

Former Dean and Director of College of Agriculture, University of California.

# Farm Output Calls for Ablest Available Man

## *Grain Marketing Muddle Needs the Undivided Attention of Food Production Administrator*

Present marketing conditions of farm products emphasize the urgent need of the appointment by President Wilson of a National Food Production Administrator, a man of ability, who shall serve in a constructive way, the vital interests of the producers just as Mr. Hoover's food administration department has been serving the interests of the consumers. For many months The Farmer has been impressed with the fact that the food producers were not getting just representation in the war councils of the nation. The present deplorable condition of the handling of the wheat crop of the Pacific Northwest under governmental regulations gives added strength to the contention for the appointment of the National War-Time Food Production Administrator. This matter has received the active cooperation of the United States senators from the state of Washington. Senator Wesley L. Jones will take this matter up with President Wilson and Senator Miles Poindexter, with the food administration. Two other letters from Washington, one from Senator William H. King of Utah, and the other from J. M. Baer, congressman from North Dakota, bearing upon this important matter, also follow:

### SENATOR W. L. JONES.

**Does Not See Where Farmer Is Trading With Himself.**

To the Editor: Your favor of August 29, inclosing a reprint taken from the Washington Farmer with reference to the problems which confront the farmers in disposing of their wheat, at hand. The situation disclosed by the letters referred to seems to be a very common one in governmental activities. It seems to be a good thing for business men to hold governmental positions that put them in the attitude of trading with themselves. I think it a very reprehensible position and am surprised that so many honorable men do not seem to see anything wrong about it. The farmer does not seem to be able to get a governmental position where he can do some trading with himself. You do not state whether you ever received an answer to your telegram to President Wilson with reference to the immediate appointment of a national war-time food production administrator. If you will write me a little more fully, giving me your idea as to the duties and power of such an administrator, I will be glad to take the matter up with the president and see what can be done.

W. L. JONES.
U. S. Senate.

Wesley L. Jones.

William H. King.

### SENATOR W. H. KING.

**Efficient Representation Is Needed for Farming Interests.**

To the Editor: I have your letter of August 29 upon the subject of the appointment of a national food production administrator. Food production is a very important matter during the war, and it would be very proper for the farming interests to be represented by a national food administrator. I note that you have brought the matter to the attention of the president, and I trust that something practical may be accomplished in this direction.

WILLIAM H. KING.
U. S. Senate.

### SENATOR MILES POINDEXTER.

**Farmers' Peculiar Interest May Be Entirely Overlooked.**

To the Editor: I have yours of recent date, with enclosures, all of which I have examined carefully, and appreciate fully, and concur with you in your protest against the failure to have any representation of the farmers and wheat growers themselves on the food administration grain agency in the Pacific northwest. I can readily see how the farmers' standpoint and peculiar interest might be entirely overlooked or ignored. I am presenting your view of the matter to the food administration, and insisting upon their attention to the matter, with a view of appointing some representative of the farmers in this administration.

MILES POINDEXTER.
U. S. Senate.

Miles Poindexter.

### CONGRESSMAN J. M. BAER.

**Needs Competent Man in Sympathy With Agricultural Interests.**

To the Editor: I am in receipt of your letter of August 29 and note what you say with regard to urging the appointment of a man who is competent and in sympathy with the agricultural interests of the country as war-time food production administrator. My sentiments are in accord with the contents of your letter, and if a recommendation from me will be the determining factor, there will be no doubt as to the outcome.

J. M. BAER.
U. S. House of Representatives.

J. M. Baer.

## May Require Permits to Ship Wheat

It is not improbable that all shippers of wheat in the Inland Empire, including the growers who want to ship directly to the grain-buying corporation, may soon be required to obtain permits to make their shipments.

A Washington dispatch of September 17 says: "Railroad grain shipments hereafter will be regulated jointly by the railroad and food administration through a system involving the issuing of permits by committees in different zones. The local committees will consist of representatives of the food administration and railroad men. The step was taken to prevent overloading of storage facilities at primary markets and seaboard terminals congested by the tremendous flow of grain this year. In announcing the new plan today, the railroad administration explained that if unrestricted grain shipments were to continue the result would be use of cars and tracks and storage congestion of terminals and withdrawal of the cars from other transportation needs."

"I have not yet been advised that this order will apply to the Pacific northwest," said Charles Hebberd, United States food administrator for the state of Washington, "and until I have more definite information I can not say very much upon the subject." Mr. Hebberd added, however, that, in view of the congested condition at Pacific coast terminals, it is not improbable that this order will be made applicable to this region.

"Our immediate difficulty out here," said Mr. Hebberd, "is a shortage of labor at the terminals for switching cars and handling the grain. I do not understand that it is as yet a question of storage capacity. A partial embargo is now in effect at our coast terminals, due, as I have said, to a shortage of labor. For example, no more grain is allowed to go to Astoria, yet there is a million-bushel elevator at that point that is still largely empty.

For the present all wheat shipments to Astoria have been embargoed. Astoria has a 1,000,000-bushel elevator that is nearly empty, but lack of labor and inadequate switching facilities have caused congestion. The problem is to move the accumulated grain from the yards to the elevator.

Excepting the Sperry dock and mill, Tacoma is practically under embargo, and similar conditions exist at Seattle and Portland. Labor shortage seems general in all the terminals.

This costly situation, laying a severe burden on the wheat-growing industry of the Inland Empire, emphasizes the duty of labor to speed up effort in every industry connected with the carrying on of the war. As more and more our men are drained into the cantonments and naval stations the labor shortage will grow more acute. How can that shortage be relieved? Governor Lister pointed out the true solution in a recent interview. Armies of workers are engaged in war industries at the Coast cities. If these well-paid workers will increase their daily output by but 10 per cent it will be equivalent to the labor of several thousand men. It is not improbable that if the men who are employed handling grain at the Coast terminals would throw just a little more constant energy into their eight-hour day the embargo could be lifted and the wheat of the interior could flow in unobstructed streams from the farms to the terminal warehouses.

"The situation is even worse in the middle west, on the Atlantic seaboard and at gulf ports," said Mr. Hebberd. "While I was east the other day I found a grain embargo on at Minneapolis, Buffalo, New York and other Atlantic ports and practically at all the gulf ports. The difficulty there is largely due to a lack of labor and congestion in the freight yards."

### HOUSER NAMES CHICAGO FIRMS.

**Commission Men Will Advance 7' Per Cent on Grain Value.**

Partial relief from the distressing situation confronting Idaho wheat growers is afforded in an announcement from the food administration grain corporation to the effect that it will furnish farmers and dealers with a list of reliable commission houses in Chicago through which they may ship and who will advance 75 per cent of the value of the grain, charging 1 per cent for the service and 6 per cent per annum from the time the draft is made until final settlement is made for the grain.

Joint effort has been made by Dr. E. A. Bryan, chairman of the Idaho state council of defense, and L. W. Fluharty, director of the university extension department, to effect a change in the system which would enable the grower to deal directly with the grain corporation and obtain an advance on bills of lading.

Mr. Houser does not seem to think it practical to deal direct with the grain corporation or possible for the corporation

# THE WASHINGTON FARMER

VOL. XLI NO. 39.

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY,
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.
To either of which communications can be sent, but to avoid delay address office nearest you.

ABC Member Audit Bureau of Circulation. Associated Farm Papers. Agricultural Publishers Association.

Eastern Representatives:
S. E. Leith, Fifth Avenue building ..... New York
Tom D. Costello, Steger building ..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Community Sing at State Fair*

A comprehensive report of the Washington state fair at Yakima last week, made by a staff correspondent of The Farmer, is published elsewhere in this issue. A striking and successful innovation was the morning community sings in the grandstand. While the big audience was made up largely of women folks there was a very respectable sprinkling of men folks. The interest was keen and it was not difficult for Mrs. J. Alexander Mahan of Ellensburg, who led, to wake up the people and bring out the chorus. The community sing at the state fair was fostered by the state department of education, and although the state superintendent, Mrs. Preston, was not able to be present, yet the department was actively represented by Mrs. Blanche A. Nagel.

The extension department of the State College of Washington made some extremely practical exhibits, showing the complex nature of farming operations. In grain growing, while rain is a prime factor, yet soil cultivation, times of seeding, smut prevention measures and the question of seed varieties, all were pictured in a way to impress even the casual visitor.

The boys and girls' club work also was a leading feature of the state fair. Taking all together, the managers are to be congratulated on the success which attended this season's exhibits and educational features.

Appearance is half, the world over; more often than not it is the whole.

## *Orchard Problems*

The most serious orchard problems that confront us in the near future are the labor problem and marketing. The manner in which we meet the situations growing out of these problems will, in a marked degree, determine the success or failure of the business. This is not a pessimistic statement, for the law of human progress proves that the law of life is changed and that the races, nations, groups or individuals that have survived succeeded and guided the world's affairs are those that have become adapted, while those who have not become adapted have perished.

There are plants that are adapted to an arid region, because they have small leaves, or leathery leaves with few pores that admit of very little evaporation of moisture. Other plants in the humid regions survive because they have large porous leaves that admit of rapid evaporation and thereby discharge the excess of water. The changes by which these plants became adapted were not sudden, but gradual; covering perhaps thousands of millions of years, but in the process of change numberless species and varieties perished and only those that became adapted survived.

This is what Charles Darwin called "The survival of the fittest." The same law runs through all the forms of life, vegetable and animal. It is a law of human progress and while the path of the evolution of mankind has been strewn with wrecks, the general trend has been upward.

Recent experiences taught us some valuable lessons, in devising ways and means for meeting difficult situations. In some sections the schools were closed in order to release students to help save the crop. Old men and cripples, not accustomed to regular work, offered their services to do what they could to relieve the situation. Women and girls; clerks from offices and stores; stenographers and others joined the ranks of apple pickers and assorters. Where a sufficient supply of boxes could be obtained, a few orchardists would put on a large force of merchants, office men and others on Sunday, while their places of business were closed. Those persons were patriotic enough so that they would rather work on Sunday than to go automobiling or pleasure riding.

Childhood is asleep in the heart of grown-ups. You never know when it will be awakened.

## *Astounding War Facts Made Public*

As our readers will recall, this war started in August, 1914, on a pretext growing out of the assassination of the Austrian crown prince. Austria charged Serbia with abetting and harboring the assassins and made threatening demands upon the little kingdom which the latter could not, out of decent self-respect, entirely yield. It did yield on every point but one, and offered to arbitrate on that.

Austria, backed, as we now know, by Germany, rejected Serbia's humiliating concessions and hurled her armies against the latter country.

Our government now publishes conclusive proofs that the Serbian situation was only a pretext. Our agents in Europe have secured a copy of an order from the German general staff, issued June 9, 1914, to the great industrial concerns of Germany, ordering them to prepare for war. That was before the assassination of the Austrian crown prince.

Germany planned and started this war, precipitating the conflict through its puppet ally, Austria. Only a pro-German can longer question the truth of this after the just-made-public revelations made at Washington.

American agents also gathered up a mass of other damaging proofs. Among others, that Germany actually made secret war on the United States in November, 1914, when the general staff of the German navy sent an official secret circular to trusted pro-German agents in the United States, directing them—

**"To hire agents for arranging explosions on ships bound (from the United States) for enemy countries, and for arranging delays, embroilments and difficulties during the loading, discharging and unloading of ships. For this purpose we are especially recommending to your attention leaders of gangs among whom there are many anarchists and escaped criminals. Money required for the hiring and bribing of persons necessary for the designated purpose will be placed at your disposal at your request."**

Our government has a copy of that infamous order, supplying German gold to hire desperate criminals to commit violent crimes in the United States. This throws a flood of revealing light on the reign of bomb explosions, incendiary fires, scuttling of ships in our harbors and strikes in American factories that startled our people in the closing months of 1914.

Through some means not yet revealed, probably through the aid of decent Russians, the American agent brought back from Russia conclusive proofs that Lenine, Trotzky and the other bolshevik leaders are in the pay of the German government; that an enormous sum was placed to their draft in a German bank to spread "peace propaganda" among the foolish Russian soldiers, peasants and workmen; that the real masters of the so-called Lenine government are a group of German officials who give orders to Lenine and Trotzky.

In some instances our government has the original official orders proving these crimes. In others it has photographs of the originals.

Undoubtedly the purpose of our government in making these astounding revelations is to put the people of the United States on guard against such treacherous "peace" propaganda as the Germans used so successfully to put Russia out of the war and bring that great country to ruin and shame.

Of all fool notions there is none more foolish than to believe that the world was made for you.

## *Austrian "Peace" Proposals*

The weight of authoritative opinion in the United States and Europe is that the Austrian "peace" proposal is a cunning German scheme to trick the people of the United States, France, England and Italy as the deluded Russians were tricked into "peace" negotiations that ruined Russia and put it under the heel of the Germans.

The Austrian proposal, which comes in the form of an official communication to all the warring countries, calls for the belligerents to send delegates for "a confidential and unbinding discussion on the basic principles for the conclusion of peace in a place in a neutral country and at a near date that would yet have to be agreed upon."

Right off the bat Secretary Lansing made this statement for President Wilson:

**"The government of the United States feels that there is only one reply which it can make to the suggestion of the imperial Austro-Hungarian government. It has repeatedly and with entire candor stated the terms upon which the United States would consider peace, and can and will entertain no proposal for a conference upon a matter concerning which it has made its position and purpose so plain."**

The time to consider peace terms will be when the victorious allied armies smash through the enemy's lines and march triumphantly into Berlin and Vienna. When Prussian militarism is overthrown and the kaiser and all his gang are our prisoners we can safely talk peace, and not sooner.

Cooperation, sooner or later, demands self-sacrifice—or the sacrifice of the other fellow.

## *War Troubles at Home*

All the discomforts and inconveniences and losses incurred at home because of the war are not worthy to be mentioned in moments of soberness and truth. Yet this does not prevent the historical fact that there are discomforts and inconveniences, and even serious losses, forced upon the American people during these war days.

The disturbing factor about these war discomforts and losses is that they are not always evenly distributed. Like the two women grinding at the mill, the one shall be taken and the other left.

Here are two men, perhaps equally situated with regard to needed work at home, perhaps one is needed more than the other, and yet, like the two women grinding at the mill, "the one shall be taken and the other left"—not always the one most needed at home. From common observation, one man's wealth may escape more than another's in war taxes; one part of the country looks over into another part of the country and is inclined to grumble.

The high call of patriotism searcheth out the heart. It is not what another does or neglects to do. "Here am I, call me."

Help yourself. Unite with your neighbors, your townsmen, your county, your state and your section in helping yourself. The government has bigger troubles to solve.

This does not mean that you must suffer unduly when governmental action may help out. Present your case, do all you can to get a hearing, then make the best of it. Don't let it cut into your war work.

It is not poverty that hurts, if poverty includes the whole man, but to have the mind of a millionaire, the tastes of an artist, the longing of an explorer, and the income of a tramp is painful, yet it is the pain we feel under such conditions that stimulates to greater activities and tends to our development.

# Allied Star in the Ascendancy

## *German Offensive Turned Into Great German Defensive*

Six months ago the great German offensive began. For weeks victory seemed about to perch upon the German banner. Today the allied star is in the ascendency. Anxiety and encouragement, depression and joy have succeeded each other since. March 21 the greatest battle of history began. It has been a period of almost incessant fighting and of bewildering changes in situations that developed from day to day and from week to week. Released by the absolute collapse of Russia, vast numbers of German veterans had been rushed to the western front and been given intensive training for the offensive. It was known that great bodies of men and tremendous stores of munitions had been concentrated at strategic points.

Moving with swiftness the German forces swept over the British lines in Picardy and rolled west like a tidal wave during the closing days of March until at last the British reached positions where they could stand at bay and the French had come to form a living wall before the gray-clad host of the German emperor. Then the offensive stopped. After a pause of nearly a month, May 27, the Germans suddenly broke through the French lines north of the Aisne river and smashed their way southward until they had reached the Marne over a wide front east of Chateau Thierry. A new assault by the Germans was aimed against the French lines between Montdidier and Noyon. It was here that the world had the first intimation that the allied armies under Marshal Foch had been pursuing a definite policy and had conserved their strength until it might be used with good effect.

July 18 Marshal Foch launched the attack which has changed the whole situation.

APPROACHING ST. QUENTIN DEFENSES.

Allied troops are progressing satisfactorily in their efforts to break down the defenses of St. Quentin. On the north the British are fighting in the Hindenburg positions and pressing toward the canal between St. Quentin and Cambrai, while on the west the French are moving east steadily. For a stretch of more than 10 miles north of St. Quentin the British now hold the dominating hills. Toward Lecatelet the British are progressing eastward on a front of three miles and are within four miles of the town, one of the important German bases on this front. West of St. Quentin the French are within two miles of the outskirts, while on the south they are forcing the Germans to give up important villages and other positions. Southwest of Metz, where the French and Americans recently cleared the St. Mihiel salient, the Germans have started further fires. Soldiers and wagon trains have been seen moving northward, and it is believed the Germans are preparing for a possible allied attack or a retirement on their own initiative.

GERMAN GOVERNMENT CRISIS.

The Leipzig Tageblatt declares that the government crisis in Germany is approaching a decisive stage. The socialists have declared their readiness to enter the new government under conditions allowing themselves substantial representation. There is suspicion in Washington that this discussion by the German newspapers of parliamentary reform is only the beginning of another phase of the German peace offensive; that the German government itself is again encouraging the socialists and liberals to agitate for such a change in order to be able to more thoroughly guide and neutralize the movement.

AMERICAN SOLDIERS OVERSEAS.

General March announces that the embarkation of American soldiers for all fronts overseas now has passed the 1,850,000 mark. Military news during the last week from all fronts has been continuously good, the general adds. On the Lorraine front, where General Pershing's first American army has completed its organization to eliminate the St. Mihiel salient, the situation has become stabilized, with the enemy hurriedly perfecting a new line in front of the Americans. This line stretches for 20 miles from Maizary to the Moselle Vandaires. The Americans are now 10 miles from Metz and an equal distance from Conflans.

The American army casualty list for publication last week contained 1999 names, divided as follows: Killed in action, 362; missing in action, 596; wounded severely, 733; died of disease, 60; died of airplane accident, 3; wounded, degree undetermined, 47; died of wounds, 158; died, accident or other causes, 23; wounded slightly, 8; prisoners, 8.

RUSH AHEAD IN MACEDONIA.

The allied struggle in central Macedonia, which opened with the expulsion of the Bulgarians from the important Sokol position, is developing successfully on a wide front. Further progress by the Serbs toward the Vardar river and the Uskub-Saloniki railroad paralleling it will probably bring about a readjustment of the Austro-German and Bulgarian positions throughout the whole theater. It is reported from Ukrainian sources that the crown prince of Rumania has fled from Jassy to Odessa. The reason for his flight is not disclosed.

BLOODY REIGN OF TERROR IN RUSSIA.

Horrified by the bloody reign of terror in Russia, the United States calls upon all allied and neutral nations to consider what they may do to impress upon the bolsheviki the aversion with which the civilized world regards their wanton crimes. This action aligns the United States with that of Great Britain and France in declaring the bolsheviki, responsible for the murders, crime and excesses which have shocked the world, outlaws and public enemies. The reported action of the bolsheviki in effecting an alliance with Germany for offense and defense is an added cause for the step. The reign of terror has already hindered the efforts of the United States to alleviate an impending famine in Russia, as it is impossible to furnish much-needed supplies to that part of the country under bolshevik control without actually feeding the German army and the German populace.

HOUSE PASSES REVENUE BILL.

The house of representatives Friday passed the war revenue bill designed to raise by taxation approximately $8,182,000,000 of the 24 or more billions needed by the nation for the current year. The agricultural appropriation bill, carrying $27,800,000, was also passed by the house Friday without the provision increasing the government guaranteed price of wheat, which once caused its veto by President Wilson.

Major tax features of the bill as transmitted to the senate and estimated revenue yields include:

Income tax, individuals' normal rate increased from 5 to 12 per cent, with the first $4000 at 6 per cent and the exemptions of $1000 for single and $2000 for married persons; $414,000,000.

Corporations' incomes, increased from 6 to 18 per cent, but with only 12 per cent payable on dividends distributed, debts paid and new Liberty bonds bought; $894,000,000.

War and excess profits of corporations, 80 per cent on war profits and virtually doubled rates on excess profits, ranging from 35 to 70 per cent; $3,200,000,000.

Beverages, present rate doubled; $1,137,600,000.

Tobacco, present rates doubled; $341,204,000.

Luxuries and semi-luxuries, 20 and 10 per cent; $272,555,000.

Other excise taxes, including automobile sales, jewelry, 2 cents a gallon on gasoline, etc.; $274,750,000.

Use of automobiles $5 to $50 each; $472,930,000.

Besides these leading revenue sources, the bill provides a general $10 annual tax for persons in business trade or professions earning over $2500, and taxes on transportation, insurance, club dues, inheritance, theaters, brokers, mail order sales, bowling, billiard and pool establishments, shooting galleries, riding academies and documentary stamp taxes.

COLUMBUS DAY FOR BONDS.

President Wilson has issued a proclamation making Columbus day, Saturday, October 12, a special occasion for unusual efforts to sell Liberty bonds. The day will be the 426th anniversary of the discovery of America. The proclamation says, in part:

"On that day I request the citizens of every community of the United States, city, town and countryside, to celebrate the discovery of our country in order to stimulate a generous response to the fourth Liberty loan. Commemorative addresses, pageants, harvest home festivals or other demonstrations should be arranged for in every neighborhood under the general direction of the secretary of the treasury and the immediate direction of the Liberty loan committee in cooperation with the United States bureau of education and the public school authorities."

BREWERS PUT UP THE MONEY.

The federal custodian of alien property, A. Mitchell Palmer, announces the names of 15 brewers who, with the United States Brewers' association, raised a fund of $407,500 from which $375,000 was loaned to Arthur Brisbane to buy the Washington Times. C. W. Fiegenspan, president of the United States Brewers' association, frankly admits that the association furnished Arthur Brisbane the money to buy the Times. He further admitted that the association and the brewing interests generally have maintained lobbyists at Washington and at various state capitals. He vigorously denied charges of disloyalty or pro-Germanism. Senator W. L. Jones of Washington has offered a resolution for an investigation of the whole matter.

THE SPANISH INFLUENZA.

The Spanish influenza, which is reported in many military and naval camps, is largely a repetition of the grippe epidemic started in southeastern Europe 27 years ago and traveling all over the world. American physicians who have had experience with Spanish influenza describe it as a milder type of disease than the old grippe.

According to the weekly summary of communicable diseases at Camp Lewis, there were 115 cases of influenza reported during the week. The influenza at this camp is not the Spanish influenza, it is announced, which has been found in some eastern camps and cities. At Camp Lewis the disease usually is checked and patients discharged from the hospital in three days.

SEVEN BILLIONS MORE FOR WAR.

Congress has been asked by the war department to provide $7,347,000,000 in addition to previous estimates for carrying out the enlarged American military program for the coming year. The new estimate is based upon plans for having nearly 4,000,000 soldiers in France next summer and another million in training at home. It brings the money sought for the army in the fiscal year 1919 up to more than $24,000,000,000.

PALESTINE NEARLY FREED OF TURKS.

Of transcendant interest, for the moment at least, are the operations of the British General Allenby's forces in Palestine. Here in less than four days the British have swept forward in the center between the river Jordan and taken the famous Nazareth, while their wings closed around in a swift enveloping movement and nipped with the jaw of the great pincer all of the Ottoman forces in the coastal sector, the plain of Sharon, the hill region in the center and also the western Jordan valley. Meanwhile, to the northeast, the friendly Arab forces of the king of the Hedjas have cut all communication in front of the fleeing Turks and are standing a barrier to their escape by way of the eastern plains. More than 18,000 Turks had been made prisoner by the British and guns in excess of 120 had been counted when the last reports from General Allenby were received. In addition great quantities of war stores had been captured and still others had not been counted owing to the rapidity of the movement.

ANOTHER glimpse into "The Heart of a Boy," by Joe L. Ashlock, will be given in an early issue of the Farmer. As you read Mr. Ashlock's sketches of his boyhood days, old, all-but-forgotten episodes and incidents of your own youth come out of the golden past and pass before your mind's eye in all too fleeting review.

## *Washington Gleanings*

The electric light plant of Coulee City was totally destroyed by fire last week.

E. F. Cadman of Wenatchee recently sold five acres of orchard land to Curt Clement for $10,500.

There will be a war-time community fair in La Conner Friday and Saturday, October 11 and 12.

John Hardinger of Centralia has purchased J. M. Vaughan's 40 acres on Lincoln creek for $2000.

Nearly $50 was added to the treasury of the Mount Vernon Red Cross chapter by the raffle recently of three white Spitz puppies.

George Midkiff, residing north of Lincoln, has disposed of his entire herd of fat cattle and dairy cows on account of shortage of hay.

Farmers in the La Conner vicinity are complaining of a light crop of oats this year, the crop running from 17 to 27 sacks to the acre.

The parent-teachers' association has been reorganized for the year with Mrs. H. E. Compton president and Mrs. Perry Willoughby secretary.

L. O. Janeck has been named as chairman of the Yakima county united war work drive, to be conducted during the week beginning November 11.

Some of the ranchers in the vicinity of Hanford are cutting their fourth crop of hay, and with favorable weather expect to get another cutting.

Threshing is entirely completed in the Spangle section. The crop, while not a normal one, is better than was expected before harvesting commenced.

A great part of the Benton county exhibit that won first prize at the state fair was procured from the Richland district through the efforts of S. M. Ross.

W. C. Schreck, a former citizen of Coupeville, but now in government work at San Pedro, Cal., has sold his 10-acre poultry ranch on Ebeys prairie to Bert Arnold.

Fire of an unknown origin recently destroyed two barns, a large machine shed, blacksmith shop and a 1500-bushel tank of wheat on the ranch of Mrs. Fred Kison, one mile north of Ralston.

At a meeting of the Skagit county game commission recently it was decided to prohibit the hunting of Chinese, Mongolian and ringneck pheasants in that county during the season of 1918.

Fred Aust has sold his 186-acre dairy ranch at Forest to David McCann, the consideration being $19,000. The sale included 20 head of cows and all dairy equipment. The new owner is from Montana.

The entire crop of Clarke county prunes, including all sizes and grades, has been ordered held by the government until a survey can be made in order that the government needs may be taken care of.

The Columbia River Milling company is increasing its capacity to 700 barrels daily. The Hartline mill, controlled by the same company, has been thoroughly overhauled and has a capacity of 600 barrels.

A $600,000 company has been formed to develop the farm land possibilities of the Olympic peninsula. The present plan is to develop the farms into going concerns and to sell them on the instalment plan.

The United States Highway council last week formally approved the continuance of the paving of the road between Moxee and Yakima, to cost about 187,000, and the paving of the Riverside road, near Sunnyside.

Four new silos are being built in Richland, one at the D. J. Dillon ranch, one at the Harry Davis ranch, one at the Grosscup ranch and one at the F. C. Anderson ranch. The corn yield in that vicinity is heavy, and silos are now being filled.

With the city public schools preparing mechanics, radio men, etc., and the state university training technicians and officers, Seattle probably feels that its young men are in a position to learn the new business of war efficiency to the best possible advantage.

The La Crosse Roller Mills company has been incorporated with a capital of $50,000. Officers are: President, Nelson Grewell; vice president and manager, Homer Williams; secretary-treasurer, E. S. Knowlton; executive board, Nelson Grewell, Homer Williams, Mr. DeLong, E. S. Knowleton and Ira M. Camp.

The Grays Harbor county commissioners at their session in Montesano last week received word from R. L. Fromme of the forest service to the effect that government money for the building of the strip of road which will connect the lower end of Quinault lake with the upper end will soon be available.

The Seattle branch of the federal employment service has been forced by the rapid increase in business to move into larger quarters. The bureau has been located in the United States Immigration Service building. It now moves to 110 Cherry street, where two floors, each 60x110 feet, will be given over to the work. Close to 1000 men are handled daily by the local and state offices.

N. D. Wortman, living on the Elwha river five miles west of Port Angeles, planted three acres of rutabagas last year on rented land. He sold the returns from two acres, but allowed the third to stand and this year go to seed. He harvested the crop with a sickle and threshed them with a flail. He shipped the crop to Seattle, and received a check for $2551.25 in payment for the shipment.

# Success of Washington State Fair

## *Educational Features Attract the Goodly Number in Attendance*

By HORACE ADDIS.

While Secretary Meredith and the entire management are to be congratulated on the success of the Washington state fair at Yakima, September 16-21, this dry year of disturbed conditions, they are much more to be complimented on the fact that their work has enabled the state fair to attain its true function of an educational institution.

While a program of high-class racing and other amusements was furnished, and the "carnival," though present, was not stuck in the most prominent place on the grounds, the educational features were emphasized more strongly than ever before. From the high school stock judging that began on Monday morning until the close of the state and government's various exhibits Saturday night, all informative in their character, there was at all times presented to visitors several centers of most useful agricultural or social information. The United States food administration, the state board of health, the Washington state college, the state department of agriculture and various independent organizations, such as the National Welfare league, had booths where a stock of useful knowledge could be gained in the study of most interesting subjects by direct object lessons. Grain and fruit diseases, insect pests and other enemies of farm crops were shown, as well as how to combat them.

The wool exhibit made by the government expert, Vincent McWhorter, from Wyoming, as well as the local wool exhibit by Coffin Bros., taken together with the sheep sale, was a school in itself, in which was taught the gospel of more and better sheep and better care and grading of wool. The presence of Mrs. Benson, mother of Commissioner of Agriculture Benson, at the wool exhibit every day, spinning yarn with an old-fashioned spinning wheel, added a touch of human interest to the exhibit. The sale of close to 1000 sheep for over $35,000 at the two-day sheep sale shows how the interest in more and better sheep is taking root. And now the annual sheep sale promises to be one of the most important activities of the state fair.

County exhibits from nine different counties in a year like this show the statewide interest in the fair, especially when nearly all of them were of the highest class. Benton county won first honors, Pierce county second place, King county third, Grays Harbor fourth, Stevens fifth, Lewis sixth, Jefferson seventh and Clark eighth. Only the total omission of a grass seed exhibit kept Lewis from being much higher, if not first, and it won a special prize for artistic arrangement.

Yakima county made an exhibit in a building of its own, but did not compete for prizes. A fish exhibit was an unexpected part of the display. The Coffin exhibit of wool and different breeds of sheep was here made; and corn, grain, garden vegetables and Yakima's wonderful fruit, besides its manufactured products, were all well displayed.

Benton's most notable feature was her illuminated centerpiece of grapes of various colors. Her products were varied and were well shown, as was the case with all the county exhibits. Five counties exhibiting are on the west side of the Cascades, where the drouth is supposed to have been severe.

Commenting on this Commissioner of Agriculture Benson said that not only the fact that counties from the western part of the state had exhibited, but that auto travel has greatly increased the attendance until no one can now say this is not in reality a state fair. The sheep sale the second year, he said, has brought the best grades of stock for breeding purposes obtainable in the United States, and the fact that it held 300 buyers in the sale barn during auto races shows the interest it awakened. The educational exhibits generally were better than he expected. He was especially gratified at the support of the state college and the good live stock exhibit, despite high feed and scarce labor, all gave him great satisfaction. Coupled with the increased attendance and receipts from concessions he felt that the fair is now on safe ground.

Industrial club work was emphasized, and its interest shown by representative clubs from 26 counties. Canning, sewing, cooking and garden competition were subjects worked on. Miss Gertrude Warren, from Washington, D. C., who judged the club work, said the outdoor garden work at this fair was the first she had seen at a fair and that she would carry the idea on to others. On school canning Whitman county won first, Yakima second and Spokane third.

The new auditorium holding 1200 people, and long needed, was used as a lecture room by various organizations, including the boys and girls' industrial clubs, and for band concerts at night. The Naval Militia band from the naval training station at Seattle furnished high-class music all week.

The machinery building was well filled and a great display of tractors and other power farm machinery was made outdoors. The child-welfare department and nursery was equipped with charts and information, and had many visitors. The art and ladies' building was filled with interesting displays. And all departments were well managed.

The poultry exhibit, again in charge of Harry Collier, while not as large as some years, on account of lack of bantams and fancy breeds, was one of the best shows in the history of the fair. Mr. Collier says it was the best show of utility birds, especially of White Rocks, White and Buff Orpingtons, White Leghorns and some others.

Added to all the other features, a live stock show of surprising quality in a year like this, and then a week of perfect weather, and success is the one word that defines this year's state fair.

### STOCK SHOW.

When the labor situation and the high price of feed is considered the stock show at the Washington State fair was surprisingly good.

The horse department disclosed the most shortage and the strength of the show was in the sheep division. Here, where the sheep show used sometimes to be negligible, over 1000 sheep greeted the eye and six breeds were represented. It took three barns to fully accommodate the sheep. Most of these, of course, were sale sheep and did not compete for prizes, though most of them might well have done so. But they filled up the space and helped make a really great sheep exhibit. Hampshires, Shropshires, Southdowns and Oxfords were shown in middle wool, Rambouillets in fine wool, and Lincolns and Romneys in long wool. Most of those shown for prizes were in fine condition, and there were very few poor sheep on the ground.

The horses shown were of excellent quality. The Clydesdales, though all shown by one exhibitor, would be a credit to any show and the Percherons were of high quality, though lacking in numbers. All Shetland pony exhibitors were children.

Of beef cattle, both Herefords and Shorthorns had good representation, but the Aberdeen Angus herd of Congdon & Battles, so notable the last few years, was greatly missed. The Washington State college showed just three very nice Angus heifers, of their own breeding.

In Shorthorns, the college won junior and grand championship on female on a very smoothly covered white heifer, that defeated a typy as well as blocky red, of the same age, shown by A. D. Dunn. Ringside opinion was divided and when they come together at Lewiston or Portland the outcome will have many watchers. A sappy young bull of much promise won grand champion honors for Mr. Dunn.

Charles Bull had an excellent herd of Herefords, but they could not win against the magnificent Curtice Cattle company herd. This herd, headed by their great bull, Beau Perfection 38, was one of the great drawing cards of the fair.

One full herd of Holsteins, shown by E. B. Marks, and eight head by William Todd & Son made up a most creditable Holstein show, even if numbers were not as large as usual in this Holstein valley.

The Middledale farm Guernseys from Cresswell, Ore., gave the breed a representation to be proud of and Erickson Brothers' Jerseys, nearly all by one sire, and of very fine Jersey type, gave that breed a good representation, besides a great bull owned by a community of dairymen at Prosser.

The hog show has been larger, but it was not a small show and the quality was most satisfactory. Three exhibitors of Tamworths gave that bacon breed a good representation, with all of the hogs of good type and some in good show condition. Earl Wood of Silverton, Ore., made the principal Berkshire show and carried off all but one championship, though there was some sharp competition in some classes. But for the pig club boys, Poland Chinas would not have been represented. The Toppenish club made nearly all its entries in the open classes and most worthy they were. Sons and daughters of Ray Fox's great boar, Ike Kfiox, at Lyons, Ore., were strongly in evidence.

Professor W. T. McDonald, commissioner of live stock of British Columbia, judged horses and beef cattle; Professor W. A. McKerrow, animal husbandman of the Minnesota Agricultural college, the dairy cattle and sheep, and Professor W. C. Rickman, acting animal husbandman of the University of Idaho, the swine. The following is a complete report of the awards:

**Clydesdales.**

O. I. Trice, Grandview, Wash., was the only exhibitor. His awards were: Stallion, 4-year-old or over—1 on Baron's Prince, that was also made grand champion; yearling stallion—1 on Liberty Bond; colt under 1 year—1 on Baron Gale; mare, 4 years or over—1 on Daisy; 3-year-old—1 on Queen Lucile; colt under 1 year—1 on Lady Lou, a daughter of Baron's Prince, and the baby was made grand champion.

**Percherons.**

Stallion, 4 years or over—1, Lee Taylor, Toppenish, Wash., on Helia. Two-year-old—1, E. M. Chandler, Burbank, Wash., on Cerebellon. Champion stallion—Helia.

**Shetland Ponies.**

Stallion—1, Forest Banks, Selah, Wash., on Fritz. Mare, 3 years old—1, Beverly Means, Yakima, Wash., on Dirola K. Two-year-old—1, Beverly Means, on Ridola K. Pony under saddle—1, Forest Banks, on Fritz; 2 and 3, Beverly Means, on Ridola K. and Dirola K. Team in harness—1, Beverly Means. Pony in single harness—1, Beverly Means, on Dirola. Champion stallion—Fritz. Champion mare—Dirola.

**Shorthorns.**

Bull, 2 years or over—1, Washington State college, on Village Excelsior. Senior yearling—1, A. D. Dunn, Wapato, Wash., on Proud Marshall. Senior bull calf—1 and 2, A. D. Dunn, on White Cup and Northover. Junior bull calf—1, A. D. Dunn, on Clipper of Dunbro.

Cow, 3 years or over—1, A. D. Dunn, on Mina 2d. Senior yearling heifer—1, A. D. Dunn on Roan Lady. Junior yearling—1, A. D. Dunn, on Roan Cassie. Senior heifer calf—1, W. S. C., on Village Queen; 2 and 3, A. D. Dunn, on Dunbro Queen and Roan Princess.

Senior champion bull—W. C. S., on Village Excelsior. Junior and grand champion—A. D. Dunn, on White Cup. Senior champion cow—A. D. Dunn, on Mina 2d. Junior and grand champion—W. S. C., on Village Queen.

**Herefords.**

Bull, 3 years or over—1, Curtice Cattle company, Calgary, Alberta, on Beau Perfection 48; 2, Charles Bull, Mabton, Wash., on Menlo. Two-year-old—1, Curtice Cattle company, on Beau Donald 192. Junior yearling—1, Curtice Cattle company, on Beau Donald 211; 2 and 3, Charles Bull, on Lewis and Menlo 3d. Senior bull calf—1, Curtice Cattle company, on Beau Donald 215; 2, Charles Bull, on Barney. Junior calf—1, Curtice Cattle company, on Beau Donald 222.

Cow, 3 years or over—1, Curtice Cattle company, on Belle Perfection 45. Two-year-old—1, Curtice Cattle company, on Belle Donald 236; 2, Charles Bull, on Lady Elma. Yearling heifer—1, Curtice Cattle company, on Belle Donald 236. Junior yearling—2, Charles Bull, on Beaulieu 4th. Senior heifer calf—1, Curtice Cattle company, on Belle Donald 254. Junior calf—1, Curtice Cattle company, on Belle Perfection 68.

Aged herd, young herd and calf herd—1, Curtice Cattle company. Get of sire—1, Curtice Cattle company; 2, Charles Bull. Produce of cow—1 and 2, Curtice Cattle company.

Senior and grand champion bull—Curtice Cattle company, on Beau Perfection 48. Junior champion — Curtice Cattle company, on Beau Donald 222. Senior champion cow—Curtice Cattle company, on Belle Donald 254. Junior and grand champion—Curtice Cattle company, on Belle Donald 254.

**Aberdeen Angus.**

Washington State College, the only exhibitor, received first on senior yearling heifer, junior yearling heifer and senior heifer calf and produce of cow. Also junior and grand champion on Enright's Queen.

Specials were given by the American Aberdeen Angus association on the same classes.

**Fat Cattle.**

Pure bred grade or cross-bred steer, spayed or Martin heifer, two and under three years, 1 and 2, Washington State College, yearling 1 and 3, Washington State College; 2, Curtice Cattle company, Calgary, Alberta. Under one year, 1, Washington State College.

Champion animal, any age, Washington State College.

**Holsteins.**

Bull, two years old—1, E. B. Marks, Yakima, Wash., on Skylark Tritomian; junior yearling, 1, E. B. Marks, on Sir Bessie Rags; 2, William Todd & Sons, on Sir Victor Korndyke. Junior bull calf—1, E. B. Marks, on Echo Segis; 2 and 3, Todd & Sons, on Sir Korndyke Cascade Jessie, and Sir Ormsby Cascade Jessie.

Cow, four years or over—1, 3 and 4, E. B. Marks, on Maldeta Canary Mercedes, Kakenson Gerben and Nellie Fobes; 2, Todd & Sons, on Lady May Fayne. Three-year-old—1 and 2 E. B. Marks on Mercedes Segis Fobes, and Leona Gerben Bracelet. Two-year-old—1, 2 and 3, E. B. Marks, on Bessie Segis Jewel, Jessie Longfield and Bessie Segis Prilly. Senior yearling heifer—1, E. B. Marks, on Bessie Fobes Tritomia, Princess Tritomia and Lucy Longfield 2d. Junior yearling—1, E. B. Marks, on Lucy Segis 2d; 2, 3 and 4, Todd & Son, on Cascade Pauline Mercedes, Cascade, Mary Ormsby and Cascade May Korndyke. Senior heifer calf—1, 2 and 3, E. B. Marks, on Bonnie Tritomia Queen, unnamed and Queen Fobes Maldeta; 4, Todd and Sons, on Cascade Stately Korndyke. Junior calf—1, 2 and 3, E. B. Marks, on unnamed, Bessie Segis Jewel, and unnamed; 4, Todd & Sons, on Cascade Barbara Piebe.

Aged herd—1, E. B. Marks. Young herd and calf herd—1 and 2, E. B. Marks. Get of sire and produce of cow—1 and 2, E. B. Marks.

Senior champion bull—E. B. Marks, on Skylark Tritonia Junior, and grand champion bull—E. B. Marks, on Echo Segis. Senior champion cow—E. B. Marks, on Maldeta Canary Mercedes. Junior and grand champion—E. B. Marks, on Tritomia Queen.

**Guernseys.**

Middledale Farms, Calkins & Riggs, proprietors, of Cresswell, Ore., was the only exhibitor. Their awards were:

Two-year-old bull—1, on Sir Julian, that was made senior and grand champion. Yearling bull—1, on Ross Langdon. Junior bull calf—1, on Middledale King.

Cow, four years or over—1, on Middledale Julia. Three year old—1, on Eugenia D. Two-year-old—1, on Middledale Queen of the May, that was made senior and grand champion. Senior yearling heifer—1, on Middledale Virginia, junior yearling—1, on Middledale Rosemond. Senior heifer calf—1, on Middledale Waukanee. Junior calf—1, on Middledale Tarbell. 1, each, on aged herd, young herd, calf herd, get of sire and produce of cow.

**Jerseys.**

Bull, 3 years or over—1, Prosser Community Bull association, on Prosser Pogis. Two-year-old—1 and 2, Jersey Home dairy, Erickson Brothers, proprietors, on Knight's Golden Prince and Belinda's Oxford You'll Do Jr. Yearling—1, Erickson, on Sultan's Olga Boy. Senior bull calf—1 and 2, Erickson, on Sultan's Raleigh Boy and Sultan Maud's Boy. Junior calf—1 and 2, Erickson, on Sultan's Lassie Boy and Sultan's Polly's Boy.

Cow, 4 years or over—1, Erickson, on Raleigh's Sunbeam. Two-year-old—1, Erickson, on Raleigh's Beauty of J. H. Senior yearling heifer—1, 2 and 3, Erickson, on Sultan's Raleigh Girl, Sultan's Star's Rioter's Girl and Sultan's Star's Lassie Girl. Junior yearling—1, Erickson, on Sultan's Figgis of J. H. Senior heifer calf—1 and 2, Erickson, on Sultan's Fancy Girl and Sultan's Bonnie Girl. Junior calf—1,

# No Two Rabbits Alike

By H. E. Gibson.

While we can give instructions how to feed rabbits you must yourself use judgment in feeding, and as you try out any particular plan and do not find it a success, try and locate the weak point and remedy it, and you will eventually make a success. To illustrate this, some old, reliable rabbit fanciers feed their rabbits only once a day and have no hesitation in saying it is the best plan; still others, like the writter, believe that twice a day is better, but both plans have been used successfully, so that the point we are trying to make is that the feed and method of feeding may be all right and the feeder be a failure; everything depends on the feeder and everything depends on the feed. Be a student of rabbits, be a student of feeds and feeding; give it much thought, read all you can find on the subject, compare notes with other breeders, and do not be afraid of showing your ignorance and confess you are only a novice, for by so doing you will learn, and in a comparatively shore time, if you apply yourself faithfully, you will have a store of knowledge and experience that will be worth much to you, and you, in turn, will have the pleasure of dispensing information to others.

Every rabbit has a distinct individuality of its own, and no two are just alike. Some are very fond of certain foods, while others will only pick at it, but by being patient and careful you can train them to eat everything you give them. You will also notice some will eat more than others, so that you must be careful not to overfeed, and when you find a bunny having some grain left after last feeding, just let him skip grain this time or give him a very light portion—if you have been feeding a cupful of rolled barley and find he leaves considerable, cut him down to half a cupful at a meal.

We will give here a list of the grains, roots and greens that may be fed rabbits: Oats, corn, wheat, peas, barley and bran, potatoes, potato peelings, turnip parings, squash or squash parings, carrots, beets, alfalfa, clover, lawn clippings, dandelions, cabbage, lettuce, cauliflower, radishes, celery, crusts of bread and weeds. We can not tell you just the particular weeds you can feed rabbits, as weeds vary in different countries, but we would suggest that you pull different varieties of weeds and try your rabbits and you will soon discover the kind they like, but always be careful not to give your animals too much green food at a time, and never turn suddenly from dry hay to green feed, but make the change gradually, by giving green feed only once a day for, say a week, then cut out the dry hay altogether if you want to and you will find no bad results.

## SPOKANE VALLEY APPLE SALE.

### About 150 Cars Sold to the East for $170,000.

One of the largest apple sales ever made in the Spokane valley has been announced by Edward Pierce, president of the Spokane Valley Growers' union. Under a contract just closed the entire crop to be handled by the union this year, approximately 150 cars, is sold to a company of eastern fruit dealers for $170,000.

This is an average of nearly $1.50 for each box of apples from the Opportunity-Vera districts.

The prices quoted and the approximate number of cars are given below:

| Cars. | Variety. | Extra Fancy. | Fancy. | Choice. |
|---|---|---|---|---|
| 40 | Jonathan | $1.60 | $1.40 | $1.20 |
| 40 | Rome Beauty | 1.50 | 1.35 | 1.20 |
| 25 | Wagener | 1.35 | 1.20 | 1.10 |
| 6 | Winesap | 1.60 | 1.40 | 1.20 |
| 5 | Winter Banana | 2.25 | 1.85 | 1.45 |
| 5 | Stayman Winesap | 1.45 | 1.30 | 1.15 |
| 4 | Spitzenburg | 1.80 | 1.60 | 1.20 |
| 3 | Grimes Golden | 1.60 | 1.40 | 1.20 |
| 3 | King David | 1.45 | 1.30 | 1.15 |
| 2 | Yellow Newtown | 1.60 | 1.40 | 1.20 |
| 2 | Baldwin | 1.35 | 1.20 | 1.10 |
| 2 | Sen | 1.35 | 1.20 | 1.10 |
| 2 | R. I. Greening | 1.35 | 1.20 | 1.10 |
| 1 | York Imperial | 1.35 | 1.20 | 1.10 |
| 1 | Champion | 1.35 | 1.20 | 1.10 |
| 1 | Blk. Ben Davis | 1.45 | 1.30 | 1.15 |
| 1 | Delicious | 2.20 | 1.80 | 1.45 |
| 1-2 | Ark. Black | 1.60 | 1.40 | 1.20 |

## RACES AT WASHINGTON STATE FAIR.

It may interest lovers of the driving horse to know that on Friday evening, September 20, of the state fair at Yakima, Wash., 48 heats had been raced, with an average time of 2:09 3-4, which is a faster average than on most of the big circuits in the east. A world's record was made by Barongale, a trotter that raced in hopples. Ordinarily hopples are used only on pacers, but to correct a tendency to pace "cross hopples" are occasionally worked on a trotter. Barongale's time was a mile in 2:08 3-4.

H. A.

# Farm Output Calls for Ablest Available Man

(Continued from page three.)

to make advances on bills of lading. Dr. Bryan has suggested that if the law is defective in this manner congress can rectify it in 48 hours. Efforts to secure a ruling or legislation, if necessary, to provide a direct marketing system, which the growers thought they were getting when the grain corporation was created, have not ceased, and important changes are hoped for.

"Farmers or others desiring to ship wheat direct to Chicago to the United States grain corporation, through a Chicago commission house, who will arrange to handle the business and permit the shipper to draw on his bill of lading for a portion, say 75 per cent, of the value of the grain, may obtain the address of reliable houses in Chicago with whom they may arrange for such shipments and draft on the basis of 1 per cent for the service by applying to Howard Jackson, grain corporation vice president, Chicago, or M. H. Houser, second vice president, grain corporation, Portland, Ore."

### FREIGHT ON FEEDSTUFFS.

**Reduce One-Half When Shipped Into Certain Parts of Montana.**

In the Sanders County Farm Bureau News for September, F. M. Hillman, county agent, says:

It will not be necessary for farm bureau members to sacrifice their live stock this fall so as not to tax their patriotism so severely by selling wheat and buying higher priced feedstuffs. Very careful and satisfactory plans have been made, with the cooperation of the government, to ship necessary feedstuffs into Montana at half the regular freight rates. This will assure us feedstuffs that we can afford to feed. W. L. Beers, our field agent in marketing at Bozeman, has been furnished a special assistant from the bureau of markets, a Mr. Todd, who had experience in similar work in Montana last fall. They are also furnishing an expert traffic man to look after the reduced freight ruling, and to route the feedstuffs cars in the most direct manner. It looks like a mighty good plan that has been worked out for handling the feed situation.

Prices and offers will be wired to Bozeman from all producing centers and as soon as they are made up into lists they will be sent to county agents and others who are interested. These price lists will be mailed regularly, free of charge, to any one upon request to W. L. Beers, field agent in marketing. The county agent is trying to arrange to have these lists put up in each postoffice in the county.

Any one desiring to order any commodity from the lists may do so by having his bank wire Mr. Beers the order and their guarantee of the payment of draft, by prepaid telegram.

The reduced freight rate on feed applies to hay, straw, feed grains, ground feeds and concentrated feeds.

To obtain the half freight rate, a permit is secured from the county agent. Mr. Beers, in his instructions, says: "The county agents, being on the ground, have been granted considerable latitude in the granting of permits. They should bear in mind that the object of the order is to assist in the planting of crops and to resist the depletion of the live stock supply. Whenever, at any place within the drouth area, these ends can be obtained by granting the privilege, it should be granted. The privilege is intended for farmers and stockmen within the drouth area and feed dealers within the drouth area having distributing facilities and whose stocks are for sale to feeders within the drouth area."

### FEED FROM HOME-GROWN WHEAT.

**Saving of Live Stock Industry and Millions in Money.**

In a letter to Robert Insinger, chairman of the agricultural bureau of the Spokane Chamber of Commerce, dated Waterville, September 15, A. L. Rogers, the well-known member of the state council of defense, says:

I thank you very much for sending me a copy of your report to Senator Miles Poindexter on the vital subjects of "Seed and Feed" for the dry farming district of the northwest. No one in our state knows existing conditions better than yourself and no one is better qualified to give the federal administration sound advice on these subjects.

Of all men, I dislike a kicker, but this seems to be the only method whereby we can jar some people loose. If the department heads of our food administration and grain corporations would swing their legs out from under their mahogany desks and take a vacation in the country and see how their rules and regulations apply to different localities, we would make much greater progress in the way of food production and food conservation. Blanket flats issued from Washington, D. C., covering the whole United States, must be modified to meet local emergencies. We must keep in economical balance at home as well as abroad or we will spoil our usefulness all around.

I presented these vital questions by letter to our state council of defense, but upon reading the report of the these food administrators of Washington, Oregon and Idaho at their late conference and published in the Washington Farmer of its August 29 issue, I felt they were fully aware of existing conditions and therefore let the matter drop. But I am afraid they are resting again on these important matters.

A resolution was passed at that conference calling the attention of the officials at Washington, D. C., to the seriousness of stock feed shortage, due in some instances to drouth, and declares the situation in the northwest "calls for the most sympathetic and intelligent consideration." Another clause in this resolution recommended "that all wheat produced in zone 10 up to the capacities of local mills, be milled in this zone in order that wheat mill feed may be available for stock feed." Now this resolution is fine and covers the subject, but it will die in the borning and be pigeon-holed before it gets to Washington, if we don't get some punch and kick behind it.

Here are the facts in the case: The government has not fixed the feed price on oats, barley and corn and there is none of these products in the northwest for sale, and must be shipped in from the Mississippi basin and freight rates are shortly to be advanced.

Sacked ground mill feed shipped in from Minneapolis, Minn., is now retailing in ton lots at country points as follows, to wit:

Corn $89.80 per ton, oats $77.80 per ton and barley $72.80 per ton, and the prices on this class of feed are not regulated and fixed by the government.

The price of mill feeds made from wheat are regulated and fixed by the government and their basis is 33 per cent of the price of wheat.

Wheat at local points in bulk is worth $2 per bushel or $66.66 per ton and 33 per cent of this amount will make bran worth $22 per ton, plus $5.50 for sacks and twine, plus $2 per ton handling charges, makes bran worth $29.50 per ton, and shorts $2 more or $31.50 per ton.

With the great shortage of forage and stock feeds such as hay, corn, oats and barley it is imperative that all the wheat grown in the northwest, be milled in the northwest, and thereby keep the mill feed at home

It will also save the terrific spread in the cost of eastern corn, oats and barley at an average price of $80.10 per ton as against local wheat mill feeds at an average of $30.50 per ton; at the same time the entire output of flour can be held in reserve for war purposes.

Furthermore, there will be a 25 per cent saving in tonnage on rail transportation of the entire wheat crop.

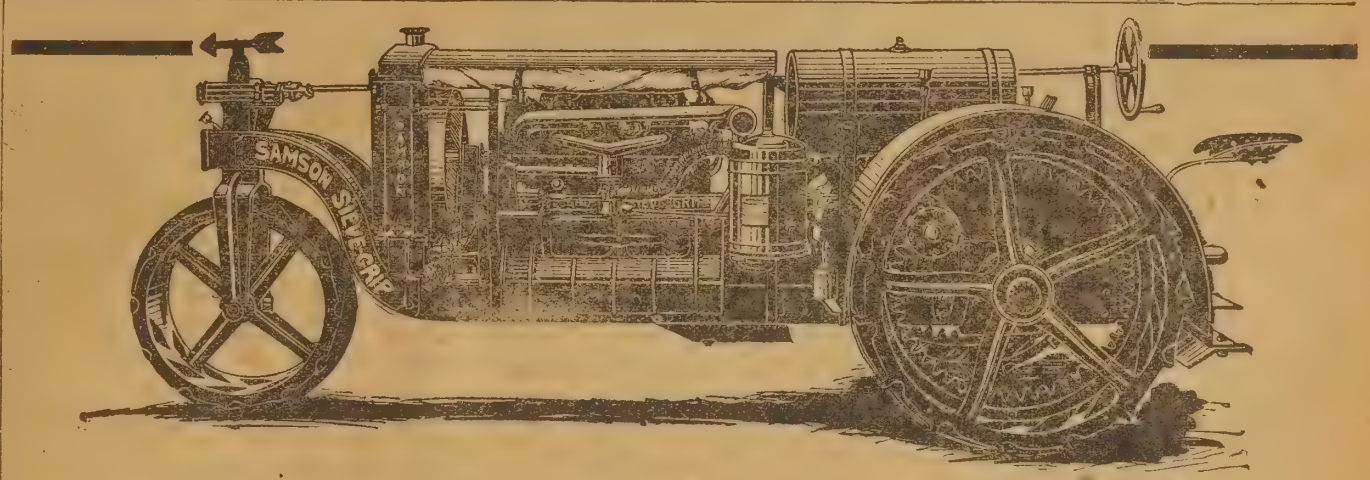
To be more explicit, if the wheat crop of the state of Washington be 40,000,000 bushels, the sum total means 1,200,000 tons, and 25 per cent of this amount at least is feed and represents 300,000 tons of bran and shorts.

| | |
|---|---|
| 300,000 tons of eastern feed at an average cost of $80.13 ... | $24,039,000 |
| 300,000 tons of Washington bran and shorts at an average cost of $30.50 ..... | 9,150,000 |
| Difference ..... | $14,889,000 |

Or a saving to the farmer and animal industry of our state of practically $15,000,000.

I understand the great sticker in the wheat mill feed problem is, that all the millers are kicking on the basic price of the product, namely: 33 per cent of the price of wheat.

If this price is too low the food administration should be fair and change it, otherwise the millers must remember that, in war times, if the federal government can commandeer its men to fight its battles and likewise commandeer the railroads to transport its men and materials, it certainly can commandeer the flour mills and grind the country's wheat to feed its men. Our farmers and stockmen are not asking "the most sympathetic and intelligent consideration from the federal department at Washington, D. C.," but an opportunity to use what they already have on hand in a patriotic and intelligent manner.



### FEEDING LOW-GRADE WHEAT.

**May Be Permitted Under Certain Conditions in the Northwest.**

Charles Hebberd, food administrator of the state of Washington, who has returned from a conference at the national capital, announces in a bulletin:

"It is possible that a more liberal rule will prevail in the northwest as to the feeding of low-grade wheat and wheat at inaccessible points. This will be permitted only on application to the grain corpo-

(Continued on page fourteen.)

# The *GMC* Samson Sieve-Grip Tractor is *your own idea* of what a tractor ought to be and what it ought to do.

IF YOU had started out to build a Tractor for **your farm,** to do everything you wanted it to do, in the long run you would have made it like the GMC Samson Sieve Grip Tractor.

It would have cost you a pile of money and a good many years to have done it. The GMC Samson Sieve Grip Tractor was designed out here in the far west for western farming conditions, and so when you know about it you will discover that it really is **your own idea** of what a Tractor ought to be and what it ought to do.

Do you know why the Sieve Grip Wheels are used?

Do you know why it steers with a single front wheel?

Do you know why the crank can't "kick back" when you start the engine?

Do you know why it is **really** a one-man Tractor?

Do you know why it has 50 per cent more cooling surface than is really needed?

Do you know that one of the first GMC Samson Sieve Grip Tractors, bought in 1903, was used steadily until just a little while ago and then was traded in for another Samson?

Let us tell you.

# The Dairy Barn

## Start Now to Clean and Repair

During the summer months the dairy barn does not get very much attention. The cows are there only a short period during milking time. But before long, cows will have to be kept under cover if they are to keep up the milk flow. The cold rains will be injurious to the cow's health if she is allowed to be out in it. And it will certainly show up unfavorably on the milk sheet.

Start now to clean up and repair the barn and barnyard. The interior probably needs a coat of whitewash, after the cobwebs are brushed down, a window needs to be put in here and there. Remember that each cow should have at least four square feet of window light, and this light should be evenly distributed throughout the barn.

Pick up the boards and trash in the barnyard. Haul in some extra cinders and gravel in the low places, and make the yard usable for wet weather. It isn't playing square with a cow to ask her to wade knee deep in mud all winter, and then expect a full pail of milk twice a day.

A comfortable, clean barn and clean barnyard help to make healthy cows that will produce their utmost at the pail. It pays to look after these things. A. B. N.

### TO PROVIDE SUCCULENCE.

By THOMAS SHAW.

Those who have given careful thought to the milk question can not fail to have noticed how freely cows milk when on grass in the spring season. When turned onto the same after having been fed on dry food in winter the milk flow is at once increased, even though the cows should be well advanced in the lactation period. What is it that leads to such a result? It does not follow because of increased nutrition in the food. It rather follows mainly because of increased succulence in the food. It furnishes materials for producing milk and it exercises a favorable influence on digestion when not too succulent. There may be some other reasons, but if so they are much less important.

In the northwestern states, and especially in Washington and Oregon, the dry fodders that are most commonly fed are clover, clover and timothy, and alfalfa. The aim should be to provide succulence that will tend to balance the ration. As is generally known, clover and alfalfa are essentially protein plants. Corn and sorphum are essentially carbohydrate in their constituents. These, then, balance the fodders named; that is, they make a food when fed together that will be fed without waste, providing it is all eaten by the animals to which it is fed.

There is no plant more suitable for producing ensilage than corn where it may be successfully grown. For this use it can be grown over wide areas in the states named, also in Idaho. Of course there are other areas where the production is not enough to justify growing it for such a use. The elevation may be too high or the nights may be too cold or the two causes may work in conjunction.

### CONDENSERY AT NAMPA.

The Carnation Milk Products company opened its condensery at Nampa, Idaho, September 9. A special car operated over the Boise Valley Traction company's "loop" line, covering a wide territory in the Boise valley, was placed in operation for the sole purpose of carrying milk from the company's patrons to the condensery. Dairymen are receiving $2.80 a hundred for 4 per cent milk, which is equivalent to about 70 cents a pound for butterfat. The plant has a capacity of 250,000 pounds a day, but it will not run to capacity for some time to come. O. W. Jones is superintendent of the Nampa plant.

### Woman Cow Tester

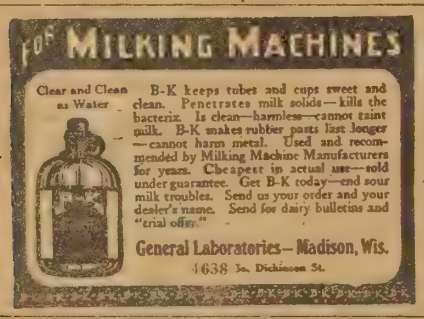
Miss Pearl Snedeker, who lived on a farm in Iowa until she was 22 years old, has recently resigned her position as teacher in the Albany high school, to take charge of the testing association at Tillamook, Ore.

There are 761 cows in the association which she has charge of, and in one of the best cheese sections in the United States. The cheese factories in this section manufactured 4,074,388 pounds of cheese last year.

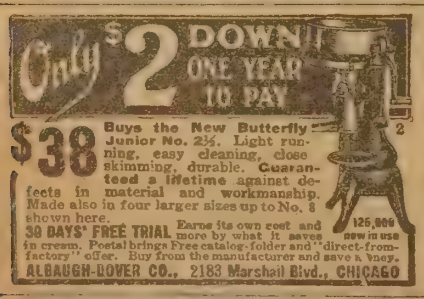
Miss Snedeker has an auto in which she travels from one dairy to the other, and since all dairies are close to cheese factories the testing is done in the factories, where a steam tester is used.

### FEEDING YOUNG FARM ANIMALS.

Professor R. E. Caldwell has been engaged as the director of the research and educational bureau, established by the Blatchford Calf Meal company at Waukegan, Ill. Professor Caldwell graduated from the Kansas State Agricultural college in 1908. For some years he conducted experimental feeding work at the Ohio agricultural experiment station at Wooster, Ohio. In 1911 he was called to Purdue university as associate in milk production, later being placed at the head of the dairy department.



Writing of his new work, Professor Caldwell says that the purpose of the company is "to establish a division of their work designed to investigate all problems relative to the feeding of young farm animals; also to carry this information to the farmers, for whom it is designed. It is not to be tainted in any way with personal or commercial ambition. The object of the department is to render service. It is not our object to work individually, but rather expect to cooperate to the fullest extent with all private, state and government agencies having as their object the genuine welfare of the American farmer and stock breeder."



### AS TO BUTTER PRICES.

The food administration for the United States has decided that retail dealers must not charge in excess of five to six cents a pound over cost for butter. Anything over that figure will be considered profiteering. Cash and carry away stores are allowed five cents, while credit and delivery stores are given a cent more. This applies to both fresh and cold storage goods. The following items of expense are considered: Purchase price, transportation charge, cold storage, if any, insurance on cold storage butter, interest on money invested at current rate while goods are in storage, actual cost of printing. Cost does not include estimated shrinkage, commissions or similar expenses.

### French Names Pronounced.

Here's the pronunciation of the following French names: Ypres, Soissons, Aisne, Amiens, Douai, Bapaume, Meaux, Yser, Lys, Ayesnes, in the order named: Ee-pr, Swahsonn, Ain, Am-e-an, Dewai, Bah-pome, Mo, Eazer, Leece, Ah-eem.

CHANDLER SIX

*FAMOUS FOR ITS MARVELOUS MOTOR*

## Let Your New Car Be a Real Car

NEARLY fifty thousand Chandler owners, many of whom are farmers, know how powerful and responsive, how economical, how dependable and enduring the Chandler car is.

"Greatest of all light sixes" never more accurately described the Chandler than it does today. If you wished to search the whole market with minute comparisons and tests this would be your answer, too.

In the ownership of a Chandler Six you will possess a really great automobile—great from the standpoint of mechanical excellence and daily performance under all road conditions, great from the standpoint of economy in operation and maintenance.

Thousands of Chandler owners tell of gasoline mileage of fifteen to seventeen miles per gallon. Seven thousand to nine thousand miles per set of tires is the usual Chandler report. Owners and dealers alike say the service upkeep of the Chandler car is much less than that of other good cars which they have owned or sold.

You want and need the best of equipment on the farm. The automobile is part of your equipment. Let the new car you buy this Fall be a *real* car. Let it be a big and fine, yet light and economical, car that you can depend on.

**Choose the Chandler for Your Car**

*7-Pass. Touring Car, $1795* *4-Pass. Roadster, $1795*
*Four-Passenger Dispatch Car, $1875*
*Convertible Sedan, $2495* *Convertible Coupe, $2395*
*All prices f. o. b. Cleveland*

There are Chandler dealers in all principal cities and in a thousand towns. Some one of them is in position to show you the newest Chandler models. Write us today for catalog and folder "How Chandler Checks with High Priced Cars"

# Dehorn Cattle

## Fall of Year Is a Good Time

By E. L. POTTER.

That cattle of all kinds should be dehorned is admitted by progressive beef men everywhere. The question is only one of how and when.

The instruments commonly used are the saw and the clippers. With animals less than 12 months of age the horns are soft and the clippers work very well. For older cattle the saw causes less crushing and bleeding and is decidedly the better instrument. Cattle should, if possible, however, be dehorned by the time they are not more than 12 months, since up to this age the horn cavity is very small, or entirely absent, so that the wound scabs over and will be free from flies or other danger in a few days. With older animals the horn cavity is too large to scab over and will contain matter and run for several weeks.

The secret of a good job is to cut close enough to take off a ring of skin at least one-fourth inch wide clear around the base of the horn. This is not always possible with the clippers, as the fleshy base of the ear tends to hold the knives too far away from the head. With the saw the saw is removed as soon as the bone is cut through and the cut finished with a knife, cutting downward between the horn and the ear. This makes a kind of notched cut that heals nicely and leaves a perfectly clean head. If the ring of skin is not taken clear around, however, a scar will form and the more skin there is left the bigger the scar will be. There is no danger whatever of cutting too deep, and the base of the horn is two inches or more from the brain cavity. The cavity in the horn connects only with the nasal passages. After the work is done the animal should be kept where it can be watched for a few hours. The bleeding will be severe at first, but should stop in a hour or so. If it does not stop put the animal back in the chute and either hold the finger on the wound for a few minutes until the blood clots, or draw out the end of the artery with a small pair of forceps and tie with a thread. Various dopes are used to put on the horn immediately after the cut is made with the idea of stopping the blood and keeping away flies, but it has been our experience that they do neither; 95 per cent of the animals dehorned are better off let alone and the other 5 per cent need more serious treatment than smearing on a little tar or sheep dip. There seems to be no practical way of keeping flies off range cattle so they must not be dehorned in fly time. Right now is a good time to dehorn calves and yearlings, but is rather late for older cattle. The fall is a good time. The work should be done just as soon as the flies are gone.

Calves may be dehorned by throwing them with one rope on the neck and one on the heels, but older cattle should be handled in a chute and the chute must be a good one with squeeze sides and proper facilities for holding the head. (Chute plans may be obtained from the Oregon Agricultural college.) Dehorning is not a bad job if one is equipped to handle the cattle properly. One can hardly dehorn cattle by simply snubbing them to the fence.

The exact kind of instrument used is not important so it is strong and sharp. A saw, to be really good, should be short and stiff. A 12-inch-back saw, such as carpenters and cabinet-makers use, is the best of all. Saws with a narrow blade like a meat saw do not work so well as the blade twists too much. A pair of fetlock clippers are needed to clip off the hair around the base of the horn before beginning to saw. If the hair is clipped the saw will cut very much faster and the operator can tell just where he is cutting. If the hair is clipped away any amateur can do a first class job on every animal.

# VETERINARY

By DR. S. B. NELSON.

**Small Hole in Heifer's Teat**—I have a 2-year-old heifer that has been fresh about six weeks and has a very small hole in her left front teat. It is about an inch from the point. In milking her the milk comes from the hole as well as through the proper channel. Kindly advise me how to heal the hole.—C. M. C., Libby, Mont.

Practically the only satisfactory way to heal the hole in the teat is to place a harnessmaker's stitch in from the side and tie it. Then scarify the outside opening of the hole with a fine knife point and put two very fine stitches across the opening. Sprinkle it thoroughly with boracic acid and put on a little bit of cotton and seal with collodium. Leave it for three of four days unless it gets rather tender, which it will not do if this has been done absolutely clean. The entire teat should be painted with tincture of iodine before beginning to operate. After four or five days take off the dressing without injuring the tissues, and handle very carefully.

**Horse Rubs Out Mane and Tail**—I have a young horse that persists in rubbing out his mane and tail. There seems to be no indication of mange or anything else, but he continues to rub, whether in pasture or stable. I have washed it with a 2 per cent solution of lysol, but that has no effect.—J. F., Bellingham, Wash.

You might try giving a purge of one ounce of aloes made into a ball. Then apply to the mane and tail a solution of one part of corrosive sublimate to 1000 parts of water once daily. This solution is poisonous, and must be kept where children can not get hold of it.

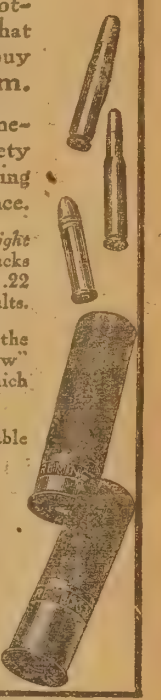
**Cooked Potatoes for Hogs**—I have a brood sow about 5 years old which I can not get with pig. I have had her bred four times. She had pigs the 24th of February. I had to take her to the boar the second time the last time she was bred. This is the only trouble I have had since I have had her. Can you tell what is wrong with her and what I can do for her? Do you think cooked potatoes are good for hogs? H. F. B.
Troutdale, Ore.

It would be impossible for me to make a diagnosis of the trouble affecting your sow without having the opportunity to make a personal examination of her. It seems to me that the sow might well be put into the fattening pen and killed, and possibly you could buy a younger sow to advantage. This might be the best way to overcome the trouble. Cooked potatoes are good for hogs when fed in proper manner with other feeds. Remember that cooked potatoes are a very starchy food, and should be fed with nitrogenous foods, such as oats, barley and other grains of various kinds.

## Repeating Shotguns and Rifles
*for Shooting Right*

WHETHER .22 repeater for the boy or autoloading shotgun for yourself, a high power autoloading rifle for that well earned deer hunt or a pump gun or rifle for general use, buy a Remington UMC and know you are getting the *right* arm.

Every Remington UMC shotgun or rifle is *right* in every mechanical detail—hammerless, with solid breech, has positive safety lock and either autoloading or slide action. And *right* in shooting qualities, balance, fit, material, workmanship, finish and appearance.



Buy Remington UMC Shotshells or Metallic Cartridges and add the *right* finishing touch. For example, for squirrels, woodchucks and other small animals, the Remington UMC .22 cartridge with hollow point bullet gives best results.

The wonderful Wetproof process used exclusively in the manufacture of Remington UMC Smokeless "Arrow" and "Nitro Club" Shotshells, produces a shell which can be exposed to wet for hours without harm.

In *black powder* shotshells, buy the old reliable Remington UMC "New Club," now wetproof sealed at turnover (crimp) and top wad.

# Show Birds

## Telling Points at Exhibitions

I have some White Wyandottes, hatched from eggs secured from one of the largest advertisers and supposed to be of the best. I paid extra for some of the eggs. Two of the chickens have single combs. Is that a good sign? Also I notice a few feathers on some of them that have a little brown or black in them; just a few, though. Also close to the skin the feathers are partly a cream color, otherwise they are a fine bunch. Tell me what to do and how to pick some of the best, as I wish to enter some in the chicken shows this fall.—A Reader, Walla Walla.

The single comb frequently shows in Wyandottes. It is not a sign of cross-breeding, except away back when the breed was made. They revert in this to their ancestors many generations back. This is called reversion. Of course the single combs might come from more recent crossing with single-comb breeds. The rose comb and the white plumage are dominant characteristics. If we cross a White Wyandotte with a White Leghorn or with a Black or Brown Leghorn we get the same result in comb and color of plumage. The comb will be rose and the feathers white. That is what is meant when we say that the rose comb and white plumage are dominant. If we cross a White Wyandotte with a Barred Plymouth Rock we also get a white fowl with a rose comb, and some of them might win prizes as Wyandottes in the show. But in the case of the Leghorn and Wyandotte cross, while they would have the White Wyandotte color and comb, they would resemble the Leghorn partly. They would have longer tails, and some would have white earlobes. It wouldn't be hard to tell they were crossed if one understood the distinctive type of each breed. In the second cross, however, some single combs would appear, even though there were no single combs in the first cross. If the single-comb cross chickens are bred together they will produce all single combs. Single comb is a recessive character, and the recessives always breed true, but the dominants do not always. The chicken takes after both parents in some characteristics, and in some others after one parent only. The same is true of cattle, horses and hogs, as well as plants and human beings.

We don't know why when we breed a single-comb chicken to a rose-comb chicken they produce rose-comb chickens only; but it is a demonstrated fact. We don't know why when we breed a white chicken to a black one they produce only white chickens; but it is a demonstrated fact. We don't know why when we breed these first crosses together they will produce some black and some white chickens, but it is a demonstrated fact.

But this is probably getting away from the subject. A Wyandotte with a single comb may be pure-bred, but it will not win a prize in the show where the judge uses the Standard of Perfection as a guide. The single comb is called a disqualification; it disqualifies the Wyandotte from winning a prize.

As to the color of feathers, it sometimes happens that some of the best specimens—I mean show specimens—have some black spots in the feathers. Of course they don't have them in the show room. The craze in a show bird is to get a pure white, without any suggestion of yellow or cream, and it happens that the birds that are the purest white—I mean birds with the least suggestion of creaminess in the feather, quill or the earlobe—are the ones that are most likely to throw black feathers or black spots. Now, black feathers or black spots, like single combs, are a disqualification. If you send a White Wyandotte to a show with a black spot in the plumage it will not get a prize if judged by the Standard, so that there is only one of two things to do: either pull out the feather before sending the bird to the show, which, sub rosa, has been done, or not send the bird to the show. The latter, of course, is the only honest way. There is no fun in winning a prize if to win it deception must be practiced. It is permissible and right to clean the bird by washing its plumage and legs; that shows it in its true color better, but painting is another thing, pulling out feathers is another. Yes, painting has been practiced, painting of the legs, and some experts can do it so as to fool the judge. But there is no sportsmanship or fun in that. The best bird should win, not the best artist.

But there are many points to consider in the show Wyandotte. The Wyandotte has a distinctive type or shape. It is not as long or rangy as the Plymouth Rock or Rhode Island Red. It is a blocky bird. The comb should not be too large; it should fit down on the head well. The earlobes must be red and the tail short. But one should study the birds themselves, the show birds, in order to get the right idea of what is required in the show room.

Once as a youngster I took a notion to break into the show business, and the first bird I sent was a White Wyandotte. I thought he was a fine bird, but the judge thought otherwise. My neighbors came home and consoled me by saying it was an outrage. They thought so, too. He was larger than the others; had a larger comb, which was nice and red; he would crow 10 times while the next best crowed only once. He looked like he could thrash the whole bunch of them if he had got a chance. But the blue ribbon was given to a rooster that had hardly any comb and less crow and acted like he was afraid to scratch for fear of hurting his toes, so the neighbors said. It dawned on me several years afterward that my rooster had too much comb and wattle, besides the little tinge of brass or creaminess on back could not be offset by any amount of crowing and scratching. But a Wyandotte may have a little creaminess and a large comb and still be a Wyandotte and a good layer. That is another question.

J. D.

### CHESTER M. WILCOX.

Chester M. Wilcox, manager of the poultry department of the Oregon State hospital, died suddenly of pneumonia at Camp Fremont, Cal., a short time ago. Mr. Wilcox was called into the service about two weeks previously, having passed a good physical examination. About a year ago he applied for enlistment, but was turned down on account of a slight murmur of the heart.

Mr. Wilcox was a graduate of the O. A. C., and had been very successful in building up the poultry work at the state hospital. It is the largest poultry farm in the state, and one of the most profitable in the United States. A few days before he died the writer received a letter from him in which he said that he had passed a good physical examination and he counted it a "rare privilege" that he could now enter the service.

A young man of rare ability and integrity was Chester Wilcox, and his taking away is a distinct loss to the community and the state.

Correct Lubrication for the Ford Engine

The Ford automobile engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE—LIGHT fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

"Zerolene is the Best"

—Say leading motor car distributors, because the records of their service departments show that ZEROLENE, correctly refined from selected California asphalt-base crude, gives perfect lubrication with less wear and less carbon deposit.

Most cars are now lubricated with ZEROLENE because their owners have learned through experience that there is no better oil.

ZEROLENE is the correct oil for all types of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.

# Orchard Troubles

## Blackberry Enemies Numerous

By GRANVILLE LOWTHER.

The diseases most common to the blackberry, are crown gall, fruit rot, leaf spot, mushroom rot, orange rust, red or bramble rust.

Crown gall is a bacterial disease, technically known as bacterium tumefaciens. It exists in the soil and in case the roots are wounded by cultivation, punctured by insects, or in any other way the bark is broken, the bacterium may enter and infect the roots. Galls of the same nature sometimes occur above the ground, but this is relatively infrequent.

The methods of control are to destroy all infected plants, destroy all aphis, gophers, field mice, ground squirrels, or whatever may injure the roots. Care should be used in cultivation not to injure the root system. For an extended article on the subject, see under apple, in this series of articles.

Fruit rot in blackberries is manifest by a dusty mold, or gray fungus on the fruit. No effective treatment has, in so far as I know, been discovered.

Leaf spot, known scientifically as Septoria rui, is manifest by small dead spots on the leaves. Since leaves are the breathing organs and manufactories of food, the injury is in proportion to the extent of the disease. The remedy is Bordeaux mixture. Spray first when the buds are beginning to unfold, and then at intervals of about 10 days, for four sprayings.

Mushroom rot is a fungus disease affecting many kinds of plants and is known to scientists as Armilaria mellea. It affects the roots at the surface and just below the ground, more than at any other point. I cured two apple trees in our orchard, affected with the same disease, by scraping away the earth, and pouring onto the roots undiluted lime sulphur, commercial lime sulphur without adding water. At the time, I though it was as likely to kill the tree as to cure it; but it cured. Most writers recommend digging out the trees or plants in order to prevent the spread of the infection. With my present knowledge, I would follow this advice in so far as it regards bush fruits; but not with reference to apples.

Orange rust produces bright orange masses of spores all over the underside of the leaves. The fungus spreads throughout the plant so that it is difficult to control. The remedy prescribed is to cut out the affected portions and burn them. When the new growth appears, spray with Bordeaux.

Rem bramble rust is similar in appearance to orange rust, and requires the same treatment.

The apple leaf hopper may be killed by spraying with coal oil emulsion, whale oil soap or tobacco. This subject was treated more fully under apple pests. Blackberry aphis and black cherry aphis may be destroyed by the tobacco spray.

Blackberry cane borer resembles the peach borer. Many of the canes will be found to be girdled at the base and the pith bored out by the caterpillar, which develops into a moth, or insect resembling a brightly colored wasp. The remedy generally recommended is to cut out the infested canes and burn them.

The bramble flea louse has been found troublesome in the eastern states, but in so far as I know has not troubled Pacific coast growers. It can be killed by spraying with tobacco or kerosene emulsion.

Blackberry bud moth is similar to the apple bud moth, and may be killed by spraying with arsenate of lead.

Further discussion of blackberry and raspberry pests will be given in a coming issue of this paper.

### SOMETHING ABOUT PEPPERS.

The pepper is a native of South America. The seeds are flat, and like the flesh of the pods have an acrid, burning taste, for which the plant is cultivated. The germinating power lasts about four years after the seeds are separated, but much longer than this if left in the pods.

The variety usually planted is Ruby King, a large, bright-red and mild-flavored pepper, considered best for general use. This is a mild pepper, while chili and cayenne are considered the hottest grown.

Peppers need practically the same cultivation as the tomato or egg plant, except that they may be planted two feet apart, with three feet between the rows.

### Siberia Is Big Place.

Siberia, of which at the present time there is so much talk, contains nearly 5,000,000 square miles and is about 45 times as big as the British isles.

### POTATO CROP ESTIMATES.

The bureau of crop estimates in its September report predicts a total yield of white potatoes of 385,000,000 bushels for the country. This is 58,000,000 less than last year's total crop, and 6,000,000 less than the August estimate. Estimates for the leading states are: Maine, 23,000,000 bushels, an increase of 3,000,000 over 1917; Minnesota, 32,800,000 bushels, a loss of 1,000,000 bushels; New York, 32,600,000, a loss of 5,300,000; Wisconsin, 31,600,000, a loss of 3,000,000; Michigan, 28,800,000, a loss of 7,000,000, and Colorado, 7,700,000, a loss of 1,500,000 bushels.

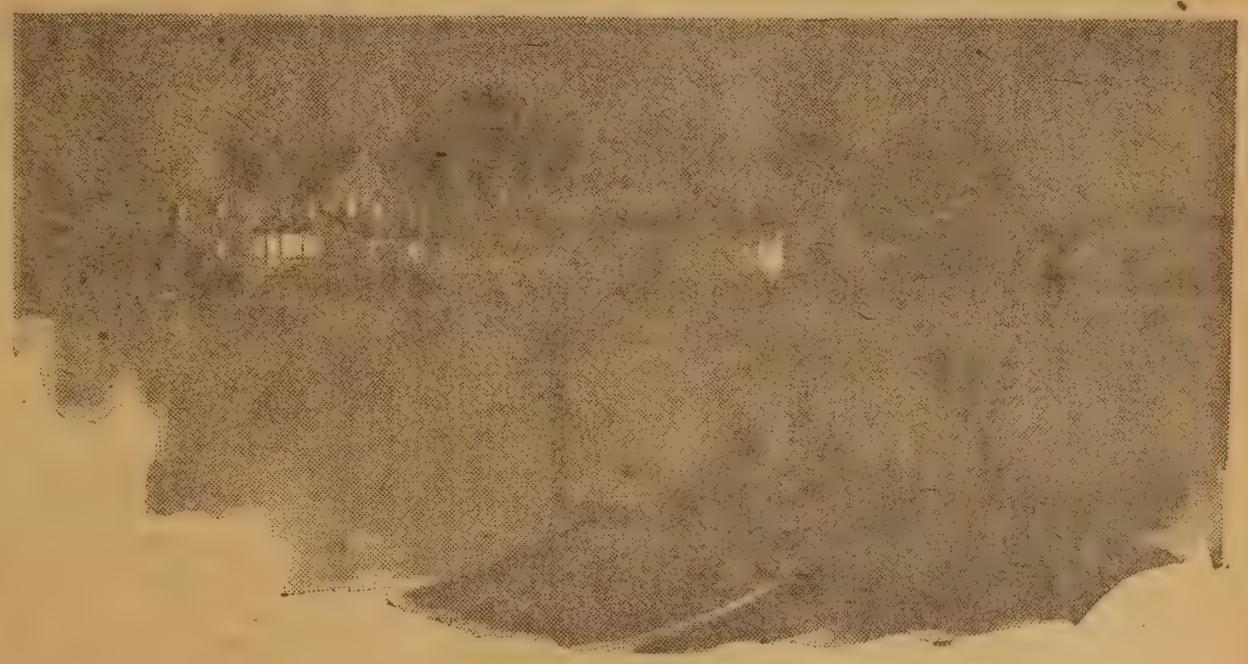
### WHEAT CROP IN SCOTLAND.

The president of the Scottish board of agriculture recently stated that the wheat crop in Scotland this year had been increased by 16,000 acres, the oat crop by 196,000 acres and the potato crop by 23,000 acres. There was some decrease in the barley crop, but the net increase on the whole of these crops was 227,000 acres, compared with 1917.

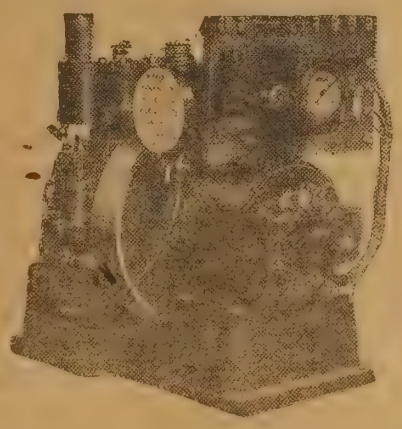
### Horse Racing in Mongolia.

Perhaps the prohibition of horse racing would be more deeply resented in Mongolia than in any other country of the world. There it ranks as the favorite pastime of all classes, including the Buddhist clergy, who number fully one-third of the total population. The races are never under 10 miles, and the Mongolian "derby" is a contest over 30 miles of rough steppe.

### Underground Theaters.



Because of frequent air raids, Paris is to have underground theaters.



If You Buy a Pair and They Rip, You Get a New Pair Free. Ask Your Dealer.

Generating plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.

## *Satisfaction Assured in Advance*

It is a fact that Lalley-Light usually finds preference among those thoughtful farmers who are regarded as neighborhood leaders.

It is not hard to understand why. The man who seriously looks into the electric light situation discovers that Lalley-Light has been in successful farm use for more than seven years.

He hears it well spoken of everywhere it is known.

He learns that faithful, year-to-year service and economy are the experience of Lally-Light users. He receives the impression that he would be entirely safe in investing in Lalley-Light.

He accepts these things as actual advance assurance of his own future satisfaction.

In reality, they are exactly that. For Lalley-Light satisfaction probably approaches 100 per cent as closely as it can be approached. Never was the need for Lalley-Light so imperative as now.

Farm labor is scarce. Lalley-Light saves labor by supplying the power to do much necessary work.

Farm products and farm buildings are more valuable. Lalley-Light safeguards them by removing the fire risk entirely.

Lalley-Light brings to the farm a score of conveniences and comforts that only electricity from a wholly dependable plant can bring. In addition, it has its own exclusive advantages which the nearest Lalley-Light dealer will gladly demonstrate and explain. Write us for his name, and for complete details,

Look for the Lalley-Light demonstrating exhibit at your state or county fair this fall.

# To Produce More Next Year

## Klickitat Farmers Are Conserving Feed, Even Straw. Will Get Through the Winter in Pretty Good Shape, With a Little to Spare

BOSSBURG, Stevens County, Wash., Sept. 20.—Crops of all kinds were short this year, except corn, but we will most all have enough feed to carry us through. A few farmers will sell off some cattle that would have been held over had there been plenty of feed. We have not had time to do much as yet to arrange for a fair for this fall, but we will have the Stevens County Live Stock association's stock show. As this event will not be held until October, after all harvesting is over, there will be a good showing of stock of all kinds, and we believe this show has done more for the farmers than the old county fairs of years past. I have been asked the question several times of late as to whether this section of the country was prosperous. In a way it is, although the dry summer was hard on some farmers and a few will have to sell off some young stock that should have been held over. Farm produce of all kind sells for a good price, except soft fruits, which have been just about the same as former years. Everybody is working, and there seems to be more money in circulation than for many years. We have managed to harvest all crops without sending out for help. There has not been much fall seeding done so far, as it has been too dry, but if we have rain in time there will be more wheat seeded this fall than usual. There is plenty of seed in the country, and of fair quality, and about all that will be shipped in will be millfeed for dairy cows. Every farmer is conserving all feed, even to the straw, this fall. Some are going to bale their straw and sell to others that have to buy some feed. Heretofore a large part of the straw has been wasted. All silos except one have been filled with corn, and some have cut the third crop of alfalfa, although it was short. Everything will be saved this year, and we will get through the winter in pretty good shape and have a little to spare. Although we have had two short crops, we are not discouraged, and will try to produce more next year, and "win the war" is what you hear at all times. W. W. PALMER.

### HAUL GRAIN WITH TRUCKS.

BICKLETON, Klickitat County, Wash., Sept. 14.—Harvest is practically over, and some of the farmers have part of their grain hauled to the warehouses. There was a wide difference in crops in this eastern Klickitat. In a radius of 10 miles of Bickleton the majority were good. In the Glade, Horseheaven and Six Prong some were nearly a failure. In Roosevelt, Alderdale and Mabton we are getting the government price less 15 cents off for freight and other charges of the warehouse man. We have had rain last night, which will benefit the roads. Everything is very high in price, but every one seems to have the money to pay. There is a shortage of all vegetables and fruit. There is a marked increase in the number of motor trucks this year. Many farmers are hauling their wheat this way this season. They make two trips daily to Roosevelt, while it takes two days to make a trip with horses. BERT H. FAULKNER.

## Why Grains "Run Out"

By B. F. SHEEHAN.

There is often complaint among farmers about varieties of grains "running out." They say seeds run out if kept too long on the same farm, and need occasional replacement by "fresh" stock from the seedsman.

Several facts may account for the general deterioration which occurs from year to year. One, and a very important one, is that many farmers use low-yielding varieties and pay little or no attention to seed selection. When no seed selection or seed grading is practiced and each year's seeding is allowed to put back all of the light and shriveled seed there is bound to be deterioration. The shriveled seeds will be slower to germinate, the first leaf will appear above ground after those of the other row are well under way, and the tardy seedlings, poorly nourished as they are, will make a hesitating and uncertain growth. In fact, in the short growing season they do not overcome this early handicap, and the yields will not only be low but many of the kernels will be imperfect. This effect will be in a measure cumulative from year to year if the imperfect kernels are planted—in fact, the stock will "run out." Liberal use of the fanning mill will get rid of these light and shriveled seeds.

Growing of varieties which are not suited to the soil and climatic conditions is a common cause of crops running out. This is especially true of potatoes. If a variety is not adapted to the soil and climatic conditions the best results can not be expected.

Grains should be seeded under as near the same soil and climatic conditions as they were grown.

The continuous cropping system which is practiced by many farmers is a common cause of varieties running out. Continuous cropping depletes the fertility of the soil, allows the entrance of weeds, insect pests and disease, which results in a light and unsatisfactory crop.

Many farmers refuse to obtain seed from a field which has not yielded well. For instance, one farmer may have a field of Turkey red wheat which gave a yield of 40 bushels, another farmer 20 miles away may have a field of pure Turkey red which has given a yield of but 10 bushels per acre. Considering that both fields are pure and contain plump seed—the seeds from the 10-bushel field are as good for seed purposes as the one which yielded 40 bushels. The lower yield may be due to any number of causes, such as lack of moisture, time of seeding, etc., which, of course, is not transmitted. Pure, plump Turkey red wheat is Turkey red, no matter what the yield, and such seed obtained from a high-yielding field and grown under the same conditions as identical seed obtained from a low-yielding field should result in the same kind of a crop.

By growing high-yielding varieties which are adapted to your soil and climatic conditions, and by practicing good seed selection and grading and also the practicing of a rotation and seed treatment, one may practically eliminate "running out," which is so common a complaint in many sections.

### CATTLE FROM DROUTH AREAS.

**Decrease of 25 Per Cent in Freight Rates Has Been Granted.**

Large shipments of cattle from the drouth-stricken regions of Texas and Oklahoma to pasture land in Pennsylvania, Virginia and other eastern states are to be undertaken by the railroad administration, upon request of the food administration. To make possible this food conservation measure a decrease of 25 per cent in freight rates has been granted, through recommendation of the food administration. Cattle buyers in the east will purchase western stock outright, and shipments in trainload lots will begin as soon as the plan is completed.

### LARGER MILK DEMAND FOLLOWS PROHIBITION.

Increased demand for milk, following curtailment of brewing in the United States, is a probable development in the nation's food situation during the coming year. In a recent conference with Food Administration officials at Washington R. C. Reed, secretary of the Michigan Milk Producers' association, presented facts of unusual interest to all dairymen. Since last May, when Detroit became dry, consumption of milk, according to Mr. Reed, increased 20 per cent and of buttermilk about 50 per cent. To satisfy this sudden demand it became necessary to bring in milk from greater distances and to a considerable extent utilize the supply formerly made into cheese.

### STABILIZING COTTONSEED MEAL.

In spite of the lower yield of cotton and the increased cost of production, the organized cottonseed producers have agreed with the food administration to stabilize the price of cottonseed at the average price of last year. This is a concession on their part to the cattle-feeding and dairy interests in this country. The prices will vary from $64 to $72 per ton in carload lots, f. o. b. cars, depending upon the yield in oil.

### May Draft Women.

A resolution has been presented in the English house of commons to draft all unmarried women between 19 and 30 years for war work.

Are You Waiting for a Perfect Tractor?

The LAUSON 15-25

DUST PROOF-ALL GEARS ENCLOSED

Is Not an Experiment But Already Perfected

Twenty-three years of experience building farm engines have enabled the John Lauson Manufacturing company to perfect the Lauson Tractor so that it is years ahead of its competitors.

**It has all the qualities you want a tractor to have**—dust-proof features, enclosed gears, ease of operation, durability, economy and day-after-day dependability under all soil conditions.

**It will do everything you want a tractor to do**—stump pulling, plowing, discing, harvesting, heavy hauling or grading, silo filling or cutting—do it **quicker** and do it **better.**

The LAUSON is the tractor you've been looking for—the tractor that is **saving money** and **making money** for its owners everywhere. Fill in the coupon below and we'll tell you how.

SPOKANE, WASHINGTON

# FARMERS OF WASHINGTON BUY 4th LIBERTY LOAN BONDS ANY BANK WILL HELP YOU

YOUR sons or your neighbors' sons have gone to France or are in training for service there and Liberty Bonds are a bulwark at home for their support.

Your money will buy food to strengthen them, clothing to warm them, rifles, machine guns and cannon to defend them; medicines and surgery to save their lives and helmets to guard them from German shrapnel and gas masks to ward off the waves of poison gas.

***Love and patriotism*** will move you to make extraordinary effort to buy Liberty Bonds. But there is the secondary consideration that every bond now purchased will be a safe, sound investment against possible hard times that may follow the war.

***Patriotism and individual welfare do not always pull together, but they are doing fine team-work now.***

You farmers who have worked hard—and no one works harder—to get together your property—farm and buildings, your crops, your live stock, your farm implements, all which represent years and years of work as well as everything that you enjoy as the result of your labor—all these advantages remain with you because the soldiers and sailors of Uncle Sam stand between you and the blood-thirsty Hun.

Be sure when you sign that subscription blank for Fourth Liberty Bonds, the amount you put down squares as nearly as it can with all your heart acknowledges this heritage to be worth to you.

# Farm Output Calls for the Ablest Man

(Continued from page seven.)

ration and the furnishing of samples. In proper cases permits will be issued for this purpose.

"All feeders of stock should make plans at once to secure necessary supplies of coarse grains for feeding purposes. No barley is to be purchased on the Pacific coast for export purposes this year, so that coarse grains should be procurable here at reasonable prices. Feed barley can now be purchased at Minneapolis at about 90 cents per bushel, so that carloads should be laid in here at $50 to $55 per ton."

Continuing the discussion of this most important feed problem, Mr. Hebberd adds:

"While we have in this country an increased wheat crop almost 250,000,000 bushels over last year, the total production of feed grains is greatly reduced. Corn and oats together are down 597,000,000 bushels, and there is serious shortage in hay crops. Exactly the same condition exists in allied countries—wheat production up, fodder and feed grains greatly reduced. Feed conditions in the allied countries have caused a decrease of milk production from the already depleted dairy herds, the production per cow being reduced 20 per cent below former amounts. As a result of this condition milk is now available only for child feeding, and even in insufficient quantities for that purpose. The civilian population in allied countries go weeks without butter and other dairy foods.

"Thus, while our feed problem in the northwest is a serious one, it has none of the elements of danger to child life or morale of the people that exist in allied countries. It was apparent at the Washington conference that every section of the United States this winter will have its serious feed problem, due to shortages and drouth conditions in many parts of the country.

"There will be about 5,000,000 barrels less flour shipped the allies and neutrals this year than last. The northwestern food administrators received Mr. Hoover's assurance that 40 per cent of the flour that goes to Europe will be shipped from the Pacific coast and that no wheat would be shipped while flour is available for shipment. Notwithstanding this, there will be a greater demand for mill feeds than the mills will be able to supply. It was therefore determined to limit the feeding of mill feeds to dairy cows, young hogs and poultry."

## HOW WHEAT PRICE IS CUT.

**Farmer Gives Figures of Grain Sold This Fall in Palouse Country.**

| | |
|---|---|
| Coast price, bulk wheat | $2.20 |
| Freight rate to the Coast | $0.135 |
| Buying charge | .02 |
| Handling charge | .03 |
| Bad sacks, insurance, interest | .15 |
| Cut from grade No. 1 to No. 2 | .02 |
| Cut from grade No. 2 to No. 3 | .03 |
| Dirt and chaff | .02 |
| Smut | .02 |
| Total reductions | .32 |
| Amount received by farmer | $1.88 |

"I find that people as a whole are woefully misinformed as to the price farmers are receiving for their wheat," said George H. McCroskey, a prominent wheat grower of the Palouse country, in a published interview. "They read that the government has fixed the price for wheat at $2.20, and they labor under the misapprehension that the farmer receives this sum.

"To show that he gets nothing like the Coast price, I give the figures printed above. Those figures are correct, for they are reductions that I received for some wheat sold this fall in the Palouse country.

"These figures are for bulk wheat. Sacked wheat is 9 cents a bushel higher. The best price I received for any of my sacked wheat was $2.10 for 249 sacks of choice marquise wheat. Most of my crop gave returns of about $1.95, sacked.

"The government has fixed $2.20 on the Coast for wheat grading No. 1. Very little of this grade is grown in the Inland Empire, it being the hard wheat of the Dakotas. I doubt if one bushel in 1000 in this section will grade No. 1. At the very outset the farmer is docked 2 cents a bushel for wheat that grades No. 2, and then if the buyer thinks that it is No. 3 an additional penalty of 3 cents is added. The flour milled from this wheat, however, is sold as grade No. 1.

"Then the freight rate of 13 1-2 cents a bushel is deducted. It makes no difference if the wheat is bought for a Spokane mill, to which the freight charge will be only a few cents a bushel, the farmer is assessed the full freight rate charge to the Coast, of 13 1-2 cents.

"Then you are charged 2 cents for buying. If the farmer sells direct to the mill that is one of the reductions that is made in settlement. Then follows a charge of 3 cents a bushel for loading, and in addition to this another charge of 10 cents a ton a month is made for any wheat remaining in storage over 30 days.

"A buyer generally has no difficulty in discovering some small damage in sacks, and this, with the insurance and interest, all three items being combined in one charge, amounts to another cent and a half.

"The buyer will smell of the wheat and declare that there is evidence of smut, although the Palouse district has been remarkably free from this trouble this year. This alleged smut imposes a penalty of 2 cents a bushel. On top of this he will discover that there is dirt and chaff in the product, and this entails another cut of 2 cents.

"So instead of getting $2.20 a bushel, as the farmer hoped for and is entitled to, he gets about $1.88 for his bulk wheat.

"When you receive a statement from the buyer showing how much he has whittled you down and you voice some complaint he forthwith pulls out the government regulations and shows that he is entitled to make all of these charges.

"When the farmer consigns his wheat to the government on the Coast he fares better in some cases and in some cases worse. On consignment he runs up against the demurrage charges of $5 a day for unloaded cars. This eats into the profits. Some farmers have been compelled to buy sacks on the Coast and sack their shipment when they have been unable to get their cars unloaded and the demurrage penalty is in operation. The government buyers on the Coast make the same kind of reductions.

"It is peculiar that no two buyers make exactly the same reductions, although they

(Continued on page twenty-four.)

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Get a Farm Service War Flag.**

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**JOHN J. FREDSPIEL, Springdale, Wash.**—Is with the 256th aero squadron in France. He enlisted in the aero service on November 18, 1917. Before entering the service he lived with his sister, Mrs. D. F. O'Connor, on Walker prairie.

**HARRY A. B. GAVIN, Malott, Wash.**—Was called May 24, 1918, and was sent to Camp Lewis. Later he was transferred to Fort Leavenworth, Kan. Here, by an odd coincidence, his father, M. W. Gavin, was mustered out of service at the close of the civil war.

**JOHN W. YOUNG, Cedonia, Wash.**—On September 5, 1917, was called to the colors and is now with our army in France. He is bugler with the 361st infantry, Company M. Mr. and Mrs. W. W. Young, his parents, are residents of Cedonia, Wash.

## Canning Contest

### An Interesting Feature at Fair

By HORACE ADDIS.

One feature of the Walla Walla fair, September 9 to 14, that deserves special commendation was the girls' industrial club canning contest. Miss Mazie Wilson, county club leader, had aroused so much interest in the project that 11 clubs entered and 10 of them had contestants present and took part. The heat was furnished by a gasoline stove and conditions were much as they would be found in any good country home. While a majority of the clubs are from Walla Walla postoffice, several are from outside points that get mail on rural routes, so that the interest was well divided between the city and the outlying districts.

Miss Edna Walker, assistant state leader of home demonstration agents, made the awards.

Winner of first prize was the Sharpstein club, Misses Irene Brown and Mary Jane Cornelison, contestants; second prize, Springdale club, Gladys Plaquette and Hattie Troyer; third prize, Green Park club, Polly Van Patten and Dorothy Moore.

Other clubs and their representatives were: Baker club, Hester Augustave and Marian Garrett; Prospect, Bertha Morrison and Isabel Keeney; Jefferson, Iris Franklin and Willetta Franklin; Preston, Polly Van Patton and Dorothy Moore; Dixie, Cynthia Cochran and Lydia Monnett; Berney, Hilda Perkins and Alice Anderson; Burbank, Gladys Plemon and Doris Robinson.

## Vocational Course

### Is Offered to Washington Girls

Any young woman between the ages of 14 and 21 years of age, who resides in a non-high school district in Washington, is entitled to free tuition for the vocational course in home economics at the Lewis and Clark high school.

This is the first course in the school to meet the Smith-Hughes law. The course extends through two years of high school and leads to a certificate in vocational home making. The controlling purpose is to prepare young women for home-making and useful employment. The course is open to any young woman between the ages of 14 and 21 years, without regard to her previous education and training. Places may be obtained where a girl may work for room and board and some wages. Those interested should apply, either by mail or personally, to Miss Olive G. Fisher, Lewis and Clark high school, Spokane.

Miss Fisher explains that, though the classes have already begun, girls may yet enter for a few weeks, and that a girl who has not finished the eighth grade need not feel that she can not do the work, for the course is so arranged that it will meet the individual needs. Neither will it keep a girl from finishing the high school course if she decides to take the four years' course later on.

First year—Vocational sewing, vocational cookery, vocational English, vocational mathematics and applied art.

Second year—Vocational sewing, vocational cookery, vocational English and general household science.

Under the subject of "sewing" is included: Plain sewing and garment making, textiles, crocheting, costume designing, remodeling, millinery, embroidering, tailoring, making of baby layettes and knitting.

"Foods and cookery" includes the classification and study of foods and their preparation, equipment and care of the kitchen and the study of fuels, physiology and hygiene, special study of fats, oils and beverages and materials used in flour mixtures, preparation and serving of simple meals, canning, preserving, infant and invalid diet, home nursing and first-aid work, and household sanitation.

"Vocational English" takes up reading for upper grammar grades, letter writing, reading aloud, use of the dictionary, Old Testament stories, story telling, compositions on home subjects, use of the encyclopedia, Ashmun's Prose Literature for Secondary Schools, use of a public library, periodicals for the home, a home library, and a child's library.

"Vocational mathematics" includes home-making problems, clothing problems, thrift and investment.

Other subjects are: House planning and furnishing, physics in the home, simple machines, water supply, heat and ventilation, electricity, light, chemistry in the home, cleaning processes, sanitation, adulteration and dyeing and bleaching processes.

### FEEDING PEA STRAW.

The following letter was received by J. R. Shinn, county agricultural agent of Spokane county, in response to his announcement in our columns that pea straw has a feeding value practically equivalent to alfalfa hay, and that it makes excellent horse feed, also when used with wheat hay, timothy hay, oat straw and alfalfa hay in proportion of two parts straw to one of other roughage. Mr. Shinn added that pea straw should not be fed alone to horses. Mr. Shinn sends us a copy of a letter from William Jones of Newport, Wash., which he has received with reference to this matter:

"I am a reader of The Washington Farmer, and on August 29, 1918, I find an article you wrote to the editor, namely, 'Liberty Cattle Feed.' I have 12 head of stock and two horses and did not raise enough hay to winter the horses, so I thought I was up against it (can't sell the stock and get what they are worth); but when I read about the Liberty cattle feed, I said, 'me for some pea straw.' I know what pea straw is in feed value as I fed it in Oregon."

### TROUT AS FOOD SUPPLY.

On his way to the Green river state fish hatchery to receive a consignment of 32,000 rainbow trout for the lakes and streams of Skagit county, W. A. McKenna, county game warden, was interviewed by the Seattle, P. I. When these fish are placed in Skagit county, Mr. McKenna said, the county will have received this year a total of a half million fish, these being about 100,000 rainbow trout, 150,000 cutthroat salmon and 250,000 silver trout. Skagit county lakes and streams have been receiving approximately this amount of trout for the last three seasons, Mr. McKenna said, and the streams are now beginning to show the results to Skagit county fishermen. "People of Washington do not generally realize what a great benefit to the state it is to have well stocked fish streams," asserted Mr. McKenna. "The government has urged the eating of fish, as they feed themselves, and the people of Skagit county this year are finding for the first time in a number of years that it is possible to count trout as a food supply."

### SALE OF REGISTERED STOCK.

A sale of registered and high grade cattle is announced at the Island farm, better known as the Ladd & Reed ranch on Bachelor's island, one-half mile west of Ridgefield, Wash. The property was recently sold to J. W. Davis. This estate was formerly owned by the late W. W. Cotton, who spent thousands of dollars developing this herd.

Pen—1 and 2, Hubbard & Sons. Flock—1 and 2, Hubbard & Sons; 3, H. S. Currie.

Champion ram—Hubbard & Sons.

Champion ewe—Hubbard & Sons.

### Southdowns.

J. G. S. Hubbard & Sons, Monroe, Ore., were the only exhibitors:

Their awards were: 1, on ram two years or over; 1 and 2 on yearling ram; 1 and 3, on ram lamb; 1 and 2 on ewe two years or over; 1 on yearling ewe; 1 and 2 on ewe lamb; 1 on pen and flock; champion ram and champion ewe.

### Oxford Downs.

H. S. Currie, Caston, Alberta, was the only exhibitor. His awards were: 1 and 2, on ram two years or over; 1 and 2 on yearling ram; 1 and 2, on ram lamb; 1 and 2 on ewe two years or over; and 2 on yearling ewe; 1 and 2 on ewe lamb; 1 on pen and flock; champion ram and champion ewe.

### Romney.

Wm. Hislop, Spokane, Wash., had one exhibit and won first on ram, two years or over.

### Lincolns.

Ram, two years or over—1 and 2, Archie Prior, Yakima, Wash.; 3, H. Stanley Coffin, Yakima, Wash. Yearling ram—J. G. S. Hubbard & Sons, Monroe, Ore.; 3 and 4, Archie Prior. Ram lamb—1 and 4, Hubbard & Sons; 2 and 3, Archie Prior.

Ewe, two years and over—1, Hubbard & Sons; 2, H. S. Coffin. Yearling ewe—1 and 2, Hubbard & Sons; 3 and 4, Archie Prior. Ewe lamb—1 and 2, Hubbard & Sons.

Pen—1, Hubbard & Sons; 2, Archie Prior. Flock—1, Hubbard & Sons.

Champion ram and champion ewe—Hubbard & Sons.

### Fat Sheep.

All middle wool breeds:

Wether yearling—1 and 3, Washington State College; 2, H. S. Currie, Caston, Alberta.

Wether lamb—1 and 2, W. S. C.; 3, Hubbard & Sons. Pen of wether lambs—1, W. S. C.

All long wool breeds:

Washington State College, the only exhibitor, received awards as follows: 1 and 2, on yearling wether; 1 and 2, on wether lamb and 1 on pen of fat lambs.

Champion pen of the show—Washington State College on middle wool.

### Boys' and Girls' Clubs Live Stock.

All entries to be grown by exhibitors:

Pet lamb—1, Ray Banks, Selah, Wash.; 2, Harry Place, Yakima, Wash.; 3, John Eicheberger, Yakima, Wash.

Fat barrow—1, Ray Banks.

Berkshire gilt—1, Morrill Delano, Puyallup, Wash.

Duroc-Jersey gilt—1, Laurel Miller, Selah, Wash.; 2, Glen Chandler, Yakima, Wash.; 3, Mark White, Yakima, Wash.

Poland China gilt—1 and 2, H. E. Larimore, Toppenish, Wash.

Sow and litter—Larry Woods, Selah, Wash.

### Butter and Cheese.

There were thirteen entries of creamery butter and two of cheese at the Washington State Fair.

The three high scores on butter were: 1, Lynden Creamery company, Lynden, Wash., 96; 2, Old Dominion creamery, Colville, Wash., 95½; 3, Turner and Fease company, Seattle, Wash., 95.

Oakville Cooperative Cheese factory, Oakville, Wash., first on cheese.

### Boys' Stock Judging.

Stock judging by four teams of high school boys featured the opening day of the Washington State fair. Teams from Wapato, Yakima, Kittitas and Ellensburg competed, Ellensburg winning first place as well as most of the high individual scores. The following are the placings and scores: First, Ellensburg, 3960; second, Kittitas, 3755; third, Yakima, 3544. Possible score, 5000.

High man, total score, Carl Bregg, Ellensburg, 860; second, Garfield Kohler, Ellensburg, 820; third, Arol Doust, Yakima, 818. Possible score, 1000.

High team in dairy, Ellensburg, 825; high man, Gilbert Peck, Yakima, 196 (possible score, 200). High team in beef cattle, Ellensburg and Kittitas, each 775; high man, Carl Bregg, Ellensburg, 165. High team, horses, Kittitas, each 930; high man, Frank Hall, Ellensburg, 195. High team, sheep, Ellensburg 675; high man, Frank Hall, 160. High team, swine, Ellensburg, 805; high man, Burton Hall, Yakima, 195.

James N. Price, county agriculturist of Yakima county, and R. P. Bean, agriculturist for Yakima reclamation projects, had charge of the high school judging. The following is a complete list of the contestants:

Yakima—Gilbert Peek, Donald Eichelberger, Benton Hall, Aral Doust, Glenn Chandler; instructor, C. S. Cole.

Ellensburg—Everett Lull, Frank Hall, Garfield Hohler, Carl Bragg, Joseph Gallanor; instructor, Verne Hill.

Wapato—Lewis Hammel, Meryle Patterson, Mills Missinger, Allred Kestler, John Hummel; instructor, A. W. Wheeler.

Kittitas—John Sorenson, James Hayes, Harold Sorenson, Kenneth Jones; instructor, Harry Waldron.

The teams of judges are composed of boys of the student bodies of the four high schools represented, and range in age from 14 to 18 years. This is the first year that they have been without at least one girl on some team.

# What Does It Mean

Ignition K-W High Tension MAGNETOS With IMPULSE STARTER

In reading over the specifications of the leading tractors, you will see under *Ignition* the phrase "K-W High Tension Magneto with Impulse Starter."

## The Impulse Starter

**What Does It Mean?** To owners of these tractors, it means Sure and Easy Starting, regardless of how cold the weather, how large the motor or how slow the engine is cranked. It means *No* Batteries, *No* Starting Coils, and *No* Complicated Self Starters. It means absolute protection against motor "kick-backs" while cranking even when the spark lever is left fully advanced.

**What It Does!** The K-W Impulse Starter holds back the shaft or rotor of the magneto until the firing point of one of the cylinders is reached. The shaft is then automatically released and is propelled forward (by means of a powerful spring) at a very high rate of speed—until it catches up to its former position. This produces a spark as large and hot as though the engine was running at full speed, thus insuring an explosion in the cylinder and a positive immediate start.

K-W TRADE MARK **High Tension MAGNETOS**

not only insure the Easy and Quick starting of cold motors, but increase the power derived from the same amount of fuel, over that of any other ignition system. They permit the use of the cheaper grades of fuel and give "No Trouble" service.

**Before You Buy a Tractor.** Look up a neighbor who is using a K-W Magneto and talk it over with him. Then we know you will insist upon a K-W Magneto on *any* tractor you may decide to purchase.

THE K-W IGNITION Co.

# A New Bulletin

Of interest to all who have a garden or farm, is a new bulletin, just off the press of Randall-McLoughlin, 79 Madison St., Seattle.

The bulletin is issued primarily for the sale of seeds, bulbs, roots, roses, strawberry plants, incubators, brooders, poultry, etc., but it is seldom that one finds as much valuable information in a bulletin of this kind, for it is literally full of useful and instructive data pertaining to all of the above mentioned subjects.

Both Ralph B. Randall and Thos. F. McLoughlin are favorably known as being unusually well posted in their respective lines of business and they have given freely of this knowledge in their first edition.

They will gladly forward the bulletin to any person sending their name and address on a postcard to Randall-McLoughlin, 79 Madison Street, Seattle, Wash.

# AMERICAN FLAG

Size 3x5 Feet

SEWED STRIPES CANVAS BOUND
FAST COLORS BRASS GROMMET

One of these big, fine flags will be mailed postpaid to any one securing and sending in seven subscriptions to your state family farm paper.

# What Comes From "Bolting" Food

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Dr. Hirshberg.

You may not have trouble with your digestion as soon as you "bolt" a meal, though this very often is true if you are a naturally dyspeptic person. But this does not mean that you are going to be free for the rest of your days from pain in the stomach.

Pain may come to you one or two hours after you have eaten or five or six hours later, or it may not come to you for days. You then have what is called delayed pain, which may grip you in the middle of the night and take you by surprise.

Delayed pain usually occurs in the abdomen—the regions of the stomach and intestines. From here the pain sometimes radiates toward the spinal column and works through the spaces of the spinal bones around the ribs. When the pain is as extensive as this, it is usually very severe and is accompanied by a burning sensation, cramps, a sore of twisting in the abdominal regions. It is apt, also, to be quite as agonizing as extensive.

**Symptoms and Causes.**

The features of the sufferer may be drawn, his fact pale, and he may experience a feeling of weakness and irritability to the extent of collapse. This may be a neuralgic pain in the stomach, and often makes the patient moan and curl up in bed, hold his stomach with both hands, while cold perspiration covers his face. His feet become cold, and, altogether, he is in a state of torture.

The sufferer may also have an excessive secretion of saliva, which is an automatic aim of the human mechanism to neutralize some of the overabundant gas present. This is accompanied by pains in the breastbone. A feeling of nausea often culminates in actual vomiting, and when this stage is reached the patient almost invariably gets relief.

The agony of pain like this can at once be decreased if the patient is given food. If you have seen a person who suffers from digestive disorders you have probably noticed that if he is given water to drink and a few morsels to eat, the pain subsides. Many persons who have so deteriorated in health as to have frequent attacks of gastric trouble can overcome their ailment very largely if they permit digestion to go on every minute of the day. To do this, distribute your meals throughout the day, so that, instead of having three meals, have six. A little food, frequently taken, is much better than a great deal of food taken a few times a day.

It must be remembered, to be sure, that pain of this sort does not come to attack the individual over night. It is, as a rule, the result of a long process of deterioration, due probably to negligence or abuse of the bodily mechanism. Like the root of many a disease, overwork enters here, too, to create mischief.

Overwork by itself is not quite as harmful as when accompanied by other circumstances. One evil, however, is hardly left to trail along without a train of other evils. Overwork is usually accompanied by lack of fresh air, an unfortunate condition, because the bodily machinery is actually robbed of its necessary spark to light the fuel in it, burn or ozidize the food, and prepare it for absorption into the tissues and muscles.

**Some Simple Aids.**

In addition to hard work and lack of fresh air, you will also notice that food is incorrectly eaten, and as a result poorly digested by a person inclined to overwork. Sufficient time is usually not given to mastication, and the result is that food is swallowed in "chunks."

Not only is the food swallowed in large pieces, and not a deep breath, a few stretching exercises or a short walk taken, but you perhaps apply yourself quickly and suddenly to your work and neglect your bodily welfare, and so allow mischief to begin. Thus it happens that you are the cause of your own downfall. You may feel a burning sensation "once in a while," and try to ignore it, and, although you perhaps work without sufficient exercise and fresh air from day to day "without feeling bad," the day of reckoning is bound to come.

If the taking of food does not give relief when the pain attacks you, take some alkaline solution, such as chalk, magnesia or bicarbonate of soda. These will neutralize much of the surplus acid in your mechanism and thus give you relief. Of these powders, bicarbonate of soda is the best to take, for that creates the quickest action; it works in about 10 minutes.

Do not take any of these powders dissolved in water, but place them on the tip of your tongue and take a swallow of water afterward. This method will prove more effective and will bring relief sooner.

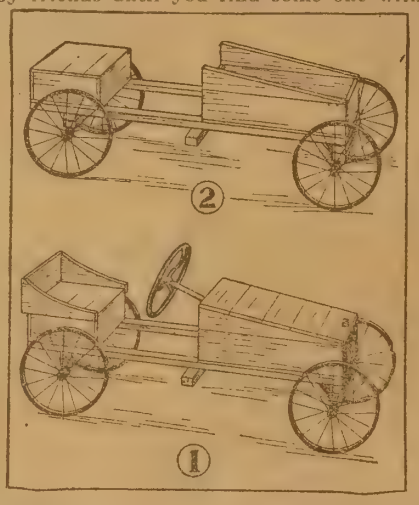
If you have been troubled two or three times with these stomach pains, put yourself on a diet of milk. Drink about four pints a day in divided doses until you have made for yourself quite a good foundation to protect yourself against the recurrence of these pains. Later you may add vegetables to your diet. Finally you may resume your ordinary diet, with precautions in taking food, against overwork and lack of fresh air.

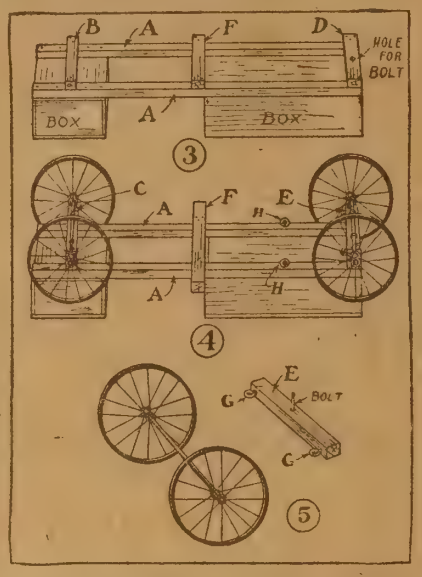
# Handicraft for Boys

By A. NEELY HALL.
(Copyright by A. Neely Hall.)

**A HOME-MADE PUSHMOBILE.**

In building a pushmobile, the wheels are of first importance. Unless you own two pair, you must scout around among your boy friends until you find some one with whom you can strike a bargain. If the iron axles have been lost, go to a blacksmith and have him thread the ends of a pair of rods. A small hole should be drilled through the rods at the right distance from the ends to drive a nail through as a pin for keeping the wheels from running back on to the axles.





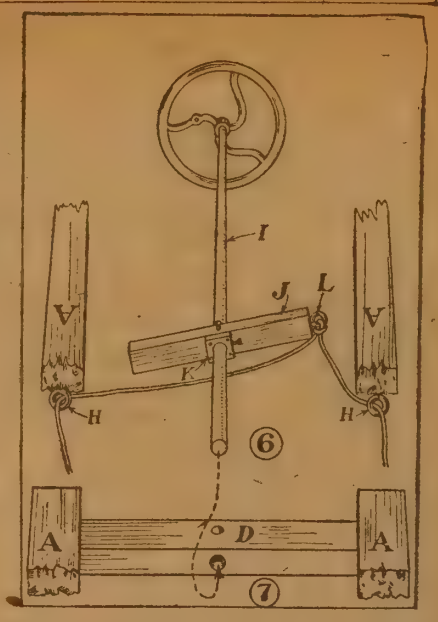


Fig. 3 shows the body framework. The side rails A should be 2 by 2's or 2 by 4's. Cut them to whatever length you wish. Upon these rails are mounted two grocery boxes, a long box on the bow end, and a box as long as this one is wide, on the stern end. Fasten the rails to the bottom of these boxes (Fig. 3). The crosspieces, B and D, provide for the mounting of the wheels. Nail one to rails A at the bow end, and the other so it will come under the center of the stern box. Crosspiece F forms a foot-bar.

The front iron axle must be attached to a pivotal wooden axle (E, Figs. 4 and 5).

This must have a hole bored through the center of its length for a 5-8-inch carriage bolt. Screw a pair of screw-eyes into one edge (G, Fig. 5). Fasten the iron axle to the wooden axle with iron staples, or with bent-over nails. Bore a hole through the center of crosspiece D (Figs. 3 and 7) for the carriage bolt to run through. Then in mounting the axles upon the framework, slip an iron washer over the carriage bolt so it will come between axle E and cross piece D. The rear axle must be fastened to a similar wooden axle (C, Fig. 4). Nail this wooden axle to crosspiece B.

The steering-gear should be made next. A sewing machine wheel is best for the steering-wheel, but a wagon-wheel will do. Cut a broom handle for the shaft (I, Fig. 6), and mount the wheel on one end. Then cut a crosspiece (J), and a square block (K), bore a hole of the diameter of the broom handle through the center of each, and nail K to J. Slip this crosspiece over the end of the shaft, and fasten it 12 inches above the end with screws driven through the edges of J and K, as shown. Cut a hole through the bottom of the bow box for the end of the shaft to run through, and another hole one-half inch deep in the center of the edge of the crosspiece D (Fig. 7) for a socket for it to turn in. Screw a screw-eye into the end of crosspiece J (L, Fig. 6), and one into the under side of each side rail (H, Figs. 4 and 6); then tie a four-foot length of rope at its center to screw-eye L, and run the ends through screw-eyes H, and tie to screw-eye G in axle E (Figs. 4 and 5).

Figs. 1 and 2 show how the hood of the pushmobile is completed by fastening a pair of triangular pieces upon the top of the bow box, nailing boards across them, and tacking screen wire over the front of the box for the radiator front; also how the seat is made.

# William McKinley at Eighteen

## *Began His Four Years of Service in the Civil War*

William McKinley, the twenty-fifth president of the United States, at the age of 18 was teaching a district school at a salary of $25 a month, and "boarding around" when Fort Sumter was fired upon. Among the first to answer the call of President Lincoln for volunteers was young McKinley, of whom it is stated that he never felt prouder than when General Fremont, after thumping his chest and looking into his bright eyes, said, "You will do."

This young man of Ohio, only 18 years old, became a member of Company E of the 23d Ohio regiment, of which W. S. Rosecrans was colonel, Stanley Matthews lieutenant-colonel, and Rutherford B. Hayes major. Thus that famous fighting regiment had the honor of producing two presidents and a senator of the United States, afterwards eminent as a justice of the supreme court.

For 14 months young McKinley carried a musket, attaining the rank of sergeant, April 15, 1862. Many years afterward, when governor of Ohio, he referred to that period in these words: "I always look back with pleasure upon those 14 months in which I served in the ranks. They taught me a great deal. I was but a school boy when I went into the army and that first year was a formative period of my life, during which I learned much of men and affairs. I have always been glad that I entered the service as a private and served those months in that capacity."

It is questionable if those 14 months could have done more for William McKinley if he had entered upon them at the age of 21 years rather than at the age of 18 years, and it may help to reconcile many fathers and mothers who are called upon to part with their 18-year-old boys under the recent registration into the army to review in the briefest way McKinley's progress in the war of the rebellion.

September 24, 1862, he was commissioned second lieutenant of company E, and on July 25, 1864, he had risen to be captain of Company G. Three months after receiving his first commission he was detailed as aid-de-camp on the staff of General Rutherford B. Hayes. From that time until the close of the war he served continually as a staff officer. With his regiment, or while on staff duty, he fought in West Virginia, in the army of the Potomac under McClellan, and in the Shenandoah valley under Sheridan. He was in all the early fights in West Virginia, at South Mountain and Antietam, receiving his shoulder straps one week after that last-named bloody battle, and exchanging his musket for the sword. His first battle was at Carnifex Ferry, W. Va., September 10, 1861. It is recorded of him that "for four long years he fought in every battle and skirmish until the very end, doing his whole duty, getting honors and adding to his fame as a soldier; fearless and without reproach."

**The Footpad and Jokesmith.**

The professional jester was walking along the darkened street, alone. He heeded not whither his footsteps tended, nor noted the lateness of the hour; for he was composing witticisms that he might peddle money.

"Hands up!"

The humorist started from his reverie, and found himself looking into the transmitter of a large revolver.

"Excuse me for talking your time," said the robber, chuckling at his own humor, though the joke was disgustingly old. But the jester laughed merrily, as if it were new.

"Don't apologize for that," he said. "I can well spare it. You see it is only a dollar watch. But I can sell this joke to a funny paper for $2 and make 100 per cent on the transaction."

**Get This One—Get It!**

Fellow came into the office—real likable fellow, too, albeit haggard; came in and slapped us on the shoulder and said:

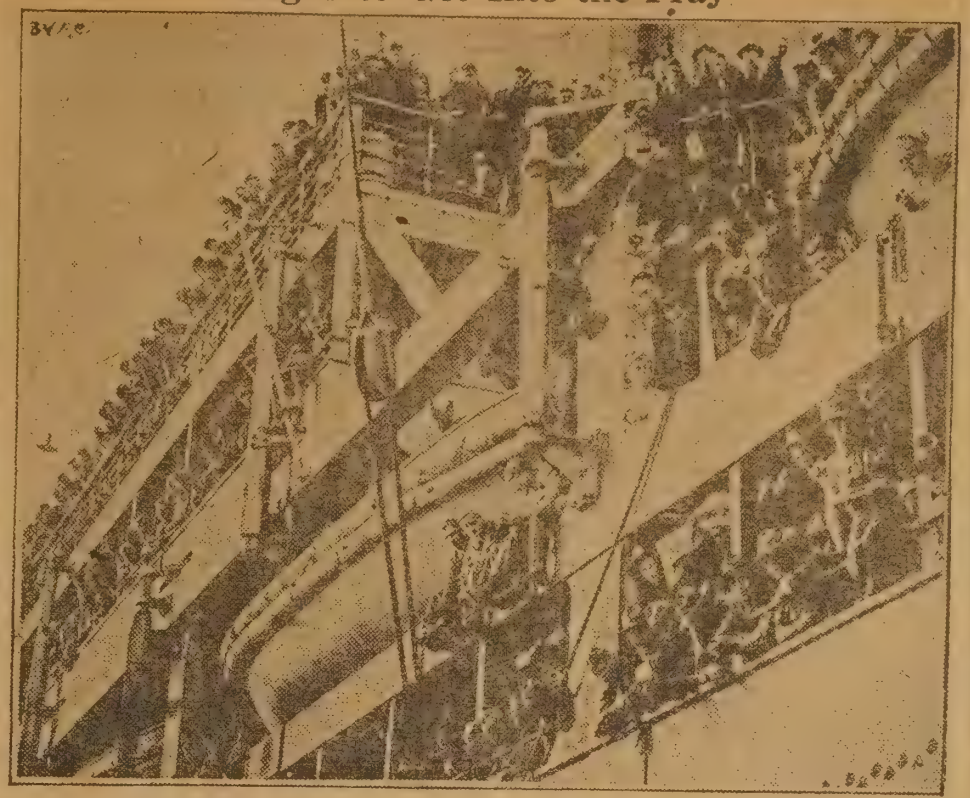
"You're a poet, ain't you, huh? Yes? Say, I just came in to tell you—har! har! har!—to tell you the difference between a plumber and a poet! Know it? Naw, naw! It ain't anything about the plumber makes money, not 'tall, not 'tall. Listen, it's this: A plumber lays his pipes, see, and a poet pipes his lays! Har! har! har! Good one, ain't it? Nice weather for a murder!—Richmond Times-Dispatch.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**A. M. WEYER, Cunningham, Wash.**—On April 26, 1918, entered the military service, and after completing his training he sailed for France. He is a member of the 361st infantry, Company M, and is now doing his utmost for his country.

**ADOLPH MILAND, Selah, Wash.**—He was called in the draft to service for his country in November. He is now a member of the 157th infantry with the M. G. company. He is the son of Mr. and Mrs. F. J. Miland, who live on a ranch.



**EDWARD T. M'KOWN, Lind, Wash.**—He was drafted last September and is now somewhere in France. His mother is Mrs. Jennie Terry of Lind, Wash. He is 25 years old and before his enlistment was employed with the O.-W. R. & N.

## Sir Henry Horne.

Sir Henry Horne, whose British first army has advanced further east than the British have since early days of the war.

## Eager to Get Into the Fray

On board a former Hamburg-American liner, American soldiers are having their first look at the land of their chivalrous ally, France.

## U. S. General Wins Cross.

The above photograph is that of Brigadier General B. B. Buck, the commanding general of an American brigade in France. He has recently been awarded the distinguished service cross for conspicuous gallantry and heroic leadership displayed before and during the attack of Berzy le Sen, France, by General Pershing, according to an official communique made public by the war department. Brigadier General Buck is the first American general to be so honored during the war.

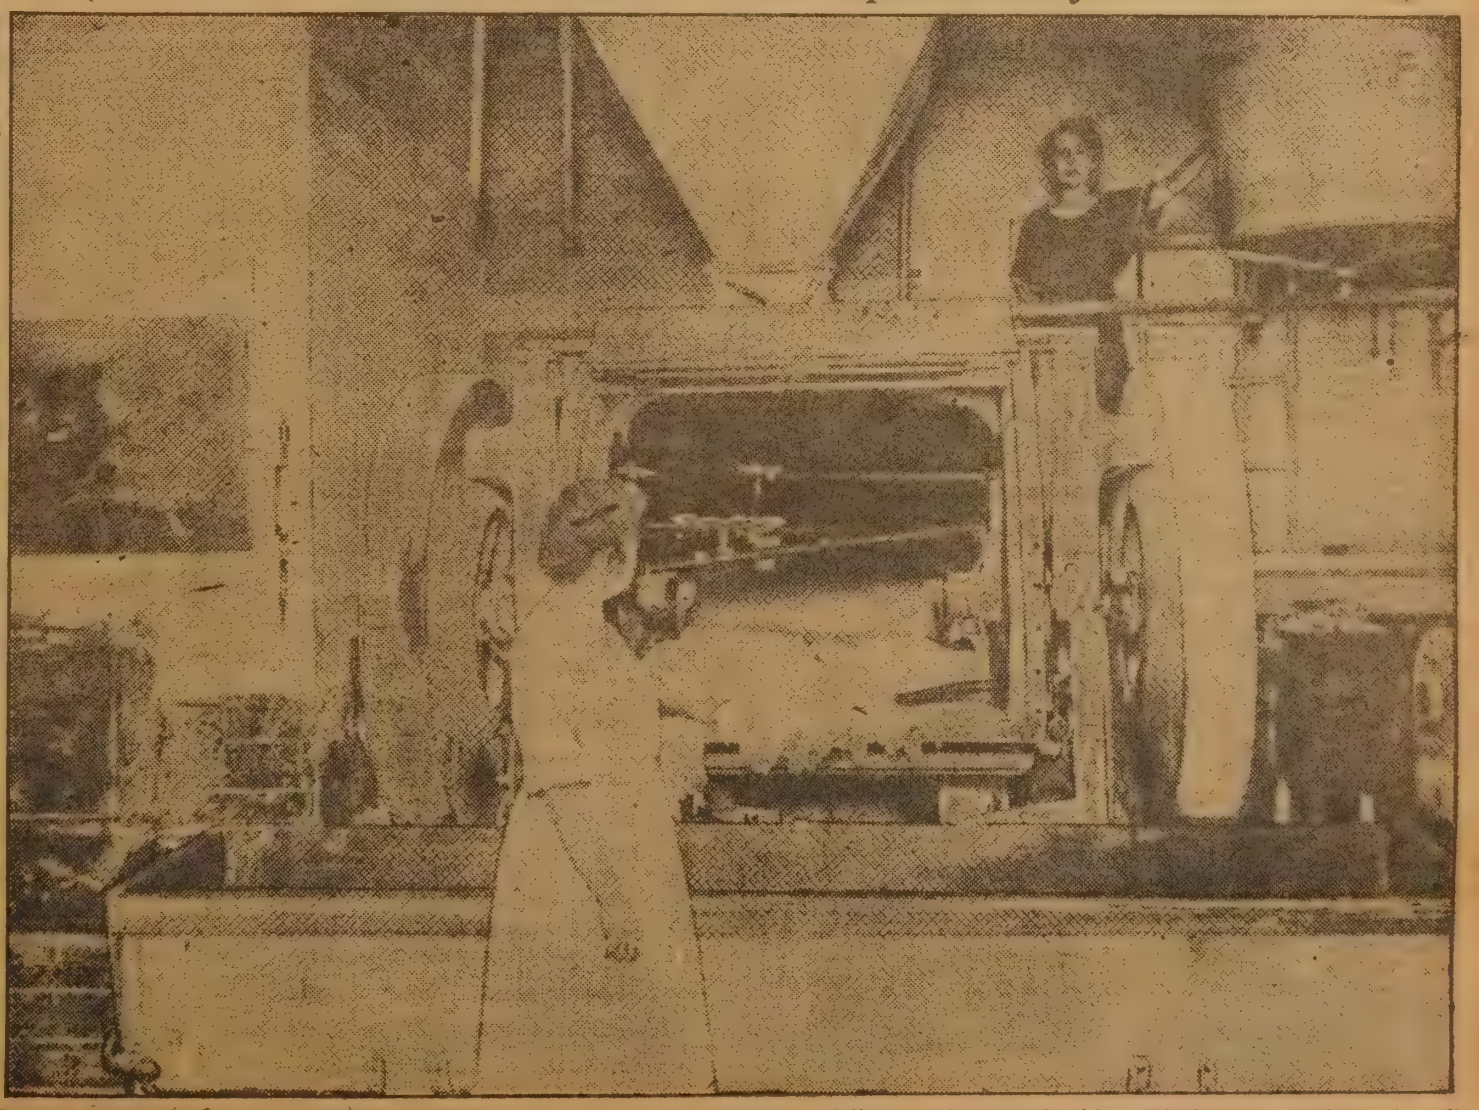
## Wealthy Girl Worker.

Miss Alice Davison, daughter of Henry P. Davison of the American Red Cross, is one of the first wealthy young women in the country to don overalls and work. Miss Davison is inspector at the De Forest Radio Telephone and Telegraph company, New York.

## Crocodile Tears

"I have not wished war!"—Campana de Gracia, Barcelona.

## Her Best Friends



—National Security League.

## Prices Too High for Her.

Mrs. Howard Gould, according to a report, left Washington, D. C., for New York because she could not afford the war prices there. "I am wealthy, but I can not stand the prices here," said Mrs. Gould, "and I do not understand how the war workers get along on their meager salaries."

Women operating a dough mixer in a Minneapolis bakery. There is almost a full crew of women in this particular shop working in all the different departments. The picture is taken from The Northwestern Miller.

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by wild animals and marauding hounds.

## CHAPTER III.

### With the Hermit Shepherd.

I was still in the prairie country and, as on the day before, kept turning aside to investigate every bell I heard and every bunch of cattle I caught sight of. There were not so many cattle here as north of the mountains, and but little time was lost. I pushed steadily southward, and the sun was not very high when I arrived at the first house. Here a pack of hounds, the same that had pursued the doe and her fawn, ran out and, surrounding my pony, barked and bayed at me with a deafening clamor.

Evidently the family were not early risers; for they were just sitting down to breakfast, at the shady end of their cabin, when, pushing my way through the noisy pack, I rode up to the yard-fence and inquired for a spotted ox with very long horns and a big bell.

"Why, yes; that animal was here just yisterday—no, the day before," the man informed me. "He stopped here some time durin' the night, I guess it was. Anyhow, I found 'im layin' out there by the cow-lot gate, lickin' hisself, when I went out to milk next mornin'. That was the first I'd seen of 'im, and the last. But he must be some'r's around here. Where do you live?"

"Up beyond the mountains, in the Little Pecan Creek country. Nearly 40 miles from here, it must be."

"And where did you stay last night?"

"Back yonder close to the gap. I camped out, and slept on the grass."

"Then git down—git down and have some breakfast with us," the man was quick to urge, with the usual frontier hospitality.

I had expected this invitation, and was very glad to receive it. "I haven't got a red cent with me, but——" I had begun to explain.

The man interrupted with a wave of his hand.

"We ain't a-runnin' no tavern. If you can put up with what little you'll git, you're welcome to it."

So I turned my pony loose to graze, with his lariat trailing, and went in. And a very good breakfast they gave me. While eating, I related how I had left home without anything, even a hat, and had accumulated all my present possessions on the way. The family were much interested, and the man said:

"If you're goin' on, I can lend you a good slicker. You might run into a rain some'r's along."

I thanked him and accepted his offer, though not till after explaining that it might be a good while before I could return the coat.

While we were eating, Vic sat near the table, watching us hungrily. Fearing her wants might be overlooked, I told how she had given me warning when the mountain lion came prowling around my camp. I also explained how I had scared the lion away by firing the grass, and what a hard fight I had had to put out the fire afterwards.

"Lucky you had the little fyst along," the man remarked. "If you hadn't, you might have waked up to find the lion on top of you. Not a bit too good to do that very thing if they git a fair chanst, them varmints ain't. I've killed five of the creatures out here. The hounds treed 'em and I shot 'em."

I also mentioned how Vic had provided our supper by catching the mule-ear and finding the wild turkey's nest.

"Why, she's a nice little thing," the woman said. "Wisht we had one like her instid of all them hounds." She called Vic to her, and after patting her on the head, fed the little dog more than she could eat.

Then, in spite of my protests, the woman wrapped up something for my dinner and forced it upon me. I thanked her heartily, and after rolling the package in my borrowed slicker, and tying the bundle behind my saddle, I mounted and rode on.

Houses were few and far between. On my left rose a mountain-range; on my right, but several miles distant, spread out an extensive forest. I kept working both sides of the road as I advanced. At the first house I failed to learn anything; but inquiry at the second house brought out the information that Lep had been seen to pass there two days before, following the road.

"I could tell he was runnin' away from home, and I had half a mind to stop 'im," the settler remarked. "Sorry now I didn't."

"So am I," I replied, and hurried on.

Believing that the ox was now traveling steadily, I, too, took the road and pushed on after him, stopping only to visit the nearest bunches of cattle, and to make inquiries at every house.

Well on in the afternoon I forded the Leon river, and not far beyond it came to a small town. There were only two or three stores, a blacksmith shop and a cotton-gin. I made my usual inquiries, but Lep had not been seen. However, there was little doubt that he had passed. Coming from where I had last got word of him, he would have gone through here after dark.

Realizing now that the old fellow was likely to lead me a long and lively chase, I entered the postoffice, and approaching the postmaster with some diffidence, said:

"I'm 60 or 70 miles from home, on the trail of a runaway ox, and without a cent in my pocket. I want a postal card to write to my father. If you'll lend me one, I'll mail you another as soon as I——"

He stopped me with a gesture, then reached up, got a card, and laid it on the counter. "It's too little to bother about," he remarked, carelessly. The average Texan scorns to waste time with anything less than a nickel.

With a borrowed pen, I leaned on the show-case and wrote. After mentioning some of my experiences—the less exciting ones—I concluded by saying:

"I am hot on his trail, and expect to stay with him till I track him down, if it takes till cotton-picking time."

Then I slipped the card into the letter-box and was soon on the road again.

As Dick trotted along, I entertained myself by imagining how that card would be received at home.

"I wish Travis would come back and let the old steer go," mother would say. "I don't like to have him wandering all over the country by himself."

Then father would speak up in his brisk, hearty way:

"No, no, let him alone—let him alone! We need that ox and we need him mighty bad. And on top of that, it'll be the making of the boy. A boy that don't know how to hang on and hang on and hang on, no matter what he undertakes, or how hard it turns out, will never be worth the powder and lead it would take to blow his head off."

My road was now leading me toward the southwest. At a house a few miles beyond town Lep had been seen again. After that I entered a rough, broken country, half prairie and half brush, and the settlements ceased altogether. The road was old, but dim and little traveled. In places I could make out tracks which I believed to be Lep's. On I pushed, mile after mile, mile after mile.

At length the sun sang low, and Vic, trotting along by the pony, kept looking up as if to ask if it wasn't high time to find a camping-place. Recalling my experience with the mountain-lion, I was very reluctant to spend another night out of doors, especially in this wild region.

While still debating what to do, I was much relieved to hear dogs barking and sheep bleating, somewhere off to my right, and a good distance away. Quickly the pony was heading in that direction.

Nearly a mile from the road I came upon a sheep-ranch. It was by no means a pretentious affair, consisting of little besides a big rail-pen for the sheep and a cabin for the shepherd.

The man, a wild-looking fellow, with a great, bushy brown beard, was just penning his numerous flock for the night. I waited till they were all in and the gate shut, then rode up and made my inquiry, well punctuated now with bleats. The shepherd had not seen Lep. After waiting in vain for an invitation to get down, I ventured to ask:

"What would be the chance to get to stay all night?"

"Why, certainly you can stay—certainly—certainly—certainly!"

The words were spoken with an earnestness that was little short of vehemence. Though surprised, I was well

Don't you hear 'em—can't you hear 'em?"

pleased at receiving so warm a welcome. My attempt to explain that I had no money was promptly cut short with:

"Feel just as free here as if you had a gold mine in your pocket."

While I was unsaddling Dick the shepherd remarked, pointing:

"You'd better take him over yonder a few hundred yards. The sheep haven't been over there for some time. He'll think himself too good to feed after them, I guess."

While being led away, Dick kept putting down his head for a mouthful of grass, but only sniffed at it contemptuously. Having found a place where he was willing to graze, I tied him to a sumac bush and left him for the night.

Returning to the cabin, I saw the shepherd going out with a milk-bucket on his arm and followed him. No cows were in sight, but several goats were browsing around outside, and some noisy kids occupied a little pen at the end of the sheep-pen.

"What! Do you milk goats?" I inquired, half incredulously. I had read of such a thing, but had never yet seen it.

"Why, yes. Why not? They give good milk. They associate with my sheep, too, and cows wouldn't, I guess."

I watched the goat-milking process curiously. At last I took a cup and tried to milk one myself, using my thumb and forefinger, as the shepherd did. The attempt was fairly successful, but I did not try another one. The shepherd milked the rest, while I stood watching a long-bearded, patriarchal-appearing Billygoat as he stalked about outside the pen.

The milking finished, we returned to the cabin, the shepherd carrying his milk and I my saddle. By this time darkness had come on. The man, whose name, I had learned was Groves, kindled a little fire in a big fireplace and set about preparing supper.

The interior of the cabin, as revealed by the flickering firelight, was very rudely furnished—almost unfurnished. There were no chairs, and no floor but the ground. The only bed was half a wagon-load of prairie-grass in a corner, with a buffalo-robe and some blankets on it. In front of the fire a large-sized drygoods box, turned bottom up, served for a table at meal-time and for a seat at other times. In one corner lay a saddle, sprawling on its back; in another stood a gun, an old, retired army-musket; and high against the wall hung a six-shooter, neck-deep in its leather scabbard. These, with a few cooking-vessels, dropped where last used around the fireplace, and some sheepskins tacked against the wall to dry, made up the cabin's contents. No window cut the logs, the gaping spaces between them being amply sufficient to let in air and light when the door was shut.

Groves cooked some corn-cakes in a frying-pan, and fried some slices of bacon—all drowned in grease. These, with black sorghum molasses from a jug and some goat's milk made our supper. The milk was warm and had, to me, a peculiar taste, the bacon was fat and the bread soggy; but I was far too hungry to care for such trifles. We sat on the ground, and ate out of tin plates and drank out of tin cups, which the shepherd had fished out from under the box.

The meal ended for us, Groves fed his two dogs and Vic, then shut the door and came back and washed his tin dishes. Afterwards he divided his grass-pile, putting half of it and the buffalo-robe in another place for me to sleep on. Now he filled and fired his pipe, and we sat on the big box and talked, by the firelight. And a very interesting talker I found him.

"How old would you suppose I am?" he asked, in the course of our conversation.

I looked at his big, bushy beard and guessed 40.

"You're 13 years off. I'm not quite 27." He laughed and seemed rather pleased than otherwise.

Greatly surprised, I inquired if he had no razor.

"Yes, but I'm letting it rest now. I'm letting my beard grow for a—well, I'm letting it grow. People that knew me without it wouldn't begin to know me with it; and people that know me with it wouldn't begin to know me without it."

Something in the way this was said made me infer that he was wearing it as a disguise. And the suspicion flashed into my mind that possibly the fellow was a fugitive from justice.

After inquiring where I lived, and how long I had lived there, he said:

"I'm a Virginian. Two thousand miles from home I am now, and I get mighty, mighty homesick and lonesome sometimes. Eight years have gone by since I saw my folks, and it's a good while since I even heard from 'em."

"Have you lived on a sheep-ranch all that time?"

"All but a few months of it," he answered. "I hired out to a sheep-raiser only a week or two after I struck west Texas, and I've been tied to sheep ever since. Three years I herded for another man. After that I bought me a little flock, a mere handful, and started out on my own hook. That was in—in another part of the country. I pegged down right here just 14 months ago. Let me tell you, I had some stirring times when I first struck the range. Twice the Comanches dashed in among the sheep, and killed some and stampeded the others—scattered 'em like a whirlwind scatters chaff."

"It's a wonder they didn't carry off your scalp," I remarked.

"Yes, it is—a great wonder. But once I took to the brush and dodged 'em, and once I jumped onto my pony and outran the red rascals. Do you ever drink—ever touch whisky?" he suddenly demanded.

"No, never," I replied, wondering greatly what this abrupt question had to do with sheep-herding and Indians.

"Then, whatever you do, stick to that—stick to that!" he fairly hissed, as he leaned toward me. "Then you'll never have to leave home and go off into a wild, half-civilized country, among desperadoes and redskins."

He changed the subject at once, leaving me with the impression, however, that whatever trouble had sent him out here, drink had been at the bottom of it.

"Sh!" the shepherd whispered, warningly, as he sprang to his feet. For a few moments he stood motionless, listening intently. Once, while he was in this attitude, his eyes met mine, and even in the dim firelight I could detect a wild-half-terrified look in them—the look of a hunted animal!

Suddenly he sprang back to the corner and snatched up his gun, the old army-musket.

"Don't you hear 'em—can't you hear 'em?" he whispered excitedly, coming close to me. That wild, strange look was still in his eyes.

"Who is it?" I demanded, much mystified and not a little alarmed at his strange conduct.

"The cattle-men! They're coming to kill me! They're right close here!"

Snatching up a board, his makeshift for a shovel, he began to shovel ashes frantically upon the little fire. Nor did he stop till the last spark had been blotted out.

Now I understood. Often I had heard of those fierce, murderous quarrels that break out between sheepmen and cattlemen. But never before had I come in personal touch with one. The shepherd's manner meant but too plainly that he was in terror for his life.

After moving slowly, stealthily around the wall, listening and peering out, he returned to where I was standing, in the center of the room, and whispered excitedly:

"The cattlemen have been trying to kill me, and they're coming tonight to try harder. They're somewhere right close by now. They want to get near enough to stick their guns between the logs. When they once do that, they'll blow me to atoms, and you with me!"

Now I, too, was frightened, and heartily wished I had camped out in the brush somewhere—anywhere. Mountain-lions, frightful things though they were, were far less to be dreaded than these cattle-raising assassins.

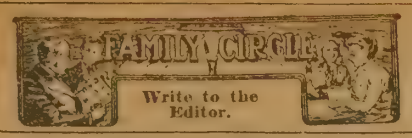
Presently Groves moved over to the wall, then came back and thrust something cold into my hands. It was his six-shooter.

"Are you brave?" he whispered, almost hissed, into my ear.

"Not to hurt," I answered.

"Can you fight?"

"I'd rather not."



"Can you die?"

"I'd—I'd a good deal rather not," I protested. At this strange question, icy chills of horror began to chase one another up and down my back.

Soon the dogs burst out again, louder than before. Listening anxiously, my ear detected something that I took to be light, cautious footsteps not far away.

"Don't you hear 'em now?" whispered the shepherd. "Don't you hear 'em slipping up? They're coming closer and closer! And they'll get me—oh, I just know they'll get us tonight! But I'm glad you're with me. It won't be so hard to die when you've got company. We'll die together!"

(To be continued.)

# High School Near Home

By MRS. ALVARA P. WILLIAMS.

SECOND ARTICLE.

I know Ruth will feel cheated of part of her education if she has to be contented with a small school nearer home. She is of an adventurous disposition, and this doesn't quite satisfy the craving for the change, the thrill of city life. But it makes a very good stepping-stone, and for many must always be the only step above their district school. Let us see just how satisfactory it is, and to what type of girl.

The course of study of the smaller high schools is generally carried out by a system of alternating subjects; few courses can be offered, usually only the required ones, as one or more teachers overburdened with too many classes, and often untrained for high school work at all, must do the work. Such things as cooking, sewing, laboratory science, business courses, if given at all, must be elementary and with small outlay for equipment. Pupils of good, bad and indifferent scholarship must be herded through the course somehow, without the automatic and unsympathetic weeding out of the city school with its higher standard of scholarship. Funds are usually scarce, with correspondingly little of broader, supplementary work. There may be provision for music, more often not. All these things are a drawback to a girl who wants to make the most of her education.

They are not the fault of the school system or any one connected with it, however. City advantages could not be expected here, any more than could Farmer Ellison be expected to work his 10-acre chicken ranch with a tractor. And these conditions are constantly being improved by the growth and progress of a newly settled country. It is unfortunate for a few to be restricted to these surroundings, but for the many who could have nothing unless this kind of training, it is a wonderful blessing. Your boy and girl, who must leave before finishing high school, can get here something they will look back upon all their lives with pleasure.

There are some pupils, too, who have ambition and means to go higher, who must be contented with this kind of education—those who have not the health to go far away from home alone, or who can only be spared for the few hours daily at a nearby school. I wonder if these realize to what extent they can improve not only their own condition, but that of the whole school? There is an indefinable spirit in some schools that can only be traced to the influence of those who might have been discontented there, but who instead do all in their power to make their surroundings the best possible.

If Ruth decides to start here, may she do so with this spirit, even while she has her mind fixed on something different after a year or two. Her very ambition, if it is unselfishly expressed, can be the making of an otherwise uninteresting, mediocre little school. A thorough mastering of the required studies of the first year of high school can be made as satisfactory here as elsewhere. For the outside influences, music, reading, amusements—a little initiative now to overcome the handicap of distance from the city, will be worth more than easily acquired culture. If she can not have actual music, for instance, she can get books about it; become familiar with the operas, composers, interpretation of music; she may even learn the rudiments of written music without an instrument, if necessary. Any other subject can be acquired in the same way. Buy these books? By no means. Your teacher or any householder can get a traveling library for your district from the state, some counties have them also. If you can't get the material you want in these, a direct appeal to the state librarian or to the nearest city or college librarian, will bring results. No one ever refused a frank appeal for help along these lines, if a full explanation is made of what is wanted, and why.

After one or two years of such a school, a girl of average high school age is better ready, physically and mentally, to make the change to a city school. Her main subjects already taken will be credited to her. Leaving the optional subjects until later means a better grasp of them. She will have gained a familiarity with methods of high school study, so different from grammar grades. She will be older, better balanced to weigh values and decide what she must omit from the too-full offerings of city school and social life. She will more quickly adapt herself to her work if she helps herself. Often the shortening of the time away from home means that she need not work as hard, receiving, perhaps, more help from home. She may even be able to carry out a system which many girls start in their nearby schools if these are too far away for them to go home every night—that of "baching" and getting some supplies from home. I am thinking of one such case, where the nearest high school is in a small town. Three girls have two rooms together, cooking their own breakfasts and sometimes dinners, using vegetables, eggs, butter and baked things from their homes. Their living expenses are a trifle, and occasional week-end trips home vary the monotony.

Another girl of my acquaintance is doing the same thing in the city, paying a higher rent, of course, and getting fewer supplies from home. She is able to work out by the hour on Saturday and occasional evenings, doing housework and caring for children, and finds that she goes a long way towards paying her expenses, and has her freedom at the same time. But she first went through the experience of working for her board and room, and was sure of her ground before she took this step. A girl unused to city ways would have risked failure.

This plan of starting away from home gradually must be more popular with most mothers than the abrupt change. Somehow it's easier to keep in touch with your daughters when you see them often and they're in surroundings much like yours. It's easier when they do leave for a more distant city to have had them away for a little, on trial, as it were. And it's so much easier to feel that your daughter is a year or two nearer what you consider an age of discretion before she leaves you, and then for a shorter time than if she had followed the other plan.

I am saying nothing about the dangers of a big city for a young girl, because that has been written about so much that it looms over-large in many people's minds. Your companionship, your sympathy and faith, backing up years of teaching of the right ideas at home, will determine your daughter's safety anywhere. There are many disagreeable things about city life, however, which you will be quick to detect and find a remedy for, or counteract. The one best method for this, no matter how busy you may be, is the never-failing use of Uncle Sam's mails.

And one other little suggestion—if there is any possible way, try to keep pace with your girl so you will be in touch with the finished product of the city school when she returns. It may seem impossible, but books and magazines at least are open to you, and any magazine editor, school principal, or city librarian would be proud of being asked to suggest possibilities to you. I think the same idea applies to you that was expressed recently by the head of the Hostess House at Camp Lewis. Speaking to an audience of women and girls, she told of the men in uniform who were getting the best training of their lives, here and in Europe, learning things which would send every man of them home bigger, broader and better in every way. Then she asked, "What are you doing to keep pace with them? Will they come home to find that you have struggled also, and are broadened by it—or will they find that you have stood still? What kind of women will you be when your boys and your lovers come home to you?"

Yours is the double responsibility in the case of your daughter as well; you must be a source of strength to her while she is away, and be ready to go on with a broadened view yourself when she comes back to you. This we must do if we would keep our daughters.

# Amusing Baby

## Teach Him Also to Amuse Himself

By MARGARET PALMER.

It is always a good plan to begin with the children when they are wee tots so that by the time they are old enough to creep or walk, they have learned pretty well how to amuse themselves, which is a great help to every busy mother.

First of all, the child must not be spoiled, no matter how sweet or how much we love it, while it is a "wee baby." Then is usually when the mischief is done; for we fond mothers think they are too small to know or understand, but the little dears soon "learn."

So do not permit too much excitement nor allow any jumping or bouncing or too much rocking or jiggling, but give him plenty of loving smiles and happy expressions of love and tenderness as you talk to the baby.

Guard the baby against sudden shocks from loud talking, yelling or screaming at him. Never allow the baby to become frightened under any circumstances by letting the older ones jump at him, for they think it fun to see baby jump, but it unnerves the baby. First of all, the baby must be made comfortable for the day, so that he will be as happy and contented as possible; for an unwashed, wet or soiled baby will fret and never try to amuse itself. The next step, the baby must be properly fed and clothed. A hungry baby is always cross or more or less fussy and the same is true if they are not properly dressed, according to the weather.

The first thing that the baby will amuse itself with is motion. They like moving things and bright colors before they do rattles or are even able to hold one. Try tying a ball, a bright one, or a piece of paper or a flower, where the baby can see it—just above the feet is a good place. Keep this in motion by giving it a tap once in a while and the baby will lie happy and contented, watching it swing back and forth for a long period of time. They very soon learn to kick at it and keep it in motion themselves.

A bird in its cage is also another source of amusement for the baby. If you have one, hang it where the baby can see it as it flies from perch to perch. It will soon learn to kick and crow in delight, often laughing out loud at these simple things.

After the baby is old enough to play with toys, do not give it too many at one time, for he soon tires of them; instead, give one at a time. When they are old enough to sit up among pillows, they often amuse themselves for hours with a rattle or a rubber ball in a pie tin or a tray.

As soon as the baby is old enough to sit in a high chair, teach him to pick up his own playthings by having them tied to a string and the string tied to the high chair. So when he throws them down, he can pull them up himself. This alone often affords him long periods of amusement.

# Warnings to Mothers

To the Editor: I am sending some warnings to the Farmer mothers, from my own experience in the last year:

Never only partly open a box of matches and place on the kitchen shelf, as friction caused by fingers trying to roll a match to the edge of the box may cause instant explosion of the whole boxful, and severely burn the fingers, in my case leaving a scar on the forefinger and removing the nail. Should such an accident happen, dip the fingers immediately in a thin paste made of baking soda and water till fire is about drawn out; sometimes it takes an hour, as a match explosion burn is more painful than common burns. Then saturate cotton batting or several thicknesses of clean cotton or linen cloths in castor oil and wrap up well.

Never apply hot water bags or bricks to limbs or any part of the body that aches or pains without first knowing what the trouble is. I used hot irons for aching limbs on my daughter, thinking she had grippe, and proved to be rheumatism instead, driving it to her heart and causing a severe leakage of that organ at the time; and probably, unless she outgrows it, a weak heart for life.

Never plug a child's ear tight with cotton when they have earache, for if there is any pus to run out, the cotton will force the pus to the base of the brain, causing serious trouble. The ear should be syringed out with warm boric acid water and gently wiped with cotton and a warm woolen cloth bound over it, urging the sufferer to lie with the aching ear down on the pillow.

Never throw flour into a bleeding wound—only as a last resort, tying a handkerchief between it and heart is much better. The flour causes unnecessary suffering when the wound needs to be cleaned and scrubbed, and then may fail to heal properly.

Never give coal oil for croup of sore throat as some people do. One of my children accidentally drank a small quantity and as it seemed to strangle him, we called the doctor. He told us it had poisoned him and that although coal oil or kerosene was commonly considered harmless, one would occasionally get some that was poisonous to take inwardly. MRS. SAM HAYES.

Mount Idaho, Idaho.

### MATCH BOX CABINET.

By Lissie C. Farmer.

Save all your match boxes, and when you have eight or 10 of them of the same size set them in a double tier four or five boxes high, and paste or sew the outer cases together at both front and back corners. Then with the inner boxes or drawers placed in the cases you have the handiest sort of a tiny cabinet for holding spices, seeds or other small articles in kitchen or pantry; for buttons, pins, hooks and eyes, etc., in sewing or living rooms; for a receptacle for beads, jewelry, etc., in the bedroom, or for a piece of doll furniture for the small daughter of the family. Such a little cabinet can be made very ornamental by covering it with bright-colored paper or cloth to match other articles near it in its place of use. If cloth is used for covering the cases can be joined together after the cloth covering is in place.

# Homemaking a Business

To the Editor: In reply to your inquiry concerning my method of saving food I will say: First, that the housewife should realize that making a home is a business. The object is well worth a good and wise woman's best efforts. Second, I want to state that often the best and most expensive foods are the cheapest—the greatest cost of food is not in the amount eaten, but in the amount that goes into the garbage can.

Preparing everything possible in our own kitchen is a saving in expense. Nothing, absolutely nothing, need be thrown away if the housewife makes the purchasing and preparing of food for her family her personal business.

One item of great economy is the making of vinegar for putting up all kinds of pickles. Two gallons of good cider and one-half gallon of sorghum molasses constitutes the entire cost of five gallons of good vinegar. Casserole dishes are a great economy if care is taken in preparing them. Many leftovers may be utilized in this way. It is essential to know food values and compositions to be able to serve a well balanced meal.

The required food served depends upon the condition of one's home and occupation. A wise housewife will know what each member of her family requires in the way of food. True it is extra work to prepare special dishes for a finical appetite, but often very necessary.

In our mad rush to put away everything in sight for next winter's use it behooves us housewives to pause and estimate the expense and utility of the commodity.

MRS. D. D. DRENNAN.

Rathdrum, Idaho.

### AGAINST WEARING BLACK.

The woman's committee, council of national defense, advises against wearing black as mourning for deceased soldiers—instead, a black band.

### Divorces Multiply in Petrograd.

As a result of the simplification of divorce proceedings 38,000 applications for divorce have been made in Petrograd since the revolution.

**FISH** Salmon, in brine, 100 lbs., meat, shipping weight 165 lbs., price $14; 50 lbs., $7. Smoked salmon, 20 lbs., $4.00. Dried cod, 10 lbs., $1.75. Herring, in brine, 50 lbs., $5.00; 25 lbs., $2.75. Cash with order.

T. A. BEARD.

4322 Winslow Place, Seattle, Washington.

**ICE FOR THE FARM**

The government urges the use of ice on the farm. It means food saved. Latham's Ice Molds solve the problem for those not situated near a stream or lake. They make good, pure ice right at home.

WARREN LATHAM, Mfg., Spokane, Wash.

**RECORDS FOR ALL MACHINES**

We carry all makes. Victors, Columbias, Edison and Blue Amerolas. RECORDS SENT TO YOUR HOME ON APPROVAL. Pay for only those you wish to keep.

Records sent parcel post prepaid to any address.

Write for our monthly supplement, which carries all the new music. Sent FREE.

Hopper-Kelly Co.
SEATTLE-WASHINGTON

**Children Need Syrup**

You can't deny them this enjoyable spread with hot cakes, corn bread, etc.

Why not economize with

**MAPLEINE**

Simply dilute corn syrup with hot water and flavor with mapleine.

Grocers sell it.

# PATTERNS

2294—Girl's dress. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 8 requires 3 1-4 yards of 44-inch material. Price, 10 cents.

2549-2436—Lady's suit. Cape coat 2549 cut in 4 sizes: Small, 32-34, medium, 36-38, large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 5 1-4 yards of 44-inch material. Skirt 2436 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 2 3-8 yards of 44-inch material. It measures 1 7-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2602—Lady's dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 28 will require 5 yards of 44-inch material. The dress measures about 2 1-8 yards at the foot. Price, 10 cents.

2363—Boy's suit. Cut in 4 sizes: 3, 4, 5 and 6 years. Size 4 will require 2 3-8 yards of 40-inch material. Price, 10 cents.

2608-2590—Lady's costume. Waist 2608 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2590 is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size will require 6 3-4 yards of 44-inch material. Skirt measures 2 1-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2588—An ideal suit. Cut in 3 sizes: 12, 14 and 16 years. Size 14 will require 3 5-8 yards for the skirt, 3 1-8 yards for the coat, and 7-8 yard for the vest, of 27-inch material. Price, 10 cents.

2369 Dress for misses and small women. Cut in 3 sizes: 16, 18 and 20 years. Size 16 requires 4 1-2 yards of 36-inch material. The skirt measures about 2 yards at the lower edge. Price, 10 cents.

2337—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 4 1-2 yards of 36-inch material, with 2 strips 36 inches long and 5 inches wide, for the sash ends. Price, 10 cents.

2446—Lady's apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 4 3-4 yards of 36-inch material. Price, 10 cents.

2609—Set of dress accessories. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size 38 requires 1 1-2 yards of 36-inch material for either guimpe. Price, 10 cents.

2610—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 4 7-8 yards of 44-inch material. The dress measures about 2 1-4 yards at the foot. Price, 10 cents.

2584—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 will require 4 1-4 yards of 44-inch material. Price, 10 cents.

# Won a Blue Ribbon

The picture herewith shows Leota Tucker of Dryad, Wash., who won first prize for best individual booth by a girl under 15 years old at the southwest Washington fair, in industrial club work. The ribbon she is wearing is the blue ribbon won, although it shows white in the picture.

Prizes for individual booth were offered by Professor Canterbury, county school superintendent, in an effort to encourage individual work on the part of club members and pupils.

Leota's booth presented a great variety of subjects, and each was well done. She had made dresses and done fancy work that would be a credit to a grown woman; her canning of both fruit and vegetables was most praiseworthy; bread and cake good enough to win prizes, and made with war substitutes; flower garden and fancy work, besides many other exhibits, made up a booth showing great painstaking and wise management. Leota simply did everything well and worked hard; hence she won. H. A.

**Baked Apples.**

Prepare apples for baking as usual. Fill centers with honey, instead of sugar, add a few chopped nuts if desired. Put in pan and add three-fourths cup of water and one-fourth cup honey. Bake as usual.

# Drouth Affects Bees

I have two colonies of bees in regular 10-frame hives. They swarm quite early (in May), and the first swarm went right to work, with the result that two months ago I took out of the super 22 pounds of honey. Of course I put other sections properly prepared with foundation back into the super, leaving in six which were not filled.

Up to now the bees haven't even started to fill these, although they always seem to be busy. Neither has the colony where this swarm came from done anything at all, although I know that the brood-frames are full, and were so at the time of swarming.

What can be the reasons, and what the remedy? PAUL N. ANDRIESEN.
Rainier, Wash., Sept. 3, 1918.

**Answer by George W. York.**

It is often very difficult to say just why bees do so and so, or why they don't do so and so, particularly when one can not examine the bees themselves, or when he does not know the condition of the bees. Perhaps the reason neither colony did much at storing honey was on account of the drouth, that is, if it was very dry, and for as long a time as it was in this part of the country (north Idaho).

Often when a colony swarms it does not do much more at storing honey than to get its own supply for winter. The old queen leaves with the swarm, and it may be that the young queen that hatched out after the swarm left, failed to become mated, or was killed when on its mating tour. If such were the case, the old colony was probably queenless for awhile, which would result in a weakened condition.

Just why the new swarm failed to store more than one super of honey would be hard to say. Perhaps the honey-flow ceased about the time the second lot of sections were put in and some of the completed ones removed. That would cause the bees to stop work in the super.

Likely a better way would have been to put a super of prepared sections under the first super, when the latter were about half filled. The bees might then have continued to store in the empty super while completing the sections of honey in the first super, which would then be on top. Then when the lower super was about half filled, the upper one would likely have been entirely completed, and be ready to remove. Then the bees would have finished the remaining super, provided the honey-flow continued.

**CANDIED SWEET POTATOES.**

Parboil sweet potatoes about 10 minutes, cool slightly, slip the skins off, and cut in halves lengthwise. Put in a dripping pan, dot them with bits of savory meat drippings, and pour over them about one tablespoon of karo syrup to each whole potato. Bake in a moderate oven until the potatoes are cooked through. Add a small amount of water, if necessary, to keep potatoes from burning.

# War Time Farming in France

## *Country Would Be Out of Luck But for Women Folks*

Most interesting bits of information regarding wartime farming conditions in France are given in a letter to Dean E. J. Iddings of the Idaho State university, written by Corporal Walter F. Thomas, now with the American expeditionary forces in France. Walter was a Davenport, Wash., boy, who went to the Idaho university for work in animal husbandry. He would have graduated in 1918 if he had not entered the military service.

"These people in northern France," says Walter Thomas, "are good, industrious farmers, and although they lack machinery and seem to waste good time in unprofitable gleaning, still produce the crops. In recent travels I have seen miles of rich crops of wheat, oats, rye and a considerable acreage of sugar beets. These fields are unbroken by fences or farmsteads, the dwellings being clustered in small villages, where the house and barn are under the same roof and the stock is kept up and fed. Women, children and old men do practically all the work. This country would be out of luck but for the women, who are very industrious.

"I have seen everything from the cycle cradle to small binders used in cutting grain. Very few good binders are in use, and a great quantity of grain is tied with rye straw by hand.

"The horses left after the army has its share are fine, large animals, but are few in number. Oxen are not uncommon, most of them being large, white, strong looking animals, and although they are slow they do a great deal of work. I shall never forget watching a little slip of a boy plowing with four large oxen. Instead of roadsters, or light road horses, we often see little donkeys no bigger than a goat drawing large carts with one or several people riding.

"In speaking of army horses, the Americans appear to a disadvantage, while the French are more standardized. I saw some of their lancers, and the cavalry horses looked a great deal like our standard bred, which they may have been. But for a regular horse show a certain English-Scotch division which I had the privilege of watching from a roadside has anything beat that I have seen. The wagons, caissons and other vehicles were shined to perfection, while the large, sleek, drafty horses, groomed to the minute, showed excellent breeding and care.

"We see very few cattle, because they are kept up for the most part. In some places we are able to get milk, but conditions about are very insanitary, so that we are sometimes forbidden to use it.

"Water is a hard proposition in this country. The rivers and canals are very pretty, but we are seldom lucky enough to camp on them. Water is hard and must be chlorinated for drinking purposes."

Review Building, Spokane, Wash.

My Dear Corner Cousins: Perhaps you have noticed that I have not commented on your letters lately. I will tell you why. There are so many letters that it is impossible to give a line on each one. We have to save on paper; our government has asked us to. Instead, I will answer as many letters as I can personally, print all we have room for and note the others. Don't you think that is all right?

When school was out I thought our Corner would be very small, as the cousins would be very busy with their war gardens, helping mother in the house and father in the field, and that Aunt Nellie would be forgotten for a time. But the letters kept coming and I was glad, because it shows how much you think of the Corner.

So many good letters were received during the last contest, and it was just as hard as ever to decide which were the best. If I could I would give prizes to at least a hundred, and there was really very little difference between the prize-winners and the Roll of Honor.

The new contest will run until the first of the year and I am going to let you choose your own subjects, and the prizes will be something extra nice.

**WASHINGTON PRIZE WINNERS.**

**Hazel Henrietta Arnold**, Sultan.
**Victoria Pieklik**, Benston.
**Rovilla Fletcher**, Fairfield.
**Arthur Heathers**, Everson (special).

**ROLL OF HONOR.**

Carol Jones, Winthrop; Dorothy Butz, Menlo; Alice Knapp, Harrington; Bertha Schoepke, Greenacres; Olive Wilkinson, Ford; Mary Tagarden, Wapato; Phoebe M. Galbraith, Wellpinit; George F. Barraford, Ferndale; Lucelia Sellman, Bothell; Zelda May Northcutt, Smyrna; Ralph Springston, Quincy; Alice Reinbold, Davenport; Lois A. Lumley, Yakima; Libbie Latimer, Plaza; Bertha M. Lundberg, Colville; Evelyn Olsen, Gig Harbor; Dick Engle, Krupp; Ida Irmer, Withrow; Eunice Martin, Riverside; Violet Dingerson, Keller; Waive Brooks, Mabana; Edna Hodges, Loomis; Geanie Amundson, Ketchikan, Alaska.

If Freda Pearl McAtee of Ellensburg has any twins she wants them to write to her. Freda was 10 years old June 13. She and her sister both have a colt out on the range. Freda thinks it is fun to read the letters. She is taking music lessons.

Our first letter from Elizabeth Gentry, of Turner, tells about her little baby sister. Elizabeth was 12 years old August 10 and if she has any twins will they please write to her? She had a nice garden this year.

Ruth Weaver, of Wapato, is another one of our little cousins whose brother has gone to fight the Germans. Ruth says she wants to do all she can here at home to help Uncle Sammy win the war. She has a thrift stamp and belongs to the Red Cross.

Cousin Florence Evans, who lives four miles from Warden, is 12 years old and has a pony named Nip.

Reta Cantrell, here is a cousin who says she is almost your twin. She is Isobel Katherine Urquhart, of Krupp, who writes that she has two sisters and a little baby brother, Duncan. Aunt Nellie is glad to know that Reta is a Red Cross member and has knitted three quilt blocks.

We thought Hazel Carney, of Tonasket, had forgotten us, she had not written for such a long time. Hazel is 10 years old now and is in the fourth grade. She has one brother and one sister. There are three nice springs on their ranch.

Are there any cousins who were 13 years old, September 10? If you were you are Christa Potter's twin and she wants you to write to her. Christa lives at Mayview and likes to read the letters her cousins write. She has three brothers, but she is the only girl in the family. Every one of them has thrift stamps. Christa has brown curly hair and is five feet four inches tall.

Washing dishes and hoeing thistles is the way Fannie Sheppard is earning her thrift stamps. Fannie's address is route 4, box 24, Palouse, Wash. She has two brothers and five sisters and they are all Hooverizing, eating cornbread three times a day. Fannie is 9 years old and her birthday is January 5.

We are all glad to have Amy Bonney, of Hooper, join the Cousins. Amy lives on a 350-acre stock ranch. She is learning to knit. We are going to get another letter from her some day.

Ruth Kayser has been moving around so much that she hasn't had time to write to us. Finally her family settled down at Rockford and they have a big house and a big barn. Ruth was 9 years old July 14, and if you are her twin she wants you to write to her.

A cat and five little kittens are Edna Cordill's pets. Edna was 10 years old December 18, and is in the fifth grade. She wants a twin. Her home is in Amber.

Bertha Aldrich's mother died when Bertha was just a little baby so she is living with grandpa and grandma and Aunt Amy Bonney, at Hooper. She is 10 years old and her birthday is November 6. She wants her twin to write to her. Bertha has five nephews in the war.

Tippietoe, a New Zealand Red rabbit, is Florence Burr's pet. Florence likes to milk and helps milk 10 cows every day. She has one war savings stamp and two thrift stamps; is a member of the Red Cross, and she knits. Florence's home is at Winchester.

One of our cousins, Edna Reinbold, of Hubby, has found a twin since she wrote the last time—Helen Calkins, of Sunnyside. Edna has an uncle fighting in France and he writes that he likes it over there. Edna enjoys farm life.

Clara Staley, of Elk, comes to visit us again. Just now she is living in a logging camp. For pets she has five kittens—Rose, Violet, Tom, John and Jack.

Alice Duncan, box 156, Benge, Wash., has done lots of Red Cross work. She has made gunwipes, sewed quilt blocks, jackets, booties and many other things for the Belgian children and towels and handkerchiefs for the Red Cross. Alice was 11 September 11, and if she has a twin she wants a letter from her or him.

Esther Chalenor, of Mead, writes that she is 7 years old and is in the third grade. She has four brothers and two sisters.

Cousin Leonard Johnson, goes fishing nearly every afternoon. He lives on a 160-acre farm at Plum, just one-half mile from the Columbia river. Leonard was 12 years old April 14, and is in the fifth grade. The groundhogs were eating the grain this summer so Leonard got after them and succeeded in trapping 20.

Helping mother and father on the farm is the way Irene Overdorff, of Davenport, spent a good deal of her time this summer. Irene is in the fifth grade and will be 11 September 28. She says that the boys and girls at her school all knit for the Red Cross.

There are horses, cows, pigs, chickens, turkeys, geese, dogs, cats and canary birds to tend to on the big 240-acre farm where Fay Sheppard lives. Fay was 11 February 8, and wants her twin to write to her, please. Her address is box 24, route 4, Palouse, Wash. Fay is earning a war savings stamp by washing dishes.

Another faithful little cousin, who reads the letters every week, is Fern Lewis, box 103, R. F. D. 1, Rockford, Wash. She writes that she has two playmates—Evelyn and Lucile McKinny. Fern has a horse of her very own that she calls Dan.

Many cousins have brothers in France but Elizabeth Woodward's father is "over there." Elizabeth lives with mother, grandfather and grandmother, and her address is box 82, Omak, Wash. She was 10 years old August 2.

A dog, Teddy, 12 chickens, a cat and a dear little lamb are Cousin Mildred Hooper's pets. Mildred's address is box 66, Hooper, Wash., and she will be 10 years old November 22. She is in the third grade.

**What Grace Is to Be.**

Dear Aunt Nellie: I am staying with my sister on the farm and like it much better than the city. I have brown eyes and brown hair and was 15 years old May 16. Papa is working in the shipyards at Aberdeen. I will go to high scchool in Pomeroy. I intend to finish a four-year course without interruptions. I will then take a course in nursing and housekeeping. This will help be to become a modern housewife. During this time I will help my country in every way possible, that is, in practicing economy, helping the Red Cross and Belgian relief workers.—Grace Tupper, Mayview, Wash.

**Valley Is Like Fairy Land.**

Dear Aunt Nellie: I live in the beautiful Wenatchee valley. It seems like fairy land to me. I go to the Lewis and Clark school. I am 12 years old and am in the seventh grade. I belong to the garden, poultry and pig clubs. I am making apple and pear boxes to pay for my pig. The rest of the money I am going to spend for thrift and war saving stamps. We own two horses, two cows, six rabbits, five pigs and one dog, named Teddy. He is black and is as full of fun as he can be. I would love to join the Corner. Have I a twin?—Ethel King, R. F. D. 2, Wenatchee, Wash.

**Ride in a Bus to School.**

Dear Aunt Nellie: May I be a cousin? I like to read the letters very much. I will be 12 October 7. I am in the seventh grade. I have some thrift stamps. I think every one should have them; don't you, Aunt Nellie? I live on a 10-acre orchard. We have all kinds of grapes and fruit. My sister owns a 40-acre homestead. I like to go and visit her and gather wild flowers. I have joined the Junior Red Cross. I made seven bandages. I would like to hear from one of the cousins. I will answer their letters. We live quite a little ways from school, so we ride in an auto bus to get to it. I have a pet cat and dog. The cat is yellow and his name is Pinky. The dog is black and his name is Tige. We named him after Tige in the funny paper. I think all the cousins, including me, like to hear from you, Aunt Nellie. So your letters are always welcome to the Corner. —Elizabeth Drenkhahn, Box 34, Benton City, Wash.

**The Picture in Alice's Mind.**

Dear Aunt Nellie: Before I moved I went to the Lantz school, which was about two miles from my home. This spring I would ordinarily walk to school and when coming home in the evening, I would often stop at the top of a steep hill. I always stood facing the east, and the scene was the most beautiful when the sun was just shining on the horizon, and the sky was bright with lovely colors all blended together. There were usually soft, silvery clouds floating about in the bright, blue sky, while the last rays of sunlight fell softly on a group of three very small lakes, which lay in a grassy pasture. Then, too, sheltered by one of the eastern hills, was a house, partly surrounded by tall, green trees, while between this and the silvery lakes were many large rocks. I tried to imagine these were houses and that they composed a city. Still nearer, were more hills and some grain fields. While at the very foot of the hill on which I stood, was a windmill, a barn and the house in which I then lived. The house had trees on the north and west sides and lilac bushes and flags along the front walk. I hope I shall never forget this place, which was my home for the last four years.—Alice Clinesmith, Marengo, Wash.

**A Dignified Sophomore Next Year.**

Dear Aunt Nellie: I would just love to have a twin. Especially if we looked just exactly alike so our parents couldn't even tell us apart. We could have the most fun. I also think it is fun to have a chum and to dress just alike, even if we don't look alike. If you have a sister about your size it's all right, but my sister is 5 years younger than I am. Last week I visited the penitentiary at Walla Walla. It was certainly very interesting to see the things the men can make. Just from a cherry pit they will carve a small dog or some other animal. They also engrave designs on silver spoons and pins and make some of the prettiest beaded handbags. I bought two souvenirs. There are 200 convicts there and 12 women. My birthday was May 30, and I was 14 years old. I am a dignified sophomore this year. I made good grades, too, as my average was 96 1-4 per cent. Of course, in country schools you don't have to study as hard as you do in the city schools.—Gladys Plemon, Burbank, Wash.

**Hopes He Has a Boy Twin.**

Dear Aunt Nellie: I like the Farmer very much and wish to join the Children's Corner. May I join? I am 11 years old and my birthday is March 2. Have I a twin? If so I would like to hear from them. I hope it is a boy. I have one brother and one sister. My brother said he would write next time. My sister and mother live at Pasco, but we two boys are staying at Rogers' ranch this summer, and here is where we got to see the Farmer first. We boys have always lived in town. It is a great treat to live on a ranch. My job is to care for the little pigs, so will tell about them. They are the sweetest little fellows. They get out from under the fence to get into the bran and shorts and then I slip up behind them and grab their tails and they squeal and kick.—John Kelly, Perry, Wash.

**Must Not Please the Kaiser.**

Dear Aunt Nellie: I will be 14 years old, December 21. I am in the seventh grade. Kathryn, my oldest sister, has earned her diploma. I think we should all help to win the war by saving all we can, for the kaiser thanks us every time we eat a slice of white bread or take an extra lump of sugar. We must eat less wheat, meat, fats and sugar because somebody over there is starving for the want of these things. I am doing all I can to help win this great war. I have one cousin on his way to France. I can crochet, knit and tat some. I wish I could find my twin and that she would write to me for I surely would answer her letter.—Mollie Hergert, Box 48, R. F. D. 1, Penawawa, Wash.

**Wading in the Ditches.**

Dear Aunt Nellie: I am 10 years old and in the sixth grade. My birthday is October 21. Have I a twin? I want Helen Elizabeth Munroe to write to me because my name is Helen Elizabeth. I am taking music lessons. We have three little ducks. My father has a lot of alfalfa and he waters it by a flume running from a creek. We have a big engine to pull the water up to the field. We go in wading in the ditches and have lots of fun. I am a Red Cross member. I have knitted one sweater, 11 quilt blocks, one wash cloth, hemmed two handkerchiefs and sewed a few things for the Red Cross for a layette.—Helen Elizabeth Urquhart, Krupp, Wash.

**Yellow and Gray Canary.**

Dear Aunt Nellie: I think it is nice that the children have a Corner. I am a little girl 7 years old and in the second grade. We have two dogs, Jack and Nig. We have one pet lamb. I have three brothers and one sister. My brothers' names are Willis, George and Harold. My sister's name is Ina. Harold is 3 years old. He has three little bantam chickens and some old hens. My brother, Willis, has two nice horses. We have a pretty little canary bird. It is yellow and gray. We have 19 old chickens and about 90 young ones. We have four pigs, three black ones and one red and black one. Mama takes the Farmer and we like it very much. My birthday is February 17. Have I a twin?—Helen Lucile Berry, Cloverland, Wash.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |
| Castle Rock Independent, Castle Rock, Wash., and The Washington Farmer | $1.50 |
| The Cheney Free Press, Cheney, Wash., and The Washington Farmer | $1.50 |
| Chehalis Bee-Nugget, Chehalis, Wash., and The Washington Farmer | $1.50 |
| Cashmere Valley Record, Cashmere, Wash., and The Washington Farmer | $1.50 |

# Six-Months-Old Bull Calf

## *How Could Carnation King Sylvia Be Worth $106,000?*

By H. G. STIBBS.

The editor of the Washington Farmer has asked me to answer two questions: First, how can a six months' old bull calf be worth $106,000? And second, how can the purchase of such an animal by a northwestern breeder benefit other breeders, the vast majority of whom will not be able to invest a tenth of this sum in their herd sires? In order to answer these questions I shall have to touch upon some matters which for a moment will not seem to have much bearing upon the subject.

The Carnation farms herd of registered Holsteins is the largest in the United States, and is the practical working out of a dream and an ideal. Part of that ideal has been stated by E. A. Stuart, president of the Carnation company, in these words:

"Our farms are operated as model dairies and breeding farms for the benefit of dairymen supplying milk to the Carnation Evaporated Milk condenseries. Our company being interested in the distribution of unsweetened canned milk, we must have the best quality of fresh milk. Again, we want the dairymen not only to produce milk of good quality, but also to produce maximum quantity at a minimum expense. The only way to accomplish both purposes is to have good cows with high producing records."

With this ideal in mind Mr. Stuart began about six years ago to build up as fine a herd of registered Holsteins as he could get together. This was not an easy task. He knew nothing of the practical side of the pure-bred business, and his first experience was a disastrous one with tuberculosis. Some of his finest cows—animals for which he had paid big prices and to which he was attached in a way that only a natural lover of cows will understand—proved to be reactors. There was nothing for it but to swallow the bitter dose and start again. This experience cost a good many thousand dollars, but its fruits are to be seen in the fact that a recent government test showed not a single reactor in the entire herd. Tuberculosis has been wiped out clear and clean, and the big herd today is in the pink of condition.

There is no question but that it will remain so, because it is under the supervision of the United States bureau of animal industry. A visitor at the breeding farm outside of Seattle is struck with the practical measures which have been taken to insure the health and comfort of every living creature on the place. The Holsteins are housed in light, airy quarters, with roofed-in and well-drained exercise yards for the rainy season, and broad, sunny pastures for the summer. The men who care for the herds have everything from shower baths to reading rooms which will make for their well being. "Milk from contented cows" is not a mere advertising slogan—it is a dynamic policy, in force at the Carnation farms every day in the year.

The purpose of all this, as Mr. Stuart has said, is to aid the dairymen in the territory surrounding our factories to produce the kind of raw milk we must have. That is where Carnation King Sylvia comes in. It is true that he is the highest priced animal of his class ever sold at public auction, but that is an incidental matter in the broad policy which led to purchase. It is because this young animal represents the highest attainment of the breeder's art and skill, because he is perfect not only in conformation, but has in his veins the blood of such world's record producers as May Echo Sylvia, the world's greatest milk machine, that he was purchased. For example—if by placing his sons, daughters, grandsons and granddaughters in various herds and by careful breeding to grade as well as registered stock, the offspring will produce an extra pint of milk at each milking (or a quart each day per cow), with practically no more feed, one can readily figure up the increased production, when thousands of dairy cows have a percentage of the blood of May Echo Sylvia through her most perfect son, Carnation King Sylvia. The reader must keep in mind the fact that value, from the breeder's standpoint, depends not so much upon the productivity of the individual animal as upon his transmitting quality or "prepotency." Carnation King Sylvia comes of a line of transmitters. He represents that mysterious quality, heredity, raised to its highest power.

And how does all this affect the northwestern breeder or farmer who must operate on a modest scale? At the present moment, perhaps, not at all. Potentially and in the future, immensely. The "get" of every truly great breeding animal is like leaven which spreads through the mass of mediocrity, until the average is raised and the entire community, producers and consumers alike, is benefited. Twenty or fifty years hence the real value of Carnation King Sylvia will be more apparent than it will be five or ten years from now. His descendants will have become the foundation stones of innumerable lesser herds, each of which will have been made a more efficient producing machine because of the infusion of the blood of one of the world's greatest bulls.

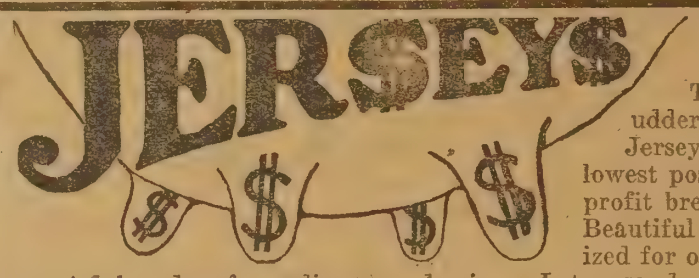
These facts, it seems to me, explain what Mr. Stuart meant when he stated that his aim in purchasing this young animal was to do his part in improving the dairy industry. And to carry out this aim, which is part of the broad and definite policy I have explained, he has to pay the price. That is the answer to the first question: Carnation King Sylvia was well worth $106,000, because other breeders looked backward into the past represented by his ancestry and forward into the future which he is destined to dominate, and desired to possess him. Their desire established the selling price.

# Available Men Needed

(Continued from page fourteen.)

all make plenty. They all seem to grade the wheat differently. I took the same wheat to a number of buyers, and the price ranged from $1.75 to $1.95 1-2 a bushel. They are the judges, and the only thing one can do is to accept their prices. The woods are full of buyers, and with the wide range of prices offered it has been demonstrated that it is best to make the rounds of all before concluding a deal.

"While the wheat price has been fixed by the government, most of the commodities that enter into the expense have not. The cost of threshing this year ran as high as 20 cents in many instances. Sacks cost from 26 to 28 cents each. Sacking twine costs from $1 to $1.25 a pound, and binding twine from 22 to 25 cents a pound. Including the expense of boarding and rooming, shockers cost the farmer as high as $7 a day. Then, on top of all this expense the shortest crop in years was obtained.



"It seems to me that a primary market should be established in the wheat belt, and that a farmer should be paid this primary market price instead of being compelled to endure all sorts of reductions as under the present system.

"Wheat buying must prove a lucrative occupation, judging from the number that are engaged in this line of business at present."

LATEST WHEAT NEWS.

Farmers who have been selling their wheat below the government guaranteed price because of railway embargoes placed on wheat shipment in certain localities were advised September 23 by the food administration that the embargo soon will be lifted and that if they hold their wheat the government will buy it at the guaranteed price. The embargoes were made necessary, it was explained, because the movement of wheat to seaboard has not kept pace with the internal movement to elevators.

The house, September 23, withdrew from its agriculture committee and passed a resolution calling for the recommendations of the secretary of agriculture and the agricultural advisory committee to the president regarding the 1919 price of wheat, which has been fixed at $2.20 a bushel. Representative Anderson of Minnesota asked for the action, no report having been made by the committee within seven days after the resolution was referred to it. The advisory committee is understood to have recommended a higher price than the president fixed.

**How much are a cow's teats worth?**

This depends on how much it costs to fill the udder and how rich the yield in butter-fat.

Jerseys are famous for the richest let-down at the lowest possible up-keep. Jerseys are known as "the profit breed" because they are natural money makers. Beautiful and hardy, their perfection has been standardized for over two hundred years.

Ask breeders for pedigrees and prices. Let us send you some very unusual information about the record-breaking breed.

THE AMERICAN JERSEY CATTLE CLUB, 314 WEST 23rd ST., NEW YORK CITY

**Sunny Bank Jersey Farm**

A few choice young bulls old enough for service, from imported sires and dams. Sired by Fussy Fern's Noble, son of the great $25,000 bull, Golden Fern's Noble. Dams milk 40 to 50 pounds a day with ordinary farm care.
On account of renting my farm, these bulls will be sold very reasonable if taken soon. Mention this paper.
H. WEST, Proprietor. L. J. SMITH, Manager.
SCAPPOOSE, ORE.

**Doerfler Farm Jerseys**

Have largest herd average in the world considering size. Entire herd of eleven head average 599.42 fat. Herd headed by Gertie's Poppy's St. Mawes. The Cary breeding is our standard.
See us at the state fair.
F. A. DOERFLER, Silverton, Ore.
Phone 54 Silverton or 43F24 Salem.

**Anoka Farm Jerseys**

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120 lb. granddam. St. Mawes breeding. The Best in the West. Prices very reasonable. Address
R. B. SEELY,
R. 5, Sherwood, Ore.
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

**Register of Merit Cows**

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.
FOX BROS. Silverton, Ore.

**LYNDEN JERSEY FARM**

Herd sire son of Fororio's Olindes Pogis, of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to
P. MEENDERINCH, Lynden, Wash.

GOLDEN GLOW'S CHIEF.
Bred by estate of W. S. Ladd, has 37 daughters, 41 granddaughters and 5 proven sons in the register of merit, and a WORLD RECORD JUNIOR 3-YEAR-OLD DAUGHTER, who is dam of ONE OF OUR HERD BULLS by the old bull himself. Our second sire is also a son of Golden Glow's Chief, out of a Gold Medal Hood Farm cow. Write us for a young bull calf.
D. Brooks Hogan, Mgr., Iron Mine Farm, Oswego, Oregon.
W. M. LADD, Owner. Portland, Oregon.

**All High Record Blood**

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.
ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

**ASHBURN FARM**
REGISTER OF MERIT JERSEYS.

A bred herd, tried out for several generations by every breeding test. Only the best blood lines. Three proven matings. Nothing for sale except from tried sires. Increase of both sexes for sale.
J. M. DICKSON & SON.
Shedd, Ore.

**Jersey Bull for Sale**

I am offering at a sacrifice my young herd bull, dropped December 15, 1916. Has blood of Golden Glow's Chief and Majesty's Togo. None better anywhere. Write
E. F. MARYATT, Grandview, Wash.

**Edgewater Farm, Breeders**

Foundation stock is from most noted Island Jersey families—Golden Lad, Golden Jolly, Oxford Lad, Old Raleigh—names that stand for high production and showring winners as well.
E. T. SMITH. Myrtle Creek, Ore.

**Meridian Dairy and Fruit Farm**

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.
B. C. CRABTREE, Lynden, Wash.

**Luckiamute Farm**

Register of Merit A. J. C. C. Jerseys.
Home of Octavia's Duke breeding. Daughters test as high as 7.58, second highest in U. S. A few good young bulls for sale.
FRANK LAUGHARY & SON,
MONMOUTH, ORE.

**Who Wants This Bull?**

A double grandson of Kadia F., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.
N. H. SMITH, Oregon City, Ore.

**Goldie's Nehalem Beauty**

won grand champion of the Jersey breed for production, 1917. Her record, 30 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring.
CLIFFORD F. REID.
Wilcox Bldg., Portland, Ore.

**Dairymen, $75.00**

buys your choice of two bull calves, both two months old; solid color, good individuals; out of register of merit dams and by bulls with heavy R. of M. backing. If you are looking for a bargain here it is.
JOHN B. STUMP & SON, Monmouth, Ore.

**BREEDERS OF REGISTERED JERSEYS**

ERICKSON BROTHERS, Yakima, Wash.

**Rose Lawn Jerseys**

The Island bull (Rosy's Jolly Golden Fine 135028) at head of herd. Bulls for sale out of Register of Merit and high-testing dams. Bred right, of right type; priced right.
S. H. KAYLER
Twin Falls, Idaho.

**WAIKIKI FARM**

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.
IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

**Ashnook Farm Jerseys**

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 30 per cent butter. A few good cows and heifers for sale.
DEL PERKINS, Carlton, Ore.

**Jersey Home Jerseys**

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (842.5 lbs. butter), both 80 per cent. Also other good young bulls.
THOMAS WILLIAMS, Forest Grove, Ore.

**St. Mawes—Rinda Lad**

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.
G. G. HEWITT, Monmouth, Ore.

**Ready for Service**

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.
HENRY STEWART, Albany, Ore.

**Jersey Farm Dairy**

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.
E. S. PELOT, R. F. D. 5, Idaho Falls, Ida.

**Please Do This**

Jersey breeders advertising on this page as well as the American Jersey Cattle Club will appreciate it if you will mention this paper when writing any of them. They want to be able to trace the exact source of your inquiry. Will you kindly show them this courtesy?

# A Grand Champion Holstein

The photo shown herewith is that of Ostego Highlands Butterfly, the Holstein cow that was grand champion at the Southwest Washington fair this fall of 1918. She is owned by Nathan Hamilton of Chehalis, Wash., who appears in the picture. Butterfly not only won championship of her breed, but she won the milking contest in which were three other Holsteins, one Guernsey and three Jerseys. She has an A. R. O. record of over 25 pounds of butter in seven days, made without any special preparation. H. A.

## News for Breeders

St. Mawes' Beauty's dam is St. Mawes Susie, that has a recently completed record of 873.6 pounds of fat, begun at 10 years and 7 months old. She has two former records, both over 700 pounds of fat.

The sire of St. Mawes Lad is Poppy's St. Mawes and his dam is Ed Cary's great cow, St. Mawes Poppy, with a record of 952.5 pounds of fat.

Thus the official records of St. Mawes Lad's three nearest dams is 2593.3 pounds of fat, or an average of 864.4 pounds. Figured in terms of 80 per cent butter this would be an average of 1007 pounds. His bull's dam was sold for $2500 to Mr. Ayer of Ayredale farm in Maine. H. A.

### RILMA'S GOLDEN POGIS.

The Jersey bull shown above is Rilma's Golden Pogis, owned by Grant Gleason of Chehalis, Wash. He was grand champion Jersey at the Southwest Washington fair this year. He was bred by Henry Stewart of Albany, Ore., and is out of a register of merit cow as well as being a show animal. H. A.

### ABERDEEN ANGUS SALES.

Secretary Charles Gray of the American Aberdeen-Angus Breeders' association gives some figures from the auction sales of the pure-bred Aberdeen-Angus cattle this season.

Here is Secretary Gray's table of prices for both bulls and cows:

| Cows. | Bulls. | | |
|---|---|---|---|
| 1 | 2 | at | $5000 and over |
| 11 | 3 | at | 3000 to $5000 |
| 37 | 3 | at | 2000 to 3000 |
| 152 | 12 | at | 1000 to 2000 |
| 66 | 7 | at | 800 to 1000 |
| 357 | 33 | at | 500 to 800 |
| 300 | 34 | at | 400 to 500 |
| 312 | 56 | at | 300 to 400 |
| 205 | 148 | at | 200 to 300 |
| 373 | 271 | at | 100 to 200 |
| 11 | 10 | less than | 100 |
| 1931 | 579 | | |

It is a noticeable fact that the top sales for the breed in Iowa this year were an advance of over 50 per cent over former years, "and they were higher than either of the other beef breeds in this greatest of all pure-bred live stock states."

### BOUGHT HIS FIRST BULL IN 1868.

J. W. Harbert, who showed Shorthorns at the Walla Walla fair for the first time this year, crossed the plains in 1859 and has been in the Walla Walla country ever since. He bought his first Shorthorn bull in 1868 from J. S. Folkes, who brought two Shorthorn bulls from Iowa. Mr. Harbert has been breeding cattle and using registered Shorthorn bulls ever since. He has had registered Shorthorn cows for the last four years. His exhibit at the fair consisted of seven head and included his herd sire, Golden Rock 2d, a bull of fine Shorthorn type, and of good size, purchased from J. H. McCroskey of Fishtrap, Wash. H. A.

### SHOWED 50 HEAD HAMPSHIRES.

The Hampshire sheep shown by Jaussaud & Son at the Walla Walla fair were bought at the National ram sale at Salt Lake in August, from the famous Walnut Hall farm in Kentucky. Mr. Jaussaud showed nearly 50 head, to fill up the pens and help the sheep show. His sheep, those of C. H. Craig's, and the Rambouillets of Mrs. R. A. Jackson and Harry Riffle, made a very strong show, where home grown sheep have usually been very scarce. H. A.

### "Black Death" in Asia.

The "black death," which ravaged China in 1546 is said to be breaking out again in Asia.

### SHEEP AND WOOL FOR JAPAN.

It is interesting to note that after a thorough investigation in this country regarding the plan of campaign for more sheep and more wool by Issa Tanimura, commissioner of live stock for Japan, that it is the purpose of the leading Japanese live stock men to create a bureau, consisting of seven expert wool men, together with a score of assistants and secretaries. The plan of action outlined will require 10 years to work out, but it is the intention to make Japan self-supporting as far as the country's wool requirements are concerned.

## Swinging Front

### Prevents Loss in Feeding Hogs

By E. D. ROSEMAN.

A contrivance that enables one to feed hogs without getting mad is a feaure of the piggery on Clarence Bowne's ranch, near Turner.

From disagreeable experience Mr. Bowne knew the hog's ability to spill ground feed and slop milk during the feeding operation, so he designed a swinging front pen to safeguard his temper and his pocketbook.

The arrangement is built of 2x12-inch planks, in solid door form, running lengthwise the pen, and is hung to a stationary plank at the top by heavy iron hinges. A V-shaped trough is built to the floor just inside the swinging front, and the door is hung high enough to clear the top of the trough when pushed in. Small strips nailed on the outside at each end of the door act as stops to prevent hogs from shoving it out and escaping.

Mr. Bowne's piggery is a simple rectangular building with a driveway running lengthwise through the center. A row of commodious pens all provided with this swinging front lines each side of the feedway.

The feeder in operating the device goes to each pen and pushes the door back over the trough, holding it in position by placing one end of a short stick against the outside stop and the other between the door and the trough. This transfers the trough from the pen to the feedway and keeps the animals out while feed is being distributed. After all the feed has been placed ready for consumption the short sticks are removed and the doors swung back to their normal position, allowing the pigs to reach the food.

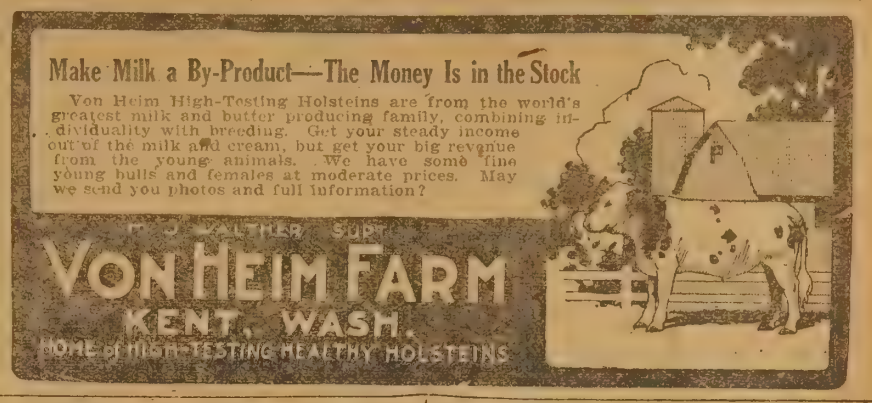
The device as used by Mr. Bowne has been found very successful in simplifying the feeding operation and preventing loss of food while doing it.

### TOBACCO FOR HOG CHOLERA.

To the Editor of The Washington Farmer: I wish to state that if people would give their swine an occasional dose of a decoction of tobacco I do not believe they would ever be troubled with hog cholera. If hogs commence coughing, give a dose of tobacco in their feed. I use Granger Twist, but what they call "long green," or the natural leaf is best. An old stockman in Kansas told my father. We have never been troubled with that disease since, and father's hogs were sick at the time.

Sultan, Wash. E. W.

Commenting on the above, Dr. S. B. Nelson of the Washington State college says:



"First, follow the advice of the United States department of agriculture. They know exactly what they are talking about. Then, if you want to, before the serum can be obtained, use this treatment. But it would hardly be advisable to rely on tobacco alone until a great deal of definite evidence has been collected to prove that tobacco is a sure preventive. In these days the known thing must be depended upon for results, and let the other ones be secondary.

### Chinese Observe Boat Festival.

The Chinese have observed their annual dragon boat festival since 450 B. C. wherever streams in China will permit use of long dragon boat paddles with which the boats are propelled.

# Breeders' Department

## HOLSTEIN CATTLE

**Registered Holsteins**

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

H. R. BOOMER, New Plymouth, Idaho.

**HOLSTEINS**

Well bred young bulls for sale.

THOS. CARMICHAEL, Gaston, Ore.

## AYRSHIRE CATTLE

**Elbow Ayrshire Dairy**

Young bulls out of heavy-producing dams, sired by Willowmoor Sentinel 16th, a bull with big A. R. records on both sides.

J. R. MABEN, Reedsport, Ore.

EDGEWATER FARM.

Government tuberculin tested herd headed by Wil. Peter Pan 63d, double grandson of Beuchan Peter Pan. No surplus stock available.

ELBERT M. CHANDLER. Burbank, Wash.

## HEREFORD CATTLE

**Highland Stock Farm**

offers for sale Hereford bulls, 1 or 2 years old. One or a carload.

PLATT BROS. Genesee, Idaho.

## SHORTHORN CATTLE

REGISTERED SHORTHORN COWS.

Young bulls and heifers, sired by Scotch bulls; liberal terms.

CALDWELL CATTLE CO., Caldwell, Idaho.

## SHEEP

**A. J. KNOLLIN**

POCATELLO, IDAHO.
Breeder of Pure-Bred Live Stock.

Established flocks of pure-bred sheep—Rambouillets, Cotswolds, Lincolns, Shropshires, Oxfords, Hampshires, Romneys.
RAMS FOR 1918 SERVICE FOR SALE,
Also a few ewes.
Also breeder of Shorthorn cattle, Belgian horses and Berkshire hogs.

**Romneys, Lincoln, Corriedale**

AND HAMPSHIRE EWES AND RAMS.

All pure bred, not registered. Have especially fine lot Hampshire ewe lambs, yearlings and three-year-olds. Any size lot. Write me on any kind of sheep deal.

H. STANLEY COFFIN, Yakima, Wash.

**SHEEP FOR SALE**

Registered Shropshire, Oxford, Lincoln, Hampshire and Cotswold rams; 50 head registered Shropshire ewes; 3000 stock ewes, Lincoln, Cotswold and Shropshire breeds; 500 ewes, lambs, Cotswold and Lincoln ram lambs. Write for prices.

EARL WOOD, Silverton, Ore.

## SHROPSHIRE SHEEP

**Shropshire and Hampshire Rams**

Registered stock. Spring lambs and yearlings. No ewes for sale.

GRANT B. DIMICK, Oregon City, Ore.

**It Costs Only a Postal Card to Send for a Catalog**

on anything advertised in this paper in which you are interested. Keep a supply of postal cards handy so that when you find something you want to learn more about you can write a card for free literature about it.

**Registered Holstein Heifer**

for sale; also May and June farrowed O. I. C. pigs, either sex, from matured sows, with pedigree; by a son from a grand champion sow. Also 18-month-old sows to farrow second litter this fall.

E. C. SCHUMACHER, R. 1, Granger, Wash.

## POLAND CHINA SWINE

**Big Type Poland Chinas**

Mouw, Fesenmeyer and Herring strains, either sex. Also registered Shorthorn cattle; good individuals.

H. J. HOWSER, Stites, Idaho.

**Big Type Poland Chinas**

Peter Mouw and John B. Lawson strains. Young boars and bred or open gilts. Good individuals.

CLIFFORD RIGGS, Touchet, Wash.

**NOTICE**

On account of the war I am forced to sell my herd of Poland China hogs, also 100 M. B. turkeys, several geese, ducks and chickens. No help. Order from this ad.

E. A. KRUSE. Roseburg, Ore.

**Unrelated Spring Pigs**

Big type and big medium. Both sexes. Most popular strains.

C. W. SHUMATE, Tumwater, Wash.

**BIG TYPE POLANDS**

Genuine—Guaranteed.

GEO. W. BUCK, Oregon City, Ore.

## BERKSHIRE SWINE

**Berkshire Hogs for Sale**

Have a number of sows, 18 months old; will farrow second litter this fall. Also young gilts and boars of all ages; all from prize winners. Write for prices.

EARL WOOD, Silverton, Ore.

Weanling pigs, bred sows, service boars.

CLARK BROS, Yakima, Wash.

## DUROC-JERSEY SWINE

**Ioka Farm Durocs**

One excellent boar at breeding age. Bred gilts and weanling pigs of either sex.

DOERFLER BROS., Silverton, Ore.
A. N. DOERFLER, Mgr.

FOUR DUROC GILTS BRED TO FARROW this fall, also spring pigs, on hand.

E. E. PRICE, CABINET, IDAHO, OR
JAMES N. PRICE, Yakima, Wash.

## HAMPSHIRE SWINE

HAMPSHIRE HOGS

have won every feeding contest entered since 1914. Weanling pigs, gilts, bred or open. Our blood lines can not be beat.

TUTTLE BROS. Asotin, Wash.

When answering advertisements don't fail to mention this paper.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Sept. 21.—Lowest prices yet for corn since trading in present deliveries began resulted today, chiefly from prospects of sustained liberal receipts here. The market closed unsettled 1 3-4c to 2 1-2c net lower, with October $1.48 1-4 to $1.48 3-8 and November $1.45 3-4 to $1.45 7-8. Oats finished 1-4c off to 1-4c up and provisions varying from 17c decline to 10c advance.

**Cash Quotations.**

CHICAGO, Sept. 21.—Corn—No. 2 yellow, $1.62@1.65; No. 3 yellow, $1.53@1.58; No. 4 yellow, $1.48@1.52.

Oats—No. 3 white, 73@73 1-2c; standard, 73 1-4@73 3-4c.

Rye—No. 2, nominal; No. 3, $1.60.

Barley, 90c@$1.04.

Timothy, $7@10.

Clover, nominal.

Pork, nominal.

Lard, $26.80.

Ribs, $23@23.75.

**Pacific Northwest Grain.**

PORTLAND, Sept. 21.—Grain, September delivery bids: Oats, No. 2 white feed, $60.50; barley, standard feed, $50; A, $52. Eastern oats and corn in bulk: Oats, No. 3 white, $53; 38-pound clipped, $55; corn, No. 3 yellow, $67.50; No. 3 mixed, $67; October oats, No. 2, $60.50; barley, feed, $50; A, $52; oats, No. 3, $53; clipped, $55; corn, yellow, $66.50; mixed, $65.50.

Today's car receipts—Wheat, 81, barley 7, flour 12, oats 3, hay, 29.

SEATTLE, Sept. 21.—Yesterday's receipts—Wheat, 15, oats 5, corn 2.

TACOMA, Sept. 21.—Car receipts—Wheat 17, corn 2, oats 2, hay 1.

**Minneapolis Wheat.**

MINNEAPOLIS, Sept. 21.—Flour unchanged; shipments, 81,326 bbls.

Barley, 84@95c.

Rye, $1.58@1.58 3-4.

Bran, $28.77.

Wheat receipts, 423 cars, compared with 227 cars a year ago. Cash, No. 1 northern, old, $2.22.

Corn—No. 3 yellow, $1.62@1.65.

Oats, No. 2 white, 69 3-4@71 1-4c.

Flax, $4.13.

## Portland Market.

PORTLAND, Ore., Sept. 21.—The scarcity of butter has put the local market up 2 cents. Prints have been advanced to 58@59c, cubes are selling at 55 cents and butter fat is up to 62 cents. The cheese market has also gained a cent.

The egg market is slow and unsatisfactory. Ranch receipts are not heavy, but storage eggs and eastern stock are offered freely.

Poultry and dressed meats clean up readily at good prices.

There is little change in the potato situation. Idaho Rurals are selling at $2@3.25, Yakima Netted Gems at $3.25 and Oregon Burbanks at $2.50@3. There is a good movement in onions at slightly higher prices. Oregon Yellow Danvers bringing $2.50@$3.

Hop picking continues where the crops had been contracted for. Dealers estimate that 10,000 bales will be saved in Oregon, 8000 bales in Yakima and 1500 to 2000 bales in western Washington. The California harvest is figured at 65,000 bales.

Butter—Cubes, extras, 55c; prints, 58@59c; butterfat, No. 1, 62c, delivered.

Eggs—Oregon ranch, candled, 48@50c; selects, 54@55c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 30c; Young Americas, 31c per lb; Coos and Curry, f. o. b. Myrtle Point, triplets, 28 1-2c; long horns, 29 1-2c per lb; 1-4 discount to Portland trade.

Poultry—Hens, 26@27c; broilers, 27@30c. ducks, geese and turkeys, nominal.

Pork—Fancy, 25c.

Veal—Fancy, 21c per lb.

Potatoes—Oregon, $2.50@3 per cwt.

Hay—Buying prices, f. o. b. Portland; Eastern Oregon timothy, $30 per ton; valley timothy, $29; alfalfa, $27; valley grain hay, $26@27; clover, $28; straw, $9@10.

## Portland Wheat.

PORTLAND, Ore., Sept. 21.—The mixed flour proposal of the government is still pending, and it is believed in the trade it will go through. In that case the millers will support it as a war time measure. To comply with it the milling industry of the northwest will have to be more or less readjusted. Mills that are not in a position to grind substitutes can not partake in government business, and after supplying their local wants will have to cease operations. The question of getting substitute cereals is said to be about as difficult as getting new machinery to grind substitutes. There is no doubt there will be plenty of California barley to be had, and it should be fairly reasonable in price, but the cost of getting it to the northwestern plants will be considerable.

Barley was quoted at the exchange the close of the week at $52 for milling grade. The impression prevails in the local grain trade that the price will go at least $5 cheaper. None of the big California crop of 600,000 tons has been sold yet. The Export company is not interested and it is believed will not be. The California home requirements, Hawaii, etc., are figured at 250,000 to 300,000 tons, so there will be a big surplus to work off on the Coast. The eastern market can not be invaded as there is plenty of barley there and the brewers are closing down. Eastern barley, in fact, is now being shipped into the northwest.

The other grain markets are quiet. Oats are quoted at $60.50 sacked and $53@55 bulk. Bulk corn bids were $65.50@67.50.

**The Threshing Problem Solved**

Threshes cowpeas and soy beans from the mown vines, wheat, oats, rye and barley. A perfect combination machine. Nothing like it. "The machine I have been looking for for 20 years." W. F. Massey. "It will meet every demand." H. A. Morgan, Director Tenn. Exp. Station. Booklet free.

KOGER PEA & BEAN THRESHER CO.,
Dept. 15 Morristown, Tenn.

## Live Stock Quotations.

**At Chicago.**

CHICAGO, Sept. 21.—(United States Bureau of Markets.)—Hogs—Receipts, 6000. Market 10c to 15c lower than yesterday's average. Butchers, $19.85@20.40; light, $20@20.40; packers, $18.90@19.65; rough, $18@18.75; pigs, good to choice, $18.50@19.

Cattle—Receipts 4000, compared with a week ago, top native steers, 25c higher, medium to choice unevenly 50c to $1 lower; cheaper grades, 15@25c lower; bulk western 25c lower; cows and heifers mostly 25c to 40c lower; canners and bulls 15c to 25c lower; calves 25c higher; best feeders strong; common stockers, 10c to 15c lower.

Sheep—Receipts 9000, compared with week ago, fat lambs mostly 50c higher; feeders strong; fat and feeding sheep steady to 25c higher.

**At Portland.**

PORTLAND, Ore., Sept. 21.—Cattle, steady. Receipts, 98. Steers, prime, $12@13; good to choice, $11@12; medium to good, $9.75@11; fair to medium, $8.25@9.25; common to fair, $5.75@8.25; cows and heifers, choice, $8@9; medium to good, $5.75@8.25; fair to medium, $4.75@5.75; canners, $3@4; bulls, $5@8; calves, $9@12; stockers and feeders, $6@8.

Hogs—Weak. Receipts, 294. Prime mixed, $19.50@19.75; medium mixed, $19@19.35; rough heavies, $18@18.35; pigs, $16@17; bulk of sales, $19.35@19.50.

Sheep—Firm. Receipts, 816. Prime lambs $13.50@14.50; fair to medium, $11@12; yearlings, $10@11; wethers, $9@10; ewes, $6.50@8.50.

**At Seattle.**

SEATTLE, Sept. 21.—Receipts, 130. Offerings exclusively secondary and common cows, the bulk of which went over the scales at under 7 cents, against a top of 8@8 1-2c.

Hogs—Receipts, 836. Market steady. Packers brought in a special trainload of finished South Dakota hogs from Mitchell to maintain local requirements.

Hogs—Prime light, $19.75@20; medium to choice, $19.50@19.60; medium heavy, $18.50@19; rough, $17.50@18; pigs, $17.50@19.

Cattle—Best steers, $11@13; medium to choice, $10.50@11.50; common to good, $8@8.50; medium, $5@$7.50; bulls, $5@7.50; calves, $5@10.

Sheep—Spring lambs, $13@15; yearlings, $9@12; ewes, $6@9.

**At North Sale Lake.**

NORTH SALT LAKE, Utah, Sept. 19.—Cattle—Receipts, 275 head. Choice heavy steers, $11@12; good steers, $9.50@10.50; fair steers, $8@8.50; choice cows and heavy heifers, $7.50@8.25; fair to good cows and heifers, $6.50@7.25; cutters, $5.75@6.25; canners, $4.75@5.50; fat bulls, $6.50@7; bologna bulls, $5.50@6.25; veal calves, $9@11.

Hogs—Choice fat hogs, 175 to 250 pounds, $19.25.

Sheep—Choice spring lambs, $14@15; wethers, $9.10; fat ewes, $8@9.

**At Spokane.**

At the Spokane stockyards the week opened with a heavy run of cattle, the majority of which were light steers and plain cows. Calves were plentiful, but few in prime veal condition.

Tuesday the cattle receipts were light, as well as the hog receipts, $19.60 per cwt. being the best price paid for fat hogs. A heavy supply of cattle was again offered on Wednesday's market. Choice killers in hogs were quoted at $19.75, the lighter in this grade at $19.65.

Fifteen carloads of cattle arrived Thursday. Ordinary steers and plain cows were in majority with a liberal supply of thin calves. Lambs were in fair condition selling from 11 to 13 cents. The bulk of hog sales were made at $19.85.

Plain cows were the chief offering Friday, the best price paid for hogs being $19.75. A summary of the livestock run follows:

| | Cattle | Calves | Hogs | Sheep |
|---|---|---|---|---|
| Saturday, Sept. 21 | 186 | ... | 96 | 4 |
| Friday, Sept. 20 | 251 | 68 | 202 | ... |
| Thursday, Sept. 19 | 386 | 82 | 103 | 309 |
| Wednesday, Sept. 18 | 258 | 10 | 325 | 173 |
| Tuesday, Sept. 17 | 35 | 255 | 38 | 13 |
| Monday, Sept. 16 | 515 | 82 | 555 | 1442 |
| Weeks ago | 139 | 18 | 29 | 8 |
| Week ended Saturday | 1831 | 313 | 1825 | 2708 |
| Year ago | 156 | ... | 2 | ... |
| Two years ago | 8 | ... | ... | ... |

The bulk of Saturday's cattle offering was a herd of stock driven in to be prepared for shipment to the country. The offering to the local trade afforded little material for much activity, with but few sales of fat stuff being made. The cattle market is firm, with Friday's close at the following:

| | |
|---|---|
| Prime steers | $12.50@13.25 |
| Good to choice steers | 11.00@12.00 |
| Medium to good steers | 10.00@11.00 |
| Fair to medium steers | 8.50@ 9.50 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 8.25@ 9.25 |
| Medium cows and heifers | 6.25@ 7.75 |
| Canners | 3.00@ 5.00 |
| Bulls | 5.00@ 7.25 |
| Calves | 7.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

One carload of hogs arrived late and will not be submitted for sale until Monday. With prospects for light receipts Monday, the market closed strong at the following:

| | |
|---|---|
| Prime mixed | $19.60@19.85 |
| Medium mixed | 19.00@19.35 |
| Rough heavy | 18.00@18.75 |
| Pigs | 18.25@19.00 |
| Stockers and feeders | 16.75@18.75 |

## Butter and Eggs.

PORTLAND, Sept. 21.—Butter—Prints, extras, 58@60c; cubes, extras, 55c; prime firsts, 52c; dairy, 36c.

Butterfat, Portland delivery, No. 1 sour cream, 60c.

CHICAGO, Sept. 21.—Butter—Higher; creamery, 51@59 1-2c.

Eggs—Lower; receipts, 6929 cases; firsts, 42 1-2@43c; ordinary firsts, 41@42c; at mark, cases included, 40@42 1-2c.

## Seattle Market.

SEATTLE, Sept. 21.—Coloring of apples in eastern Washington orchards has been a slow process, due to heavy smoke clouds, through which the sun did not shine, and market conditions are being affected. Picking time has been delayed two weeks over the expected period and the movement to market has been retarded. It is not believed that the fruit will be rolling in volume before October 1.

Prices are holding at the present level. White winter bananas reached the market two weeks earlier than last season and a big volume was sold before the Jonathans started to move. Rome Beauties, according to reports received by distributors here, will be 400 carloads short. Quotations f. o. b. shipping points in eastern Washington are $2.25 for Spitzenburgs, $3 for Delicious, $1.85 for Staymans, $2 for Winesaps and $2 for Rome Beauties, prices being fixed on sizes of 175 and larger.

Fall peaches sell as fast as received at $1.75. A few October Krummels will arrive through the coming week. Pears are cleaning up at $2.75@$3 strong for fancy stock.

The potato market is weak, and a decline to $30 f. o. b. before fall digging is predicted. Spuds received from Yakima so far this season are of a very inferior quality and there is much loss through shrinkage.

The demand for storage eggs has been little short of phenomenal and operators who kept cleaned up on fresh stock admit that prices had reached the point where buyers would no longer participate, and accordingly switched in a body to storage eggs, which are selling at 11 to 13c per dozen less.

Poultry prices for the coming week will be stronger. Jobbers expect to bid a cent higher on large and small hens. Receipts throughout the week have been light, greatly reducing the surplus going into the coolers for the winter demand.

There was a slightly firmer tendency to the egg market for the weekend. Cut prices, carried on by a minority of the houses with 60 cents as the base, are spending their force with the exhaustion of surplus stocks. Jobbers will start the new week easy with bids of 57 cents and will endeavor to feel out the market before plunging heavily with higher bids to producers.

The butter market is as firm as before the advance of 2 cents earlier in the week.

**Buying Prices.**

Eggs—Select ranch, 57c per doz; pullets, 47@48c per doz.

Butter—Fresh dairy, 32c per lb; butter fat, 63c per lb; bakers', 38c per lb; raw milk, $3.10 per cwt.

Poultry—Broilers, live, 1918, under 2 lbs, 30c per lb; 2 lbs and over, 28c per lb; hens, 3 1-2 to 4 lbs and up, 27c per lb; under 3 1-2 lbs, 25c per lb; old roosters, 17@18c per lb; ducks, live, fat, 23c per lb; squabs, large, $3.50 per dozen; geese, fat, live, 21@22c per lb; Belgian hares, 12@16c per lb; guineas, $7 per dozen; turkeys, young toms and hens, dry picked, 10 lbs and up, 30@35c per lb.

Hogs—Light, 21@23c per lb; heavy, 19@21c per lb.

Beef—Steers, fat, 12@15c per lb; heifers, fat, 14@15c per lb; cows and bulls, 11@14c per lb.

Veal—Fancy light, 20@21c per lb; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb; spring lamb, fat, dressed, 25c per lb.

## Seattle Wheat.

SEATTLE, Sept. 21.—The embargo against receiving any more wheat at this terminal for eight days by the railway administration will in some degree relieve the increasing pressure on the storage spaces here, but it will add to the burdens of farmers in the interior of eastern Washington who must now pay storage and carrying charges, insurance and interest. Millers and grain dealers, however, insisted that there was no space available either in the mill bins, the port commission wheat storage spaces or elsewhere and that an emergency existed.

Millers and grain dealers estimate that 70,000 to 100,000 tons of wheat and flour per month would be ready if ships could be supplied. The government gives no assurances that the situation will be any easier in October, although the shipping board and grain corporation officials are working out a plan to divert sea tonnage here from other localities and so assist millers, grain dealers and farmers toward cleaning up their holdings and turning them into cash.

One reason for the wheat embargo as announced by millers is that the grain corporation has begun on its program of holding out 300,000,000 bushels of this year's crop for any emergency that might occur in 1919, such as shortage of crop, continuation of the war, destruction of ocean wheat-carriers by submarines, or any other event that might tend to reduce the food supply of the allied armies.

In their appeal to Washington for more ships, Seattle millers have said with much reluctance that unless they can get some of the wheat and flour aboard ship and to sea within 10 days they will be compelled to close down, Tacoma mills have already done so.

**Advantages of Smokeless Powder.**

The advantages of smokeless powder besides its virtue of high explosiveness are twofold. It does not create a smoke cloud that betrays the location of the gun or gunners, and at the same time the man behind the gun is not confused for a second by a pall of smoke that obscures the range of vision in the direction of the enemy.

**California's Weeping Trees.**

California has but two species of native trees that are normally of weeping habit. One is quercus lobata, the valley oak, having its most southerly range near Burbank. The other is picea breweriana, the weeping spruce, which is found in a few isolated mountainous sections in the northwestern corner of the state.

# Farmers' Want Ads

**SITUATIONS WANTED—Male** 21

DAIRY POSITION WANTED; MARRIED MAN, 29, 1 child, desires position in large dairy as milker, where he can learn up-to-date dairying, testing, record-keeping, etc. Mechanical milking preferred. Three years' experience with the Empire. Do not use liquor or tobacco. Draft 4A class. Myself and wife educated Americans. Address Mechanical Milker, care Oregon Farmer, Portland Ore.

EXPERIENCED FARMER WANTS WORK on good farm or ranch for duration of the war; has wife and two children; desires location near school; Oregon, Idaho, Utah or California preferred; best of references. J. E. Swan, Moorcroft, Wyo.

**EDUCATIONAL** 45

EARN MORE. ENROLL ANY TIME. AT Behnke-Walker, Portland, northwest's biggest business college, because best. Graduates assured positions. Write for catalogue.

**Do You Want a Well Drilled?**

If so, we can very likely put you in touch with a competent driller in your section.

**EXPERT ADVICE FREE OF CHARGE**

Upwards of a Thousand

**KEYSTONE**

WELL DRILLING MACHINES

now operating in Pacific northwest. We will send you the name of driller nearest you free on request. Will there likely be other wells to drill in your neighborhood?

J. H. Harris 1210 Ide Ave. Spokane, Wn.

Pacific Northwest Distributor for Keystone Driller Co., Beaver Falls, Pa.

HIDES WOOL FUR

RUBBER METAL SACKS

We pay full market value, correct weight and assortment, prompt returns. Write for prices. We want your business.

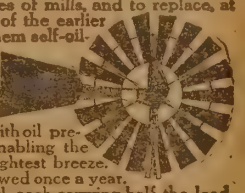
**PACIFIC HIDE & FUR DEPOT**

Joseph Thiebes and C. T. Symmes,
1101-09 Railroad Ave., Spokane, Wash.

Purebred Registered

**HOLSTEIN CATTLE**

Leave out of consideration the greater direct cash return and Holsteins are still the best investment you can make. Great strength and constitutional vigor make the typical Holstein long-lived, free from disease and sure to produce healthy calves.



A thirteen-year old Holstein owned by the Kansas Agricultural college has recently finished a year's record of 15,773 pounds of milk and 513 pounds of butterfat.

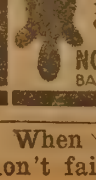
This record indicates the dollars and cents value of Holsteins.

Send for FREE illus. descriptive booklets. The Holstein-Friesian Assn. of America, F.L. Houghton, Sec., Bx.205, Brattleboro, Vt.

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load.

We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.



Write AERMOTOR CO., 2500 Twelfth St., Chicago

**SHIP** your cattle where they will bring you the most money.

OUR northwestern customers have found Kansas City their best market. We specialize on Oregon, Washington and Idaho cattle.

WRITE or wire us for market information at any time.

WITHERSPOON-McMULLEN L. S. COM. CO.
Stockyards Station,
Kansas City, Missouri.

**HIDES**

We want to buy hides. Highest market price paid. Our check by return mail. References, any Seattle bank.

NORTH COAST TANNING CO.
BALLARD STATION ••• SEATTLE

When answering advertisements don't fail to mention this paper.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

**FRESH FOOD PRODUCTS 56**

WILL DELIVER BOX 48 LEMONS, ANY place, exp. paid, $1, or parcel post $1.25. Ernest Vince, Santa Barbara, Cal.

**HONEY, BEESWAX—Wanted 58**

SEND SAMPLES OF YOUR HONEY AND beeswax. State quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**

For Subscription to The Washington Farmer

**25c**
For 1 Year

**50c**
For 3 Years

**$1**
For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

The Winchester pattern. 320 pellets out of a possible 431, or 74 per cent of the shot charge, evenly distributed. No birds get through.

# A quick eye and a good shot pattern

A QUICK eye and a good shot pattern, that's the game-getting combination. Given an old-timer with a reliable gun in his hand and the rest of the story is up to the shot pattern.

Now the secret of good patterns is in the control of the gas blast from the exploding powder. This in turn depends upon the *wadding* in the shell.

The wadding, like the piston head of a gas engine, must give the explosion something solid to work against so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance to the explosion so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where it is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431, or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yds.

## The Winchester System

***Winchester Wadding*** is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work. Though the explosion is almost instantaneous, it is none the less *progressive*, the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle* where it is most needed.

Meanwhile, under the heat and pressure of combustion, the tough, springy *Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* the shot evenly.

At the muzzle, the shot pellets slip out without jamming, while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or wadding and makes the hard-hitting, uniform pattern for which Winchester shot shells are world famous.

***Fish Tail Flash.*** All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.

***The Crimp.*** The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

***Waterproofing and Lubrication.*** In the cold, damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester waterproofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

***Uniform Shells.*** From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. 25,000,000 rounds of ammunition are fired every year in testing Winchester guns and ammunition. $100,000 is spent annually in the inspection and testing of finished shot shells alone.

## Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Winchester Repeating Arms Co., Dept. WT-31, New Haven, Conn., U. S. A.**

THE road to independence for the orchardist, and the farmer of moderate grain acreage is marked by the trail of the Yuba Model 12-20 Tractor.

The owner of a Yuba 12-20 is independent of adverse conditions of weather or soil. He plows, cultivates and harvests at his own convenience with no worry over his ability to finish on time.

He is independent of unreliable labor, increasingly scarcer, dearer and harder to hold.

He is independent of the erratic horse market as his power resource.

He is independent of the rising cost of feed.

Successful orchard men realize now as never before, that they must abandon horses; and are placing orders for Yuba 12-20 Tractors.

Make your decision without delay.

Tractors may be dearer before they are cheaper.

Your road to independence is on a Yuba 12-20 Tractor.

# Farm Production Is Threatened

## *Unless Farm Labor Problem Is Managed With Intelligent Insight*

Unless the farm labor problem is managed with intelligent insight and wise prevision, agricultural production will be curtailed next year in the Pacific northwest.

It would be a serious mistake for those in authority to assume that because sufficient labor was at hand to harvest the crops this season in the Inland Empire, the drain of labor from the farming districts to the coast cities can be continued indefinitely in safety. If the Inland Empire had enjoyed normal crops this year, there would have been an acute shortage of labor. A light crop from Dakota to the Columbia river and from Oregon up into western Canada was handled with a short supply of labor. But the work of preparing for the next harvest requires a normal supply of labor, and it is not at hand. Grain growers are feeling the handicap already, and the outlook for spring operations is not encouraging.

There is a danger that agricultural production next year may be shortened through the whole country by an undue drain of labor to other war industries. Mr. Hoover evidently senses that peril, for he has issued an earnest appeal to the American people to keep up their practice of saving food, particularly wheat, fats and sugar.

The national food administrator informs the public that the allied civilians and armies, the American armies, the Belgian relief and certain neutrals who are dependent upon the United States will require 17,550,000 tons of food stuffs for the year beginning July 1. These requirements are thus classified by Mr. Hoover: Meats and fats, 2,600,000 tons; breadstuffs, 10,400,000 tons; sugar, 1,850,000 tons; feed grain, 2,700,000 tons.

These are enormous demands upon the food producers of this country. To meet the call for breadstuffs, to use one illustration, nearly 350,000,000 bushels of wheat would be required. Breadstuffs sent abroad the coming year will not be wheat alone. There will be some rye, oats and other cereals, but the main prop will be wheat.

The United States has never exported in a single year 350,000,000 bushels of wheat. The nearest approach was in 1915, when, with a bumper crop we exported 332,464,975 bushels.

In the five-year period from 1907 to 1911, our exports of wheat and flour averaged yearly only 116,137,728 bushels. In 1912 they were but 79,689,404 bushels; in 1913, 141,132,166 bushels; in 1914, 145,590,349 bushels, and in 1916 and 1917 they were, respectively, 243,117,025 bushels and 203,578,699 bushels.

Mr. Hoover is right. Food production continues a vital war time industry, secondary not even to shipbuilding; and it would be a lamentable mistake to drain labor from the farms to a point where production would be cut down.

### TO LIFT GRAIN EMBARGO.

**Plenty of Ships Are Now Available, Says Max H. Houser.**

Max H. Houser, federal grain administrator for Oregon, announced Sunday that the embargo from eastern Oregon and Washington points to Portland exporters, whose grain handlers refused further service last week following rejection of their wage demands, probably will be lifted beginning tomorrow.

"There are plenty of ships here now to carry away our grain," said Mr. Houser, "and there is much grain available. Only the refusal of the grain handlers to work is preventing rapid exports. About two-thirds of the exporting firms here have been affected by the walkout of men, who already were earning from $45 to $50 a week each, and who would not consent to arbitration of their demands for still higher wages. Efforts will be made at once to replace the men who quit work."

### MAX H. HOUSER

**Would Do Everything Possible to Assist Farmers of the Northwest.**

Former Governor M. E. Hay of Washington, who has been closely connected with the grain-farming operations of the Inland Empire for many years, writes with reference to the difficulties which have proved a serious embarrassment to wheat growers:

To the Editor: I had never had the pleasure of meeting M. H. Houser until the conference held in Portland about a year ago. I went to this conference prejudiced against Mr. Houser, but after seeing him in action I became thoroughly convinced that the man was thoroughly honest and was doing and would do everything possible to assist the farmers of the northwest. I believe he is working for the government for patriotic reasons and not for any ulterior motive or for financial gain to himself. The same as yourself, I thought he was not as frank as he might or should have been, but this, I can readily understand, came about from lack of time and not from any intentional effort to mislead or appear curt.

Spokane, Wash. M. E. HAY.

### ADVANCES ON WHEAT SHIPMENTS.

To the Editor: I have your favor of the 19th, enclosing copy of Dr. Bryan's article published in the current number of the Farmer. I have read this interview of Dr. Bryan's with great interest, and regret that the government has not found some way of making advances on shipments of grain to terminal points. The food administrators of the northwest zone took this matter up with Mr. Hoover and Mr. Barnes at their recent conference in Washington, but we were advised that no plan could be worked out for making an advance on these cars.

CHARLES HEBBERD,
Federal Food Administrator for Washington.
Spokane, Wash.

### SITUATION AFTER THE WAR.

To the Editor: Your letter of September 5, with Mr. Houser's reply to your article in the Farmer of August 29, is carefully noted. I appreciate very much the very patriotic and laudable position of the Farmer, and feel its argument was not very well answered. Undoubtedly the industrial situation after the war will be acute. The problem will vary in different states and localities. The American people are not giving as much thought to meeting the situation as is the case in foreign countries, particularly in Great Britain. Idaho has a very competent committee, I understand, seeking to solve their problem there. Washington thus far has made no attempt along this line.

H. C. SAMPSON,
Vice President-Manager Lincoln Trust Co.
Spokane, Wash.

### FARM ADVISORY COMMITTEE.

**Leading Producers Representative of All Agricultural Interests.**

To the Editor: It has been our recent experience in the east that the advisory committee of 24, which is composed of leading producers representative of all agricultural interests in the United States and serves as adviser to Secretary Houston and Mr. Hoover, does give to our farmers a very considerable measure of representation. Governor Stuart, the chairman of this committee, is also a member of the price-fixing committee of the war industries board, and this committee considers every question put to it by our producers, and in many instances has been most influential in securing needed changes in regulations and in policy. I am convinced that our national government has suffered through lack of counsel with representatives of farming interests, but we surely are improving conditions through this committee of 24. Personally I wish they had a more distinctive and independent official standing.

ALVA AGEE,
Secretary State Department of Agriculture.
Trenton, N. J.

### SITUATION CONFRONTING GROWERS.

To the Editor: I thank you very much for a copy of the interview of Dr. Bryan. There is a very serious situation confronting our wheat growers, and if they are not afforded some relief the farmers are not going to be in shape to subscribe very liberally to Liberty bonds or other patriotic funds.

EDWIN T. COMAN,
President Exchange National Bank.
Spokane, Wash.

### FOOD PRODUCTION ADMINISTRATOR.

To the Editor: I am heartily in accord with your urgent request asking for a food production administrator. It does seem to me that this is even more important than the partial management of price and distribution of that which the country produces. Surely President Wilson will respond to your request, and I shall look forward with personal interest to the result.

N. D. SHOWALTER,
President State Normal School.
Cheney, Wash.

### FULL INFORMATION FOR PRODUCERS.

To the Editor: I have read with interest your communication of August 29th, and have also looked over the article in the Farmer entitled "Will It Pay Wheat Grower to Ship Direct." It is important that full information should be before the producers, particularly as regards the sale of wheat. I have not gone into the wheat handling question much, as state food administrator, since this is more definitely handled by the grain corporation of the food administration.

ALFRED ATKINSON,
Federal Food Administrator for Montana.
Bozeman, Mont.

### DIVIDE THE PASTURE.

**By Carl J. Menze, Ferndale, Wash.**

On farms where cleared land is used for pasture, or on farms where logged off land is used for pasture, it is an advantage to divide the pasture into several fields and turn the cattle into one field at a time and let the grass in the other fields have an opportunity to grow. If the cattle are allowed to roam over the entire pasture, and there is a large number of cattle for the size of the pasture, when they graze the field short it will not grow much the remainder of the year, especially if it is a very dry year. When the pasture is divided into several fields, and they are used in turn, there will be an increase in the amount of feed produced and the grass plants will not be weakened by being constantly grazed close to the ground. The only draw back in this method is that more fencing is required on a farm that is cleared. However, as many farms contain partially timbered and logged-off land which is used for pasture the problem is not so difficult, as there is always a great amount of logs and brush which can be used for the division fences.

# Houser Did Not Name Firms

## *Referred Shippers to the Chicago Office*

Last week there was published a communication from the field editor of The Idaho Farmer, containing the following opening paragraph:

Partial relief from the distressing situation confronting Idaho wheat growers is afforded in an announcement from the food administration grain corporation to the effect that it will furnish farmers and dealers with a list of reliable commission houses in Chicago through which they may ship and who will advance 75 per cent of the value of the grain, charging 1 per cent for the service and 6 per cent per annum from the time the draft is made until final settlement is made for the grain.

From Mr. Houser's letter, which we are glad to print below, it appears that this item should have read that the Chicago office of the grain corporation would furnish this list of names of Chicago commission men.

In other words the names will be furnished to Idaho farmers by the Chicago office of the grain corporation instead of being furnished by the grain corporation office in their own zone at Portland.

**Mr. Houser's Letter.**

To the Editor: I notice in your issue of The Oregon Farmer, September 26, an article written by "R. W. F." I wish to take exception to the erroneous headlines that you have used in regard to this letter, as I can see nothing in the body of the article to warrant this statement, for I have had nothing to do with the naming of any Chicago firms.

In our letter of September 4th to the state council of defense we pointed out to them that the growers could have their own representative at Chicago or that they could make the shipment direct and through the assistance of their banks, who, in turn could rediscount through the federal reserve, avoid the necessity of dealing with any Chicago firms unless they desired to do so.

The only reference I made in my letter at all in regard to Chicago commission firms was to point out the proper railroad billing instructions if any of the shippers desired to handle it through that source so that there would be no question arise in regard to who should pay the war tax, to have it clearly show that it was the intent of the shipper that the wheat was destined and intended for the grain corporation.

Sometime later, on September 16th, when we received a request from the chairman of the council of defense to give the names of some of the commission people, we refrained from doing so and referred him to Chicago and I wish to have it thoroughly understood and known that I am not legging or boosting for any Chicago commission firms.

Now in regard to the necessity of keeping me supplied with the car orders. Please note that up to this time in 1916 south Idaho had shipped 295 cars; up to this time in 1917 a total of 301 cars; the total cars shipped this year to date is 2867. This result in comparison with former years speaks for itself, particularly in this time of stress when the entire country is clamoring for cars.

We have been continually handicapped by lack of information of the actual car orders filed in order to make the proper representation to the railroads and for this reason we have asked that we be sent a copy of the orders filed in order that we may substantiate our claims and I can freely say that if these had been coming forthwith as they should have been, we could even have made a better showing.

As you have no doubt noticed from the daily press reports, all the eastern grain terminals have been practically embargoed on account of the unprecedented wheat movement, but nevertheless, we have been able to get this embargo lifted for the south Idaho shippers.

FOOD ADMINISTRATION GRAIN CORPORTATION. By M. H. Houser, Second Vice President.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## The Mill Feed Situation

The cheap mill feed during the last year, though limited in amount, has helped to prevent the slaughter of laying hens. Now the mills are not making flour and there is no mill feed to be had. The government did not buy flour in September, and the mills are overstocked. To keep the mills running there must be an outside market for flour. If limited to a home market for flour the mills, we are informed, would not make enough mill feed for the poultry alone of the Pacific coast, to say nothing of the needs of the dairymen and hog men. The price of wheat being the same on the Coast as at Chicago, the millers here can not ship flour east and pay the freight. The remedy is for the government to buy the flour or provide boats to ship it by water.

Unless something is done and quickly the poultrymen and dairymen will suffer and later on the public will suffer from a shortage of both milk and eggs. The feed is here, but the children have to suffer because the mills are not milling.

It should be possible for the food administration and the millers to get together and relieve this situation.

Trouble makers are born and the habit grows rapidly. It takes a capital operation to cut it out of the system.

## The Ability to Give

The sum total of any man's success and happiness is measured and determined by his ability to give. When we look into the lives of great men, living or dead, we find that they have been persons who gave largely and freely along some definite line; not spendthrifts, but givers, for the spender gives only to himself. The real giver adds to the comfort and well being of others.

To every individual in existence is given the privilege and opportunity to develop this ability, not only along one or two lines, but along every line. As a matter of fact, there are very, very few who take advantage of this wonderful privilege. If this were not so the world today would be full of genuises, super men and women, who have learned to give the very best and highest of their every effort and possession; for this, after all, is the natural and easy way to live.

Every hour of every day is a period opening up chance after chance to develop this one and only infallible rule of success and happiness. The pot washer in the basement, the chimney sweep, even the sodden drug fiend, are free to lay hold upon this truth and set their feet upon the upward way, working out each his own complete salvation from all discomfort and unhappiness.

Sometimes the beginning is slow, but there is no man so weak and poor that something better can not be given out in thought, word or deed every waking minute. Even the hopeless invalid upon his pillow can enter upon this way of progress. He may have nothing more to give than good will, but let this become a persistent daily and hourly practice—a period of real kindly good will given to every person, thing and incident, past and present, and there will come a time sooner or later when opportunities open up for larger giving. This in turn will react upon the patient's mind and body until he finds himself definitely improving, both mentally and physically. There are countless cases on record of miraculous healing which may come under this one principle of receiving as we give. I. C. Y.

Other campaigns may come and they may go, but every day is campaign day for the Red Cross. It fits into every other campaign.

## What Will the Farmer Boys in France Think?

A great host of farmer boys are fighting with Pershing in France. Fighting for us who are in safety and comfort at home. Putting their dear young lives to the dread ordeal of battle.

Always they are wondering about the folks at home, wondering whether we appreciate their sacrifice, whether the nation is going to back them up, whether the Liberty loan will go over the top, whether the people will make real sacrifices, too, and keep sending across the ocean that continuing stream of men, munitions and supplies which must flow in unbroken current if we are to win the war.

Buying Liberty bonds is not a sacrifice unless the individual buyer makes it a sacrifice. To buy bonds up to one's easy means is no sacrifice at all. It is only a wise investment wherein the government gives more than it receives. All through the long period of peace after the civil war there were shrewd investors who bought government bonds bearing three per cent, and even two. If they had said they were doing it on patriotic grounds they would have been laughed at for their pains.

But to buy Liberty bonds now, if one buy them in sizes that mean real self-denial and temporary loss, has come to be regarded as a patriotic service, and the man or the woman who refuses to buy bonds when able to buy has come to be regarded as distinctly unpatriotic.

That is the estimate which the boys are going to place upon those who can not exhibit a set of Liberty bonds when the armies come home. They are going to inquire into these matters, and a lot of close-fisted men in all ranks of life are going to do a lot of squirming then.

Just money! That is all we're asked to give.
He gave his life, Jim. He'd have liked to live
For Betty—bless her shy young heart—had only
The week before he left put on his ring.
How long her life will be to her, how lonely
With nothing of him but remembering!
She never flinched, nor he, my son, they gave;
She working still, and Jimmie in his grave.

And now today we're asked again to save,
And give, give, give the country what we've sweat
And toiled to earn. It's hard for all—and yet,
We safe, we calm, we fortunate, we living,
I wonder, dare, dare we call this giving?
—Mary Carolyn Davies.

Unless you can broaden your shoulders when needs be, you are no burden bearer.

## Deserved Promotion

King county is soon to lose the services of County Agent Floyd W. Rader, who has been with that county since the organization of his department. Mr. Rader, who has been instrumental in forming 11 drainage districts aggregating 18,125 acres, three of which have already completed their work, will become assistant director of extension work at the Washington State college. His successor has not yet been appointed.

The real tragedies of life are hidden. Those on display are not the hardest to bear.

## Freak Wheats

Professor G. R. Hyslop of the Oregon Agricultural college sounds a timely warning against the purchase of highly advertised grain specialties. Burbank superwheat, for instance, introduced in 1917 as a revolutionary strain destined to increase wheat production immensely, proved, in the experiment station wheat nurseries, to be identical with Jones' Winter Fife. Another freak wheat, acclaimed by one promoter as rust and smut proof, proved to have more than 50 per cent smutted heads. The advice of the nearest experiment station is the best guide to grain selection the grower can wish for, and this advice is always cheerfully and freely given.

Hearts and homes are drawn into closer companionship in war days.

## Loyalty Is Foremost Requisite in Winning the War

Loyalty is the foremost requisite in winning the war. Men and money and food will not give the world the victory outlined by President Wilson unless these most important war agencies are backed by unswerving loyalty to one's own country. This makes it doubly important that the farmers should scan closely the words and acts of all those who are seeking election to office in the state or nation. The very loyalty of farmers demands of them that they shall see to it that no person whose loyalty can be legitimately questioned shall receive their own patriotic votes.

Here is a letter from Arthur LeSueur, secretary of the nonpartizan league, to William D. Haywood:

Fellow Worker: Have just returned from Des Moines, Iowa, and am very glad to be able to report the case there disposed of favorably and the boys at liberty. I think the defense committee is satisfied with the handling of the case. Of course, it was not one in which any labor principle was involved, and, therefore, the fight was simply made to get the boys out.

My expenses for the trip were $34.30, and if you will send me check for that it will clean the matter up.

How are you coming with the Minnesota proposition? I hope you don't start anything until the year has expired. This damned war business is going to make it mighty hard to do good organization work or good radical work of any kind, but I think the fight should be now centered against spy bills and conscription. Have you heard from Pennsylvania with powers of attorney? Yours for industrial freedom, ARTHUR LESUEUR.

This letter, written three days after President Wilson made his historic speech to congress asking for a declaration of a state of war with Germany, was one of the government's exhibits in the recent I. W. W. trials in Chicago. It was written, as already stated, to William D. Haywood, the I. W. W. chieftain, convicted in Chicago of violation of the espionage act and sentenced to 20 years at Fort Leavenworth, Kan.

A man of this type, one who writes a letter like this, is unworthy of the support of any loyal citizen of the United States. It makes no difference whether he is the secretary of the nonpartizan league, the secretary of the National Manufacturers' association, secretary of the national grange, secretary of the National Bankers' association or secretary of the national farmers' union.

Loyalty first, loyalty last and loyalty all the time is now to be demanded of every candidate for office in the states of Washington and Oregon and none will be more strenuous in demanding this loyalty than the farmers of the state of Idaho.

## Do Not Make Exception the Rule

It is never safe to make the exception the rule, even in times of war. It is better to work out a wartime rule as soon as possible. There are many exceptional cases where men patriotically forsake their own business and devote their time to war activities. This evinces a high degree of patriotism. As a rule it is up to the business man to attend to his business in war times just the same as in times of peace. His business needs the business man in times of war more than in times of peace. Nothing would demoralize the country more than the abandonment of business affairs by private individuals.

The same is true of the home and the school and the church. No matter what difficulties have to be met these great agencies of civilization must be kept up.

If it were possible the ideal duties of the person at home during war days would be to divide his day into three parts, one-third for his usual and necessary occupation, one-third for wartime activities, and one-third for refreshment and sleep. Every one is called upon to do double duty. Every one is called upon to find his pleasure and recreation in patriotic stunts. These are no times for waste of words or waste of minutes. Make everything count. Save effort that you may put forth double effort.

# Smashing Into German Defenses

## *Bulgaria Surrenders and Is Now Definitely Out of War*

Bulgaria is definitely out of the war and Turkey, virtually cut off from communication with her allies and her armies in Palestine almost annihilated, is likely soon to be forced to sue for a cessation of hostilities against her.

Seeing eventual defeat staring her in the face through the swift progress of the Serbian, Italian, British, Greek and French troops in the reclaiming of Serbia and the invasion of Bulgarian territory, the Bulgars begged for an armistice, reserving to themselves no conditions. All the territory now held by King Ferdinand's army is to be immediately demobilized and all means of transport inside the kingdom, even along the Danube, is to be given over into allied hands.

Thus, in addition to the isolation of Turkey, the back door to a direct invasion of Austria-Hungary is flung wide open to the allies.

**TEUTONIC ARMIES EVERYWHERE CRUMBLING.**

The entente allied forces from Belgium to Verdun on six battle fronts are registering victory after victory over the Teutonic armies, and the enemy front almost everywhere is crumbling, notwithstanding the desperate resistance that is being offered on various sectors.

In the region of St. Quentin, where the Americans are fighting with the British, the old Hindenburg line has been cut and penetrated to a depth of three miles over a front of eight miles.

In conjunction with the operations of the French northeast of Soissons the Germans have begun the evacuation of the Chemin des Dames and the French now hold half of this famous defensive position. Likewise there is an indication that the enemy intends to give up the remaining positions held by him along the Vesle to Rheims.

**FOCH'S BATTLE REACHES CLIMAX.**

There can be no mistaking the fact that Foch's battle has reached its climax, says Frank H. Simonds, the noted war writer. Within a brief period, perhaps of hours, certainly days, a German retirement out of northern France is assured. German resistance, tremendous and sustained in certain sectors, is breaking down completely at others.

Perhaps the most amazing single incident of recent days has been the Belgian success about the old Ypres salient. In a single day, with insignificant losses, the Belgians have retaken all the ground which the British spent five months and 500,000 casualties in taking one year ago. This can only mean one thing: that the German army, as a whole, is breaking down.

**GERMANS REALIZE DEFEAT NEAR.**

The German press is hysterically emphasizing that the need for cool heads never was greater than now. The possibility never before entertained or visualized is beginning to dawn on the people that Germany may lose the war, and the suddenness of this realization has had a bewildering effect.

**AMERICANS FORGE AHEAD.**

On the western flank of the Champagne-Verdun offensive the French are pushing over the heights behind the Hindenburg line. From the Argonne east of the Meuse the Americans are forcing their way into the Kreinhild positions. Some ground has been gained near the Argonne forest, but the American progress Saturday apparently was slowed down some from the first two days.

**ALLIES GAIN IN MACEDONIA.**

In Macedonia the allies are pressing the defeated Germans and Bulgarians into Bulgaria on the east, into Albania on the west and toward Uskub on the north. The Serbians, who are at the apex of the salient, are moving toward Uskub, having taken Veles and its garrison. They are also approaching the Bulgarian border from east of the Vardar. In the Doiran region the allies are working their way over the mountains toward the important line of the Struma river.

**BULGARIA READY FOR PEACE.**

During the week the allies broke the link between the western and eastern Bulgar armies, cut the Uskub-Saloniki road, captured towns of vital strategic importance to the Bulgars, got north of Lake Doiran and up the Vardar into Bulgaria itself, and won such positions at Veles, Istib and the neighborhood of Uskub that they stand behind the Bulgarian army of the west and can march eastward upon Sofia the capital of Bulgaria, immediately followed by Bulgaria's begging for an armistice in order to discuss peace terms. Experienced officials at Washington temper the high hopes of the collapse of Bulgaria as an active military force by declaring that this appeal for peace, after all, can be considered as only the first step toward the end of Bulgaria's activities.

**AMERICAN FORCES IN RUSSIA.**

American troops which are taking part in the operations in virtually all sectors on the northern Russian front have captured several villages in recent fighting. The net result of the fighting, in which the Americans cooperated with the British and Russians in taking many more places in the last 10 days on the Dvina, is an advance of more than 50 miles. British and Russian airplanes are continually observing and bombing the bolsheviki. These operations, which are still in progress, besides scoring a 50-mile advance, have been accompanied by the sinking of at least four enemy ships, the capture of several guns, many machine guns and much war material. Prisoners have been picked up to the number of nearly 100. Enemy ships retiring hastily toward Kotlas sowed mines as they went back, and the allied progress has been impeded by the necessity of mine sweeping. Allied casualties have been very small.

**NEW GOVERNMENT TO RULE RUSSIA.**

Out of the chaos which has existed in Russia since the overthrow of the Kerensky government by the bolsheviki there is emerging a central authority which officials and diplomats here hope will be able to reestablish order and renew the fight against the common enemy. Official information reached the Russian embassy at Washington that the pan-Russian conference at Oufa, European Russia, which has been recognized by all the provisional governments opposing the bolsheviki, including the Siberian government, has constituted a committee of five as the lawful authority for all Russia. This committee will be responsible to the constituent assembly of all Russia, which will convene next January 1, provided 250 members attend.

**FIX NO MINIMUM HOG PRICES.**

In answer to a telegram sent to the food administration at Washington by the Chicago office of the bureau of markets as to the fixing of hog prices the following message was sent from Mr. Hoover's office: "No minimum price on hogs has been fixed or contemplated, but the report of the live stock producers' committee which met with the food administration this week recommends that an average price of about $18.50 be maintained at Chicago during October. Attention is called to the fact that the proposed price is a general average and not a minimum."

**TWO TURKISH ARMIES DESTROYED.**

At this writing 45,000 Turks are reported to have been taken prisoners, which means putting two armies out of business and virtually completing the conquest of Palestine under the British general, Allenby. Saunders, the German general, was completely surprised. The Turkish western, or right, wing has been utterly crushed. Allenby's immediate objective now is Damascus, his later goal Aleppo, the point of departure for Mosul on the east and for Constantinople on the northwest. The political and military effect of this decisive defeat upon the Ottoman government must be great. It has long been desirous to quit Germany and come to terms with England and France.

**THE FOURTH LIBERTY LOAN.**

Messages from all sections of the United States reached the treasury department Saturday almost simultaneously with the opening of the campaign for the fourth Liberty loan telling of villages, towns and cities which had within a few hours subscribed their quotas of the $6,000,000,000 total. Parades and other patriotic demonstrations marked the opening of the campaign throughout the nation, while news from the war fronts in Europe, particularly from the sector where American troops were driving forward, added to the impetus of the first day's campaign.

**PRICE OF PEACE IS JUSTICE TO ALL.**

Before an audience of fourth Liberty bond workers in New York city Friday night President Wilson declared that the price of peace will be impartial justice to all nations, and the instrumentality indispensible to secure it is a league of nations formed, not before or after, but at the peace conference; and Germany, as a member, "will have to redeem her character, not by what happens at the peace table, but by what follows." Although the president did not refer specifically to the utterances of enemy leaders, this is regarded as an answer to the recent peace talk from the central powers. The president added: "Germany is constantly intimating the 'terms' she will accept; and always finds that the world does not want terms. It wishes the final triumph of justice and fair dealing."

**THE EIGHT-BILLION TAX MEASURE.**

To collect within a few months $8,000,000,000 is the task confronting the bureau of internal revenue, says a bulletin from that board. This is the amount the new revenue bill now being framed is expected to yield. It is difficult to realize the immensity of this sum, and yet $8,000,000,000 is less than one-sixth of the annual income of the United States. If divided according to population it would mean a per capita tax of $76.76, or more than $336 per family. The total value of all crops on American farms in 1910, the last census year, was $5,000,000,000. The total value of all live stock on farms January 1, 1910, was slightly less than $3,000,000,000. In one year, therefore, the taxpayers are called upon to pay more than the aggregate value of all farm crops in the United States in 1910, plus the value of all farm animals.

**SPANISH INFLUENZA IN ARMY CAMPS.**

Epidemics of Spanish influenza in army camps provoked Marshal General Crowder to cancel calls for the entrainment between October 7 and 11 of 142,000 draft registrants. Thousands of new cases of influenza in the army camps have been reported, especially in the eastern and central parts of the country. Influenza is also on the increase among the civilian population, particularly in New England. The federal government has taken steps to cooperate with the state and municipal authorities in combating the disease where the epidemic has gained great headway. Vaccination with a recently discovered serum which from tests just completed at several army camps has been found to be an almost positive preventive against contraction of pneumonia will be used to combat the epidemic of Spanish influenza. The use of the vaccine will be widely extended, congress having appropriated $1,000,000 to be used by the public health service in fighting Spanish influenza and other communicable diseases. This influenza is simply a recurrence of the malady which swept Europe in the late '80s and reached the Atlantic seaboard along in 1890, sweeping through the entire country in 1892 and '93.

**WOMAN SUFFRAGE FACES DEFEAT.**

With certain defeat or withdrawal admitted to be the only present alternatives, the house resolution proposing submission to the states of the Susan B. Anthony equal suffrage amendment furnished another sharp but brief fight in the senate last Saturday and then went over. There are plenty of political prognosticators who assert that from now on the suffrage sentiment will go down. Although the vote has not been taken the result already is known. This will make the third time the suffrage amendment resolution has failed to secure the necessary two-thirds majority in the senate. The first time was in 1887, when only 16 votes for it could be mustered against 34 negative votes. The second time was in 1914, there being 35 yeas and 34 nays. How soon it will come up again no one ventures to predict save the aggressive suffragists, who say they will continue to fight more earnestly than ever.

**THE I. W. W. OF BUTTE AGREE TO WORK.**

The I. W. W. of Butte have agreed to resume work in the mines. The strike which was called September 12 was ended at a closed meeting Saturday, at which time the requests made by Federal Mediator Tom Barker were discussed. In the future the men will be employed through the federal employment bureau and their grievances will be adjusted by the national war labor board.

## *Washington Gleanings*

The Grays Harbor district is holding its lead in the production of airplane spruce.

The Bossburg ferry is again running, after being out of commission for three months.

School at the Yakima Indian agency at Fort Simcoe opened October 1. Three teachers have been hired.

The season's yield of cabbage seed from the farm of Louis Maupin, near Mount Vernon, amounted to between 1600 and 1800 pounds.

The directors of the Burley Fair association have announced that their second annual fair will be held Saturday and Sunday, October 12 and, 13.

When the Yakima Fruit Growers' union met last week its officers reported that its membership is now 250 and that there were 70 additional names to be voted upon.

Harvesting is finished around Sprague, and farmers are hauling their wheat and piling their straw. On account of lack of moisture, little winter wheat has been seeded.

The state highway commission has approved the graveling of nine miles of county road in Adams county from Hatton east and the building of five blocks of sidewalk in Omak.

The office of agricultural agent for Thurston county will be discontinued the first of December as a result of a change made in the county budget at a recent meeting of the county commissioners.

Miss Jeanne Mercier, sent here by the French government to enter Whitman college, expects to be joined by a sister in about a year. Miss Mercier is the daughter of a French territorial soldier.

N. E. Hinch, for 16 years an instructor in the English department of the state normal school at Cheney, has left for the University of Chicago, where he will take up special training in English.

The sale of the R. M. Saver sawmill at Lacamas was reported last week, Theodore B. Brown, Horatio Brown and Bert McPhee, all of Portland, being the purchasers. The plant has a daily capacity of 25,000 feet.

The Skagit County Rabbit Breeders' association was formed last week at Mount Vernon. The officers elected are Lloyd Hildebrand, president; T. A. Hanvey, secretary and treasurer; R. E. Beaty, vice president.

The Chehalis Mill company of this city has purchased from the O'Connell Lumber company two sections of timber land south of the village of Lacamas, at the terminus of the Cowlitz, Chehalis & Cascade railway line.

Under the budget of the Hood River Apple Growers' association, just adopted by the directors, a maximum charge of 6 cents per box for apples and 10 cents for pears may be made for handling the fruit the coming year.

Jeanette Olney, the 4-year-old Indian girl whose pet lamb was sold at the state fair at Yakima for the benefit of the Red Cross, netting $1000, has spent some of her allotment money in providing for the care of a French orphan.

Maurice Lodeon of Keller and J. C. McDevett, a homesteader, were hunting on Alice creek, about four miles up the river from Keller, last week, and they killed two large black bears. One tipped the scales at 450 pounds and the other at 350 pounds.

The heavy rain which fell near Uniontown recently left the ground in splendid condition for seeding, and as a result a large acreage is being sown. Most of the summer fallow is in fine shape, and the farmers are putting in the seed as fast as they can.

Ira D. Cardiff has started his season's evaporating run at his big plant near Yakima. During the season the plant will operate 10 hours daily. It has a capacity of between 40 and 50 tons of green fruit, which means an evaporated output of from five to six tons.

Grays Harbor county is in the enviable position of having enough funds in its coffers so there will be no levy this year for current expenses. This is the first time in the history of the county that there has been sufficient cash on hand to omit the tax levy.

The Cashmere union reports that it will erect a new unit 170 feet long and 72 feet wide, which, when completed, means a warehousing institution with a length of 570 feet. This warehouse will be the largest and most complete of its kind in that section of the state.

The threshing of grain in the Keller region is completed. There was but little wheat harvested from the grain, scarcely enough to get back the amount of seed sown last spring. Corn yielded well, and homesteaders are disposed to plant it extensively this year.

The Lewis county teachers' institute this year will be held October 21, 22 and 23, in Centralia. The second day will be allied patriotic day, when teachers will be addressed on how they can do the most effective work in all kinds of patriotic work among the school children.

The apple growers' association at Hood River has completed the pack of Bartlett pears, all of which have been shipped to eastern markets. The yield was only 24 cars, but 50 per cent of the estimates of growers. Other varieties are being packed and shipped, and the association will soon begin on the apple crop.

A conspicuous example of what a proper community spirit can accomplish is shown in the northwest of Pasco, in what is known as the Riverview district, where the farmers have organized the Riverview club. The community is divided into two sections, each section furnishing its quota of programs, and at the end of the season the section which has furnished the best number of programs will be banqueted at the expense of the other section.

# THE HEART OF A BOY---By Joe L. Ashlock

This teacher, my first, was a sad-faced, thin-featured, joyless fellow. On several occasions he reprimanded the pupils with some severity, and this struck me dumb with terror. I can not remember that he smiled as much as once.

Each day I dreaded school; dreaded the hour when I should start, and longed for the evening hour when I could go home. In the schoolroom the hours passed as slowly as the prehistoric ages.

In fact, there was a good deal of the prehistoric in the school administration of this young teacher. He carried with him an air of grave superiority and aloofness. As I look back I can see, plainly enough, that by his perpetual coldness and melancholy this young teacher was mainly responsible for the sepulchral air that filled his schoolroom.

Once he corrected me. Indians at that time went in bands through the Walla Walla valley, and passed the old Union schoolhouse on Dry creek, of which I am speaking. One morning at recess we beheld a band of them coming down the road toward us. With outcries the younger of the school children fled to the schoolhouse. But as for me, I made for home, our house being across the road from the schoolhouse.

The larger boys shouted derisively at me, and one called me a coward. But I halted not till I had sped in at our own doorway and sought refuge under the bed. Mother made use of the broomstick in driving me from my retreat, and assuring me repeatedly that there was no danger, sent me back to the school.

Recess was over when I returned. Sick with fear I made my cringing way down the aisle to my seat. Icy hands seemed to clutch my soul by the throat when the funereal faced teacher ordered me forward. Trembling like a leaf I went.

He did not explain to me in a friendly way that the Indians meant no harm. Instead, devoid of feeling as an Egyptian mummy, he wanted to know why I had run away. It was hard for me to tell why I had done this dreadful thing, being only 6 years old, but I managed to let him know that I had been scared by the Indians.

Acting the part of a mummy revived to an imitation of life he told me, if my memory is right, that never again must I get scared and run home. He said some other things, but must have used words too long for my 6-year-old understanding. Then he ordered me to my seat, and told me I could stay there during the noon hour, giving me barely time enough to get home for dinner and return.

I had three teachers at the Union school which I attended in parts of three different terms while we lived in the Walla Walla valley. The first was the gloom-bird referred to. The second was Miss Martin.

Miss Martin was utterly the antipodes of the gloom-crow. She filled the room with flowers—brought them to school herself, and led us children on flower-picking excursions in the woods near the schoolgrounds. Under her skilful administration the schoolroom was changed from a sepulchre to a place of love and brightness and good cheer. We had several months of her love and teaching, and then it ceased. She sickened, underwent an operation and failed to recover.

Her successor boxed my cheeks, and by that act has made herself well remembered by me. Possibly I deserved the punishment. One of the boys ahead of me in the row of seats had drawn a picture on his slate, and, although he spat vigorously on his slate and rubbed with his bare hand, he was not quick enough to obliterate all of the picture. What it was I never learned. I was craning my neck to see, and giggling with the other children; and, having soundly punished the artist, she came down the line and gave us each a small dose of the same thing.

She had to reach twice for me, because I dodged. For ducking her first blow, she gave me double measure.

Maybe she was right, but I did not think so. Silently I wept, and said to myself, over and over again, that Miss Martin would not have done it. I suppose I was 8 then, and my soul was a bit stiffer than when I had fled from the Indians. Following my grief, a new feeling possessed me—the first thing of the kind I can recall. It was deep, silent, brooding anger. This feeling stayed with me for months and years. That teacher may have occupied partly at least the place in my esteem that had been won by Miss Martin. But when she boxed my cheeks, she shut the gate on herself.

In the old Union school of those days, which was well populated, there were, of course, the usual school bullies who kept us smaller tots in a reign of terror. One of these bad boys took a special grudge at me. He would steal up behind me with a long pole and strike my legs from behind, at the knee joints. The effect of the blow, aside from the pain of it, was to double up my legs and make me sit on the ground.

Eventually, I ceased crying when assailed thus, and gave chase to my persecutor as soon as my legs had recovered from the numbness given by a blow of this kind. But the other boy was too quick for me. From a safe distance he would make faces at me, and call me vile names.

I began to plot. With an air of extreme nonchalance I would venture near him, giving him tempting opportunities to strike the back of my legs. Once down by the creek when I was thus secretly on guard he was trapped. Quicker than he, I dropped on my knees before the blow was delivered and received the full force of it on my thigh where it did no harm. A round stone the size of a small egg was in my hand. On my feet again before he could draw back for another blow, I let fly with the stone, all of my eight years of muscle in the throw.

My aim was wickedly good. The stone struck him on the side of his head and he dropped down, partially stunned. I suppose I would have been scared at seeing him fall, had he not hounded me to the point of desperation. As it was, I seized the pole he had dropped and started in to finish him. He managed to flee beyond reach of my wrath, though he was a bit wobbly on his pins.

The blow, as a matter of fact, was a bad one, and it was several days before my tormentor returned to school, pale, chastened, with a black bruise on his head. His mother called on my mother and made quite a fuss about it. I got a good scolding, though I think mother was half way pleased because I had planned and executed a successful defensive where one certainly was needed.

From certain memories I have carried since those early, schoolboy days, I can see that a child's hunger for play and playmates is second only to its hunger for food, and often takes precedence over food hunger. It is a seriously wrong thing for a parent to ill-naturedly and without reason, interrupt the play of a growing child, or starve it for play. The child who is treated thus is to be pitied; and the hermit-child growing up in a home without brothers or sisters or other children of its own age to play with, is likewise to be pitied.

In the Walla Walla valley during the brief time we lived there in a thickly settled country where there were large families of children living closely together and the rural schools were well attended I had playmates, some of which abused me, and some of which I abused, maybe, though as I recall, it was generally I who suffered. Most of the time we were on big wheat ranches, where I had only grownups to associate with. Compelled to be something of a hermit at home and to devise my own play, in school with other children I remained something of a hermit, and was generally on the outer edge of the group.

Down in the creek brush and trees near the schoolhouse I played "livery stable," and in a cool, shady place had my stick horses of red willow tied in straight rows waiting for customers to come and hire them. Alone, I got along fine, but when the other children trooped in upon my retreat and tied up their willow horses, my livery stable was all broken up. I moved out to another location, from which I presently was routed by my playmates.

There were many wild cherry trees along the creek bottom. I hunted alone in the brush till I found a good one with many richly red "choke cherries" at the top. When I wanted choke cherries I stole off alone to my tree; presently my playmates discovered the tree, climbed it for the cherries, whereupon I moved farther up the creek to another tree.

It interests me to watch my own young son grow up among plenty of playmates, now, the general conditions of his environment being the antipodes of mine. On our street which is in the edge of Pullman, with the farmed hills of the Palouse on one side and the state college campus on the other, there are 16 children ranging in age from 10 to 3 years of age. This is in the distance of one block and a half. There is scarcely any traffic through the street, so on cool, summer evenings the children use the place as a playground. It slopes downhill, and the youngsters get out in every conceivable kind of a coaster wagon. Down the hill they go, the older ones guiding, the smaller in the rear, and the ones left behind howling their wrath at times. It is a hubbub and shout all the time, and now and then they come together in a group to arbitrate or fight out their difficulties, when maybe the parents have to exercise some supervisory discretion.

Every day this 8-year-old boy is learning to adjust himself to the whims of others, and to plan his way through the tangle of his playmates' whims and caprices and interferences—or to battle it through. A blind man ought to see that he is now getting something that will last him through life, and be for his general good.

Now, in my case, between the ages of

(Continued on page twenty.)

# Measuring Hay in Ricks or Stacks

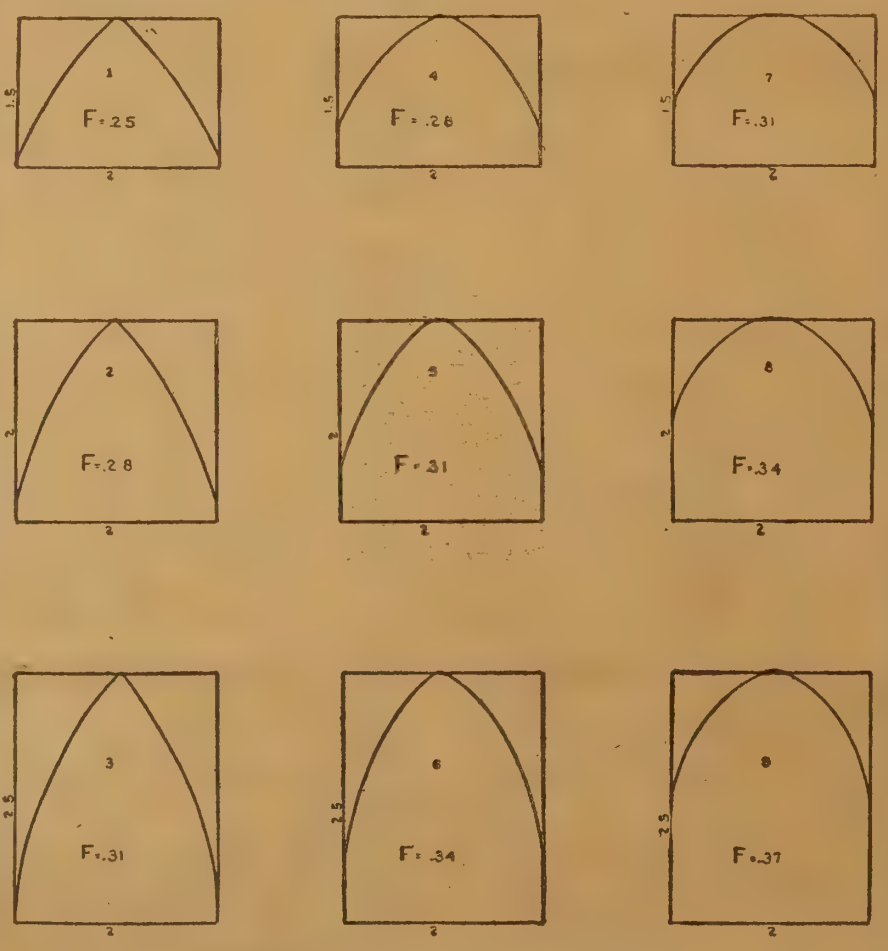
One of the continuing problems with the farmer is that of measuring hay in ricks or stacks. As Circular No. 67 of the office of farm management of the United States department of agriculture says, the problem of obtaining an accurate formula for determining the number of cubic feet in a hay rick is difficult because of the variation in the shape of ricks. Even if the number of cubic feet in the rick is known, the problem of converting this into tons is difficult, because of the wide variation in the compactness of hay in bulk. In fact, all the investigations made show that any general rule for determining the weight of hay in a rick by measurement must be only an approximation. However, as thousands of tons of hay are sold annually on such measurements, it is desirable to establish at least average values for the quantities concerned in those measurements.

The volume of a rick is equal to its length multiplied by the area of its cross section. The length is easily measured; the cross section not so easy. If the top of the rick were perfectly flat and the two sides straight up and down, the area of the cross section would simply be the width multiplied by the height. If the rick were triangular in cross sections, so that the sides represented straight lines from the top of the rick to the bottom on each side, the area of the cross section would be one-half of the product of the base and the height. The actual area of the cross section lies somewhere between these two.

It is difficult to measure accurately the height of a rick. It is much easier to measure the "over," which is the distance from the ground on one side of the rick over the top of the rick to the ground on the other side. The length of the over depends upon three things—(1) width, (2) height, (3) "fullness" of the rick. The over is always somewhat more than twice the height.

The accompanying illustration shows the cross sections of hay ricks of nine different shapes, the corresponding value of the fraction F for each of these shapes being inserted in the outline of each cross section. The height of ricks Nos. 1, 4 and 7 (upper row) is three-fourths the width. The height of ricks Nos. 2, 5 and 8 (middle row), is equal to the width, while the height of ricks Nos. 3, 6 and 9 (lower row), is one and one-forth times the width. Ricks Nos. 1, 2 and 3 (left column) are narrow, or nearly triangular, in outline; ricks Nos. 4, 5 and 6 (middle column) are medium full, while ricks Nos. 7, 8 and 9 (right column) are full and rounded. It will be noticed that the value of F is the same (0.31) in Nos. 3, 5 and 7; in Nos. 2 and 4 it is 0.28, and in Nos. 6 and 8, 0.34.

In attempting to find the volume of hay ricks the choice between these various values of F may be found by comparing the shape of the end of the rick—that is, the cross section of the rick—with ricks Nos. 1 to 9 in figure 1. If the shape of the rick to be measured is intermediate between those shown in figure 1, intermediate values of F may be used. The use of the above formula may be made clear by a few examples in the accompanying illustration.



In general, hay ricks are more often measured short than long. The reason for this is because allowance is made on account of the sides of the stack being not well settled or pressed in. It sometimes happens that the corners are not square, which also tends to lead one to measure the rick short.

Two other rules are quite commonly used in measuring hay in the stack. The first is known as the "quartermaster's rule" and is often wrongly called the "government" rule. This rule is as follows:

Add the over and width and divide by 4; multiply the result by itself and then by the length; the result will be the volume in cubic feet. The second, commonly called the "Frye" rule, used a great deal in the middle west and west, is as follows: Subtract the width from the over and divide by 2; multiply by the width and then by the length; the result will be the volume in cubic feet.

**Example 1—A hay rick is 16 feet wide, 24 feet long, and the over is 31.2 feet. The end view indicates that the shape of the rick is very close to No. 4 in the illustration. What is the volume of the rick?**

**Solution—V equals 0.28 multiplied by 31.2 by 16 by 24, equals 3354.6 cubic feet.**

**Cross sections of hay ricks of different shapes.**

**Example 2—A hayrick is 14 feet wide, 20 feet long, and the over is 34.2 feet. Inspection of the end of the rick shows that it is of the type of No. 8 in figure 1. What is the volume of the rick?**

**Solution—V equals 0.34 multiplied by 34.2 by 14 by 20, equals 3255.8 cubic feet.**

## OREGON BOYS TO DRILL.

Every high school in Oregon having as many as 35 boys is called upon to organize a company for military instruction in a bulletin issued by State Superintendent Churchill. In commenting further upon what the high schools should do, Mr. Churchill says: "A competent military instructor should be secured by each high school, or there should be in the corps of regular instructors one man who has had sufficient military training or military experience to enable him to teach military science successfully.

## DAIRYMEN WOULD SELL.

Dairymen are preparing to retire from the business because of diminished revenues and increasing costs of feed and labor, according to information received by J. D. Mickle, Oregon dairy inspector, who says the situation is becoming serious in the extreme. Mr. Mickle received a report from Chairman Deckenbach of the Marion county Liberty loan committee that no less than six dairymen who were visited in one day were offering their herds for sale because of the shortage of certain varieties of feed and the poor returns.

# Potato Crop Will Be Short

## Average About 70 Per Cent Is Estimate—Prices of Dairy Products High, Cost of Feed Higher. Will Butcher Poorer Cows. Pasture Is Good

DARRINGTON, Snohomish County, Wash., Sept. 23.—The conditions in this section are good—plenty of work for everybody at very good pay. There are logging camps on every side. This will help the farmers out a good deal as practically all of the logged-off land will produce good pasture when seeded down to clover and grass. Some new settlers have bought small tracts of the best of the recently logged off lands. The oat crop did not turn out as good as was expected. Lots of oats was lost in the fields owing to getting overripe. Cloudy and rainy weather prevented it being harvested at the right time. The potato crop will be short, too, just how short is hard to say at present until digging time, but don't think it will be over 70 per cent, if that. Prices of dairy products are high and yet the dairy farmers feel as though they are not getting their share as the price for dairy products doesn't hardly correspond with the high cost of feeds. A number of the poorer cows will be butchered this fall in this section. Potatoes are selling at three cents per pound at present, eggs at 65 cents per dozen, butterfat 57 cents. Pasture is very good and stock is doing fine.

C. B. NEIDERPRUM.

### TOO DRY TO SOW WHEAT.

METHOW, Okanogan County, Wash., Sept. 23.—In regard to the special effort to raise fall wheat, some wheat was sown six weeks ago, but it does not look good and a good deal of it never came up. Owing to the dry fall not much wheat will be sown before the 1st of November unless it rains. One fact has stood out plainly here and that is that wheat sown in dry dust before this date invariably rots. Wheat sown even after the 1st of November in the dry dust never makes a big crop, owing to the soil running together and the young wheat growing on top of the soil so that it is impossible to harrow to break the crust without pulling out too much of the wheat. The growers are always willing to take risks. The largest per cent of farmers are going out to work in the orchards and the Sound shipyards. Were it not for the apple and cattle industry this section would be in bad shape.

CHARLES GRANT.

### CORN CROP LOOKS FINE.

GRANDVIEW, Yakima County, Wash., Sept. 23.—There is some fall wheat being sowed as nurse crop for alfalfa, but very little yet for a wheat crop and it is too dry on the nonirrigated land. Most of the valley is hay and corn. The corn crop looks fine. I think most farmers are willing to do what is best for the country. Farmers are paying off their debts and appear to be doing pretty well. The farmers generally say we are in this fight to win and are willing to do their best.

E. H. FAULKNER.

### LESS WHEAT THAN EXPECTED.

RITZVILLE, Adams County, Wash., Sept. 20.—After threshing is all done we have less wheat than we expected. It went from 15 to 20 bushels per acre and straw is correspondingly short. The interest in fairs is not marked as everybody is overtaxed with work, therefore fairs are neglected. Feed is very scarce and a lot of it is being shipped in. We have plenty of seed grain except winter wheat. Circumstances have hit us here somewhat, but no one is grumbling. Pastures are poorer this year than usually and water is another drawback. We have to provide watering places for stock to drink.

JACOB HARDER.

### APPLE PICKERS ASK MORE PAY.

While orchardists are sending in calls for help daily, there are about 100 apple pickers and packers who are refusing to accept employment at the standard wage offered, $3.50 a day, according to federal employment officials at Yakima, Wash.

In past years orchardists have paid pickers by the box, and experts could make as high as $6 a day. Growers claimed it was a losing proposition for them, as the pickers were not careful enough with the fruit, and adopted the $3.50 scale. Apple harvesting is now at its peak and calls for harvesters are insistent. Workers here claim the Yakima scale is lower than that of Wenatchee, and many of them are refusing to go to the fields, though they report for work at the federal office.

### ASKED TO COLLECT TIN.

Red Cross workers throughout the country are requested to devote part of their time to collecting platinum and tin for government uses. The campaign is being undertaken at the request of the war industries board. Despite the wide gulf that has hitherto separated lowly tin from aristocratic platinum, these two extremes in metals are now brought to a common level by the necessities of war. Each is regarded as of equal importance to many of the essential industries of the country, and as there is a shortage of both materials, the government has called upon the Red Cross to help make up the deficit.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**CORPORAL HARRY J. COLEMAN, White Bluffs, Wash.**—Enlisted in July, 1917, at Walla Walla, as a member of battery E, 146th field artillery. He now drives a tractor truck in the heavy field artillery, in France. His mother, Mrs. J. F. Colemaa, lives at White Bluffs, Wash.

**HOMER ALVA ARMSTRONG, Richland, Wash.**—Enlisted July, 1917, in the Rainbow division of the 117th United States engineers. He is at present serving his country "somewhere in France." He has the honor of being the first man from his home town, Richland, to be in France.

**FLOYD ANDREW SMITH, Harrington, Wash.**—Was called in the August draft of 1917, at the age of 28 years. He is a member of the 347th field artillery, battery F, which has been training at Camp Lewis, but is now on its way "somewhere." He has a brother, Walter, who is with an engineers' company.

# 8 times more ground grip

THAT'S the advantage of a *track* over *wheels*. The long, wide "Caterpillar" track has 8 times the contact surface on the ground that round wheels have. Think what that means in soft, ashy soil where wheels sink and spin—what it means in climbing hills with a gang of plows or harvester behind.

And think what "Caterpillar" *construction* means—track shoes that outwear horseshoes many times over—gears enclosed in cases that keep all the oil in and all the dust out—reinforced frame, radiators spring-mounted to do away with vibration strains—gravity distillate feed and force-feed oiling system.

Built by a company with 30 years reputation behind it, with 8000 owners all over the world ready to swear by it to the last bolt, the "Caterpillar" is no gamble for any man to buy. We want you to write us for our new Catalog BG 178. It gives upkeep data and tells how the "Caterpillar" cuts the high cost of plowing.

Reg. U.S. Pat. Off.

We can deliver a limited number of 75 horsepower "Caterpillar" Tractors from Spokane in October.

*Don't say Caterpillar unless you mean Holt!*

# The Better Way

THE FARMER who can get stable manure to spread on his fields this year and who fails or refuses to take care of it and spread it properly, is losing the chance of a lifetime to make his farm pay handsomely. No farmer can possibly raise too much of any of the staple crops in these times. Increased acreage is pretty nearly out of the question; labor and power are too hard to get. There is a better, easier, less expensive way to grow bigger crops. Save stable manure, add phosphate as your soil requires, and spread it in a thin, even coat with a widespreading

**Low Corn King, Cloverleaf, or 20th Century Manure Spreader.**

Begin right after harvest. With one of these machines, and no additional power or help, you can increase immediate yields, and put your soil in better condition for future crops. They are low, light draft, narrow box machines, each made in three handy sizes—small, medium and large. The entire load is spread in 3 to 5 minutes, in an even coat that extends well beyond the rear wheel tracks. See the machine at the local dealer's place of business—or write us.

# Milk Producers

## of West Side Uniting Rapidly

By PAUL E. TRIEM.

At the present rate of growth, it will not be long before the entire Pacific coast will be solidly organized, as far as the dairy interests are concerned. Whatcom county, Skagit county and Snohomish county, in western Washington, have long been thoroughly organized. Skagit was the pioneer in this movement. King county was a little slower in falling into line, but today is pulling shoulder to shoulder with the other west side counties. Pierce county recently organized and incorporated a producers' association, with O. R. McKinney as president, and J. M. Wilcox, L. M. Hatch, W. A. James and A. O. Johnson as other incorporators.

In Grays Harbor county an association of 150 members was organized in July, with the following board of directors: W. F. Darby, Montesano; W. J. Wharton, Satsop; Ransom Minkler, Elma; Lee Foster, Satsop; David Bey, Porter; E. E. Sweitzer, Oakville; J. Porter, Porter; O. M. Gerdon, Summit, and John Murphy, Montesano.

The Thurston County Dairy and Farm Products association represents producers of all farm products. There are about 500 members and the association has a concession for furnishing milk and vegetables to Camp Lewis. Some of the milk for this purpose is secured from Lewis county, however, the Thurston county association acting as a sort of clearing house.

At the present time the Lewis County Dairy association is one of the most active on the west side. It was organized in May, J. A. Scollard as president, Harvey Shoultes of Adna, vice president; Herman Young, Centralia, treasurer, and J. C. Bush, Chehalis, secretary. The nine directors are: George Olderson, Ethel; J. A. Scollard, Chehalis; V. M. Bullard, Menlo; Harvey Shoultes, Adna; A. N. Bennett, Chehalis; J. G. Bush, Chehalis; E. E. Wilkinson, Curtis; Herman Young, Centralia, and T. O. Hendricks, Forest. V. M. Bullard of Menlo is the board representative of Pacific county, which is at present affiliated with the Lewis county association.

Asher Hobson, head of the farm markets division of the state college, at Pullman, has given the dairymen valuable assistant in whipping their organizations into shape. Floyd Rader, who recently gave up his work as county agent for King county to take up important work at Pullman, worked with the dairymen in figuring up the actual cost of producing milk under western Washington conditions. The average cost per 100 pounds of milk, based on exact records kept on 89 farms, was $3.29.

As a final result of the work done by the county associations, the United Dairy association filed articles of incorporation at Olympia in August. The incorporators were: J. A. Scollard, Fred Nelson, John Kill, W. H. Guin and Ed Brown, representing the five west side counties, which have been most active in organizing. J. A. Scollard, president of the united association, recently went to Washington to represent local producers at a national gathering of dairymen.

This, in tabloid form, is the present situation in regard to organization in western Washington. It may confidently be predicted that the next six months will see the work of coordinating the various county associations advanced immensely. It is only a matter of time until the entire west side will be in shape to act as a unit in matters of buying feed and selling milk and its products.

# Good Dairy Cow

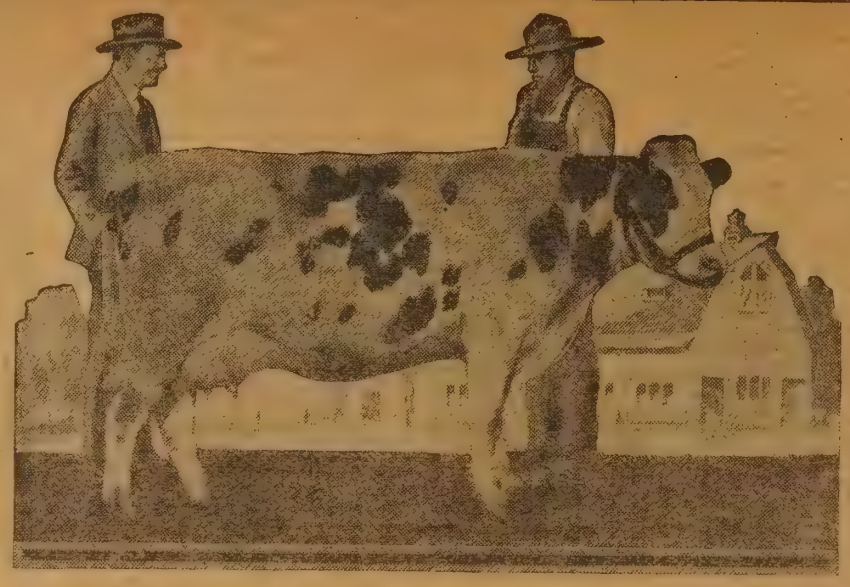
## Important Problem on the Farm

By E. D. ROSEMAN.

Successfully raising a good dairy calf is an important problem on the dairy farm, unless the herd is to be replenished by purchase of cows, and most dairymen find this profitable only under exceptional circumstances. Skim milk and egg has proven to be a very good calf feed in the herd of Octav Voget at Hubbard, Ore.

Mr. Voget, who is a breeder of purebred Guernseys, bought a registered cow from a herd in Washington. About the middle of July, after bringing the animal home, she gave birth to a heifer calf. In proportion to the mother's weight the calf was somewhat below the average size but appeared strong and vigorous.

At this time Mr. Voget was marketing the bulk of his product in the shape of whole milk and required a considerable portion of the output to supply his trade. Consequently the calf was taken off of whole milk as soon as possible—sooner, perhaps, than would have been advisable under other conditions. As a substitute Mr. Voget used skim milk and egg. Although this was supplemented by some other feeds, the surprising results are attributed to the milk and egg rather than the supplementary portion of the ration.



The calf received about six pounds of milk per feed and a raw egg was stirred into the milk before feeding, both night and morning. Digestion troubles never appeared and the calf grew and developed at a remarkable rate. By November 1 it might easily have been taken for a 6 or 6 1-2-months-old heifer. With hide soft and pliable, hair fine and silky, and body big and strong, it gives every indication of developing into a better cow than the dairyman can ordinarily buy for the enlargement of his herd.

The expense of this ration, Mr. Voget believes, is not prohibitive, in view of the results obtained. And this does not take into consideration the greater value that the animal may possess through having been raised by the owner of the herd in which it is to produce.

This dairyman's great advantage in raising his own cows lies in the fact that it can be done with a view to securing the maximum amount of production compatible with their inherent capabilities; and the greater advantage in his feed is that it does produce an unstinted, well-grown, well-developed cow, physically able to do the best that her breeding will permit.

### MORE SILOS IN LEWIS COUNTY.

Miles D. Coleman of Mossy Bank, Wash., put up a wooden hoop silo under the supervision of the county agent on September 30. This makes four silos of this type put up by the county agent in Lewis county this year.

**Buy Milking Machines As You'd Buy Stock**

When you buy a pure-bred cow you are interested as much in her pedigree as in her butter-fat record.

Scrub cows sometimes establish a highly productive record for a limited time. But when you buy a pure-bred cow, her pedigree is your guarantee of uniform, heavy production year in, year out. You know you are taking no chances.

Buy milking machines the same way.

Investigate their past records. Find out what machines are standing up best under years of service. Inquire into their effect on the herd—milk production, lessened udder and teat trouble, effect on lactation period, etc. Also find out what machines the big milk producers and breeders use.

When measured by these standards, you'll be surprised at the overwhelming Empire leadership. You'll find them milking the foremost herds in the country, and you'll find them on the small dairy farms of 10 cows or more.

They're everywhere. Why?

Because the Empire works in harmony with the cow. The Empire Super-Simple Pulsator—the pulsator without a piston—causes a uniform action on teat cups.

Pistons wear and leak vacuum, resulting in uneven teat cup action, nervous, irritated cow and reduced milk flow.

The Empire Pistonless Pulsator cannot leak vacuum. The action is always regular and positive.

Cows like it. It soothes them and they let down their milk in increased quantities. Lactation period is increased. Teat and udder troubles diminish and the health of the herd is improved.

Investigate the Empire. Look into its "pedigree"—past performance. Get our 1918 Catalog No. 48. Let us have our dealer give you a demonstration. No obligation, of course.

# VETERINARY

By DR. S. B. NELSON.

**Cow Suffers From Abscess**—I have a cow about 6 years old, giving milk. She seemed healthy and was in good shape. One night when she came up I noticed a small hard lump about the size of an egg under her mouth. This lump increased in size. It swelled down till it came to her windpipe, then it swelled up to her ears. Her head was about twice as big as normal. The first week she had chills. The second week she had fever. She lived two weeks. The next day after we noticed the lump she ate quite a bit. The next two days she ate a little bran. Then she refused to eat unless I put it in her mouth. She seemed to want food, but couldn't pick it up. Her mouth seemed sore, and a slimy substance came out of her nose and mouth continually. I thought it was a snake bite and treated it as such. In a week it got soft and seemed to contain pus, so I lanced it. Then for two days she seemed to be better and ate more, but the third day she refused to eat and had difficulty in getting her breath. From then she got worse. Her breath came in shorter gasps, her eyes became nearly closed and she ground her teeth quite a bit. She stood almost all the time, and when she did lie down she was on her breast bone. The day before she died she moaned at every breath. She got poor and so weak she could hardly stand up. Could you, from the data given, give the cause of her sickness and if I have any more trouble with other stock what treatment would be given?—J. W. D., Reardan, Wash.

It seems to me that the cow was suffering from an abscess, due to injury. Whether it is snake bite or something else no one can tell; but the tissues were injured and pus formed. The lesions were pretty bad, judging from the way she had swelled. When you opened the lump and gave it drainage it may be possible you did not give it sufficient drainage, and the air coming in gave the bacteria an opportunity, after two or three days, to develop in very great numbers and affected her lungs, I think, and especially the windpipe or trachea. I believe that in the future, along this line, the treatment would be to give the abscess a free lancing and then wash it out with a disinfectant—any of the common disinfectants. Keep it thoroughly cleansed and be most careful that the opening does not close up until such a time that the drainage can not get into the body. Naturally, whatever symptoms would appear might have to be treated, and that I could not give you advice about in general.

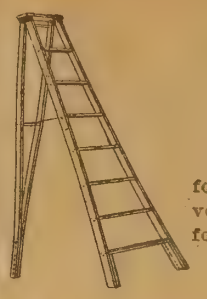
**Trouble With the Heifer**—Will you kindly favor me by answering the following questions? What should be done when heifer 17 months old has not come in heat for the last three months? Will melons dry cows or decrease milk? Also squash and mangles? C. B.

Boise, Idaho.

If the trouble with the heifer is not an anatomical one, then you might get results from giving her a pretty strong purge, for instance, a pound of epsom salts; possibly only three-quarters of a pound, depending upon her size, and from a quarter to a half pint of heavy molasses, the two being mixed together and given in two quarts of water. The placing of hot blankets and leaving them on for some time across the loins may also have a beneficial effect along the same line. If, however, it is a disease of the ovaries or the uterus or the mouth of the uterus, naturally this treatment will not do any good, and it would have to be physical treatment that must be given. Melons, squash and mangles will not dry up cows, provided that they are simply fed these in addition to the regular feed of hay and grain. They should be fed as appetizers or regulators of the bowels, and not because of the material food value that they contain.

**Hogs Have Cough**—My hogs have a cough. They are on green pasture, and look well and are good eaters. Can you give me a remedy for the cough?—G. L. S., Tremonton, Utah.

The cough is just the sympton of some trouble, and if they are eating well and thriving I do not believe that I would give the hogs any medicine. I would, however, see to it that they are well provided with shelter at night and that they are not allowed to bunch so as to get heated and then chilled. That is something a hog can not stand.



**Calf Needs Grain Feed**—I have a bull calf 2 months old that I bought when it was a day old. I fed it two quarts of new milk while warm from the cow morning and night, and at noon two quarts of morning's milk warmed, until it was 6 weeks old, then three quarts of warm skimmed milk after sitting from morning till night, and it has had all the alfalfa and clover it wanted and at any time it wanted it. Now for about two weeks I chop up two or three quarts of apples morning and night and give it about a quart of bran at noon. It looks poor and its hair is long and rough, but it eats a lot and its bowels are very loose most of the time, and I have never seen it chew its cud. Please let me know what to do for it and what ails it. It is Holstein and Durham. It's mother had to be milked up to the time of her freshening. —L. S., Clarkston, Wash.

I would first suggest that you quit feeding apples to the calf and add to your bran one-third ground oats and about a teaspoonful to tablespoonful of ground linseed. The calf needs grain feed.

**Muzzles for Sucking Cows**—On two different occasions I have read your advice on the prevention of a cow's sucking herself, and each time you described some kind of a harness. I have had some experience this year with two of my best cows sucking themselves, and I even caught my 3-year-old bull sucking one of the cows, and my method of prevention is simpler than yours. There were in our local store some muzzles called brad muzzles, just to be fastened into the nose, without making a hole, and I put these on the cows and fastened a board into the ring of the bull's nose and had no further trouble. These muzzles are very sharp and will certainly do the work. For a small cow an ordinary muzzle with sharp prongs, as is used on the calves, will suffice. A. H. G., Madras, Ore.

Your method certainly is simple; but it is just like any other remedy. You can take your choice. Sometimes one works, sometimes another. There are a number of these remedies, and I am very glad that you mentioned yours.

Inland Ladder

National Tractor Farming Demonstrations
Demonstration
A. E. HILDEBRAND, MANAGER
July 29-Aug. 2

Salina, Kansas, July 29, 1918.

MOLINE PLOW CO. DEMONSTRATION GROUND
MOLINE, ILL. ATTEN: S.C. TURKENKOPH.

Dear Sir:—
We beg to report the following performance of a Moline Universal tractor 9-18 H.P. Serial No. 19002 Motor No. 10002 under test for draw bar horse power:
Conditions:—
Soil: Stubble ground- loose on top firm underneath.
Load: Plow. two fourteen inch plows.
Dynamometer : Hyatt Recording.
Draw Bar Pull: Average for one minute in maximum.
Time: Recorded by dynamometer.
Hitch: Horizontal - centered.

| TEST NO. | GEAR | DRAW BAR PULL | SPEED MILES PER HOUR | DRAW BAR HORSE POWER | REMARKS. |
|---|---|---|---|---|---|
| 2A | | 2155# | 2.18 | 12.5 | Average plowing maximum |
| 2B | | 2135# | 3.52 | 20.05 | |

OBSERVERS:
C. H. WOOLLEY JR.
L. S. NEWMAN
J. B. DAVIDSON.

ENGINEERS IN CHARGE.
MANAGER OF DEMONSTRATION.

*Develops 20 H.P. on the draw bar and we only rate it at 9 H.P. Think of it!-*

*Officially Accredited with 26.48 H.P. at the belt- We rate it at, 18 H.P.*

IN previous advertising we have stated that the Moline-Universal was conservatively rated at 9-18 h. p. Just how conservative is shown by the astonishing official tests made at the National Tractor Demonstration which showed the Moline-Universal to have an excess of over 11 h. p. on the draw bar and 8 h. p. at the belt.

Certainly these tests show beyond question of doubt the efficiency of the Moline-Universal. For each 169 lbs. of weight the Moline-Universal developed 1 h. p. on the draw bar. Compare this with the ordinary tractor which develops 1 h. p. for each 250 to 300 lbs. weight—and you will clearly realize the greater efficiency and corresponding greater economy of the Moline-Universal.

*However, we shall continue to rate the Moline-Universal at 9-18 h. p. A tractor to give satisfactory service and stand up for years under the strain of tractor work must have reserve power, and the greater the reserve the better. Under normal conditions the Moline-Universal has from 50 to 100 per cent reserve power. Think what this means.*

Ninety-eight per cent of its entire weight is on the two big drive wheels where every ounce is available for traction. The Moline-Universal is scientifically constructed and utilizes its weight to best advantage. It has no dead weight.

From the above report you will see that the Moline-Universal developed 20.05 h. p. at 3.52 m.p.h. pulling two plow bottoms 9 to 10 in. deep in exceptionally hard plowing. At 2.18 m.p.h. it developed 12.5 h. p. The difference in speed accounts for the extra draw bar pull. At 3.5 m. p. h. under average conditions the Moline-Universal will plow as much in a day as a 3-plow tractor traveling at 2.25 m.p.h.

***Just the Right Size***

If the Moline-Universal were built to pull a 3-bottom plow, it would be too heavy for light work. As the Moline-Universal is now built it has ample capacity for all ordinary plowing needs, and at the same time is equally suited for light operations such as cultivating, haying, harvesting, etc. which require far more work hours than your heavy work.

You are chiefly concerned in getting your work done quicker and better than you ever did before. You have no fixed power requirements. One day your work may be heavy, the next day light—and the light work is just as important as the heavy. Thus, you must have a tractor which will do both heavy and light work efficiently and economically, and the Moline-Universal fully meets both these requirements. You have plenty of power when you need it and when you don't want it you have no extra expense—as you would have with a heavy tractor for light jobs.

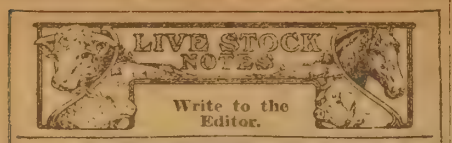
Remember this—here's what the Moline-Universal Tractor will do for you:

*(1) Gives you plenty of power for all your work, both heavy and light.*

*(2) It does all farm work including cultivating.*

*(3) One man operates both tractor and implement from the seat of the implement in all operations.*

*(4) Electric lights enable it to be worked nights to make up for unavoidable delays.*



*(5) Because of self-starter, non-robust labor can operate tractor successfully.*

*(6) So well made and has so much reserve power that it will give many years of service.*

Send for free catalog which gives detailed description of the Moline-Universal Tractor. Address Dept. 50.

**Moline Plow Company, Moline, Illinois**

E. J. IDDINGS, Editorial Contributor

# Tuberculosis

## Government Eradication Work

That tuberculosis may be eradicated is not a theory, but a fact, demonstrated for a number of years by the bureau in the work accomplished among herds in Maryland, Virginia, the District of Columbia, and elsewhere, says J. R. Mohler, chief of bureau of animal industry at Washington, D. C. In the district during 1910 all of the cattle were tested, consisting of 1701 head; of the total 18.87 per cent were found to be tuberculous by the tuberculin test. The diseased animals were slaughtered and the premises cleaned and disinfected. Each succeeding year since 1910 all of the cattle have been tuberculin tested with the result that during the fiscal year terminating June 30, 1918, less than 1 per cent of the animals were found tuberculous.

The financial losses from tuberculosis of live stock each year is at least $25,000,000, but far greater than the loss in dollars and cents is the curtailment of our supply of meat, fats and dairy products. During the fiscal year terminated June 30, 1918, there were slaughtered at official abbatoirs in the United States 10,938,287 cattle and 35,449,247 swine; there were 222,787 cattle and 3,493,188 swine found affected with tuberculosis, which resulted in the condemnation of meat products to the extent of the stupendous sum of 25,875,200 pounds. It is for the purpose of preventing such appalling losses that the campaign against tuberculosis was inaugurated. The fact that it has been demonstrated over a considerable area that the disease can be eradicated, is sufficient encouragement to take up the work in every state in the United States in cooperation with the live stock sanitary officials, with the owners of live stock and others interested in the welfare, the preservation and the stimulation of the live stock industry.

### COMMUNITY BULL ASSOCIATION.

**Benewah County Stockmen Waking Up to Effect of the New Law.**

September 7 the new Idaho registered bull law went into effect. All scrub bulls must be taken off the public range. This makes it necessary that all who have cows running at large must own or have an interest in a purebred, registered bull. The Benewah county farm bureau in northern Idaho is taking advantage of this opportunity to organize the farmers into a purebred bull association for the purpose of buying and owning community bulls. The Cosmos Bull association has been formed, with John Kueber president and E. L. Miller secretary and treasurer. The directors are empowered to buy bulls, divide the association into blocks with one bull in each block, provide for the care and maintenance of bulls, levy assessments on each member in the proportion to the number of cows subscribed. None but members are permitted to use the association bulls. Other bull associations are being organized.

### SHORTHORN BREEDERS TO SHOW.

Arrangements are being made for the annual Canyon County Shorthorn Breeders' show and sale, to be held at Caldwell during the first week in November, just preceding the Northwest Live Stock show at Lewiston. There will be 60 or more head of purebred Shorthorn cattle in the show and sale ring. Cattle from all sections of Boise valley will be entered. This event, it is recognized, gives Boise valley a reputation as a community where good Shorthorn stock is being produced and herds built up on a solid, constructive basis. The following will have charge of the sale, the address of the first two being Caldwell, while Mr. Hall lives at Middleton: C. H. Howard, S. G. Tucker and W. A. Hall.

### YAKIMA MAN JUDGES STOCK IN EAST.

H. C. Davis of Yakima, Wash., once even better known as a Holstein breeder than he now is as a banker, judged Holsteins at th Minnesota State fair this fall. The classes were large in nearly all ages and competition was close, but Mr. Davis gave good satisfaction. Professor McKerrow of the Minnesota university, who judged dairy cattle and sheep at the Washington State fair, compliments Mr. Davis' work as judge very highly. Mr. Davis says the Minnesota State fair has a very fine judging pavilion, and that its value is appreciated when seen. H. A.

### HAS SHOWED SINCE A BOY.

Byron Reser, who showed live stock at the Walla Walla fair when only a boy of 15, had a few polled Rambouillet sheep on exhibition there this fall. Byron earned a reputation as a good breeder and a good sport when only a boy and his interest in live stock keeps up now that he is a young man. H. A.

### ALBERTA'S WOOL CLIP.

A conservative official estimate of the 1918 wool clip of Alberta places the total quantity of wool produced in this province at approximately 2,415,300 pounds net weight.

### WOMEN WORKERS IN BRITAIN.

Thirty-six per cent of the employes of the government of Great Britain, outside the munitions factories, in January, 1918, were women, according to an announcement by the department of labor. It is estimated that in all lines of work 1,442,000 women have stepped in to fill the depleted ranks of industry, and nearly three-quarters of this number work for the government.

### TWO CANNERIES CLOSE.

A consolidation agreement has been made by the two principal salmon packing companies of the Grays Harbor district in western Washington, to meet the food administration's call for economics and saving of man power, by which two canneries will be closed and all fish handled at their other canneries. The agreement closes one plant at Hoquiam and one at Moclips.

### HOOD RIVER APPLE VALUES.

Market men at Hood River, Ore., report that the apple market remains spotted. Big firms, who in former years have purchased large stocks of northwestern fruit on speculation, are buying none this season, it is stated.

### LIMIT OUTPUT OF THREAD.

The war industries board has directed manufacturers of cotton thread to limit their output of white thread to 14 sizes, of black to seven sizes and colored to one, with spools regulated to certain diameter made to hold about 200 yards.

TO the Editor of The Washington Farmer: Enclosed find $4.50, for which please renew my subscription for six months to The Spokesman-Review, which includes a three years' subscription to The Washington Farmer. I am sending five cents for a farm service war flag.

ROY E. HIBBS.

Addy, Wash.

### LAND BANK APPRAISEMENT.

C. Irving Worthington, engineer-appraiser of the federal land bank of Spokane, has been in White Bluffs, Benton county, Wash., and has been appraising the land upon which applications for loans from the bank have been made. Mr. Worthington has placed a maximum valuation of $300 per acre on orchard land and $200 per acre on land seeded to alfalfa in the valley, upon which the bank will loan 50 per cent. A value of from $40 to $60 per acre was placed on unimproved land, and the bank will loan 50 per cent of this value. The money loaned on unimproved land, however, must be spent in improving it; but the amount of the loan can be increased as the land is improved. Under the government plan, the rancher can, by paying 6 1-2 per cent of the loan each year, wipe out the entire debt in 36 years. If the rancher prefers, however, the loan can be paid off any time after five years.

# Worked His Way

## Willing to Fight for Education

By DR. S. B. NELSON.

In November, 1913, William G. Hart wrote to me from Tulare, Cal., saying that he wished to take up the study of veterinary science. He said he had high school diplomas from the Arapahoe high school of Nebraska and the Tulare high school, which would admit him to the freshman class of the University of Nebraska; desired to know if admission requirements of the State college were sufficiently identical to those of Nebraska to permit him to enter the freshman class at the State college. I informed him that they were. Also, he wanted to know if I thought he would be able to earn his board after school hours, while attending the State college. He said he would do janitor work about the buildings, on the grounds, would work for private families for his board, or would do anything for his board that amounted to honest labor.

I told him that many of our students were making from $5 to $15 a month while studying, and that I saw no reason why he could not do as well; that we would help him all we could; that I advised him to come ahead. He did so. During the four years of study and work that followed I saw a good deal of Hart in class and out, and it has occurred to me that there is in his story a good deal that should be inspiring to any young man who now may be wavering slightly in his determination to fight on for an education, in the face of all odds and drawbacks.

Hart came up from California and enrolled in our veterinary classes in February, 1914, on the opening of the second semester of that year. He had practically no funds when he arrived. That winter and the next he worked in dairies near Pullman night and morning, milking and doing other work. Naturally, he had to be up very early in the morning, and often was working or studying till late at night.

Summers he worked in harvest fields in the neighborhood of Pullman. He became known among the farmers as a husky young fellow who understood farm work and could be relied upon to "take hold and go ahead," and who was not afraid to let out an extra link once in a while to save some hay from a coming rain. He had these characteristics, and his services were always in demand.

During the last semester of his junior year he roomed in the veterinary hospital at Pullman, and it was his business to be on the alert during the night to help look after the patients. Of course, he did not have to be up every night, but occasionally he did, for which service he received his room rent.

After finishing his junior year, which was the first of February, 1917, he was made an assistant in the hospital practice of Dr. F. T. Notz of Baker, Ore. He retained this position until about the middle of September, 1917, and then took up his studies at the opening of college, at the Spokane branch hospital of the State college of veterinary science. He received his degree of graduation last May.

While in the employ of Dr. Notz, Hart, although lacking a year of having finished his veterinary training, was able to take care of a considerable part of the practice during temporary absences of Dr. Notz. During this period, he earned sufficient money to pay some debts which he had contracted while studying in Pullman, by borrowing from the students' loan fund, which we maintain.

During his senior year's work in the Spokane branch hospital he was employed as groom. It was his particular duty to care for the patients in the hospital proper. This responsibility he discharged during the year to the satisfaction of all, and carried on his class work besides.

Soon after his graduation, Hart was eminently successful in passing the examination of the Washington state board; and a little bit later was equally successful in passing the examination of the Oregon state board. He is now at his home in Tulare, Cal., waiting his call, and is one of the large number of young veterinarians whose services are required in the medical corps of the army.

### Many Jews in Navy.

More than 4000 Jews are enrolled in the United States navy.

# Motor on the Farm

The tractor demonstration held at Chehalis, during the week of the Southwest Washington fair, August 26 to 30, was an eye-opener to the farmers. It showed conclusively that power farming is here to stay. It didn't make much difference what make of machine it was, all gave good account of themselves in all types of soil.

The first plat laid out for plowing was a pasture sod that hadn't been plowed but twice in 32 years and then only about four inches. For this demonstration it was agreed to plow six and a half inches, and, without exception, all the six tractors kept fully down to this depth. It was a test of power in this demonstration.

The second plat was laid out on oat stubble that was comparatively easy to plow. Here the depth was eight inches, and the contest was that of getting the best job of plowing and disking in the least time. The six tractors that took part were Fordson, Moline Universal, Cleveland, Samson Sieve Grip, Bean and the Lauson. The Beeman Garden Tractor also demonstrated.

Without a question the tractor will play an important part in food production during the next few years. Once it is used by a farmer it is safe to say he will not go back to the old method. A. B. N.

For years the standard of farmers everywhere—Mica Axle Grease. Its high-quality petroleum grease would alone make good axle grease. But the powdered mica makes it better. It can't gum or cake and it lasts twice as long. No hot boxes. Get a can from your dealer today.

# How the packer is saving millions out of waste

## —and how this results in higher cattle prices for the stockman

*The development of by-products out of waste means a saving of about one hundred and fifty million dollars annually—a sum sufficient to keep New York's six million people supplied with meat for six months.*

THERE was a time when the steer was handled solely for its edible meat, its hide, and its tallow.

The remainder of the animal, in weight totaling many millions of pounds annually, was thrown away—a sheer waste.

Today virtually all of this former waste is utilized. Over 250 articles are now contributed by the steer to human needs, and a larger proportion of the animal is saved for human food.

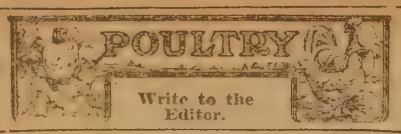
At the time of writing $135 is, on the average, the price paid for the average beef animal to the stockman by Swift & Company.

But if the old order of waste still prevailed and only the hide and tallow were saved, Swift & Company would be obliged either to pay not more than $125 to the stockman, or to charge the public higher meat prices.

Thus, you see, by-product utilization results in a saving of about $10 per animal—a saving which, when multiplied by the total number of cattle dressed annually by Swift & Company, over two million, amounts to more than twenty million dollars annually. This saving goes to the stockman in higher cattle prices and to the consumer in lower meat prices.

If applied to the entire number of cattle dressed annually in America, approximately fifteen million, this saving would amount to about one hundred and fifty million dollars annually.

The real development of by-products came with the development of the larger packing organizations.



Success was attained not easily, but by patient effort, by exhaustive experiment, by intense specialization. It has been a big job and has called for big methods—a job far beyond the resources of the old, unorganized system of local meat dressing.

Not only are the by-products saved but their value has been increased through better handling of hides, fats, and other edible portions of the steer.

Swift & Company is glad to have had a part in this development. It is an achievement of thrift—an achievement that has made possible today lower meat prices to the consumer and higher prices to the producer of cattle than would have been possible under the old methods.

# Lay 1000 Eggs

## Record of 35 Hens in Ten Months

The report of the all-northwest egg-laying contest for the month of August shows that seven pens, five hens in a pen, have laid 1000 eggs or more in the 10 months of the contest. This is an excellent showing, and the director is to be congratulated. The record shows that the 20 best pens among the 135 entered laid from 922 eggs to 1096 each.

The pen of Barred Rocks owned by the Oregon Agricultural college still leads all other pens for the full period. This pen has laid an average of 219.2 eggs a hen in the 10 months. If this pen lays no more in the next two months than it laid in the month of August it will establish a pen record for laying contests in the United States. The second pen, owned by Paul B. Towne of Tekoa, Wash., is only nine eggs behind the O. A. C. pen. For the last three months the race has been very close between these two pens. In June the college pen was eight eggs ahead, in July eight eggs, and in August it gained one egg on the Towne pen.

The leading pen for August was No. 56, White Rocks, owned by C. Daniels, Hoquiam, Wash., which laid 114 eggs. A pen of Rhode Island Reds owned by Bliss & Bliss, Southworth, Wash., was second with 113 eggs. The highest individual hen to date is a White Leghorn owned by C. F. Williams, Salem, 263 eggs; second, H. J. Kingsbury, Twin Falls, Idaho, 244 eggs. The highest individual record for the month of August was made by a White Orpington, 29 eggs, entry of Mrs. A. Gunn, Seattle, Wash.; second, Rhode Island Red hen by J. R. McRae, Milwaukee, Ore., 28 eggs. J. D.

### CARE OF MOULTING STOCK.

**By Mrs. George R. Shoup, Western Washington Experiment Station.**

Considering the large number of adult birds that are being kept over this year, the care of such stock during the moult is one that needs careful thought. Remembering the trying time that was experienced when chicks moulted, it stands to reason that fully grown birds undergo more or less inconvenience during the process of changing clothes.

The birds show timidity, dreading the attack of birds in full feather, and are not as active as during the laying period, and rarely seem happy or sing.

Those that have been the best layers usually drop their feathers quite suddenly, sometimes looking like a picked goose for a few days, and then begin feathering quickly and these moulters seem to use as much energy in providing clothes, as they have hitherto used in making eggs.

In designating the various stages of the moult it has been the custom at the western Washington experiment station to use numbers for tabulating purposes, and once so identified, selecting by physical test is easier. When a bird is in old feather (neither growing nor dropping feathers) it is called "O," and fowls are usually laying in the fall in this condition of moult. When the bird is shedding enough to show bare spots or complete areas, it is called moult "1." When the bird begins to shoot new feathers so that they are short and tight to the body but without new wing flights or tail yet showing half out it is moult "2." When the body feathers are practically grown, and the tail and wings are about half out, it is moult "3" and when the feathers are entirely renewed and comb growing plump it is moult "4."

Birds in moult "1" and "2" show loss of appetite and even hide away and occasionally are found dead, either from hunger or exposure.

Mash in some form seems to be especially liked, and an increase in this feed over what the layers will eat often gives the timid moulters a chance to get it. The same is true of green stuff. They care little for hard grain, using about one-fourth their laying ration of grain until moult "3," when they are again protected from attack and are willing to feed among the fully feathered birds and even return a fight for a disputed morsel. With moult "4" they again fill their crops as for laying, grow comb and return as producers. The entire process takes from 60 to 120 days and birds of over 250 egg records are known to have kept laying during the earlier part of moult "1" and to have resumed in moult "3" with only three weeks' rest from production. There are also a few birds on record as not having moulted in two years.

Where culling is in process, it is a distinct advantage to the birds to sort the breeders out when getting market birds and putting those kept into their future breeding quarters. In this way the producers can be partitioned into smaller quarters, making room in the pullet house for the oncoming well advanced pullets, as well as putting the moulters by themselves, greatly to their relief.

In feeds, plenty of sunflower seed or stalks turned down so the birds can harvest their own seed in their runs, all the mash they care to eat and a liberal supply of green feed besides an increased amount of sprouted grain, seem to give best results. If linseed meal is obtainable it adds to the quality of feathers and helps to regulate the bowels; also bone meal or else dry cut bone likewise is a help, fed in the mash.

Upon your skill in caring for this fall's moulters, depends your egg returns from them, so it is worth while to try to keep them comfortable, which, after all, is what a real poultryman does for his flock at all times of the year.

### Cheese and Macaroni.

The addition of cheese brings up the food value of cabbage or cauliflower and adds to the flavor. Cheese and macaroni make a well-balanced dish and take the place of meat.

# What's a Good Flock of Hens to You?

To the poultryman a good flock of hens is his bank account. He must safeguard it in every way possible to insure a steady production.

To do this the poultryman must be sure that he is feeding correctly.

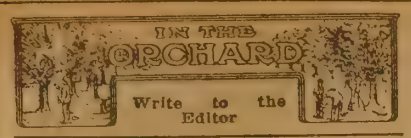
Make no mistake—select Lilly's Scratch Food—it builds from the crop. It is the very bottom and foundation of your flock's body-building stamina and egg production.

Lilyy's Scratch Food is made of good grains in correct proportions. Good sound grains best suited for the purpose—not such grains as can not be used for other purposes.

Lilly's Scratch Food is made of good modern machinery. Different grains are scientifically mixed—the proportions are correct and all chaff, dust and dirt is removed by machinery built for this purpose.

Insist on Lilly's, the original Scratch Food. Don't accept something

*JUST AS GOOD*



All progressive dealers handle Lilly's poultry foods.

# Orchard Troubles

## Blackberry Enemies Numerous

By GRANVILLE LOWTHER.

The cane borer is a beetle that girdles the tip of the cane with punctures in laying her eggs, so that the tips droop and wither. The grub is a blind worm without feet, and burrows downward in the pith. The remedy is to cut out the affected canes below the injury, or if in autumn cut off the canes at the ground.

Gouty gall beetle, in the form of a round-headed larvae, enters the canes at the base of the leaf stalks and from such stalks work around the canes in long spiral tunnels through the sap wood. Later in the season, the canes swell over the eaten areas, forming enlargements or galls, very noticeable when the leaves have fallen. The only practical remedy is to cut out and burn the galled canes containing the larvae.

Leaf hopper is known by the curling and twisting of the infested leaves. The eggs are inserted under the bark of the tender twigs, or sometimes under the older bark. They hatch in the early spring in time to attack the first green foliage. The adult insect is a pale yellowish green, about one-eighth of an inch long. It may be controlled by sprays such as coal oil emulsion or tobacco.

The oyster shell scale, so common in apple orchards, affects blackberry plants as well. It is harder to kill than San Jose scale, but may be killed by the lime sulphur spray, a little stronger than is used for San Jose.

The red spider pest on blackberries is the same insect as affects many other plants and trees. It may be controlled by the use of coal oil emulsion, whale oil soap, or tobacco.

Rose scale infests mostly blackberries, raspberries and roses. When the plants are dormant, spray with lime sulphur. When the leaves are out, spray with tobacco.

San Jose scale affects blackberries and all bush fruits. The remedy is lime sulphur, used before the buds open, or after the foliage appears, the remedy is tobacco.

The saw fly is a chewing insect, and the remedy is arsenate of lead. In its larval form, it feeds on the under side of the leaves. If the fruit is formed, it is dangerous to spray blackberries, with this or any other poison. It has been scientifically proven that with apples, not enough poison will be present to affect the health; but it is considered hazardous in blackberries or raspberries.

The snowy tree cricket deposits its eggs in the canes or twigs during the autumn, they remain dormant during the winter, hatch in the early spring, and feed entirely upon plant lice or other soft insects during the entire summer. It is therefore the friend of the fruit grower. It is to soft insects in general what the lady bug is to aphis. However, if control measures are desired, cut out the canes affected and burn them.

# Aerate the Soil

## To Catch the Water From the Snows

Mr. Hassell of Grandview, Washington, came to North Yakima a few years ago from the state of New York. His pathway may have been strewn partly with roses, but they were the kind that had developed thorns, and his feet have often been bleeding as he pursued his journey. In spite of this, he is vigorous, optimistic, has imagination, and often sees things with the mind which people have never seen with their eyes.

For a number of years Mr. Hassell engaged in the making of concrete tiles, for drains and irrigating purposes. Meeting with various mishaps in this enterprise, due to labor and other complications, he eventually moved out into the Bickelton country, where he bought a homestead.

"I happened to know that country," says Mr. Hassell, "or at least I did know it 13 or 14 years ago, when it was just being settled by homesteaders who believed it would be a great wheat-growing section. These hopes have not been justified by the facts, however, for they lose at least half of their crops, and the yield on what they call 'good crop' years is not enough to tide them over."

Imagine my surprise, after hearing this recital, to have Mr. Hassell continue with the declaration that he intends to raise prunes on his ranch.

"How do you expect to raise prunes in that arid region?" I demanded.

"I intend to tile it," explained Mr. Hassell. "I am putting in tile to aerate the soil, to catch the water from the snows and the spring rains. If the soil can be wet down two or three feet, by surface cultivation I can hold enough moisture to develop good prunes. I have already tiled several acres, and know what this treatment will do for the soil."

When I asked him why he chose prunes instead of some other fruit, Mr. Hassell was ready with an answer. "Because the prune ripens early, is generally ready for picking before the dryest weather of the summer comes on and therefore before the ground dries out, if the latter has been tiled. Furthermore," he continued, "I am planting almond seeds, to raise stock upon which to graft my prune scions. The almond root is better adapted to dry weather conditions than is the prune."

Mr. Hassell estimates that it will cost him about $25 per acre to tile his land, laying the tiles 20 rods apart. Now let us figure a little: Suppose the arid or semi-arid regions, with 12 to 20 inches of rainfall per annum can be made to produce abundantly by tiling to the extent of $25 per acre; do you not see the tens of thousands of acres in Washington, Oregon, Idaho and Montana, now practically waste, that will in the future be made to yield good returns? Well, if you do not you need to awaken your imagination. G. L.

### The Heart of a Boy.

Read in this issue another chapter of the early school-day experiences of Joe Ashlock—and compare them with your own. Share with him his boyhood joys and little tragedies, and somehow the ups and downs of your own present-day life will be found subject to a broader interpretation and tempered with greater patience and tolerance.

"The Heart of a Boy" is on page 6 of this issue.

### SCHOOLS IN PERSHING'S ARMY.

Every officer and enlisted man of the American expeditionary forces is offered instruction under a vast educational system organized by the Y. M. C. A. with the approval of the commander in chief. The project has been under discussion by the military and Y. M. C. A. authorities for some time and details are now completed by general orders placing in operation a course of preparation. General John J. Pershing has taken a keen personal interest in the matter.

SAVE FUEL

and Help Win the War
The Caloric Saves 35 to 50% Fuel

Much more room

First floor plan of Mr. Reep's home

Great Comfort and Cleanliness

"It's a great comfort to have our farm home as well heated as any city dwelling," said T. F. Reep, at his residence on Rural Route No. 2, Michigan, N. D. Mr. Reep is a successful farmer, well known throughout the community, and knows what the North Dakota climate in winter means.

Last Fall he installed the patented Caloric Pipeless Furnace. Since then he has been enthusiastic about its benefits.

"The Caloric Pipeless Furnace has heated my entire house with perfect satisfaction. All twelve of its rooms have been comfortable even in the severest Dakota weather, and I have found the fuel consumption to be very moderate as well.

"Not only that, but since getting rid of the stoves I had been using I have much more room, and we do not have the labor of carrying fuel and ashes. There is none of the dirt that made heating by stoves so unpleasant.

"I can readily recommend this furnace to anyone wanting a clean and economical heating plant."

Your home, in town or on the farm, may enjoy the genial warmth and healthful comfort of the Caloric ventilating and heating system, for this furnace may be put in an old or new house, in a cellar or in a pit, without cutting walls.

Over 6,000 people have willingly written their hearty endorsement of the Caloric, and over 50,000 are using it with great satisfaction. Why shouldn't you?

See the dealer, or let us send you our new catalog, which tells of the principles that have made the Caloric so successful. With it we will send the names of users in your section, and you may see for yourself. Write us today.

The Caloric burns lignite most successfully. Hundreds of people in this section are using lignite exclusively for fuel.

Burns coal, coke, wood, lignite or gas.

## Fourth Liberty Loan

### Are Best and Safest Investment

The farmer will buy fourth Liberty loan bonds because they are the best and safest investment in the world.

Because they are backed by the greatest nation in the world, whose debts have been paid always in full.

Because they provide a full measure of insurance against want, old age, or temporary financial distress.

Because the possession of Liberty bonds will better your credit; as collateral Liberty bonds rank highest when you wish to borrow.

Because if you don't buy bonds, just that much more money will have to be raised by taxation; in the one case you receive interest for the money loaned, in the other a tax receipt.

Because the investment of money in Liberty bonds means a financial reserve that will enable one to share in the country's prosperity after the war.

Because no American citizen desires to shift the burden of supporting the government and the boys in the trenches on to his neighbor's shoulders.

Because every dollar loaned is a fighting dollar, helping to win the war by keeping our fighting men supplied with guns, munitions and everything necessary to keep the Hun on the move towards the Rhine and unconditional surrender.

Because the money loaned is coming directly back to the farm in high prices paid for farm products, through the purchases of our government and by the allies.

Because if we do not win the Hun will dictate peace terms and you will still pay the enemy.

Because if the war is a draw through failure to throw in our full force and resources, it will mean a world armed to the teeth with all the attendant cost, permanent high taxes, with the constant menace of another and more costly and sacrificial war.

The first instalment of subscriptions to the fourth Liberty loan bonds may be paid in United States treasury certificates of indebtedness of all outstanding issues except the 4 per cent series of August 20, 1918, it is announced by Governor James K. Lynch of the federal reserve bank of San Francisco.

Governor Lynch advises bankers throughout the twelfth federal reserve district that the certificates of indebtedness will be accepted in payment of the first instalment in even sums of $500 or multiples thereof only, and will not be accepted in payment of any smaller amount.

This plan is expected to materially simplify the work of bankers in handling the fourth Liberty loan.

### LIBERTY LOAN FLAG.

The treasury department has issued a warning against the unauthorized reproduction of the fourth Liberty loan honor flag design. This honor flag is the exclusive prerogative of the treasury department and is not to be reproduced by any person or organization either in the form of buttons, circulars, posters, flags or any other form of advertising matter. It is the intention of the treasury department to make the honor flag a real mark of distinction and to exercise a very careful supervision of its use.

### GIRLS' HALLS FOR MEN.

Waldo and Cauthorn halls, campus residences for women at the Oregon Agricultural college, will be requisitioned for housing men of the students' army training corps, thus supplementing the large barracks now being rushed to completion, and others to follow. This will make possible the desire of the war department to consolidate its men in a single group of buildings on the south side of the campus.

**AMERICAN FLAG**

**Size 3x5 Feet**

SEWED STRIPES CANVAS BOUND
FAST COLORS BRASS GROMMET

One of these big, fine flags will be mailed postpaid to any one securing and sending in seven subscriptions to your state family farm paper.

# The Biggest Link in the Chain of Greater Crop Production!

# PEORIA DRILL

NOTE the Wonderful PEORIA DISC SHOE

***AN ACCIDENT***

W. J. Rummens, of Pomeroy, while seeding along the right-of-way, his team became frightened by a passing train and ran across the track, breaking his drill so badly that he had to buy a new one to continue the seeding of his field. The new drill he bought was a PEORIA. The result is shown in the picture on the right.

***THE RESULT***

With the new PEORIA Mr. Rummens started seeding where he had left off. When the grain was grown the point where he began with the PEORIA could be easily marked with the eye. The grain sowed by the PEORIA was four inches higher and at least fifteen to twenty per cent thicker.

## Uncle Sam says "increase your crops"—the Peoria will do it

JUST as the big tanks play a vital part in the big offensive in France, so the New PEORIA DRILL plays an equally important part in the big food offensive which is constantly being waged in the Northwest. By actually increasing your crop yield the New PEORIA makes every acre of ground on which it is employed do nobler duty for our country in this hour of need. It is the duty of every farmer to produce the biggest crops possible.

The New PEORIA makes every seed count. It opens the furrow, drops the seed at the very bottom. This means a bigger yield—more profits for you. No seed is wasted—none left exposed to the birds or wind. Because every seed is laid at the bottom of a packed seed bed and covered, the grain grows evenly—the whole field ripens uniformly—the grain grades better in the market.

At the price of grain today can you afford to waste seed? Do you know that your crop yield will be greater when sown by a New PEORIA? NOW is the time to investigate the New PEORIA—not after your crop has been put in.

## Disc Shoe the Greatest Drill Feature in Existence

Does a saving of 20 per cent in your seed interest you? That's exactly what the famous PEORIA DISC SHOE will do for you. It has been absolutely proven by farmers all over the Pacific Northwest that grain sown with the PEORIA DISC SHOE at the same time and on the same soil and under the same conditions yields from 2 to 3 bushels more grain per acre than grain sown by any other method. With the high prices grain is bringing can you afford NOT to investigate the wonderful PEORIA?

At Washington on February 3, 1915, President Wilson said: "There is a shortage of food in the world. It is necessary that our land should yield more per acre than it does now. It is necessary that there should not be a plow or spade idle in this country."

The PEORIA will make the words of our great President come true—it will make greater crops and thereby help our Government in this time of need.

# Idaho State Fair

## War Work Is a Big Feature

Rain threatened to spoil things at the state fair of Idaho this year, but the silver lining of the clouds brought forth everything that could be desired, and the week ended with thousands of satisfied spectators and excellent gate receipts. Sunday exhibitors worked in a downpour. Monday dawned with more rain, which gradually diminished to a cold and disagreeable drizzle. Parts of the ground were bog mires, and cattle, automobiles, tractors and trucks plowed through it when they could and wallowed and snorted when they couldn't. Undaunted, Secretary O. P. Hendershot and his assistants went ahead with their work, and the exhibitors, catching the spirit, did likewise, with the result that when Old Sol showed his welcome face Tuesday morning everything was ready and working smoothly.

The tractor demonstration scheduled for Tuesday and Wednesday was postponed until Thursday and Friday. Great crowds witnessed the plowing of 120 acres on the Rankin farm, south of the fairgrounds, and later were given private demonstrations on the fairgrounds. Professor Wooley and Professor Neidig of the University of Idaho supervised the official plowing and drawbar tests, and farmers for the first time in southern Idaho were privileged to witness an exhibition which was in all ways practical and broad enough in its scope to give them an idea of the many uses to which tractors can be put in modern farming.

The tractor demonstration and the work attendant upon it represented a big undertaking for all concerned. It was recognized by the National Tractor association, and therefore was held under the rules and regulations governing demonstrations sanctioned by that body. With only limited funds at their disposal the committee in charge found hard going at times. Most of the committeemen had exhibits and demonstrations of their own to look after, and it was frequently difficult to drop their own work and do something for the school as a whole.

### War Work.

War work in all its branches was one of the big features of the fair this year. Red Cross exhibits were inspiring. Pretty girls tagged one everywhere, and the fellow who came away without a thrift stamp or a war savings stamp must have gone out the side entrance.

The work of the university and of the university extension department was effectively displayed in various booths. Economy in the preparation of home meals was demonstrated by the extension department people, and all other phases of the work were brought most forcefully to the attention of the fair visitors.

### Boys and Girls' Club Exhibits.

The work of the Idaho's 10,000 boy and girl club members was one of the most interesting of the hundreds of exhibits. To many persons this was one of the most inspiring exhibits on the grounds. This included the standard exhibits in the buildings and the pig and sheep entries outside. This movement has a hold on Idaho people which means support from nearly every section. The breeders of large and fancy herds are among the most interested in this work, some of them made so by meeting defeat in the open classes at the hands of some small stripling of a pig club member.

### Farm Exhibits.

Agricultural exhibits emphasized again the many and varied resources of the state. The county exhibits were noteworthy, and in many cases showed much hard work and painstaking effort.

The women's department was a place of absorbing interest to every one. It was shown on a large scale, and many and varied were the entries. This was also true of the fine arts.

The poultry and rabbit show was one of the busiest places on the grounds, great interest being manifested especially in the rabbits.

The fair management provided wholesome amusement, although I believe we could get along pretty well without the cheap sideshows that take up so much good space and provide so little diversion of any real merit. People are getting tired of being treated like they lacked good sense, and the sooner all of our fairs do away with this sort of amusement the more they will be appreciated.

Following is a list of the department superintendents: Horses, E. O. Walter, Filer; beef cattle, H. W. Dorman, Caldwell, and Henry Thiessen, Sweetwater; dairy, T. H. McDermott, Meridian; cattle, second division, H. A. Ireland, Caldwell; swine, Jesse H. Richards of Virginia, Idaho, and D. H. Vahlberg, Emmett; sheep, D. C. Mullen, Nampa; poultry, Graham Park, Fruitland, and E. S. Bailey, South Boise; farm products, M. A. Thometz, Twin Falls, and I. Lee Truax, Meridian; fruit, Guy Graham, Fruitland, and B. F. Hurst, Boise; dairy products, W. H. Blunt, Caldwell; pantry and kitchen, Mrs. H. E. Champlin, Boise; bees and honey, P. S. Farrell, Caldwell; women's department, Mrs. M. D. Badgley and Miss Ethel Mathews, Boise; fine arts, Mrs. T. C. Hollingshead, Boise; boys and girls' clubs, W. T. McCall and Miss Z. Fay Fowler, Boise.

# A Weatherproof Coat

In every Raynster there is a Raynster Label. That label assures you something more than just a raincoat. It is the sign of the best in weatherproof clothing of all kinds. It is the proof of full value for money received.

Buy a Raynster today and be sure the label is in it. Raynsters are good insurance of health and clothing for every member of your family.

There are Raynsters in all styles of weatherproof clothing. The heavy rubber surfaced kind for outdoor work; cloth coats suitable for dress or work, these are good overcoats as well as good raincoats; heavy ulsters that are warm and shower-proof, splendid for driving in cold or rainy weather. Raynsters are made for every member of the family and are priced according to materials and workmanship necessary to produce each particular kind—the label guarantees value for price—always look for it. Don't buy just any old raincoat when your dealer can get you a Raynster.

Write for a Style Book showing many Raynster models.

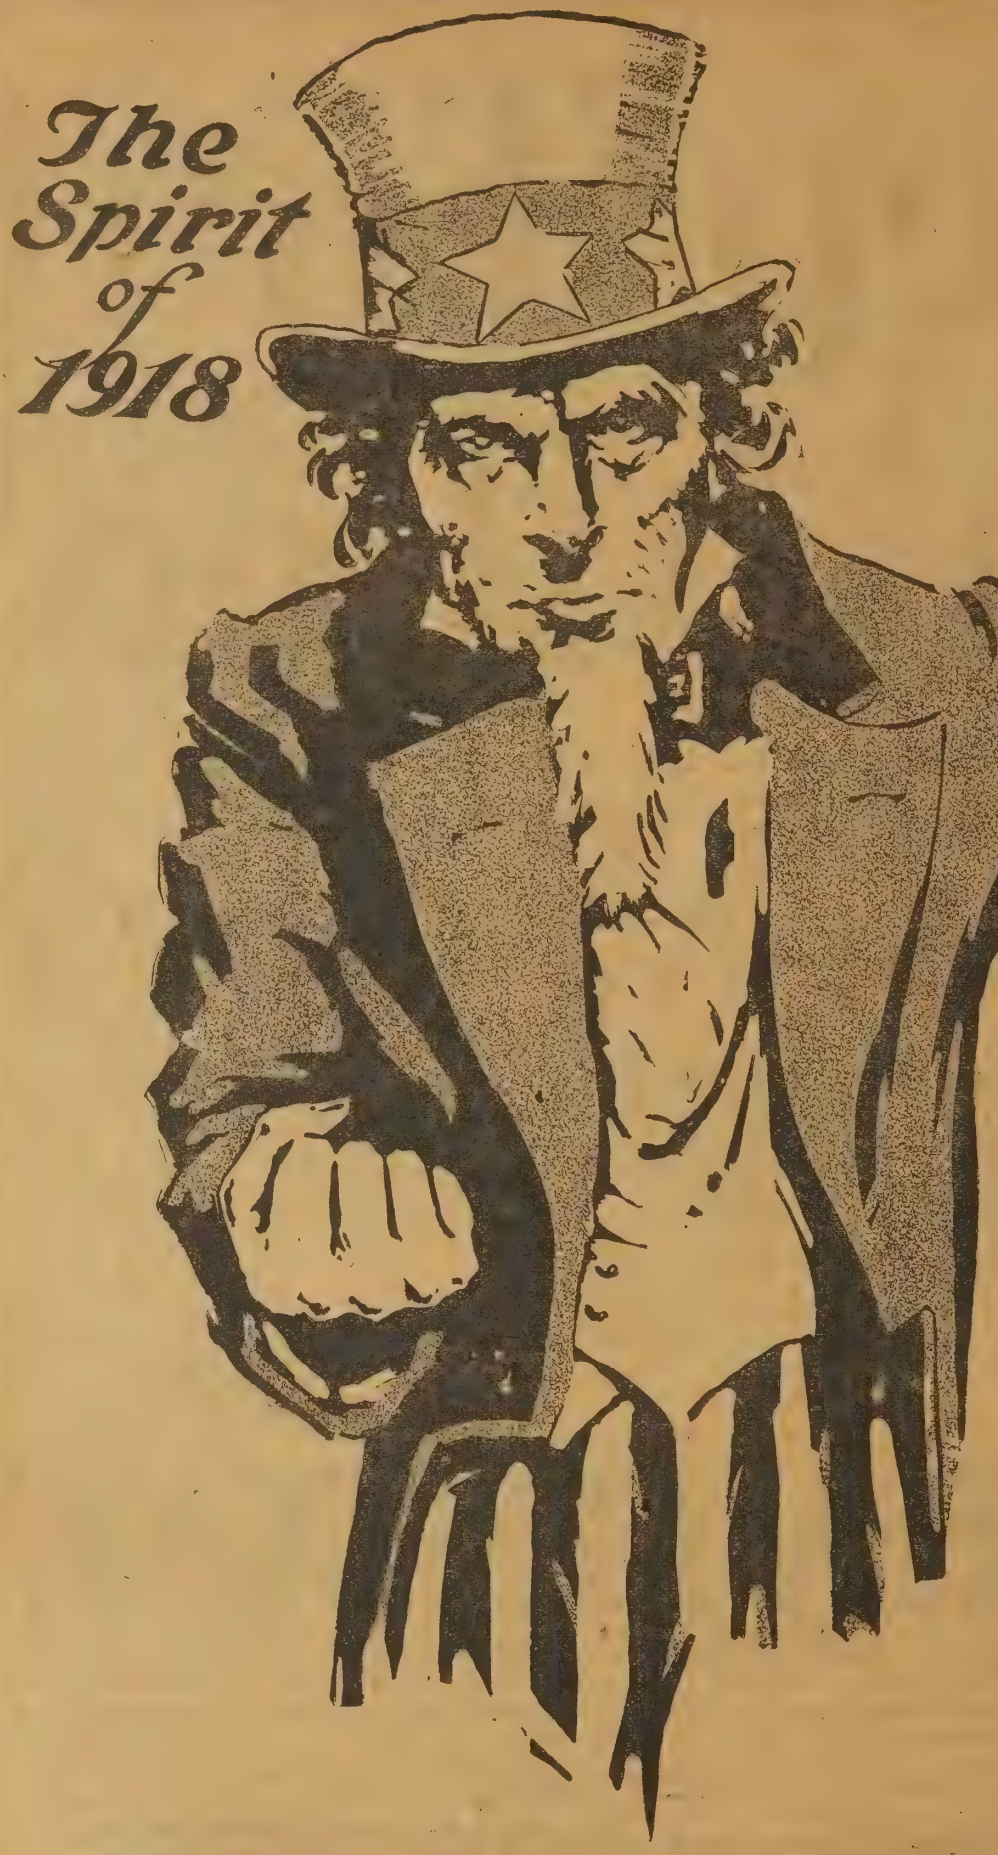
As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address



The Lawrence-Williams Co., Cleveland, O.

# Look for the Trademark

Trademarks are placed only on articles that the manufacturer knows will do the work expected of them—that will satisfy the buyer. The manufacturer isn't afraid to let it be known that he made the goods—and it is certain that he isn't going to send out anything that will be a discredit to his trademark or that will cause the buyer to pass that mark when he is buying again.

The trademarks of the various lines of equipment and merchandise you buy are safe guides to follow. They will lead you to goods of high quality and goods that are sold at one price. Your dealer who sold these goods can stand back of them, for he knows that the manufacturer who sold them to him will stand back of the goods and back of him, too.

# Oregon State Fair

## Praise for County Exhibits

Three years ago the weather man cried first, then frowned, but finally relented over the Oregon state fair. Last year he threatened for the first two days and then decided he'd be decent. But in 1918 he smiled the whole week through. The weather was fair weather—take it both ways—and weather is one of the vital determining features of success or failure.

The Oregon state fair is one of the really great state expositions in the whole west but as everywhere else and in everything else, the war has had its effect. The exhibits were smaller than they have been for a good many years, but those who sought beauty and utility in fruit, pigs or dairy products found them.

Professor Larson, who judged the county exhibits, was enthusiastic in his praise of the quality of the products included in the county exhibits. He spoke particularly of the grain, which he described as being large and clean, with no overgrown soft stuff in it.

He said the three leading exhibits in district No. 2 were exceedingly well matched and it was almost a toss up as to which should be given first, as they scored very close and all of them high.

**County Exhibits Good.**

The county exhibits were very good, although there was room for more. In the Coast division Tillamook county stood first and Clatsop second; in the central division Lane county was first, Washington second and Linn third; in the eastern division Union county stood first, Morrow second and Asco third. Marion and Polk counties were both well represented, but neither entered to compete for the awards.

It is estimated that more than 20,000 persons witnessed the races Wednesday afternoon, while more than 30,000 were on the fairgrounds. The grandstand was packed to capacity. The day was bright and warm, an ideal state fair day, and Salem turned out en masse.

Among individual farm exhibits, western division, Banner farm, of Linn county, stood first and Chetco farm, of Clatsop county, second. Sagerhurst farm, of Morrow county, won first for the eastern division.

The O. A. C. display was larger than ever, and while it would not be correct to say that it was better than preceding ones it had been changed to suit new conditions. The clothing exhibit was very instructive.

The stadium was finished and filled with tractors and automobiles. This new building is a feature of the fair this year, and will be of great value in the years to come.

The free camp grounds were just as attractive as ever, the grove of oaks as shady and majestic, but not nearly so many people camped there.

The industrial pig and sheep exhibits in the live stock section were far better than they have ever been in the past. The barn which housed them was no doubt the most popular barn. More work to do for the boys and girls and less feed than usual, but just the same the children were there with some mighty fine hogs. The Marion county pig clubs were out in force.

**Splendid Work of Canning Teams.**

The canning teams did splendid work this year, showing the effects of the year's training. The boys' and girls' camps ran full blast and they had as good a time as ever.

Attendance this year was quite good. It was not as large as in some previous years, but it was very good. Salem day was well patronized and Portland day was a big one, as usual. The board states that the fair is again a financial success.

In addition to urging people of Oregon to save transportation by using Oregon products, the college exhibit gives many illustrations of how this can be easily done by showing the home products to be used.

It also has an interesting exhibit illustrating conservation in clothing. The big idea is to save wool. The way to do it, it is pointed out, is to use every scrap of old woolen clothing that can be used, and that which can no longer be used should be sent to the factories, where it can be worked over again.

In the exhibit are made-over garments of all kinds. Women's old dresses and coats have been made into boys' coats and suits, and castoff men's clothes have been turned into suits for boys. These made-over suits range in cost from 26 cents to $1.16. One boy's suits, which looks as neat as can be and good for lots of wear, came from a woman's gray skirt which has done yeoman service. The skirt was new four years ago. After the new was worn off, it was made into a girls' school dress, and as such was worn for three years.

In that time it was remodeled three times and finally dyed blue. During the last two summers it was used for an outing dress at the Coast, after which it was washed, ripped apart and next made its appearance as a boy's natty suit. The suit was made at a cost of 43 cents.

Other parts of the big college exhibit emphasize foods essential to growth and health. They call them "protective foods." The principal articles are dairy products and vegetables of all kinds, put up in form for winter use.

# DELCO-LIGHT
## INCREASES FARM EFFICIENCY

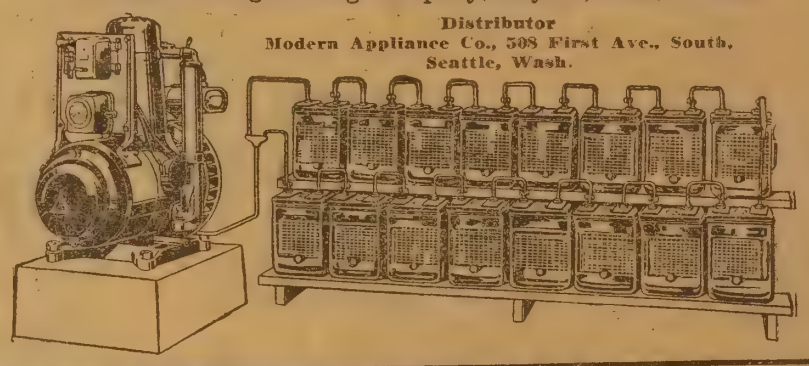
Delco-Light in the Farm Home Means

An abundance of clear, bright electric light throughout the house and barn.

Running water in house and barn. A modern bath room, fire protection. No laborious pumping.

Economical power to operate the washing machine, the churn, the cream separator, the vacuum cleaner and other small machines.

It means increased profits in time and labor saved.



And a home that has in it the comforts and conveniences usually found only in the city.

Delco-Light is a complete electric light and power plant for farm or country home. It is self-cranking, air cooled; ball bearing. Has thick plate, long lived storage battery. No belts.

**A Size for Every Engine and Motor**

Piston rings prevent escape of gas and power. They must fit exactly or there is compression leakage, excessive carbon, and power loss. The scientific construction of

**McQUAY-NORRIS LEAK-PROOF PISTON RINGS**

assures equal pressure all around the cylinder walls. They are made in all sizes to fit every model and type of engine, automobile, tractor, etc.—every size accurately gauged to fit the particular model of motor.

Your local dealer or garage has—or can get—our data book of piston ring sizes of practically every engine and motor made. This will tell exactly what rings you need. Complete size assortments are carried by more than 300 jobbing and supply houses all over the country from which you can be quickly supplied. Over 2,000 unusual sizes and oversizes—all widths and diameters—are kept constantly on hand at the factory ready for prompt shipment anywhere.

**McQUAY-NORRIS Superoyl RINGS**

A special ring for engines that pump oil. Used in top groove only of pistons to control excess oil, with McQuay-Norris LEAK-PROOF Rings in lower grooves to insure maximum compression and fuel economy.

**This Is the Season of Preparation on the Farm**

This is the season of preparation on the farm. There's many a timely and practical suggestion on equipment, etc., to be gleaned from our advertisements these days. Read them.

# Cheese Factory

## Feature of West Washington

By Winifred Buckingham.

A large and valuable ranch in Pacific county is that run by Joseph Buerkli, a native of Switzerland. He leased the place from William A. Potter, who spends most of his time in Sacramento, Cal. The ranch is located west of South Bend, on the Willapa river, near the head of the bay. It is on the tideland, and 1000 acres of the land have been diked. Mr. Potter has leased the place for the last 15 years for dairying purposes. Six years ago he leased it to Joseph Buerkli, who came here from Portland.

For a while Mr. Buerkli ran a milk route, but as this was not satisfactory he sold his route and equipment and began operating a cheese factory, which has been a successful undertaking and is counted as one of the growing enterprises of the town.

The place is stocked with 200 cows, besides a smaller herd of young stock and several hundred pigs. The cows are a good grade Holstein. They are kept up to a standard of production, and the poorer ones are replaced by cows frequently purchased from other herds, for only a small herd of the best calves are raised every year, due largely to the high cost of feeding the calves milk while they are young. Recently two registered bulls purchased from the Carnation stock farms have been added to the herd, as Mr. Buerkli purposes to build up a better herd. During eight months of the year this large tract of tideland affords excellent pasture. If the winter weather is mild stock are permitted to pasture a longer period, especially the young stock.

Hundreds of pigs are raised on this ranch. A goodly portion of the pigs' ration is the whey from the cheese, as this seems to be the most profitable way in which to utilize this byproduct; in fact so profitable is it that the piggery is to be enlarged very soon.

The cheese factory is a newer building—built and equipped for the purpose. It is well lighted and has a concrete floor. Part of the equipment is a whey separator which is run by steam. The whey is then pumped into pipes and piped to the hog house. The cheese made is the kind generally known as American cream cheese. It is conveyed by an auto truck to the freight depot and shipped to the cities.

No crops are raised on the place, but during eight weeks of the summer part of the pasture is fenced off and some hay made.

About 15 men are employed on this ranch. The men do the milking—no machinery is used. One of the men employed is an expert cheesemaker and has entire charge of making the cheese.

Pacific county has hundreds of acres of tideland waiting development. The first cost, that of diking, is perhaps the most expensive, as it averages $50 an acre to dike tideland. W. E. B.

# This Year's Wheat

## Five Cents More for Same Grade

To the Editor: In regard to marketing of my wheat this season as compared with last year, will say, that last season I consigned my wheat, drawing about 90 per cent of the estimated price when loaded, the balance being paid when the returns were sent back, which was from one to four months. This season so far, I have shipped seven cars of the same kind of wheat to the same parties. So far have received returns on three cars within 30 days after shipment. As to prices and grades, will say that this year I am getting about 5 cents a bushel more for the same grade of wheat than last season. The terminal price is 15 cents higher, the difference being taken up in freight, warehouse charges and other expenses, which have been raised this season.

Yesterday I took a sample of wheat to several of our local buyers and offered it for sale. They all scrutinized it very carefully by testing, smelling and tasting. I got as many different buyers finally selling to the highest bidder at $2.06 for bluestem.

The warehouse charges on this wheat were 4 1-2 cents, as it was taken down Snake river bluffs on a tramway, for which they charge 1 1-2 cents extra.

On the whole, I am receiving about 5 cents more a bushel for the same grade of wheat this year. J. S. KLEMGARD.

Pullman, Wash., Sept. 25.

### BOY BUYS PRIZE BERKSHIRE.

During the Washington State fair at Yakima, September 16 to 21, Jesse Elmore, a member of the Selah, Wash., pig club, purchased from E. V. Cox of Yakima, Wash., a fine first prize Berkshire sow. Jesse is only 14 years old, yet he purchased the sow with his own money and did so with the full assent of R. C. Woodruff, leader of the club. The sow is soon to farrow by a good Berkshire boar.

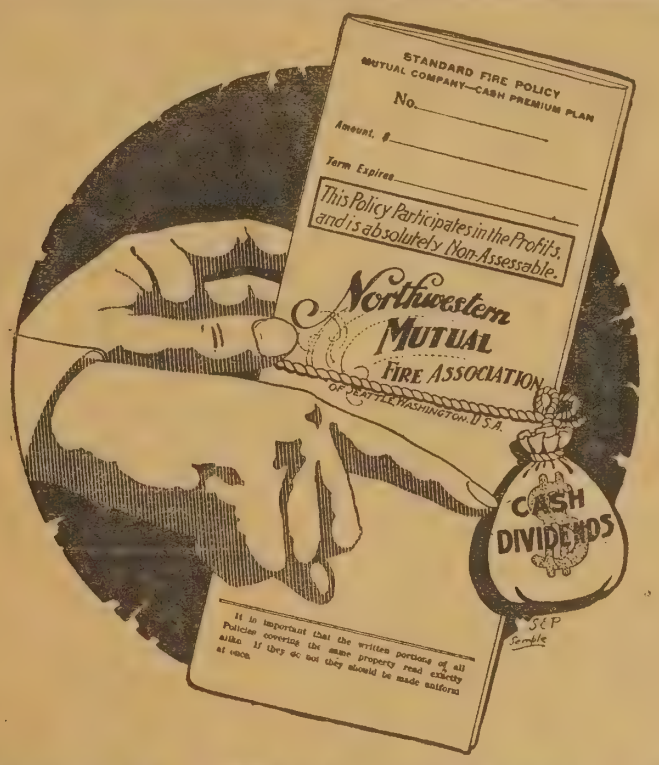
### Dinner Time.

This is a photograph of James Felton and his lamb. The little woolly is an orphan, or was when this picture was taken, some time ago. His happy owner is one of the sons of Ray W. Felton, one of The Farmer's correspondents well known to many readers.

# MR. LIVE-STOCK MAN

If you are a producer of less than carload lots of live stock, get your neighbors to join you in a community shipment to us.

This will put you on the same basis of marketing as the carload fellow and at the same time you will be helping to build up your home markets.



Write or wire us for our prices and our weekly Market Letter.

# Truth in Advertising

Nationally advertised goods may be depended upon for the reason that national advertisers know that their goods must be truthfully advertised to gain and hold popularity. A good name in advertising has to be won on merit, therefore the buyer may be sure of obtaining right value when buying widely advertised articles.

# GIVE YOUR FIRE INSURANCE A LITTLE THOUGHT

BUY fire insurance INTELLIGENTLY—with your eyes open!

Sentiment is a poor guide in such an important business—involving the protection of home, business, lifetime accumulation.

A little thought on this question of fire insurance will not only repay you in money, but will provide greatly increased protection for your property.

When you take out a policy with the Northwestern Mutual Fire Association you become one of the owners of the company; your money is used wisely and economically in the mutual payment of losses, in efficient administration, in carrying forward an educational policy of fire-prevention to reduce losses.

All the money not needed for these purposes goes back into YOUR POCKETS in the form of CASH DIVIDENDS.

With the splendid cooperation of 50,000 policy holders the Northwestern Mutual Fire Association has been able to return more than $2,500,000 in dividends—equal to a stack of dollars piled up four miles in the air.

Under state authority Northwestern Mutual policies are absolutely nonassessable.

# THE HEART OF A BOY---By Joe L. Ashlock

(Continued from page six.)

5 and 8, I had in the Walla Walla valley some opportunity for play and association with children of my own age. But these opportunities were limited, and for months at a time I was wholly alone on the big wheat-farms with mother and father and the hired men. I grew actually to prefer the society of grownups. The actions of children of my own age were annoying to me. Toddlers just beginning to walk or to talk were funny, I thought. They said such funny things, got their words all twisted up and wrong end to, were regular little clowns, and I could find something for a laugh in every move they made. But as for playing with them or talking to them! I fled at the very intimation of such a thing.

It was the luckiest thing in the world for me that my wife was reared in a large family of children. In her girlhood home she was the eldest and had both brothers and sisters of different ages partly in her charge at times. So while she was a child she learned a good deal about children—and don't imagine there isn't a lot to learn about them. They are a world, including psychology, diplomacy and the rod, by themselves.

Well, when our two children, a boy and a girl, began to get up in years, temper, and initiative sufficiently to assert themselves contrariwise to the general weal, it was certainly amazing to me to see how their mother took hold of them. She could see through them, all around them, and a long way ahead of them. When they bluffed their way by her, they certainly did something worth crowing about. But as for me—in the management of my own children my wife says I'm an encumbrance to the household. They can run any kind of an old dodge on me, and I'll swallow it at 100 per cent.

I recall that when our little girl was 2 1-2 or three years old and could only say a few words, she began showing her displeasure when things didn't go just her way by sticking out her chest and prancing stiff-legged about the room. That was all she did, plus a sparkle of defiance in her eyes. I thought that was very funny, and tried to get her to do it when others were there so that they could laugh, too.

Her mother took hold of her for doing that in a way that spoiled all the fun. I wondered why, mildly, diplomatically, of course. My wife edified me thus:

"That is a bad little trick," she said. "It may look funny now, but wait till she grows some more. The thing it will grow into is throwing herself on the floor and kicking and crying; and I simply would not stand for any such nonsense."

She didn't.

About the same time, the little girl began to reach for things on the table. She would grab at anything that caught her eye—the sugar bowl, preferably; second to that, something that had a bright color. She particularly liked to reach out and grab a fistful of jelly.

That to me seemed very funny indeed, especially when she spread the jelly over her face in trying to get it into her mouth. But her mother again spoiled my fun. She stepped into the breach with abruptness that caused a near-riot.

"Maybe it looks cute now," she advised me. "That little trick is only the beginning. By and by she will pull off the tablecloth, dishes and all, to see what is on the table. The only thing to do is to nip these little tricks in the bud."

So, in the upbringing of our two children, into whose childhood I have wandered in telling of my own, my wiser half is busy nipping little buds all the time, and most of the time I do not know that any buds are budding. She knows children and I don't. That's the difference, and it is fundamental.

I should say that if a young man and a young woman are joined in ties which "let no man put asunder," neither having known children when they were children, in the rearing of their own children, they will have one devil of a time and so will the children, so will their maid servants and their man servants and their neighbors and their neighbors' children; and the doctors of the village will wear out a new set of auto tires and challenge the speed laws each time the stork visits this home.

Here ends my moralizing.

My education, which was commenced in the old Union schoolhouse on Dry creek in the Walla Walla valley, progressed only a little way before it was interrupted. About this time I heard mother and father speaking with recurring frequency about their desire to get a "claim" somewhere. Finally, one day, mother said, "We're going to the Big Bend." Not long afterward we were on the way in a covered wagon which contained all that was ours.

There were no other children in our wagon party, we passed none on the road, and, after watching vainly for other children for many days I decided that all the other children had stayed down in the Walla Walla country, where one could find plenty of red willow switches for stick horses, where there were creeks with swimming holes and fish in them, trees along the bank red with choke cherries, orchards, vineyards, watermelon patches, and all such joys.

I missed the trees most, I think. Also, I missed the flowers; and, oddly enough, I missed my whippings.

As a youngster, playing with other youngsters and partaking of their mischief, I suppose that I came in for a goodly share of spankings and switchings; but when we crossed Snake river my whippings ceased. I asked mother about this once. She laughed, and remarked to some one else nearby that since I had gotten away from other children, I was becoming really a good little boy.

I reflected upon this; and it came to me with force that for the sake of a few playmates, fishing excursions up and down the creek, watermelon patches, red switches for stick horses, and choke cherry trees to climb, I would take spankings with pleasure.

We found a claim by and by up in the bunchgrass country, surrounded on all sides by as many miles as you could see of gray-green grass which showed here and there a bluish-green tuft of prairie sage, and once in a while a tall clump of wild rye grass, the blades of which were so tough and sharp that they cut a horse's mouth if he tried to eat them. There was a good deal of monotony about it all, and it was to me a red letter day when a band of Indians came along with their pack ponies loaded with watermelons.

We seldom had money, of course, but usually had a few trinkets, or eggs, or odds and ends of food that we could trade for melons. On one occasion we had not a thing we could give in exchange for the melons. Providence intervened. A fat, cream-colored Indian pony that was about as broad as long and was stacked high with big melons, chose to lie down and roll in the dust while the squaw was at our door bickering for a trade.

The squaw let out a volley of sounds such as I have never heard issue from a human throat. What she called that old yellow cayuse I know not, but it was plenty. She raced toward it gesticulating and squalling, and upon reaching the recalcitrant, pelted it with sticks, clods and small stones. The pony rose slowly, with a satisfied grunt; then shook itself as is the custom of ponies after they have rolled in the dust. Broken watermelon flew in all directions.

The squaw, jabbering and scolding with the speed of a millrace, unstrapped the packsaddle, and let the crushed wreckage fall to the ground, where she left it. It certainly was a luscious looking pile. After the Indians had departed, I stole up to the cracked and broken melons they had left and had the feast of my life. Afterwards, in all seriousness, I remarked to mother that God must have made that pony do that so that we could have some melon. She laughed and said maybe so. Not being remiss in accepting the riches thus left at our door, she filled many pots, pans and kettles with the juicy fragments which she made into preserves flavored with lemon extract, spices and sugared richly. For days, weeks and months thereafter this event stood forth in my mind with the prominence of mountain peaks; and I never ceased to be thankful for the blessing which had been laid at our door from the open hand of the most gracious giver of all blessings.

I can remember how mother and I used to sit in the doorway of our small cabin when father was away in the Walla Walla harvest fields, and, in the lonely evenings when dusk was falling on the wide, empty waste of gray-green prairie about us, watch the wild sagehens that came in from the grass and wandered up and down the rows in our potato patch.

Sometimes she grew afraid and lonely, I think, for she would go inside the house and lock the door. Once, late at night when I lay awake listening to a multitude of imagined sounds in the prairie about us she asked me if I ever prayed. I said I did, sometimes. She talked about prayer or a while and said I must never be afraid, for God was always near and would protect us. I think she grieved a good deal because I was not in school. From the school books she had used as a girl she taught me a good deal, and, on several occasions, from somewhere she got Sunday school literature which she read to me and explained.

She loved flowers. In early spring she would go with me far over the fresh, fragrant prairie to the rocky places where the first pansies and buttercups came out of their winter nests. We gathered these by the handful, took them home and kept them fresh for many days.

On other occasions, with some help from me, she filled boxes with soil and planted the seed of pansies and verbenas. I remember well the loving care she gave to her boxes of flowers, and how richly they bloomed.

One year she had bad luck with them. A bug or pest of some kind worked havoc with them. Also, the soil was none too rich, and a dust laden wind one day whipped the tender plants almost to shreds.

She worked over them in a sad, discouraged way for a long time. I was 11 or 12 then, I suppose, and had begun to notice how she loved pretty things, and how few were the pretty things in the wide, bleak prairie about us. I shared her grief when her boxes of flowers came to grief, and when she sorrowfully gave up said and she was afraid we should have no flowers this year I stole away in sadness that would not be overcome.

I wanted to be a big man right then and there, with a lot of money to buy her a whole wagonload of flowers in nice, painted boxes that did not leak the soil from their corners. My imaginings ran riot and I grew happy in thinking what I would do some day. I would buy her a lot of pretty dresses and a horse and buggy so that she would not have to stay at home all the time. Rosettes were my dreams and when I told mother about it she grew wonderfully cheerful, in spite of our spoiled boxes of flowers.

I never gave up that hope, and was always planning to earn money and save it somehow, and bring my dream to pass. Occasionally I earned a little money, but usually it had to go for my own clothing, or some other necessary, as soon as earned. At the age of 13, with money I had earned poisoning squirrels, I bought my first pair of suspenders. They were of a rather unusual shade—a dull rose color, not "loud," but taking the light in a pleasing way.

Mother examined the color in the suspenders, facing them this and that way against the light. Presently she spoke to me in a wistful way, with a note of longing in her voice I had never heard before.

"You have been wanting to buy something for me," she said. "Now I will tell you what I want. When you are rich some day, I want you to buy me a silk dress the color of those suspenders."

She did not know how her words took root in my soul, and never will, because now she is dead. Nor did she know what happened that night after she was asleep.

I took off my new suspenders, slid the buckles up and carefully cut off a piece from each suspender. These pieces I stored away in a secret place, so that some day I should have them to match with a piece of silken goods.

I said nothing of this to any living soul, but in the years that followed made annual and semi-annual pilgrimages to the small, secret shrine where lay in hiding two small bits of rose-colored rubber fabric. The color faded, in spite of all I could do; but by the time it had faded, the original dull rose had made itself fast in my brain never to be forgotten or mistaken for another.

Some years later, when I was reaching the point where the dull rose silk was not far away, though still unattainable, I received a telephone message one day from a distant city whither my mother had been taken in a serious illness. The nurse was talking. My mother was dead.

Some hours later I was in the wareroom of the undertaker where there were rows and rows of caskets, most of them black with silver handles. I was selecting one. None that I saw seemed to do.

I came to one presently, different from the others. Its color was dull rose. I asked to have a curtain pulled up so that the sun could strike it and give me a better chance to be sure as to the color. It was the right shade of rose. The polished silver handles blended in the light with the dull-rose of the casket with the precise effect I had years before noted in my polished buckles and the dull-rose suspenders they adorned. I told the undertaker that the rose casket would do.

# Crawling Strengthens Heart

**By Dr. Leonard Keen Hirshberg, A. B., M. A., M. D.**

Dr. Hirschberg.

Odd as it may seem, effort and muscular work of a sort are of great assistance to the heart and arteries when they are diseased in some ways. To be sure, there are many kinds of heart trouble, several of which can not be treated in this way.

If you have a leaky heart, a rapid heart or some other type of a mild or harmless heart affection you must not be content to call it that, but visit some heart specialist to have the precise diagnosis made and treatment prescribed.

Professor Cecikas, a Greek physician, of Athens, has just announced that the position on all fours to relieve various heart symptoms have been triumphant over many kinds of cardiac distress. He tells how eight persons who were in great paroxysms of rapid heart beats were relieved when they were told to crawl on hands and feet. The quadruped position redistributes the fluids and blood, and, of course, modifies the heart action. The pressure, therefore, in and upon the chest and heart is reduced; the viscera change their relations to each other; the heart is moved by the force of gravity into a different perpendicular and twist, its axis is changed, and the gases or pressure from the stomach and abdomen are withdrawn. All of these remedy several disturbances of the heart.

One patient of 32, emaciated by dysentery, found this form of exercise the only means to check his rapid heart beat. Other victims were corpulent, and suffered from a tendency to dropsy of the lungs and angina of the heart. When they went down on all fours and stood still or crawled to and fro like an animal in a cage they were immediately at ease.

### Immediate Relief.

Another sufferer was very thin and emotional. Attacks of palpitation, sleeplessness and shortness of breath constantly upset him. He was at once benefited by getting up in bed and crawling around on hands and knees or feet, after which he would comfortably go to sleep.

A change to the country, with walks, dips in "the old swimming hole" and other exercises brought recovery to others.

Professor A. Jaquet of Basel, Switzerland, a French physician, who has devoted much observation to heart disorders, is particularly enthusiastic over the results obtained by hill climbing exercises. Caution, of course, must be maintained, and only persons with particular kinds of heart trouble chosen by an experienced physician dare to be given such muscular work. At the first sign of trouble these exercises are to be stopped. The doctor is trained to notice such evidences.

When you climb a hill or a mountain the legs are bent in such a way as to assist the movement of the blood from the veins in the legs. Ordinary walking does this only in a trivial way.

The deep breaths taken as you climb enhance the activity of the heart and also aid in the motion of the blood toward the heart.

The victim is to begin with short distances on the level. About 100 yards on the ground, with 40 to 50 steps to the minute and a deep breath every other step is a good start.

If the pulse beats too fast after this attempt and does not quiet down within a few minutes, nothing further should be done until the heart is relieved and rested. If this walking can not be resumed the doctor will then know it.

If, however, there is nothing abnormal, no shortness of breath, rapid pulse, palpitation or other unpleasant consequence of the climb, the distance and the slope are gradually increased, but always under constant medical supervision.

Finally you will know that you can climb hills without harm, and can be trusted to continue the exercises without the presence of the doctor. You should, nevertheless, always find out the exact grade of the slope, and never trust the eye alone.

# Teachers' Cottage

## Is Liked and Has Come to Stay

**By CARL J. MENZE.**

"What are the advantages of a teachers' cottage in the rural district from the viewpoint of the teacher and the community?" I asked this question direct of Miss Helena Stenvig, a rural school teacher of experience. Not expecting the question, she was at first silent. But when she started to answer it I was convinced that she had given some thought to the subject.

She replied, in substance, as follows:

"In most rural districts it is very hard for rural teachers to find suitable boarding places. Some farmers do not have the room to keep them; others do not wish to be bothered with them, especially if they come from the city. Sometimes the boarding places are too far from the schoolhouse. Unmarried teacheps can find a place to board easier than married ones. Married teachers like to live with their families, and in rural districts it is not often that there are vacant houses which can be rented. Personally, I believe that school boards should try to retain good teachers from year to year. I am opposed to the custom of teachers teaching in one district one year and in another district another year. If they intend to teach for several years, or make teaching their life work, they should stay in the same district, study the community and try to improve it. A teacher's cottage would appeal to these teachers.

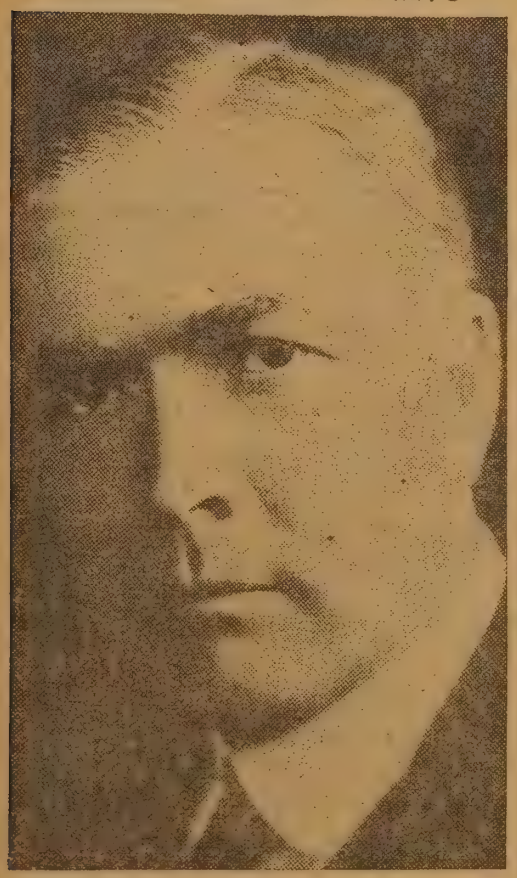
"When teachers board with a private family they usually have a small room to themselves. That is, a room where they can have privacy to plan the school work. In the winter this room is usually not heated, which makes it very disagreeable to work in. In a cottage one has privacy with liberty; one can live as one pleases.

"Where I taught last year there were two teachers besides myself. We all lived together. At the end of each month the expenses were divided equally between us. We found that we could live a great deal cheaper than if we boarded with a private family. And the work, caring for the cottage and doing our own cooking, was a diversion from teaching. It gave us exercise and the pleasure of cooking what we wanted. Some people always accuse a teacher of being a poor cook, and if this is true doing our own cooking gave us practical lessons in the culinary art.

"During the winter we gave several entertainments and invited the community. We did our own planning, and had things just as we wanted them. Some families would object to this. In these entertainments the people felt that we belonged to the community, and we teachers felt the same way.

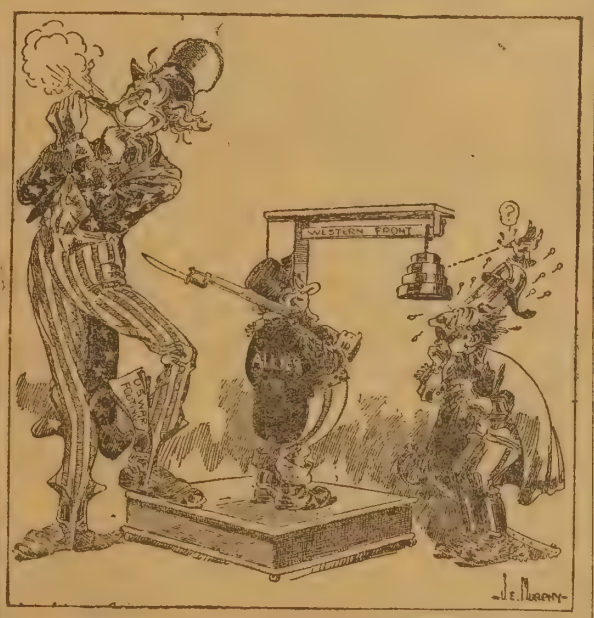
"The teachers' cottage has come to stay in this country. In time all rural schools shall have to adopt them. When the teachers live on the school grounds they have the property under their care. And in the future the country school will not have that bleak, barren look, devoid of grass and trees, but rather will have a campus planted with trees and flowers.

# Volunteer College Workers Renounce Vacations, Fudge, Hammocks; Spend Summer in War Work



—Food Administration.

One of the main reasons why the absence of millions of young men serving the colors has not crippled American industry is that the College Volunteer Workers, comprising groups of girls from almost every woman's school in the country, have come to the rescue.

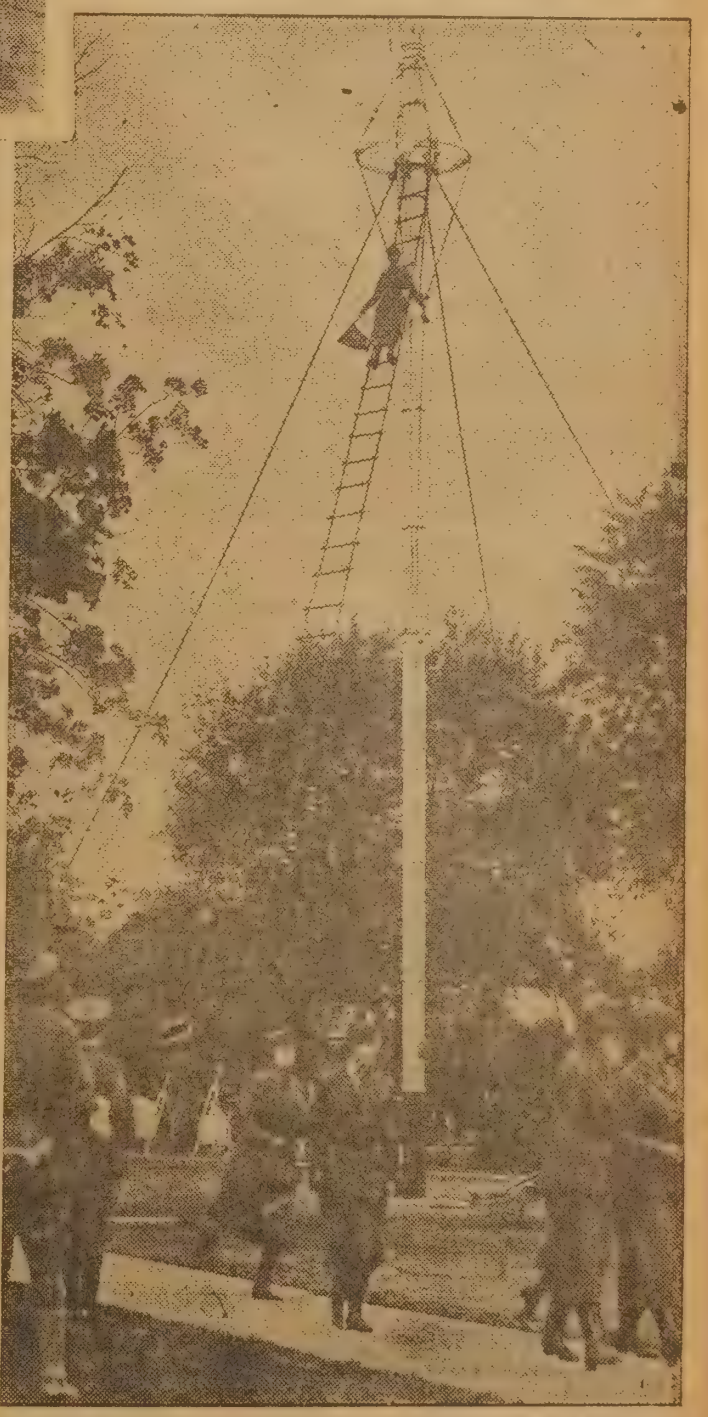


Nothing is too unimportant, nothing too difficult for these Volunteer College workers. They have harvested crops and canned them, too; they have assisted the state councils of defense in Propaganda work; they have helped immeasurably in disseminating the recommendations of the food administration. Yet they have not felt themselves above taking care of babies for busy housewives who need a release from home tasks in order to do the canning; or mending and patching, to aid in the conservation of clothing in order that the factories may be employed in the making of soldiers' uniforms. Almost all of the schools and colleges have maintained intensive courses in home economics and dietetics during the summer. Hundreds of girls have given up their vacations without a murmur to attend the courses. Before the war, the average college girl's definition of a vacation was a time of complete rest from brain work, and the recipe for enjoying it was one hammock, one book of fiction, and one large plate of fudge, all surrounded by soft breezes, blue sky and permeated with an atmosphere of utter irresponsibility. Today, when there is such a thing as a war on hand, the definition is strangely altered. Ask any Volunteer College Worker and you'll find out that her interpretation of the word "vacation" now is—intense application to some sort of work that will help to win the war.

## Directs United Drive

John R. Mott, international secretary of the Y. M. C. A., was made director general of the united drive to raise $170,500,000 for war work, at a conference held in New York of representatives of the seven organizations involved in the huge philanthropic drive. At the request of President Wilson, the drives for funds to carry on the war work of the various organizations have been merged into one big national drive, so as to conserve energy largely dissipated in individual drives, while it will be carried on throughout the country, November 11 to 18. The object of the campaign will be to raise $170,500,000, to be allotted as follows: Y. M. C. A., $100,000,000; Y. W. C. A., $15,000,000; Knights of Columbus, $30,000,000; War Camp Community service, $15,000,000; Hebrew Welfare board, $3,500,000; Salvation Army, $3,500,000; American Library association, $3,500,000. Of the total amount for the nation, the western department is to raise $8,525,000. An official party is making a tour of the western district, consisting of the western military department.

## "Ach! How He Iss Gaining!"



—Murphy, in Washington Times.

## "Peace—Kamerad!"

—Harding, in Brooklyn Eagle.

## Training for Motor Corps Women

The motor corps of the National League for Women's Service is undergoing real strenuous army training at Fort Totten, the women having decided to abandon home duties and social affairs. The photo shows Lieutenant Catherine Frederick wigwagging from the top of a flag pole.

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

**SYNOPSIS.**

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by wild animals and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed cattle men of the region were trying to kill him.

## CHAPTER IV.

### On Guard for Assassins.

"Yes, we'll die together," Groves kept repeating, as if the statement afforded him no little consolation.

"Not if I can help it," I said to myself. And at once I began to wonder how I could escape.

"Did they ever try to kill you before?" I wanted to know, after recovering from my first fright.

"Time and again—time and again," he assured me. "But I was always on my guard. I was too sharp for 'em. But they'll get me yet—oh, I just know they'll get me! But I'll get some of them first. Now see if I don't."

"Maybe you're worse scared than there's need for," I suggested. "Why should the cattle-men want to kill you?"

"To get me out of the way, of course. Then they'll kill the sheep, to get them out of the way. And they'll be here tonight—yes, sir, they'll be here tonight! Now watch what I tell you. I've had my warning that they're going to kill me if they can—if they can! But I'm watching out for 'em, and I'll get lots of them if they don't look sharp. Lucky you stopped here tonight. You can help me guard the house. I can't guard both sides at once, but with you to watch one side, maybe we can keep 'em off. Anyhow, we'll try."

I did not answer. The arrangement was little to my taste. It was no quarrel of mine, and I should have been more than glad to keep clear of it. It would be cowardly, though, to desert the shepherd in his hour of peril. And if the cattle-men were already around the house, there might be less danger in staying than in going. So, six-shooter in hand, I moved over to the wall and began to peer out between the logs in quest of assassins.

The night was partly cloudy, but there was light enough to reveal objects dimly. For several minutes I kept a cautious watch, but failed to discover anything dangerous. Groves, who was watching near the door, soon tiptoed over to my side to caution me not to shut an eye till the moon rose. All our conversation was carried on in whispers.

"If you let the scoundrels crawl up close enough, they'll blow us both to pieces," he declared.

"Why should they kill me?" I inquired, with a shudder.

"Because they won't know us apart in the dark. Kill one, kill both. You can depend on that. We'll die together."

This was terrible. While Groves moved on around the wall, my excited brain kept revolving various plans to escape; but not one seemed safer than staying here and defending the cabin. So I resolved to make the best of a bad situation.

Long I watched there, with ears strained and my eyes searching the darkness outside. Slowly, gradually my fears subsided. Perhaps the cattle-men might not come tonight, after all.

"Have they ever actually tried to kill you?" I inquired, when Groves, who was seldom still, got round to me again.

"Ever tried to kill me? Well, I rather guess they have—a dozen times at least. But I'm too sharp for 'em. I always see 'em slipping up to the cabin, and then I let drive."

"What! Did you shoot at them?"

"Of course I have. Fifty times, I guess."

"And did you hit any of them?"

"Yes, I have—that I have! I've let daylight through seven of the scoundrels; and I'll kill about seven more, I hope, before they finish me. Oh, I'll sell my life dearly. You can count on that. And they know it, too; every mother's son of 'em knows it. They're afraid of me, but they'll get me at last. Yes, they're bound to get me at last."

"Do you mean to tell me that you've actually killed seven of the cattle-men?" I demanded. The thought of all those seven corpses, lying pale and stark, well-night froze my blood.

"Yessirree! That's just what I did! I laid out seven of the scoundrels neatly, and I hope to lay out seven or eight more before they finish me. But they'll get me at last—they'll get me at last," he repeated, half sadly, as if realizing his inevitable doom.

He moved on around the wall, and I stood staring after him. The full horror of the fellow's confession had taken possession of me. No wonder the cattle-raisers were after this man, bent on revenge, when he had killed seven of their number! And no wonder Groves, with all that blood red on his hands, had little hope of escaping the cattle-men's vengeance in the end!

"If you see or hear anything suspicious, blaze away at it," he said, on coming to me again. "The more we shoot of 'em, the longer we have to live."

"Did you kill all seven right close here?" I asked, unable to drive that ghastly subject out of my thoughts.

"Yes. Every one was knocked over within a dozen yards of this cabin," was the reply, almost exultantly uttered. There was not the slightest sign of remorse. "They tried to sneak up to blow my brains out, but I was too quick for the rascals. The first thing they knew they were stretched out on the ground, kicking as hard as they could. My! how hard some of 'em did kick! One fellow kept kicking and flouncing about nearly five minutes after I knocked him over."

This was said with as little feeling as if he had been talking about the weather.

"Have you never been arrested?"

"No. The cattle-men won't put the sheriff after me, because they want to kill me themselves. They will, too, and that before so very long; but not till I've laid out some more of them. Maybe I'll get to shoot a few more tonight—who knows? Anyhow, I hope so. We must both keep a sharp lookout."

He moved on, and I stood by the wall, peering out into the darkness, and listening for any sound that would give warning of the enemy's approach. My thoughts, however, kept running on what I had just heard. Evidently Groves was a desperate, cold-blooded fellow, fully capable of taking care of himself. To say that I wished myself miles from here would be far short of expressing my feelings. If I escaped this time, I promised myself never to stop anywhere again, especially with a lone man, without knowing something of his history. Should the vengeance of the cattle-men fall tonight, I must inevitably be a victim to it. In leaving an out-of-doors camp to spend a night here, I had jumped out of the frying-pan into the fire.

An hour or two dragged by, and still nothing suspicious had been seen or heard. My fears had largely subsided, and I began to grow drowsy. After losing so much sleep the night before, and riding hard all day, weariness was heavy upon me. The bed Groves had prepared for my use was at my feet, and I sat down on the edge of it. The shepherd had called the dogs inside, and Vic came and curled herself up near me. Soon I lay down on my face, in such a position that I could see out between the logs. The six-shooter was in my hand.

While reminding myself that I must by all means remain awake, I fell asleep.

How long I slept is uncertain; but I awoke with a start to find somebody shaking me. I grabbed the six-shooter and started to my feet, under the impression that the cattle-men had got into the cabin and seized me. But it was only the shepherd.

"They're coming now! They're right close by!" he was whispering excitedly. "Don't you hear 'em—can't you hear 'em?"

I listened with all my ears, and certainly did detect footsteps somewhere not far away.

"Now keep a sharp lookout on your side, and I'll keep a sharp lookout on my side, and maybe we can get some of the rascals. Who knows but what we may kill one apiece? Wouldn't it be fine if we could?" he added, with

Up I leaped, frightened half out of my senses.

a cheerfulness that was little less than astounding. "Don't suppose you ever killed a man, did you?" he inquired.

"No, I—I never did," I answered, shuddering at his cold-blooded way of asking the question.

"Well, watch out now, and maybe you'll get a chance before long. Makes you feel a little queer when you knock over the first one; but by the time you've laid out as many as I have, you'll get used to it. Keep your eyes open now!"

He returned to the front side of the cabin. I sat listening and looking, ready to shoot instantly if an opportunity offered. I didn't care to kill anybody, not even one of the dreadful cattle-men. A shot in the air would answer all my purposes. But the sound of the footsteps—or whatever they were—came no nearer, and I had no occasion to use the six-shooter.

Again an hour or more dragged its slow length by, and again, after the excitement died out, I began to grow drowsy. Feeling confident that there had been a false alarm, I finally resumed my position on the bed.

Before I was aware of having fallen asleep, a terrific explosion tore the air almost over me—an explosion that seemed loud enough to lift the cabin-roof!

Up I leaped, frightened half out of my senses. My ears were still ringing with that report. The shepherd was standing near me, quietly reloading his gun.

"What's the matter? What did you shoot at?" I cried out in the dark, excitedly.

"Sh!" was his warning. Then he whispered: "He was crawling up, but I was too quick for him. He thought he had me that time, but he'll never trouble me any more."

"What! Did you hit him?"

"Yes, I laid him out. Don't you see him kicking out there?"

I put my eyes to an opening, and could certainly make out a body lying several yards away. It was barely distinguishable in the dark, but I could see it jumping and jerking convulsively, as if in the throes of death.

A strange feeling of horror, impossible to describe, crept over me as I watched that prostrate form till it became motionless. Indeed, I could scarcely keep my eyes away from it. But the shepherd seemed not in the least disturbed by the deed he had committed—the taking of a life.

"What made you go to sleep again?" he whispered. "If you'd kept awake, you might have killed that fellow, instead of me. But maybe you'll get one yet. I'm going back to my own side. Hope I can knock over another rascal there."

Again there was a long silence, and again, in spite of that motionless, lifeless body stiffening out there among the bushes, I lay down on my rude bed and slept—slept the sleep of weariness.

Once more I was awakened by an unusual noise, very different from the roar of the old army-musket, however. So sleepy was I that, though partly awake, I had been listening to the sound for some time, as it seemed, before I could realize what it was and where I was.

Now I sat up. The cabin-door stood wide open, and the moon had risen till everything outside was in plain view. In front of the cabin stood the shepherd, with his head thrown back, singing with all his might. In the still night-air his words must have been audible a mile or two away.

He was just finishing something as I woke up. Now he began on another verse. The words were very distinct:

"I comb my head with a curry-comb,
I grease my boots with a bacon-rind;
I grind my teeth on a big grindstone;
My claws are long as a punkin-vine!"

These words, shouted out, almost bellowed out, at the top of the singer's strong voice, had a strangely grotesque sound; so much so that I half believed myself still asleep and dreaming.

After pausing for a few moments, the singer started up something else:

"Go tell Aunt Nancy—
Go tell Aunt Nancy—
Go tell Aunt Nancy
The old gray goose is dead!"

At the end of that verse, Groves went first to one corner of the cabin and then to the other, as if looking for his enemies. Then he planted himself in front of the door again, and again he began to sing:

"I'll eat when I'm hungry,
I'll drink when I'm dry;
If a limb don't fall on me
I'll live till I die!"

Those silly words, shouted out so vociferously, would have sounded ridiculous under different circumstances; but they had no such sound to me now. If fact, a strange, creepy feeling of horror stole over me as I sat there on the buffalo-robe and grass, listening to them. For I knew well enough what they meant; the shepherd was crazy—as crazy as a loon! The persecutions of his enemies, and perhaps remorse for all the lives he had taken, must have driven him insane.

(To be continued.

# Sidelights

**Patriotic Girl.**

He—Will you share my lot?
She—Is there a war garden on it?—Boston Transcript.

**Couldn't Very Well.**

"Dine with me tomorrow at the Mitre, can't you?" asked one young man of another.

"Sorry, old man, but I really can't go tomorrow. I'm going to see 'Hamlet,'" answered the friend.

"Oh, bring him along," was the cordial answer.

**Returning a Favor.**

"So you and Nexdore are not on speaking terms?"

"We are not."

"What's the trouble?"

"Why, he sent me a box of axle-grease and advised me to use it on my lawn mower."

"Well?"

"Well, I sent it back and told him to use it on his daughter's voice.—Boston Transcript.

**His Specialty.**

"He's an infernal liar and a stuttering fool!" snarled Constable Sam T. Slackputter, as he sat alone on the porch of the Petunia Tavern. "He's a thief, a reprobate and—"

"Here, Sam!" exclaimed the landlord, appearing at the doorway of the hostelry. "What in thunder are you doing cussing along that-a-way, all by yourself?"

"I am running down a criminal!" ominously replied the sleuth.—Kansas City Star.

**What Mike Meant.**

In Indianapolis lives a young woman of wealth and philanthropic inclinations who has founded a club of street urchins. One Sunday evening she invited three of the members to be her guests at her home. The youngsters asked to be taken over the place. Their eyes grew bigger and bigger with admiration. Finally the smallest of the trio could contain himself no longer, and he burst forth.

"Honest to Gawd, this is the most notorious house I wuz ever in!"

"Why, Mike," asked his hostess, "what do you mean?"

"Beautiful! Jest beautiful!" said Mike.—Saturday Evening Post.

**"A Little Learning—"**

A Chicago man was walking through a foreign quarter of his city when, with an amused smile, he stopped in front of a small eating place, on the window of which was painted in white, "Lam Stew."

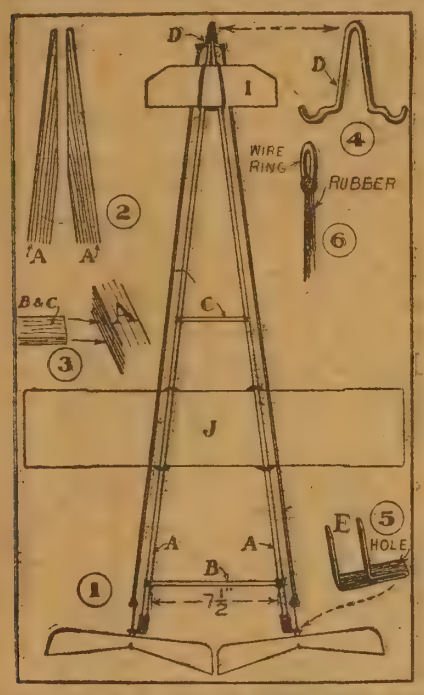
Now the proprietor happened to be standing in the door way, and when he saw the smile of the gentleman who had stopped in front of his place, he asked to be favored with an explanation of the joke.

Whereupon the other explained about the missing "b" in "lamb," and the proprietor accepted the correction in good part, at the same time expressing his thanks.

When next the Chicago man passed that restaurant he found that the menu had been changed, but that the lesson in orthography had not been forgotten. The proprietor was now offering "Clamb Chowder."—Harper's Magazine.

# Handicraft for Boys

By A. NEELY HALL.
(Copyright by A. Neely Hall.)

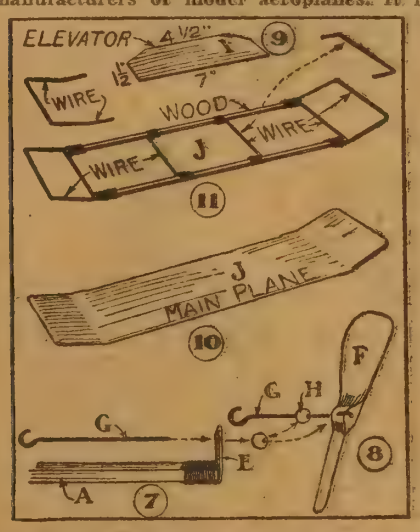


## A MODEL AIRPLANE.

This model aeroplane is built along the lines of the models that have won records for distance flights. Your success in building the little aircraft will depend upon the care with which you prepare, assemble and "tune up" the parts.

The triangular frame consists of the two pine side sticks A (Fig. 1), 1-4 inch square and 32 inches long, and two bamboo sticks B and C, 1-16 inch thick and 1-4 inch wide—B 8 inches long and C 4 1-4 inches long.

The bow end of sticks A must be tapered on the inside edges as shown in Fig. 2, so they will come together, and slots must be cut through these sticks for the ends of sticks B and C to stick through (Fig. 3). Cut the slots for B 2 1-2 inches from the stern end, and the slots for C halfway between these and the bow end. Slip separators B and C into the slots, and then bind with strong linen thread, coated with glue to make it stick.



Bow hooks D (Figs. 1 and 4) support the bow end of the rubber motor, and are

bent out of a piece of heavy piano wire. Bend the wire V-shaped to fit the bow ends of sticks A, and bind to the sticks with thread (Fig. 1).

The bow ends of sticks A must have metal bearing-plates similar to E (Fig. 5) bound to them with thread. Bend these out of heavy tin or brass, and punch a hole in the position shown.

A pair of accurately made propellers can be purchased at toy stores, and from manufacturers of model aeroplanes. It is

not much of a trick to make a pair when you know how, and in another article I shall tell you about the work. Meanwhile, see what you can do unaided.

The propeller shafts (G, Fig. 8) are made of heavy piano wire. Bend one end into a hook (Fig. 7) to receive the end of the rubber motors, then run the other end (Fig. 7), slip a glass bead (H) over it for a "thrust-bearing," and run it through the propeller hub and bend over the side of the hub (Fig. 8).

The motors are made of strands of rubber. Rubber bands can be looped in one another, end to end, to form the strands, but strands all in one piece are better. Twelve strands are needed for each motor. Fasten the bow ends of the strands to wire rings (Fig. 6), so they may be slipped on and off hooks D quickly.

With the motors in place, the "elevator plane" I and "main plane" J (Figs. 1, 9 and 10) remain to be made. Elevator I is made of two wooden side strips 15 inches long, 1-16 inch thick, and 1-4 inch wide, connected with wide separators bent and joined to the strips in the manner shown in Fig. 11. The end wire tips should extend beyond the wooden strips 2 1-2 inches, and be bent to the angle shown. Cover the frame

with china silk. Sew or glue this on to the frame, then give it a thin coat of shellac.

The planes should not be fastened securely to the model aeroplane framework, but be held to it by rubber bands so their position may be adjusted to the points where they will give the model the greatest stability in flight.

# Saves Fryings for Gravy

To the Editor: We have a family of four. Instead of a too frequent serving of lemon pie—I make two at one time—I would use the lemons for lemonade, the eggs for meat and have some sugar left to sweeten sauce.

I seldom fry raw potatoes when they are high-priced or scarce. It takes such a quantity. I had supposed any leftover potatoes were utterly worthless until this winter I tried putting them in a porcelain basin, covering with milk and letting them simmer on the back of the stove for a boy who was out hunting. They were good and filled the boy.

Instead of fancy breakfast foods serve graham, cornmeal and oatmeal mush a part of the time.

When frying pork to be put down in lard, it is often necessary to rinse out the frying pans thoroughly several times if frying a large amount. I now save and cook this up and can for brown gravy—I used to throw this in the slop pail, thinking it useless to save. MRS. J. TEFFT.

M'Kee, Ore.

### PREPARES JUST ENOUGH.

To the Editor: I try to prepare just what I think will be enough for the meal. If there should be any left I make it over into something else for the next meal. The high price of meats makes one want something to substitute. There are many such things. As to garden, I can what vegetables I need for winter and dry fruit, such as apples, prunes and cherries.

MRS. M. H. TORPEY.

Farmington, Wash.

### One Starchy, One Green Vegetable.

With any meat one should serve one starchy and one green vegetable. A dinner made up of different rice dishes would not be attractive or satisfying. Dressing or dumplings with meat extends the meat food with a cheaper and less concentrated one.

### Dainty Dessert After Heavy Dinner.

A dainty and wholesome dessert should be served with a heavy dinner. Mince pie or plum pudding are not appropriate to serve after a turkey dinner. Chopped dates or raisins are good when added to cereal.

# DID YOU GET THE BULLETIN?

This is planting time for Bulbs, Roses, Fruit Trees, Rhubarb, Asparagus, Strawberries and bushes. It is also time to think about Incubators, Brooders and Chicks for the coming season.

Our bulletin gives you all the details necessary for successful planting and culture. Will be glad to mail you a copy upon receipt of a postcard.

Elliott 5150 Seattle 711 Madison St.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**

For Subscription to The Washington Farmer

**25c** For 1 Year

**50c** For 3 Years

**$1** For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

# Pleasing Clothes

## Aids Efficiency and Good Nature

That health, efficiency and good nature of any individual will be increased by wearing clean, comfortable and pleasing clothes is the opinion of Miss Edna E. Walker, emergency state leader home demonstrators, extension service State College of Washington. Miss Walker asserts that often the secret of being well dressed lies in one's ability to keep all articles of clothing clean and in good repair.

Mend clothes, if possible, before washday, advises Miss Walker, as rents grow in washing. Washing is facilitated by soaking the clothes to soften the fabric and loosen the dirt. The soaking is made more effective if soap, borax, ammonia or kerosene is added to the water. Yellow soaps are usually strong soaps, and should never be used on delicate fabrics. Boiling purifies and whitens clothes. Rinsing is a most important part of the washing process, for if soap is left in the clothes it may be very detrimental, bluing may react with the alkali of the soap and form rust spots.

When properly done, washing, cleaning and mending clothes is an art in itself, and should be studied if the best results are to be obtained and the full life of the cloth is desired.

### WAR TIME CAKES.

Many recipes have been sent out by the United States food administration since we have entered the war. The Farmer recently received the following cake recipes:

**Spice Cake, 100 Per Cent Barley Flour.**

One-half cup fat, two-thirds cup sugar (about 4 3-4 ounces) one cup sirup (11 1-2 ounces), three eggs, three-fourths cup milk, one teaspoon vanilla, one-half teaspoon ginger, six teaspoons baking powder, one-fourth teaspoon salt, one teaspoon cinnamon, one-half teaspoon cloves, one teaspoon allspice, three and three-fourths cups barley flour (10 ounces), one cup raisins.

Method: Cream the fat, sugar and egg yolk. Add the sirup and mix well. Add alternately the liquid and the dry ingredients, sifted together. Add the flavoring and fold in the well-beaten egg whites. Bake for one hour in a moderate oven (170 degrees C., 350 degrees F.). After 20 minutes raise the temperature to 250 degrees C., 400 degrees F..

**Spice Cake, No. 2.**

One-half cup fat, two-thirds cup sugar (about 4 3-4 ounces), one cup sirup, (11 1-2 ounces), three eggs, three-fourths cup milk (6 ounces), one teaspoon vanilla, one-half teaspoon ginger, six teaspoons baking powder, one-fourth teaspoon salt, one teaspoon cinnamon, one-half teaspoon cloves, one teaspoon allspice, one cup rice flour (5 ounces), one cup buckwheat (5 ounces).

Method: Cream the fat, sugar and egg yolk. Add the sirup and mix well. Add alternately the liquid and the dry ingredients, sifted together. Add the flavoring and fold in the well-beaten egg whites. Bake for one hour in a moderate oven (170 degrees C., 350 degree F.). After 20 minutes raise the temperature to 205 degrees C., 400 degrees F.

**Chocolate Cake.**

One-half cup fat, two-thirds cup sugar (about 4 3-4 ounces), one cup sirup (about 11 1-2 ounces), three eggs, three-fourths cup milk, one teaspoon salt, one cup rice flour (5 ounces), two cups barley flour (5 ounces), six teaspoons baking powder, one teaspoon cinnamon, one teaspoon vanilla, two squares chocolate.

Method: Cream the fat, sugar and egg yolk. Add the sirup and mix well. Add alternately the liquid and the dry ingredients, sifted together. Add the flavoring and melted chocolate. Fold in well-beaten egg white. Bake about one hour, starting in a moderate oven (350 degrees F., 177 degrees C.). After 20 minutes raise to 400 degrees F., 205 degrees C.

### SAVE THE FRUIT PITS.

Every American has the chance for direct war service that will save the lives of soldiers. Carbon is needed to make millions of gas masks for the American army. Cocoanuts have furnished much of this material, but cocoanuts mean ships, and during the present shortage material for carbon must be found nearer home. The pits of apricots, peaches, prunes, olives, dates, cherries and plums and the shells of Brazil nuts, hickory nuts, walnuts and butternuts make carbon for masks that will outlast the most diabolical of the German gases.

Here is work for all, every home, church and school. See that the work is started in your neighborhood. Place collection boxes in schools, churches, banks and stores, and above all in your own home, so your boys and girls can see the pile grow. It takes 200 peach stones, or seven pounds of nut shells to furnish carbon for a gas mask and save the life of an American soldier.

Dry the pits and shells before turning them in to the nearest Red Cross chapter. This organization is in charge of collecting all material.

### HOW TO MAKE KISSES.

Beat whites of three eggs very stiff with a pinch of salt. Beat in gradually one-half cup sugar, a pinch of cream of tartar, a few drops of any desired flavoring extract, the flour and nuts or spices. The following is the right quantity of the various flour substitutes to use: Three-fourths cup cornstarch or one cup rice flour, or one cup oat flour, or one cup corn flour or one-half cup each of cornstarch and soy bean flour sifted together. Three-fourths cup cocoanut or one-half cup walnuts or almonds, chopped fine; three teaspoons cocoa and one-half teaspoon cinnamon, or one teaspoon cinnamon and one-fourth cloves. Use a trifle less flour with the spices. Bake in a moderate oven, dropped in teaspoonfuls on an oiled pan.

**Wafers.**

Yolks of three eggs beaten very light. Beat in gradually one-half cup sugar, pinch of creaf tartar, the flour with a pinch of salt, one tablespoon of water and a teaspoonful any desired flavoring extract, nuts or spices. The following is the right quantity of the various flour substitutes to use: Three-fourths cup cornstarch, or one cup rice flour, or one cup oat or corn flour, one-fourth cup soy bean flour mixed with three-fourths cup of cornstarch or rice flour is good. Always try a little of the wafer dough, as the size of eggs varies and it is sometimes necessary to add a trifle more flour to prevent the wafers from spreading too much. Drop the batter in teaspoonfuls on an oiled pan, allowing plenty of room to spread. Bake is a moderate oven.—Mrs. W. F. S.

### SCRAP BOXES.

I wonder how many of the readers of The Washington Farmer save their papers. If you do not save them here is a good method to save the most important articles, such as recipes, helpful hints and any articles that will be of interest and use in the future:

Take small cardboard boxes or cigar boxes and put some paper neatly around them if they look unsightly. Label each box with the names of the articles that are to be put in it, as Poultry, Dairy, Household Hints, etc. By clipping out and saving the articles that are of interest a very good collection should be had in a short time.

When a particular article or recipe is wanted take the box that it is likely to be in and dump the contents on a table, and in a moment's time the one that is wanted will be found. C. J. M.

### CHOCOLATE DAINTIES.

One-half cup dates, 1-2 cup figs, 1-2 cup nut meats, 1 tablespoon orange juice, grated orange peel, 1 square unsweetened chocolate.

Put fruit and nuts through a meat chopper. Add orange juice, grated peel and melted chocolate. This mixture may then be molded into balls and rolled in chopped nuts or granulated sugar, or it may be packed in an oiled tin, put under a weight, and then cut into squares.

### SUGARLESS MARSHMALLOWS.

Two tablespoons gelatin, one-half cup cold water, two cups corn syrup, one egg white, one teaspoon vanila.

Soak gelatin in the cold water. Boil corn syrup to the crack stage and pour it over the gelatin, beating as it is added. Add egg white beaten stiff. Flavor with vanilla and beat the mixture until it holds very stiff. Pour into a pan thickly powdered with cornstarch and confectioner's sugar. Cut into squares when cold.

### BAKED CODFISH BALLS.

One cup codfish, two and one-half cups potatoes, one egg, pepper. Remove skin and bones from the codfish and cut into small pieces. Pare and dice potatoes. Cover fish and potatoes with water and cook until potatoes are done. Drain dry and mash fine. Mix egg and seasonings with potatoes and fish. Shape, and bake on an oiled pan until brown.

**Way to Save Fuel.**

You can save fuel in the war-saving times if you plan to bake when you bake and boil when you boil. If you have a roast for dinner, plan to bake your potatoes, have baked squash or baked tomatoes, and a pudding that can be cooked in the oven. Plan to have baked beans the next day, so that when your dinner comes out of the oven you can put the beans in to cook on the heat that would otherwise be wasted.

**Less Sugar in Tea and Coffee.**

Sugar in tea and coffee is frequently wasted because all of it is not dissolved. It is possible to use other sweetening in coffee, such as corn syrup.

# Saving Sugar

## Dry Fruits and Also Let Bees Help

By LISSIE C. FARMER.

There are several ways by which Pacific northwest householders can help the government save sugar and have more to send abroad and help win the war.

First, you can plant and raise plenty of the various products that produce saccharine substances. In many localities sugar beets will grow and syrup to be used in all kinds of cooking may be made from them. Sugar peas, parsnips, carrots and sweet corn contain considerable sugar, and these can be grown and used more in all kind of cookery. Almost all kinds of fruits contain sugar, greatest just when the fruit is at the right stage of ripeness. These can be dried and used in puddings, sauces, cakes and breads, lessening the amount of sugar required. Juices of fruits may be boiled down into syrups, retaining all the natural fruit sugar, and these syrups used in drinks, sauces and cooking.

Bees pay well for the work bestowed on them because they gather a good share of their own food from blossoms not otherwise used as food sources and do not require expensive housing, and the honey they produce is one of the best sweetening substances ever known, healthful to use and a splendid keeper.

It is not likely that much could be accomplished in growing sugar cane in our climate, as in most places the nights are too cool; but it is reported that the first cousin of sugar cane—sorghum—has been successfully grown by a Hood River man. If sorghum can be grown in the Hood River valley it can be grown in other northwest localities, and the molasses produced from this cane is a valuable sweetener.

Sugar maples thrive in our locality, growing very rapidly into healthy, graceful trees. They are easy to get started, are not particular about being crowded—in fact, they grow among other trees in uncleared land and can be tapped for sap when about 10 years of age. Why not, then, when setting out trees, do a little planning for the future and plant a few sugar maples? In a few years they will give you a high grade of syrup and sugar and they will require very little labor or attention in the meantime.

# Rabbit Meat

## But Few People Know Its Value

By H. E. GIBSON.

Comparatively few people know the food value of rabbit meat. The ablest physicians of our country have declared that tame rabbit meat is more nutritious than any other kind of meat. The taste is preferred by many people to poultry. All that is left to be done is to educate the people to the peculiar advantages of rabbit meat.

Rabbits can be kept cleaner, perhaps, than any other meat-producing animals in sanitary out-door hutches. They are very particular about their food—much more so than either hogs or chickens—refusing to touch any kind of food that may be only slightly tainted, while hogs and chickens are noted scavangers. It is remarkable how people become educated to choose as choice food for the best tables the least particular of the meat-producing animals. It now becomes those who are interested particularly in the rabbit business to interest our people in becoming partial to a better, safer and cleaner meat food supply.

One can keep a few rabbits in their back yard and any time fresh meat is wanted, a young rabbit can be killed, dressed, cooked and on the table inside an hour's time. Here is a simple, cheap method of keeping an ever-ready supply of fresh meat always on hand.

There are many little plans one can think of to get people interested in eating rabbit meat. Suppose a special supper or banquet could be gotten up in your community, at which "dressed hare" should be the principal article of diet. Make a present of an occasional rabbit to some prospective customer and they are almost sure to become a regular weekly purchaser. Get after the hotels and restaurants, offer some special inducement just to get them started and once they get the taste you are sure to have them for good.

Talk rabbit meat. Ask for it when having a meal at a restaurant, hotel or public eating place of any kind. Make sure you have rabbit on the brain and by being enthusiastic yourself you will arouse interest in others. There is no other way. When you get one or two started they will tell others, so the news will spread and rabbit meat some day will be the most popular—as it ought to be—meat on the market.

### SOME LIBERTY LOAN SLOGANS.

Wear your old clothes and buy Liberty bonds.
Liberty bonds or German bondage.
"Come across" or the kaiser will.
The soldier gives; you must lend.
Liberty bonds or German taxes.
Buy over here to win over there.
It's billions for defense or billions for indemnity.
For Foch and freedom; buy bonds.
A bond slacker is the kaiser's backer.
A man who won't lend is the kaiser's friend.
The more bonds you buy the fewer boys will die.
Let all get on the bond wagon.
Be one of the millions to lend the billions.
Dig up the coin and bury the Hun.
Buy bonds before it's verboten.
Idle dollars are pro-German.
Put the "pay" into patriotism.
Bonds speak louder than words.
If you can't fight, your money can.
Freemen buy bonds; slaves wear them.

### Use Fruits.

Chopped figs, dates, or raisins cooked with cereals will give a sweet flavor without the addition of sugar.

Use more fresh and dried fruits in place of rich pastries and sweet puddings. Fruit cakes and puddings may be made without sugar with excellent results.

### Substitute Other Cereals for Wheat.

Use breakfast foods made from corn, oats and barley. Use yeast breads, griddle cakes, muffins, biscuits, cakes and desserts in which some buckwheat, cornmeal, barley or oats is used.

### Cottage Cheese Salad.

Cottage cheese mixed with chopped nuts, celery, olives, pimento, pickle, onion, or caraway seed may be made into balls and served on lettuce leaves with salad dressing.

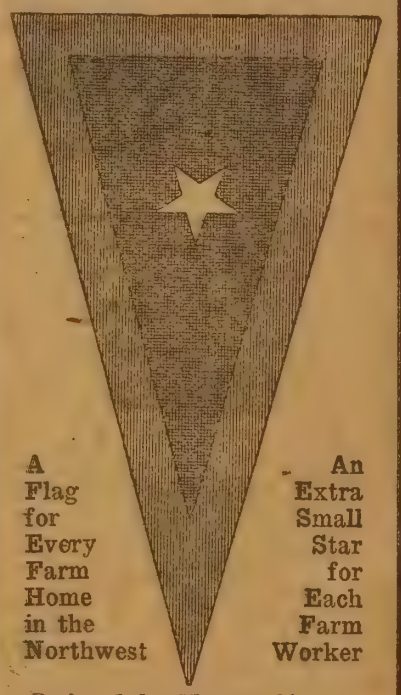
**RECORDS FOR ALL MACHINES**

We carry all makes. Victors Columbias, Edison and Blue Amerolas. RECORDS SENT TO YOUR HOME ON APPROVAL. Pay for only those you wish to keep. Records sent parcel post prepaid to any address. Write for our monthly supplement, which carries all the new music. Sent FREE.

Hopper-Kelly Co.
SEATTLE-WASHINGTON.

**FISH** Salmon, in brine, 100 lbs., meat, shipping weight 165 lbs., price $14; 50 lbs., $7. Smoked salmon, 20 lbs., $4.00. Dried cod, 10 lbs., $1.75. Herring, in brine, 50 lbs., $5.00; 25 lbs., $2.75. Cash with order.

T. A. BEARD.
4322 Winslow Place, Seattle, Washington.



**ICE FOR THE FARM**

The government urges the use of ice on the farm. It means food saved. Latham's Ice Molds solve the problem for those not situated near a stream or lake. They make good, pure ice right at home.

WARREN LATHAM, Mfg., Spokane, Wash.

GOOD PROFITS TO AGENTS
Cabbage Cutter with 6 Knives
that always keep sharp. Slices cabbage and all other vegetables easily and rapidly. Sent prepaid for $1.00. 3 for $2.00. LUSHER BROS., Elkhart, Ind.

## FARM SERVICE WAR FLAG

Designed by The Washington Farmer.
(Patent applied for.)

### Get a Farm Service War Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

Convenient Order Blank.

..... 1918.

THE WASHINGTON FARMER,
Review Bldg., Spokane, Wash.
Enclosed find five cents (5c), for which please send me a Farm Service War Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

**When you write to advertisers be sure to state that you saw their advertisement in this paper.**

Dear Corner Cousins: I have a treat for you this week. We have a letter to us from a "cousin" who has lived longer than any of us—such an interesting letter, too. He was born in 1847—a year after this country made the Oregon boundary treaty with Canada, and a year before gold was discovered in California. He did not tell us his birthday or I know some of us would write to him on that day. I do not suppose I could find a "twin" for him, though.

He was one of those gallant boys who wore his country's uniform when it was blue instead of khaki, but the same kind of a heart was under the blue. He offered his life for his flag as freely and generously as our brothers and cousins and friends are doing now, and all was for liberty.

What wonderful things he has seen in his 71 years. There were no automobiles then—no trains across the country. This beautiful land we live in now was then a wilderness with only wild Indians in it and wild animals. Now we have several Indian cousins, as bright and smart and good and just as dearly loved by Aunt Nellie as any of her great family of nephews and nieces.

I know we all want him to write to us again and if he feels able, to tell us all about the times when he was a little boy. Isn't it nice that he likes to read our Corner letters? Here is what he writes to us:

"As I am an old soldier I thought I would write a few lines. I served five years in the regulars from 1875 to 1880 at the Presidio, San Francisco, Cal. I have bought one war saving stamp and expect to buy some more when Uncle Sam makes me another pay day, which comes in next month, on the 4th or 5th of September. I am past 71 years, but I guess I am not too old to write you; will do it just the same. I read the story, 'Trappers of the Ozarks,' which occurred many years before my father and mother were born, but it is quite interesting all right, and I read all of the stories and all of the letters that come each week from the little folks. I think they are quite interesting and such nice letters from the little ones. It helps them in many ways to write letters. For fear I will tire you, I will close with many good wishes to the Farmer. I bid you adieu for this time.—E. L. B., Cherryville, Ore. (I am a subscriber)."

"I want to be a farmer when I get big because I like the looks of the stuff as it comes up," writes Graham Potter, of Mead. Graham has made a good beginning, for this summer he dropped potatoes into the planter for nearly 10 acres. The hardest part of farming, Graham thinks, is the pulling and digging. Graham's sister, Ruth, writes to the Corner, too. She was eight years old, February 4. Ruth tells us that they have a horse named Pat and one calf named Beauty.

Cousin Verna Tittle, and her sister, Ruth, helped papa put the crop in this spring. They thought it was lots of fun to plow. Verna lives at Republic. Last year when she was raking, the horse ran away with her and she was hurt so badly that she couldn't walk for a week. Papa was near when the accident happened so he took her home on a load of hay. Vera and Ruth and papa and mamma are charter members of the grange.

Arnold Menger can beat many men when it comes to playing horseshoe and he surely likes to play it. Arnold's parents live on a farm near Davenport and so Arnold has his work as well as his pleasures. He tends to all the stock and drove derrick last summer in harvest time. He has a 22-rifle and loves to hunt ducks and rabbits. He was 12, March 7.

How many cousins like to knit? Fern Carlisle of Espanola, says that she does. Fern has auburn hair and blue eyes and is very big for her age, she says. She is 12, October 4. Her home is on a farm about two miles from Medical Lake. She calls her pet calf, June.

A dog, Sport, and a cat, Tom, are Beulah Buckley's pets. Beulah lives at St. Andrews, and she was 11 years old, December 29. She has three brothers and three sisters.

A big wheat ranch near Waitsburg is where Cousin Dorothy Harris lives. Dorothy takes music lessons. She has a dog named Sport and a cat named Lion.

Gyp, the dog, and Buster, the calf, are Hazel Nelson's pets. Hazel lives at Diamond, just a little ways from the schoolhouse. She had a small garden this summer. Hazel was 10, May 30, and is a Red Cross member.

Living on a ranch with sister and taking care of her little niece, Georgia Jane, is the way Josephine Holland of Davenport spent her summer days. Josephine wonders if little Georgia Jane has a twin? She was 1 year old April 25, and she can walk and wants to go everywhere that Josephine goes. Josephine was 12 years old November 16. She has thrift stamps.

Echo Dell is the name of the school that Bertha Wahl of Warden, attends. Bertha was 11 years old January 8, and is in the fifth grade. Has she any twins?

Who was 10 years old September 4? Gladys Hill of Palouse was and she is looking for a twin. There are seven of us in the family, writes Gladys, and my cousin lives with us. Gladys wishes some of the cousins would write to her.

Cousin Margaret Silver lives two miles and a half from school. Her address is Box 80, Route 6, Spokane, Wash. Margaret was 10 May 30. Has she a twin? There are about 200 chickens, two cows, two horses and one cat Mike, on their farm.

Here is another little cousin who reads the letters every single week and enjoys them, Marvel Parriett, of Goldendale. Marvel is 10 years old, is in the fifth grade, and for pets has a goat, 37 chickens and one cat.

A pet cat, six little kitties, an old pet hen and a doll named Brenty, share the comfort of Cousin Clara's playhouse. Clara Baskette lives at Colfax, and just came to Washington one year ago from Tennessee. Blue-Eye, her pet cat, has one blue eye and one yellow one. Clara is a little Christmas present. Her birthday is December 25, and she is 7 years old. Can you guess her riddle? God never saw it, Washington might have seen it and we see it every day.

Cloe Jolly and her sister, Evelyn, live at St. Andrews, and they both wrote nice letters to the Corner. Cloe has made one handkerchief and knitted one washcloth for the Red Cross. She was 12 years old March 10, and Evelyn was 11 July 11. Cloe's pony, Bess, is white and very gentle. Evelyn calls her pony Bird and she has a little dog named Gippy. Their home is on a 320-acre ranch.

A five-acre orchard tract at Opportunity is the home of our 7-year-old cousin, Caroline Hunt. February 9 is her birthday, and she would like to have a twin. Caroline's father keeps White Leghorn chickens. Caroline buys thrift stamps with the money she earns by helping mama with the dishes and by picking berries.

It averages 103 in the shade in Cuba, and there is very little shade at that. Stella B. Ervin of Mead has a cousin who lives there, and that is what he told her. Stella helped papa cultivate this summer and raised a garden of her own. She had a birthday just a little while ago. She was 15 September 16. This winter she is going to Spokane high school. Stella likes the letters that Sallie Garry writes and would love to correspond with her.

Father, sister and my two brothers are in Canada, writes Norma Oliver, who lives on a 400-acre farm at Palouse. Father is coming back this fall, though. Fay and Fannie Sheppard, Norma's schoolmates, write to the Corner also.

**Picking Wild Currants.**

Dear Aunt Nellie: May I join the Corner? I haven't found a twin yet, but I know I will find one. I am 11 years old and in the fifth grade. My birthday is May 7. I have a sister but no brother. My sister's name is Ellen. She is nine years old and in the fourth grade. Her birthday is June 15. Has she a twin? My sister and I like to read the children's letters. We have two dogs, Shep and Towser. They are shepherd dogs. We have two working horses, Betty and Nancy. We have one pony, Jim, five colts, Molly, Merrylegs, Nagger, Rosa and Hutsytutsy. We live on a 160-acre farm and rent 160 acres, so we have 320 altogether. We have a dairy farm, A creek runs through our place. In summer we wade and swim. I can knit and have knitted a doll sweater, cap, stockings and a scarf. I have two cousins in the war. My sister and I have each two war savings stamps and are going to get more. We have been out in the pasture picking wild currants.—Agneta Bruhn, Wilbur, Wash.

**Hazel Has One Brother.**

Dear Aunt Nellie: I am 11 years old and am in the sixth grade at school. I live on a ranch. It is about eight miles from town. We have two horses, one colt, two calves, one cow and a dog. I have one brother. His name is Russell Crouch. He is 16 1-2 years old. My father takes the Farmer and I like to read the letters very much.—Hazel Crouch, Tonasket, Wash.

**Shep Chases the Kitty.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and was glad to write. We went to Rosalia to meet my mama and I asked her if she took the Farmer and she said "No." Shep is a big dog and every time he sees kitty he starts after her and so kitty goes away.—Beatrice Clay, R. F. D. 2, St. John, Wash.

During the last two weeks Aunt Nellie has received letters from the following cousins: Myrtle Green, Myrtle Garrett, Luella Venneberg, Ruth Reynolds, George Turner, Anne Raisio, Esther Crider, Virginia Clarke, Anna Brandt, Margaret Wilkinson, Helen Huguenir, Bertha Brown, Inda Scott, Eva Dunlap, Ivy Ward.

# King Segis Pontiac 13th

On October 16, P. A. Frakes of Scappoose, Ore., the pioneer Holstein breeder of the northwest, will sell 70 head of his fine Holstein herd. Mr. Frakes' advancing years and the shortage of labor, which makes the burden of running a big herd of cows in milk too great for him, are the chief causes of the sale. The picture herewith is that of King Segis Pontiac 13th, one of the herd bulls, to which many of the cows are bred. He is a grandson of King Segis and King of the Pontiacs, two of the greatest sires the Holstein breed has ever produced. The sale will be held on the Frakes farm, and trains at Scappoose will be met from both directions. H. A.

# News for Breeders

Mrs. M. E. Vessey of Yakima, Wash., who is considered one of the best judges of sheep in the Yakima valley, was a good buyer at the state fair sheep sale. She paid $140 for one Butterfield Rambouillet ram and took others at high prices. Mrs. Vessey ranges about 9000 sheep in the Wenatchee forest, and carries over 5000 breeding ewes.

J. H. Compou of Walla Walla, Wash., during the Washington state fair purchased from Mr. Calkins of Middledale farm, Cresswell, Wash., two 3-year-old Guernsey cows and one yearling heifer, all of May Rose breeding and sired by Longwater Emigrant. W. E. Brown of Walla Walla was also a Guernsey purchaser, taking home a yearling heifer sired by Imp. Ivy's Masterpiece. Besides several other heifers, Mr. Calkins sold all his young bulls, Alphaland Farms, Grandview, Wash., taking one good youngster and C. R. Angel of Zillah, Wash., another. The largest shipment is to C. R. Schurch of Cloverdale dairy farm, Deer Lodge, Mont., who got the first-prize bull calf, Middledale King of the May.

Both the grand champion Holsteins at the Washington State fair were the get of E. B. Marks' herd bull, Sir Bessie Fobes Tritomia and most of the prize winning young stock shown by Mr. Marks are by him.

Members of the boys' pig clubs made all the Poland China exhibits at the Washington State fair. The entries were fully as creditable as is usually shown by older breeders and the young men have cause to feel proud.

Professor Hickman of the animal husbandry department of the Idaho University, who judged swine at the Washington state fair, purchased a young Berkshire boar pig from Earl Wood of Silverton, Ore., who exhibited a herd. The pig was dropped July 3 and is out of the grand champion sow at the Pacific International stock show last winter. He is large and thrifty and promises to be a show animal. Mr. Wood also made several other sales. H. A.

ST. MAWES LADD.

G. G. Hewitt of Monmouth, Ore., has for his Jersey herd sire St. Mawes Lad, and Mr. Hewitt believes this bull has greater production represented by his three nearest dams than any other Jersey bull in the world. St. Mawes Lad's dam is St. Mawes Beauty, the heifer with which Ed Cary won first in her class as a senior yearling at the Panama-Pacific stock show and first and junior champion at the Oregon State fair. She first freshened at 1 year and 11 months and produced 587 pounds of fat or 690 of 85 per cent butter or 703 of 80 per cent butter. Her next freshening was as junior 3-year-old, and she produced 767.2 pounds of fat, which was within three pounds of a world's record.

# Wheat Feeding Permits

Charles Hebberd, federal food administrator for Washington, has issued instructions which go more fully into detail of feeding low grade wheat to stock. He says:

On account of shortage of feed due to severe drouth conditions of the last season the food administration has made a special ruling applicable to the state of Washington and other states of the northwest zone relaxing the prohibition against feeding of wheat to animals and poultry.

Any wheat grading below No. 3, or which for any reason is not of a good milling standard, may be released for feeding. Also all wheat at remote points inaccessible to transportation and all wheat grown in such small quantities as not to be readily marketed may be thus released for feeding.

Samples of all such wheat must be submitted to the county food administrator, and none shall be fed until the county food administrator has issued a written permit to the owner of such wheat.

The prohibition against flour mills, grist mills and others grinding wheat for this purpose may be considered suspended in all cases where the county food administrator has issued a permit to the owner to feed such wheat.

County administrators will please impress upon all applicants for permits that it is not the intention of the food administration to issue permits to feed wheat except where it is impossible to obtain coarse grain for feeding purposes at reasonable prices. It is the duty of every feeder of stock to make every reasonable effort to supply his feed requirements without using wheat.

The foregoing permission from the food administration is made specially to the states of this zone, and must not be abused. In case of any abuse of the privilege granted or of any unfair practice as to price or otherwise, the county food administrator is authorized to cancel any permit issued by him.

County food administrators will exercise their best judgment in the issuance of wheat feeding permits, according to the foregoing limitations. In order that there may be uniformity in all sections, however, they are requested to notify J. K. Smith, chairman of milling and feeding division, food administration, Spokane, Wash., of each permit issued, forwarding sample on which permit was issued. Permit may be granted at once, however, by the county food administrator with the understanding that it shall continue effective unless disallowed by the milling and feed division.

**Barley as Breakfast Food.**

Pearl barley is also very good as a breakfast. We like it with milk or cream. Some of the family like a little bran stirred in it and a cup of seedless raisins.

**Just One Hour's Demonstration**

That's all we need to prove to you the merits of The Lauson Farm Tractor. Write and let us arrange for the test.

The LAUSON TRACTOR 15-25 Full Jewel

is just right for the average farm. It contains no experimental feature. Every part is standard. Driving gears are enclosed and run in oil. *Twenty-four* Roller and Ball Bearings are used in its construction.

The engine, of course, is the main thing. Our four cylinder *Heavy Duty Valve-in-Head Engine* is a great power plant—economical in fuel, reliable and easily controlled.

*Write us or our distributor for name of Lauson dealer in your locality.*

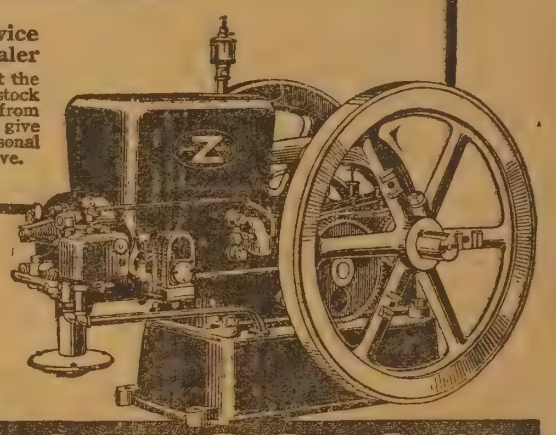
# The Engine Selected by over 150,000 Farmers



**RECORDS made by over 150,000 practical farmers buying over $10,000,000 worth of Fairbanks-Morse "Z" Farm Engines have never been equaled in Engine history.**

**Demand, as they did:**

1. Fairbanks-Morse Quality.
2. Economy in first and fuel cost, and low upkeep.
3. Simplicity and Staunch Durability.
4. Light-weight, Substantial, Fool-proof.
5. Gun-barrel Cylinder Bore.
6. Leak-proof Compression.
7. Complete with Built-in Magneto.
8. More than Rated Power.

**You Also Get Service from your Local Dealer**

Your local dealer has just the type "Z" for your needs in stock waiting for you. Buy from him. He is prepared to give prompt delivery and personal service right where you live.

The 3 and 6 H. P. sizes are built to use kerosene, distillate, stove oil, tops or gasoline. The 1½ H.P. size uses gasoline only.

## HOLSTEIN CATTLE

### YOU SHOULD COME
*AND BUY*
### HOLSTEIN CATTLE

**October 16, 1918.**

Here you have an opportunity to take advantage of the thirty years' experience of the pioneer breeder of the west. This sale will contain about seventy head from the well known herd owned by

**P. A. FRAKES, Scappoose, Oregon**

including herd bulls, cows, heifers and young stock of both sexes. There are cattle in this sale good enough to win in the show ring and capable of taking high A. R. O. records. Not a three-teated cow in the offering and every animal has a federal certificate of health.

The catalog tells all about them and how to reach the sale.

Send to the sale manager for one.

P. A. FRAKES, Owner, Scappoose, Oregon.
E. A. Rhoten, Sales Manager, Salem Ore.

Col. Geo. A. Gue
Col. J. W. Hughes
Auctioneers.

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific International sale, 1914, for $1025, and whose dam has A. R. O. record of 31.97 lbs. butter in 7 days; 118.89 in 30 days, and big records all through his pedigree.

ERNEST JOHNSON, Scappoose, Ore.

### 365 DAY HOLSTEINS

We are offering a bull calf, born June 27th, the two nearest dams of which average 19,866 lbs. milk, 855 lbs. butter for their yearly A. R. records. One a Jr. 2, the other a junior 4-year-old. The herd with yearly records.

WESTERNWOLD RANCH, Prineville, Ore.

REGISTERED HOLSTEINS.

Bull calves for sale, with good A. R. O. backing.

BEEBE BROS., R. F. D. 2, Rupert, Idaho.

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

H. R. BOOMER, New Plymouth, Idaho.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Sept. 28.—Rushes to sell corn brought about a sharp fresh break today in prices. Broadening of the entente offensive, together with peace movements, furnished most of the impetus. The market closed unsettled 1 3-8 to 3 1-4 net lower with October 139 1-2 to 139 3-4 and November 139 to 139 1-8. Oats lost 1-2 to 7-8. The finish in provisions ranged from 85c decline to 12c advance.

Liberal buying for the seaboard kept the oats market from any radical setback. What weakness there was seemed due to sympathy with corn.

Provisions showed weakness, owing to an official denial that a guaranteed minimum price on hogs was contemplated. Liberal shipments for the week acted later as something of an offset.

### Cash Quotations.

CHICAGO, Sept. 28.—Corn, No. 2 yellow, nominal; No. 3 yellow, nominal; No. 4, nominal. Oats, No. 2 white, 72 1-2@73 3-4; standard, 73 1-2@73 3-4. Rye, No. 2 nominal. Barley, 96c@$1.05. Timothy, $7@10. Clover, nominal. Pork, nominal. Lard, $24.85. Ribs, $23.12@23.75.

### Pacific Northwest Grain.

PORTLAND, Ore., Sept. 28.—Grain September delivery bids: Oats No. 2 white feed, $60; barley standard feeds, $48; A, $49; oats, No. 2, $59.20; barley feed, $48.50; A, $49; oats No. 3, $52; chopped, $53; corn, yellow, $63.50; mixed, $62.50. Eastern oats and corn in bulk bids: Oats No. 3 white, $52; 38-pound clipped, $53; corn No. 3 yellow, $64.50; No. 3 mixed, $63.50.

### Minneapolis Grain.

MINNEAPOLIS, Minn., Sept. 28.—Flour unchanged. Shipments 86,992. Barley, 88@94c. Rye, $1.55 1-2@1.56 1-2. Bran, $28.77. Wheat receipts, 609 cars, compared with 378 cars a year ago. Cash: No. 1 northern, old, $2.22 1-2; corn, 3 yellow, $1.49@1.52; oats; No. 2 white, 69 1-4@70 1-4c. Flax, $3.91.

## Live Stock Quotations.

### At Chicago.

CHICAGO, Sept. 28.—(United States Bureau of Markets.)—Hogs—Receipts 8000; fully 10c higher than yesterday's average. Spots showing more gain. Butchers, $19.50@20.10; light, $19.60@20; packing, $18.60@19.35; rough, $18@18.50; pigs, good and choice, $18@18.50.

| Tuesday, Sept. 24 | 166 | 22 | 164 | 2 |
| Monday, Sept. 23 | 491 | 54 | 470 | 41 |
| Week ago | 186 | .... | 96 | 4 |
| Year ago | 127 | 2 | 492 | .... |
| Two years ago | 1 | .... | 12 | .... |

As compared with a week ago medium and choice steers unchanged, common to fair, 10 to 25 lower. Stockers and feeders unchanged, with fair demand. Cow stuff declined from 25 to 50 cents, with a full 50 cents off on canners. Bulls and calves unchanged. The calves received during the week have been thin and poor quality.

| | |
|---|---|
| Prime steers | $12.25@13.25 |
| Good to choice steers | 11.00@12.00 |
| Medium to good steers | 10.00@11.00 |
| Fair to medium steers | 8.50@ 9.25 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 8.00@ 9.25 |
| Medium to good cows and heifers | 6.00@ 7.25 |
| Common to medium cows and heifers | 4.75@ 6.00 |
| Canners | 3.00@ 4.50 |
| Bulls | 5.00@ 7.00 |
| Calves | 6.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

Compared with a week ago prime mixed hogs declined 10 cents and stockers and feeders 25 cents. The market closed firm at the following:

| | |
|---|---|
| Prime mixed | $19.50@19.75 |
| Medium mixed | 19.00@19.50 |
| Rough heavies | 18.00@18.75 |
| Pigs | 18.25@19.00 |
| Stockers and feeders | 16.50@18.50 |
| Bulk of sales | 19.25 |

Compared with a week ago, lambs declined 50 cents. Other classes of sheep unchanged. The market is steady, with a fair demand for fat sheep and lambs.

| | |
|---|---|
| Prime lambs | $13.00@14.50 |
| Fair to medium lambs | 11.00@12.00 |
| Prime yearlings | 10.00@11.00 |
| Prime wethers | 9.50@10.25 |
| Best mutton ewes | 8.00@10.00 |
| Breeding ewes, 1 to 4 years | 14.00@18.00 |

### At North Salt Lake.

NORTH SALT LAKE, Utah, Sept. 26.—Cattle—Receipts, 363 head. Choice heavy steers, $11@12; good steers, $9.50@10.50; fair steers, $8@8.50; choice cows and heavy heifers, $7.50@8.25; fair to good cows and heifers, $6.50@7.25; cutters, $5.75@6.25; canners, $4.75@5.50; fat bulls, $6.50@7; bologna bulls, $5.50@6.25; veal calves, $9@11.

Hogs—Market steady. Choice fat hogs, 160 to 250 pounds, $18.75.

Sheep—Receipts, 3161 head. Choice spring lambs, $14@15; wethers, $9@10; fat ewes, $8@9.

## Seattle Grain.

SEATTLE, Sept. 28.—In place of the 250,000 tons of flour expected for October business, the government has let contracts for 35,000 to 40,000 tons, according to the apportionment of 6000 tons to Puget sound mills, indicating that while some ships for moving the flour have been secured for that month, only a small percentage of the tonnage needed to clear this port of accumulated wheat and flour will be available. This situation interests every wheat farmer in Washington, Oregon and Idaho, for if ships to move flour and wheat are lacking, it will mean a backing up into the country, where growers must hold their grain in the interior, paying thereby additional holding charges in storage, insurance and interest.

Sessions were held this week between millers and the commissioners of the port of Seattle in regard to wheat storage. All the bulk wheat space, consisting of 1,500,000 bushels, had been leased to private interests. Millers contended that as a war emergency, and in view of the fact that the wheat and flour were for government use, this space should be prorated. The commission took the ground that since these leases had already been negotiated, it has no recourse. Millers objected to the lease because it was in favor of the Tri-State Elevator company, a farmers' organization, and Kerr, Gifford & Co., exporters, neither of which, millers pointed out, paid any taxes to build the public warehouses. Millers said the commission stood firm, declining to alter or amend its former action. Farmers who are endeavoring to get their grain off their hands and the cash in the bank before they are compelled to pay additional costs for holding the wheat at home will, millers declare, pay a good part of the penalty from the decision of the Seattle port commission when large empty storage spaces await the pleasure of private lessees.

The embargo against wheat shipments into this terminal placed by the United States railway administration eight days ago has been lifted in part. Grain up to 60 cars a day, or one-third the loading capacity, may now be shipped in.

## Portland Market.

PORTLAND, Sept. 30.—The shortage of dairy produce is becoming acute and no relief is expected until the fall rains set in. Cubes are holding firm at 60 cents and prints at 61@62c in box lots. Cheese is very firm at the recent advance.

Lighter receipts of Oregon ranch eggs have added strength to the egg market, though there is still a fair supply of Eastern on the market, and storage stock is being withdrawn continually.

There are fair arrivals of poultry and dressed meats, but no more than is needed.

The potato market is gradually declining under larger supplies of home grown stock. Yakima Netted Gems are quoted easier at $2.50@4.75, Oregon Burbanks are moving at $2.25@2.50, and Idahos at the same range.

There is also a weaker feeling in the onion market, owing to larger receipts of Oregons, which are selling at $2@2.50. The top on California Browns is $2.50.

Butter—Cubes, extras, 60c; prints, 61@62c; butterfat, No. 1, 65c.

Eggs—Oregon ranch, candled, 50@53c; selects, 54@55c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 33c; Young Americas, 34c per lb; Coos and Curry, f. o. b. Myrtle Point, triplets, 32 1-2c; long horns, 33 1-2c per lb.

Poultry—Hens, 26@27c; broilers, 27@30c; ducks, geese and turkeys, nominal.

Pork—Fancy, 25c.

Veal—Fancy, 21c per lb.

Potatoes—Oregon, $2.25@2.50 per cwt.

Hay—Buying prices, f. o. b. Portland; Eastern Oregon timothy, $30 per ton; valley timothy, $29; alfalfa, $27; valley grain hay, $26@27; clover, $28; straw, $9@10.

## Portland Grain.

PORTLAND, Ore., Sept. 30.—Local grain prices are following the east downward. There was another drop of 50 cents at the close of the week, following a series of declines. Sacked oats closed at $59.25@60, bulk oats at $52@53, bulk corn at $62.50@64.50 and barley at $48@49. The demand was nominal. Considerable quantities of California barley is coming up by rail and boat. Millers are looking for the acceptance by the government of bids for several hundred thousand barrels of flour for October shipment.

Refusal of grain handlers at some of the Portland docks to continue working at the present scale of wages, 70 cents an hour straight time and $1.05 overtime, resulted today in a government embargo being declared against further shipments of wheat to the exporters here who are affected by the strike. About 150 grain handlers are out. They made a demand a week ago for an increase of 80 cents straight time and $51.20 overtime. The employers proposed that the demand be arbitrated and that meanwhile the men should remain at work. This they declined to do after several fruitless conferences.

## Butter and Eggs.

PORTLAND, Ore., Sept. 24.—Butter, prints extras, 61@62c; cubes extras, 60c; prime firsts, 58c; dairy, 36c. Butterfat, Portland delivery, No. 1 sour cream, 65c.

CHICAGO, Sept. 28.—Butter unsettled; creamery, 51@58c. Eggs higher; receipts 3720 cases; firsts, 48c; ordinary firsts, 44@46c; at mark, cases included, 44@47c.

SAN FRANCISCO, Sept. 28.—Butter unchanged. Eggs, fresh extras, 65 1-2c; fresh extra pullets, 55 1-2c. Cheese, new firsts, 28c; new California young Americas, 55 1-2c.

# Farm Building Operations

## *Should They Be Restricted by War Industries Board?*

The farmers' and business men's organizations of Mitchell, S. D., recently appealed to the council of defense with reference to the restriction of building operations by the war industries board. Here is their statement:

With reference to recent action of the war industries board and of your body in in the matter of restricting building operations, and in hearty agreement with the manifest purpose thereof, we are constrained to suggest the vital necessity of securing a modification of the regulations established, in so far as they hamper, or tend to discourage the construction of farm buildings. The increased production of grain, which is rightly demanded, makes adequate storage capacity absolutely essential but with the announced policy of holding a large reserve of food grains in storage until after next harvest, it is evident that even a normal yield in 1919 would result in serious congestion, unless immediate action is taken to stimulate the construction of granaries and farm elevators.

With a minimum loss of 30 per cent of feed (and food) value of corn when not reduced to ensilage, the construction of silos is evidently an important conservation measure.

In the proper housing of farm animals much remains to be done in securing a maximum of dairy and meat products from the feed and labor devoted to these purposes.

The loss incident to lack of implement sheds for the proper storage of farm machinery when not in use, is proverbial and it is unthinkable that, in the present stress, such waste may be ignored.

Again in the matter of marketing small grain, two related subjects demand attention, viz.: Storage at the farm when threshed, and properly cleaning the grain before marketing, the adoption of which procedure would in some cases require the construction of granaries and small elevators.

The shortage of labor, intensified by the extended draft will make it very difficult to deliver the grain from the field to the public elevator, even though such storage is found available and in any event, the fact can not be gainsaid that every bushel of grain should be cleaned and the screenings reduced to feed at the point of production, the clean grain being marketed as needed or indicated by the government.

If a reserve of wheat is to be held as a war measure, grain storage capacity must be increased. We submit that this construction should be on the farm.

In the increased acreage called for, new farms are being opened up and new sets of buildings required, the cost of which will usually exceed the exemption heretofore named.

Lastly, if permits are to be required for any buildings as herein indicated, the delay incident thereto, would in many cases prevent their construction, which is so urgently required under present conditions.

In view of the foregoing, we respectfully urge that farm buildings generally be exempted from the building regulations and that farmers be requested to prepare not only for increased production, but also to save the waste that will accrue from inadequate housing.

If this last suggestion is followed, attention may well be called to the fact that necessary building should be attended to, if possible, before field work opens next spring as a serious shortage of mechanics seems inevitable after that date.

## Seattle Market.

SEATTLE, Sept. 28.—Hope of lower apple prices vanished today with authentic advices from eastern Washington that worms, developing late in the season, had cut 4000 carloads of apples off the market. Both Wenatchee and Yakima valleys are affected, and extra fancy fruit in Jonathans and other standard varieties have dropped to the minimum.

Digging time in the White River valley is expected to begin this week. Growers are willing to sell, and there is a small movement at $30@35 f. o. b.

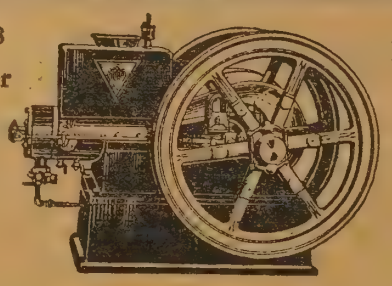
Predictions of a barren December butter market, with retail prices of $1 per pound, were made by Seattle city creamerymen today. Vigorous efforts have been made by Seattle jobbers to buy in California, Idaho, Utah, Colorado or any eastern point that seems to offer any encouragement, practically without success.

### Buying Prices.

Eggs—Select ranch, 56@58c per doz; pullets, nominal per doz.

Butter—Fresh dairy, 32c per lb; butter fat, 65c per lb; bakers', 46c per lb; raw milk, $3.10 per cwt.

Poultry—Broilers, live, 1918, under 2 lbs, 30c per lb; 2 lbs and over, 28c per lb; hens, 3 1-2 to 4 lbs and up, 27c per lb; under 3 1-2 lbs, 25c per lb; old roosters, 17@18c per lb; ducks, live, fat, 23c per lb; squabs, large, $3.50 per dozen; geese, fat, live, 21@22c per lb; Belgian hares, 12@16c per lb; guineas, $7 per dozen; turkeys, young toms and hens, dry picked, 10 lbs and up, 30@35c per lb.



Hogs—Light, 21@23c per lb; heavy, 19@21c per lb.

Beef—Steers, fat, 12@15c per lb; heifers, fat, 14@15c per lb; cows and bulls, 11@14c per lb.

Veal—Fancy light, 20@21c per lb; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb; spring lamb, fat, dressed, 25c per lb.

1 3-4 to 28 Horsepower

For Gasoline or Distillate

# Alpha Gas Engines

# SAVE

*Work*
*Time*
*Money*
*Fuel*

Will economically handle all your pumping, drive the feed cutter, grain separator, churn, washing machine or separator.

Save time and money because you never have to "fuss" with an Alpha. It's always ready. Fine materials, high class workmanship and a correct, simple design, insure smooth, steady running and long service.

A gallon of gasoline or distillate when supplied to an Alpha engine will produce 25% more power than an ordinary engine and 1-3 more power than the average cheap engine.

**A TYPE AND SIZE FOR EVERY REQUIREMENT.**

Write today for full information. What is your power-problem? Our experience is at your service.

**DE LAVAL DAIRY SUPPLY CO.**

**SAN FRANCISCO.**

Warehouse Stocks Carried at Portland and Seattle.

# Food Conservation

## Outline Plans for Coming Year

Charles Hebberd, federal food administrator for Washington, reviewing the plans of the national food administration for food conservation during the coming year, says:

**Saving Is Essential.**

Food Administrator Hoover in outlining the food conservation program recommended for the American people during the coming year, said the United States was prepared to ship 5,730,000 more tons of foodstuffs to its armies and allies than last year and still have a margin over the amount necessary to maintain health and strength at home.

The great undertaking can not be accomplished, however, Mr. Hoover emphasized, without due regard to the importance of saving by every person, with no prospect, as he saw it, of a proper ending of the war before the summer campaign of 1919. The food problem, the food administrator declared, is no small part of the issue. The allied civilians and armies, the American armies, the Belgian relief and certain neutrals who are dependent upon the United States will require 17,550,000 tons of foodstuffs for the year beginning July 1st. This, in round numbers, will include meats and fats, 2,600,000 tons; breadstuffs, 10,400,000; sugar, 1,850,000, and feed grains, mostly army oats, 2,700,000.

There will be no food rationing in this country so long as the people continue to conserve, as in the past, Mr. Hoover said.

**Must Eliminate Waste.**

"Of our imports," Mr. Hoover said, "we shall apparently have sufficient sugar to maintain the present consumption and take care of the extra drain of the allies from our markets, instead of compelling them to send their ships to the far east. We can secure in sailing vessels the coffee we need, if no one makes an over-brew. In our own products we must secure a reduction in consumption and waste in the two great groups of, first, breadstuffs, and second meat and fats—that is, in all bread and cereals, beef, pork, poultry, dairy and vegetable oil products.

"The average consumption of our people of breadstuffs amounts to about six pounds a week and of meats and fats to four pounds a week for each person. On a reduction in consumption of less than half a pound a week a person in each of these two great groups of food would accomplish our purpose. We wish to emphasize, however, that we do not want curtailment in the use of milk for children.

**Health Is Important.**

"Some of our homes, by reason of limited income, can not now provide more food than they should have to maintain health in the family. They can not rightfully be asked to make the suggested reduction in consumption. But the great majority of our homes can do more than suggested.

"We need even greater simplicity of living than last year.

"We estimate that nearly 9,000,000 people eat at our public eating houses—hotels, restaurants, boarding houses, clubs, dining cars and so forth. The food consumption in these places is larger than in the average homes. We are asking the proprietors and employes of these institutions to undertake in many particulars a more strict program than last year, and we are confident that they will willingly do this.

"This is not rationing—a thing we will never have if our people continue to support us as in the past.

**No Meatless, Wheatless Days.**

"We have so arranged the international food program that except for a moderate substitution of other cereals in bread, it will not, we hope, be necessary to substitute one foodstuff for another nor to resort to wheatless and meatless days.

"It is necessary that every family in the United States study its food budget and food ways to see if it can not buy less, serve less, return nothing to the kitchen and practice the gospel of the clean plate."

### REED COLLEGE TO DO WAR WORK.

The entire resources and equipment of Reed college at Portland, Ore., have been turned over to the government for war work. Induction into the army is necessary for the admission of any man over 18 years of age. The work of women students will be concentrated on preparation for specific war service.

TO the Editor of The Washington Farmer: Enclosed please find 25 cents in stamps for one year's subscription to your very interesting paper, which was loaned to me by one of my neighbors. Also send me one of your war flags. We live on a small farm of 25 acres facing the main road from Union to Shelton.

MARY L. WARD.
Union City, Wash.

# Logged-Off Lands

## Survey in Montana and Idaho

W. H. Graves, a hydraulic engineer of San Francisco, assisted by C. B. Swim of the district forestry office at Missoula, is undertaking a survey at the behest of the reclamation service of the logged-off lands in western Montana and Idaho preliminary to seeking aid from congress to reclaim them for agricultural purposes where discharged soldiers could settle.

Mr. Swim will determine the location and acreage of the land, classify it, determine ownership and the areas suitable for agricultural purposes. Through this survey it is hoped to induce congress to assist in the development of the country by providing opportunity for returned soldiers and sailors to establish themselves on the arable land through granting them preference rights of entry.

### NEW KING COUNTY AGENT.

Virgil Patton has been made county agricultural agent for King county, with headquarters in Seattle. From the South Central high school in Spokane young Patton took the agricultural course at the Washington State college and was immediately appointed county agricultural agent for Walla Walla, where he has remained until his new appointment.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer

**SITUATIONS WANTED—Male 21**

RELIABLE MAN WANTS EMPLOYMENT; AM 21, but lame for military. Roy Hartman, Winchester, Idaho.

**HONEY, BEESWAX—Wanted 58**

SEND SAMPLES OF YOUR HONEY AND beeswax. State quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

**EGGS AND BUTTER WANTED. 59**

# Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |

## Shortage of Feed Results in Attempt To Make Use of the Weed; Drouth Cuts Acreage of Fall Wheat

SPOKANE, Spokane County, Wash., Sept. 25.—In regard to the increased fall wheat production in Spokane county I wish to say that most of the fields which were summer fallowed this year have been planted and the wheat is in a very promising condition at the present time. The large increase in wheat production, however, will be in the planting of fields which have been in peas during this season (1918). If weather conditions warrant, and there is sufficient rain this fall a greater increase may be expected in the acreage planted to fall wheat than what would normally be the case in Spokane county. Most farmers, however, believe in waiting until fall rains come in sufficient amount to insure the wheat getting a good start. Most of the farmers in this county are prepared to take care of their live stock in a satisfactory way. However, in the dairying sections of the county there is likely to be a shortage of roughage to feed. It is interesting to note that one man living west of Cheney has filled two silos this season with tules, or cat-tails, which grow profusely in the swamps of the southwestern part of the county. In other sections a limited number of farmers have tried this silage and it has been found very satisfactory.

J. R. SHINN.

### SEEDING WINTER WHEAT.

BICKLETON, Klickitat County, Wash., Sept. 30.—The seeding of winter wheat is now in progress. The condition of the ground is good, being moist to a depth of five inches. A few fields that were sown in the dust before the rain are up and showing green. The best farmers are still using the same careful methods they have always practiced. There is a tendency to utilize every acre possible, but I notice in the drier sections they are "stubbling in" a great deal. The taking of so many young men for the army is causing the ones that are left to try to farm more land than they can properly handle. Around Bickleton this has been a very prosperous year. The crops are good and the prices are in most cases satisfactory, although they are not satisfied with the toll the grain buyer takes. The farming this fall and winter will not be hindered to any extent, but the last draft of 18 to 45 is bound to make a shortage of working men next harvest. In my opinion it is going to be the greatest problem the government will have to handle here at home—the furnishing of man labor in sufficient quantity and quality to keep up the normal production of cereals.

BERT H. FAULKNER.

### TOO DRY TO SEED WHEAT.

COLFAX, Whitman County, Wash., Sept. 27.—Every effort is being made to increase the acreage of fall wheat, but it is not reasonable to expect farmers in general to sow $2 seed in dry soil and take the chance of having it result as so much did the last year. All summer fallow land and a great deal of the pea stubble is being prepared so that at any date that the moisture is present in sufficient amount to insure germination as well as growth after germination, a large acreage will be seeded. Farmers in general are not very prone to take long risks this season in spite of the grave need of the government. Crops in general were slightly better than anticipated at the beginning of harvest. Feed crops are short and farmers are planning on the utilization of straw to a greater extent than ever before. I have yet to see the first straw stack burning where in former years dozens could be counted on any night. Some hay will need to be shipped in, but in general the tendency is to use the low grade substitutes.

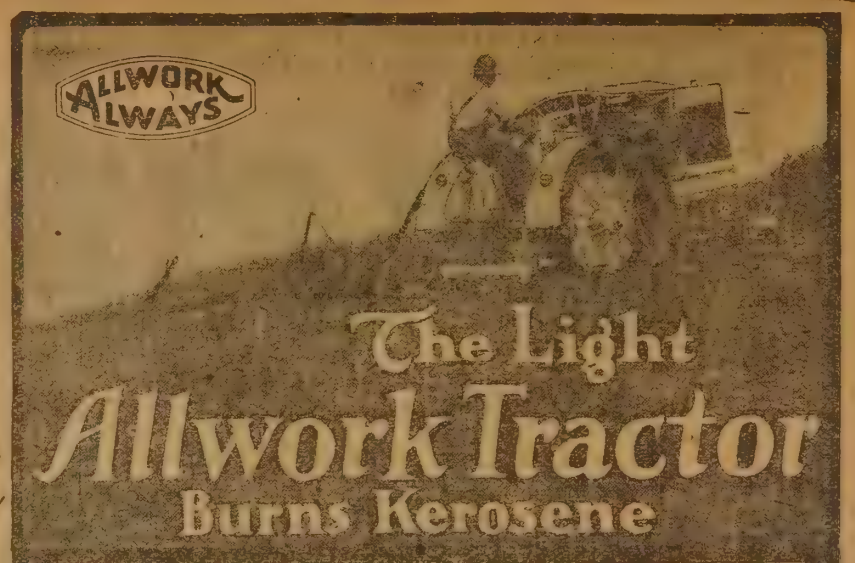
F. L. KENNARD.

### FARMERS GO TO SHIPYARDS.

COLVILLE, Stevens County, Wash., Sept. 27.—There does not appear to be any marked increase in the fall seeding of wheat throughout this county. In fact there is some probability that the acreage may be reduced owing to the very unfavorable season due to the drouth. While there have been some light rains the ground is in a very unpromising condition for seeding. Fields which were planted a month ago immediately after the one heavy rain of the summer are making some showing. Considerable fall plowing is being done, and the area of spring grain will be large, as many timothy fields have been plowed already and with a late fall much sod will be broken for re-seeding. There appears to be sufficient seed for all requirements. The war is working many changes, if the number of public sales and changes of residence are considered. Many small farmers who are capable workmen have gone to the shipyards, most of them taking their families. To some extent this drain is affecting the timber and logging industries, as many of their workmen are naturally attracted by the larger wages for work that they feel they can easily do. This county has sent a heavy percentage of its industrial workers to the war, but the draft has been well distributed and the farmers have possibly not suffered more than any other class. The late registration will make a more keenly felt draft than those which preceded as the enticing offer of college, where they can get an education without expense to themselves is sure to take almost the entire body of his class of registrants. The most noticeable effect this is having on farming is the drying up of the cows in the winter dairies. School officials report a serious falling off in attendance in the schools of the county, both in country and town. There is a reduction in the number of teachers hired for the coming winter and some two and three room schools have reduced their teaching force.

E. E. ELLIOTT.

### BIG ACREAGE AWAITS RAIN.



NEPPEL, Grant County, Wash., Sept. 28.—The community fair of Neppel was held on September 28, and was a success. There was a good average attendance and some extra fine displays of vegetables and fruits. Numerous prizes were awarded and the committee in charge has made arrangements for a bigger and better fair next year. Every dry land farmer in Grant county is eagerly awaiting a good shower of rain that the fall wheat seeding may start. As yet none has been seeded and tens of thousands of acres will be seeded immediately after a good rain falls. Every effort has been put forth to get in a large acreage. In the irrigated section more land is being developed and seeded to alfalfa as it has proven to be the farmers' best friend without fail. Most of the shortage of wheat hay to feed horses will be relieved by their purchasing alfalfa and carrots. A car of stock carrots was shipped from Neppel this week. The apple crop has turned out better than expected and packers are busy now packing the crop for shipment. A good price was realized by orchardists this season, running from $1.90 to $2.50 per box. The Delicious and Winter Bananas were unusually fine this year. There has been a good demand for soft fruit all season. A shortage is now felt as a large number of people are still in the market for their year's supply, the sugar situation having upset their usual method of securing their needed supply. The fourth Liberty loan opened here with a goodly list of willing bond buyers signed up. However, there are still people here that have never bought a war savings stamp; they keep their cash in a sock instead of in the bank. They are assuredly pro-German and will be looked upon in the future as traitors.

MARTIN PENHALLICK.

### APPLE HARVEST BEGUN.

OMAK, Okanogan County, Wash., Sept. 24.—The extreme dry weather has made is impossible for farmers to plant fall wheat and unless we get rain there will not be much wheat sown in this section. Most crops have been a partial failure and unless we get a good supply of snow this winter many of the orchards will die. Many of the orchardists have brought their fruit through in good shape by digging wells and putting in pumping plants. Hay is going to be very scarce and a great deal of the stock are being driven out and sold. The apple harvest has begun, but the crop will be much lighter than last year.

J. O. WOODS.

The Light
Allwork Tractor
Burns Kerosene

Get Your Money's Worth In Work Every Season

THE Light "Allwork" Tractor is built for all around work in any season of the year. Powerful for heavy plowing—light enough to get out on wet land in early spring or on a soft seed bed for harrowing and seeding—low enough for orchard cultivating—plenty of power for belt work. Here is the *practical* light-weight, high-power farm tractor. Free from freakish features—runs on four wheels; carries the largest 4-cylinder engine we know of on any 3-plow tractor. It sets crosswise on the frame, thus giving direct spur gear drive—no bevel gears. Belt pulley is on direct line with crank shaft.

*4 cylinders, 5 in. bore, 6 in. stroke, 750 R. P. M., develops 28 H.P. at belt and 14 P.P. at drawbar. Automobile type front axle, roller bearing rear axle—self-oiling steel gears thoroughly protected from dust. Weighs 5000 lbs. Develops 3000 lbs. drawbar pull and 4000 lbs. on low gear. Burns kerosene. Turns in 12-foot radius—pulls three plows (will pull four under favorable conditions)—will run 18-inch silage cutter, 28-inch separator—pull an 8-foot road grader. Gasoline or kerosene fuel. Two-speed transmission working in oil.*

**Write for Our Catalog** and learn how the "*Allwork*" can make tractor farming pay big dividends on your farm. It's built by a company with an established reputation—satisfied customers everywhere. Let us refer you to "Allwork" owners near you. Write today.

ELECTRIC WHEEL COMPANY, Box 318-A, QUINCY, ILL.

**Spring** Plow, harrow, drill, pull manure spreader, cultivate orchards, etc.

**Summer** Pulls binder, hay loader, drives clover huller, thresher, plows, etc.

**Autumn** Run silo filler, corn sheller, baling press. Plow, haul loads, etc.

**Winter** Run wood saw, feed grinder, pull stumps, general belt work, hauling.

LILLY'S SEEDS For Fall Planting

BEST FOR THE WEST

To lose a crop or part of a crop these days of food shortage is a calamity. Do not take chances with inferior cheap seeds or seeds not acclimated.

We test our seeds not in a general way but specifically for climate, soil, germination and pedigree. LILLY'S tested seeds, northern grown, are good seeds—by which we mean clean, pure, strong seeds, capable of producing the maximum crop of superior quality.

Vol. 41. No. 41. THE RANCH PACIFIC DAIRYMAN HORN AND HOOF October 10, 1918

# National Farmers' Headquarters Planned

## *Agricultural Temple Proposed to Guarantee Representation at Washington, D. C.*

If a movement which took official form at Washington, D. C. recently develops as leaders in the agricultural industry of the nation believe it should and will, the farmers of America will soon have a headquarters in the national capital.

At the recent "Win the War" conference of the National Board of Farm Organizations at Washington, D. C., a resolution was introduced by A. A. Elmore, president of the farmers' union for Washington and northern Idaho, providing for the erection and endowment of an agricultural temple in the national capital by and for the organized farmers of America. The resolution was adopted without dissenting voice by the one hundred and sixty-eight delegates present from all parts of the country. A building committee was appointed consisting of A. A. Elmore, chairman; Gifford Pinchot of Pennsylvania, Maurice McAuliffe of Kansas, J. H. Mills of Georgia, Milo H. Campbell of Michigan, S. J. Lowell of New York, F. J. Niccolls of Iowa, and J. A. McSparren of Pennsylvania. It is proposed to raise among the six million farmers of the nation by voluntary, though systematic, subscription a fund of approximately $8,500,000 of which approximately $1,250,000 would be for the construction and equipment of the agricultural temple and the remaining $7,000,000 or more an endowment fund, the proceeds of which would be used principally to maintain the ablest possible representation of the agricultural industry constantly at the national capital to protect and foster the farmer's interest at all times. The following is the resolution as adopted by the conference at Washington:

1. Whereas agriculture is the first, the most important and the most fundamental of all occupations, and

2. Whereas there is in the city of Washington no place where the farmers of America can bring together their interests and their needs, and

3. Whereas labor, commerce, and other great interests have established general headquarters through which their demands and desires can be promptly formulated and effectively transmitted to congress and the executive departments, and

4. Whereas, the farmers of America have never had such headquarters and have suffered greatly from the lack thereof, and

5. Whereas at this time, the need for united action among American farmers is greater than ever before in the history of our country, and

6. Whereas, the service which a national headquarters for the organized farmers of America can render is greater than ever before, now therefore,

Be it resolved, That the national board of farm organizations hereby approve the erection, endowment and maintenance of a Temple of Agriculture in the city of Washington to serve as a general headquarters for the organized farmers of America, and

Be it further resolved, That a committee of seven be appointed by the chairman with power to prepare plans and when such plans shall have been approved by the general council of the National Board of Farm Organizations to raise the necessary funds and thereupon to procure by purchase or otherwise such temple of agriculture in the city of Washington, D. C. But we declare that our patriotic duty requires us to do no building during the war.

The membership of the national board of farm organizations includes representatives of the National Farmers' Educational and Cooperative union (the farmers' union), the National Council of Farmers' Cooperative associations, the National Dairy union, the Pennsylvania Rural Progress association, the National Agricultural Organizations society, the Farmers' National congress, and the National Conference on Marketing and Farm Credits.

The executive committee of the national board is made up as follows: Chairman, W. T. Creasy of Pennsylvania; C. S. Barrett of Georgia, J. W. Shorthill of Nebraska, Gifford Pinchot of Pennsylvania, and Charles McCarthy of Wisconsin.

The national grange is not officially affiliated with the board, though it is understood that the two organizations are closely harmonized in their work and that a movement is under way to bring about a formal alliance on the part of the grange with the national board. At the recent conference in Washington, forty-four delegates were present representing the grange. There were sixty representing the farmers' union, and more than sixty others representing other agricultural organizations. Altogether there were fifteen organizations represented at the conference.

Among representatives from the northwest were A. A. Elmore, William U. Neeley of Davenport, Wash.; M. W. Merritt of Rosalia, Wash., and A. V. Swift of Baker, Ore.

Mr. Elmore said upon his return from the conference that there was a universal appeal from those who appeared at the meeting for the farmers to take some definite action in their own behalf in addition to doing their utmost to produce the food supplies needed during the war period. He said it was becoming recognized everywhere that the farmers as a class of producers are not represented at the national capital like those represented in other industries, and that the present movement for the establishment of national headquarters adequately endowed was designed to bring about the needed representation.

All details either as to the construction and equipment of the agricultural temple or as to the manner of securing the agricultural representation in the national capital are still to be worked out, but the big idea is that there shall be present at Washington at all times, men thoroughly familiar with the needs of the industry and thoroughly capable of presenting those needs and securing justice in all matters affecting farm life.

**A. A. Elmore.**

**At the "Win the War" conference of the national board of farmers' organizations, a resolution was unanimously adopted for the erection and endowment of an agricultural temple in Washington, D. C.**

**The resolution was introduced by A. A. Elmore, president of the Farmers' union for Washington and northern Idaho, and provides for a subscription fund of $8,500,000 to be raised among the 6,000,000 farmers of the nation. Of this $1,200,000 will be used in the erecting of an agricultural temple and the remainder for an endowment fund. The temple will not be erected until the close of the war, and all funds raised will be invested in Liberty bonds.**

**A building committee was appointed, of which A. A. Elmore was chairman.**

**The campaign to raise funds will be started October 12 in Columbia county, Washington. Northern Idaho and eastern Washington are allotted $196,000, while Oregon and southern Idaho are allotted $167,250.**

**Among those indorsing the movement are Senator Gore of Oklahoma, Senator Miles Poindexter of Washington, and Dr. W. J. Spillman of the department of agriculture.**

Mr. Elmore credits Senator Gore of Oklahoma with the first voluntary subscription toward the agricultural temple fund. Mr. Gore, upon learning of the movement, subscribed $100 as the nest egg for the fund. In a letter to Mr. Elmore, Speaker Champ Clark of the house of representatives, said in part:

"You have my heartiest good wishes for the success of an undertaking to which the farmers of this great country should respond generously and quickly. I believe the entire nation will be the gainer and that the farmers will be given contracts with the government in a way not possible heretofore."

Senator Miles Poindexter of Washington, in a letter to Mr. Elmore, touching upon the construction of an agricultural temple devoted to the interests of the farmers, said:

"A great building dedicated to that purpose and affording a meeting place and home for the representatives of this foundation industry of the nation would not only, in my opinion, be an inspiring object for your own organization, but would be of immense value and interest to our entire population. A great many of the difficulties with which the farmers have had to contend during the last generation have been due to the fact that they were an unorganized body competing with highly organized and specialized rivals. They produced and sold as individuals, whereas the interests that purchased their products, whether live stock or wheat, acted in unison. The consequence was that prices that the farmer received for his products were fixed by his competitors in the business world, and he was allowed only so much as they, in their generosity or wisdom, or for expediency's sake, saw fit to allow him. A universal organization of farmers or a close union of existing organizations is, in my opinion, the most essential agency and weapon with which the farmer should be armed in the industrial struggle of the future.

"A great building worthy of this noblest of all occupations will be a visible sign and token to all the world of the intelligent organization and direction of the farmers' forces and, so, powerfully encourage and facilitate that movement.

"Such a building, housing, permanently, representatives of the agricultural interests, and preserving and aiding their unity of action, will be a powerful force for justice and good government in our public affairs."

In expressing his approval of the movement W. J. Spillman, formerly of the State College of Washington, but now head of the department of farm management of the United States department of agriculture, says:

"Nothing that could be done would be of greater service to the farmers of the United States than to have here in Washington a building with offices for the various farm organizations of the country, and to have these offices filled by able men wholly devoted to the welfare of the farmers. The time has come when every one recognizes that unless the farmers of the country are fully organized they are helpless in the matter of getting the legislation to which they are entitled. A temple of agriculture in Washington city would at once be recognized as the official headquarters of the American farmer, and those interested in his welfare would naturally seek there for the advice of those who represent the farmers."

A campaign throughout the nation will be started soon to raise the fund needed for the agricultural temple and its endowment. In the state of Washington this will be started on October 12, with a county convention in Columbia county. This will be followed by similar conventions in other counties, each of which is designed to organize a campaign in its respective territory. Northern Idaho and eastern Washington are allotted $196,000, to be raised for the purpose, while Oregon and southern Idaho are allotted $167,250. Of the amount in each of these districts, $150,000 is to go to the endowment fund and the balance to the building fund. The building committee will hold its next meeting November 10 in Denver, Col., at which time definite plans will begin to take form.

It is worthy of note that the conference agreed that no building construction should be undertaken until the close of the war, it being agreed that no labor should be diverted from actual war-winning work at the present time. It was further agreed that all money secured for the building and endowment prior to the end of the war should be invested in Liberty bonds and war savings stamps to be held till the close of the war. The idea is further emphasized that contributions to the fund may as well be made in the stamps or bonds as in cash, and it is intended that this proposition shall not only assist materially in the sale of Fourth Liberty loan bonds, but also in the contribution to the agricultural temple fund.

# Hogs at $18.50

## For Packers' Droves at Chicago

The agricultural advisory committee has just recommended to the United States food administration that the "average cost per bushel of corn" for the purpose of determining the price of hogs be considered as the average "farm value of corn," or the average selling price of corn at local railroad stations as determined by the department of agriculture, and that the general corn figures be arrived at by taking these averages and weighing them according to production over the eight leading hog and corn producing states for a period of five months preceding the month the hogs are marketed, or prior to the month for which directions are given to the packers. The price of hogs should be calculated on the average of packers' droves at Chicago. At a recent meeting the packers agreed to help make the recommendation effective, though considerable disapproval of the plan was voiced.

To illustrate: Based upon the prices of corn figured on the above basis during the last five months, and a general survey of market and consumption conditions, it was agreed that a fair price interpretation of the ratio for the month of October would be an average price, for the average of packers' droves, of about $18.50 per hundred pounds at Chicago. It can not be expected that the day to day market prices, with the fluctuating flow of demand and supply, can be maintained at any fixed and definite figures, but that it should be the aim to maintain about an average during the month.

The communication adds:

The indication of war demands are that the supply of pork products for the future should be kept up to the present level of production. The producers have responded magnificently and are placing at the hands of the government the hogs with which to carry over the allied and domestic necessities for the next 12 months. It is obvious that after peace the world demand for pork products will be greatly increased over the present large war demands. The food administration should endeavor during the war to maintain prices for hogs that will be profitable to the producer and fair to the consumer, and to give this assurance to the producer, the committee recommends that the food administration should at once announce its intention to maintain the minimum price of not less than $15.50 continuously during the war.

It is recognized that the food administration has no power to fix the price of hogs or corn, and can only influence the hog price so far as the volume of controlled orders for the army, navy, allies and export trade will absorb the surplus production. If prices should go so high as to curtail consumption at home and abroad, then in this event the stabilization of prices during the next winter would be likely to fail, with disaster to the producer. On the other hand, it must be recognized that the costs of production are necessarily greatly increased, and that to maintain production fair returns must be assured to the farmer. It is, therefore, in the fundamental interest of the producer and consumer that both extreme high and low prices should be guarded against.

The special committee making the above recommendations was composed of Eugene D. Funk of Bloomington, Ill.; Professor John Evvard of Ames, Iowa; Professor John H. Skinner of Lafayette, Ind.; A. Sykes of Ida Grove, Iowa, and N. H. Gentry of Sedalia, Mo.

### DR. WILLIAMS APPOINTED.

Governor Lister has appointed Dr. Randall S. Williams as member of the Washington state board of dental examiners to succeed Dr. S. L. Moak of Montesano, who resigned to enter army service.

## Make Victory Doubly Sure

There is no longer any doubt about who will win the war. There has not been since America threw her weight into the scale against the Hun. But there is one big question left: When will it be won?

Over there the armies of England and France and Italy and our own United States are doing wonderful work. Mile by mile, village by village, they are driving the German from the soil of France and Belgium. They are able to do it because the people of this country have furnished the money and the food and the clothing. The Germans are retreating because neither her arms nor her spirit is capable of standing before the indomitable arms and spirit of the well munitioned, well fed and well clothed armies of the allied nations. Let us now, those of us who are privileged to escape the hardships of the battle front, deal another blow, a final death blow to the arms and spirit of Germany by an overwhelming subscription to the Fourth Liberty loan, the loan that will insure food and clothing and loaded weapons to our soldiers as they drive the enemy across the border onto the soil of his fatherland, and there dictate to him terms of peace upon which a civilized world may depend for perpetual justice and liberty.

Carelessness is one extreme and morbidness is the other extreme. While seeking the middle of the road, do not give morbidness the benefit of the doubt.

## Urge $2.50 Wheat for 1919

Senators and representatives from wheat growing states, and officials of the National Wheat Growers' association, in conference at Washington, D. C., last week, decided to appoint a special committee to urge upon President Wilson immediate action, fixing the price of wheat for 1919 at $2.50 a bushel. Strong support came from Dr. W. J. Spillman, formerly of the State college at Pullman, Wash., and now chief of the office of farm management of the department of agriculture.

Dr. Spillman presented figures compiled by his office to show that $2.50 a bushel is essential if the maximum production is to be obtained next year. These figures will be read before President Wilson and it is not likely that the president will lightly disregard the careful judgment of so eminent an authority as Mr. Spillman.

Two reasons are readily apparent to sustain this judgment. Throughout the great wheat producing region of the northwest, extending from Dakota to the Cascade mountains, wheat growers have been severely handicapped by partial crop failures for the past two years. Thousands of growers are discouraged and need the incentive of a slightly higher price. The increase, in fact, will hardly cover the advanced costs of production. The price of $2.50 per bushel for the 1919 crop would in reality be no more liberal upon the part of the government than the price of $2.20 for the 1917 crop.

If the government wants a maximum production next year, it must make an extraordinary effort to secure it. Responding to urgent appeals, farmers all over the wheat growing areas of the United States have been forcing production. In this region particularly there has not been enough summer fallowing, and the yield per acre is declining.

This is no time to falter. It would be short-sighted on the part of the government now to haggle over the price of wheat a few cents more or less.

You are wasting precious time every minute that you spend in self-satisfaction.

## To Stabilize the Butter Market

The United States food administration announces that through the appointment of a committee to investigate the situation as to dairy products the first steps have been taken to stabilize the butter market. Increased demands from the army, the navy and the allies have produced a shortage of butter, and with the increasing scarcity, the price has risen steadily and consumption by the civilian population has decreased. These conditions, dairymen have agreed, will sooner or later produce a collapse in butter prices, possibly below the cost of production. Dairymen have recommended to Mr. Hoover that when such a fall occurs government purchase be used to support the market at a reasonable level.

There seems to be no other solution for this exceedingly difficult problem. It is well enough to appeal to dairymen to lower the price of butterfat and the dairymen would very gladly respond if the government could find some way to lower the costs of feed. There is no sidestepping, ducking or dodging the unalterable fact that extraordinary prices for feed stuffs must be reflected in extraordinary prices for butter. It is simply asking too much to say to the owners of dairy herds that they should go on indefinitely selling their products at a loss. That condition can benefit no one. It would mean ruin to the dairymen, deprivation to the consumer and added difficulties for the government in its supreme task of winning the war.

Discussing this immensely important subject, Charles Hebberd, federal food administrator for the state of Washington, says:

"There is a tendency apparent, especially on the Pacific coast, toward a runaway market on butterfat and dairy products. While present feed and labor conditions warrant high prices to producers, this tendency must not be permitted to develop beyond prices reasonable to producers in view of such costs. Otherwise a temporary advantage will result in an inevitable subsequent collapse. All producers, organizations and the trade generally are warned that undue competition for the restricted supplies available must not be permitted to carry these products to excessive levels. Failure to heed this warning will inevitably result in a market collapse disastrous to producers and the industry alike."

All that is undoubtedly true, but the situation is too difficult to be solved with words. Vigorous assistance must be rendered by the government, and the plan proposed by the dairymen at the Washington conference seems the only working remedy.

Storms would not be storms if they were the regular thing. During the height of the storm there is not much time to think of peace. Something must be done and there is no time for happy thoughts.

## Losses in Marketing Poultry

A recent federal bulletin contains these significant words: "The food administration points out the desirability of more water and less feed for poultry just before marketing. Experienced poultry handlers have recognized the soundness of this request, and during hot weather give their fowls an abundance of clean water, but a mere maintenance ration. This practice has greatly reduced losses in handling live poultry."

## Pioneer Demonstration Farm

The fifth annual meeting of the Stevens county (Washington) Live Stock association opened last Tuesday with fine weather and a good attendance. The stock exhibits are reported to be unusually attractive, with over 20 herds of thoroughbreds and about 50 individual exhibits of cattle. Horses, sheep and hogs were well represented.

A more fitting place for the holding of a live stock fair could not be found anywhere in the west than at Colville. In that vicinity the live stock industry of all the Inland Empire had its beginning nearly 80 years ago, when the Hudson Bay company built up extensive herds at old Fort Colville. From its herds the mission families at Walla Walla, in the Spokane valley and at Lapwai, Idaho, secured their milch cattle and beef. The old Hudson Bay settlement at Colville was, in fact, a great demonstration farm that proved the agricultural possibilities of the Pacific northwest.

In the warm valley of the Columbia, the company grew corn, wheat, oats and a great variety of garden produce. Its herds and its fields became famous all over the west. There the first flour mill in this vast northwestern land was set up.

The Stevens county stock show has, therefore, deep historical interest as well as present day influence in the way of improving the herds of that bountiful region.

## Haggling Spirit in Aiding Farmers

President D. G. O'Shea of the Spokane Federal Land bank recently expressed surprise and disappointment at the very slight response made by farmers in need of credit to buy seed wheat under the terms of the law recently enacted by congress. Mr. O'Shea thought that a good many farmers had "hollered" more than they were really hurt.

Ex-Governor M. E. Hay and others answered Mr. O'Shea, and their answers make it quite clear that the relief law is entirely too restricted. Only those farmers who have suffered two consecutive crop failures (harvesting a yield of less than five bushels per acre) can get loans for the purchase of seed wheat, and then only up to $300. It must also be made plain that such applicants are totally unable to borrow money elsewhere.

J. F. Lee of Othello, Wash., points out in a communication that the fact that a man can not establish an eligibility to get a loan from the government is far from conclusive evidence that he does not need aid. Mr. Lee writes:

"The man who is farming from one to three sections of land and has gone the limit to increase the production of wheat and by so doing has everything on the ranch mortgaged to the local bank, and by reason of a complete failure this year is unable to pay anything, and is told by his bankers that they are unable to furnish money to buy wheat for fall seeding, is in need of assistance, even though by reason of having raised a crop slightly in excess of five bushels per acre last year he is not able to establish his eligibility; or the man who has no mortgage on his outfit and has from 300 to 800 acres ready to seed, and has visited all the local banks in his vicinity and been turned down for the reason that the bank did not have the money to loan, needs some assistance, even though under the rules laid down by the government he is ineligible."

We frankly confess that we can not understand the government's exacting, rigid attitude in this matter. The need of increased food production is so great and apparent, and the government's appeals to the producers have been so emphatic and insistent, that it would be thought congress and the administration would eagerly adopt every reasonable means of fostering increased production.

That is the policy and the practice of the government in dealing with manufacturers who are building ships and making war munitions. In many cases it practically financed them outright, and that, under proper safeguards, is a sound national policy. Our criticism is not directed against such government action, but we do feel that the government's haggling spirit in aiding farmers who have been overtaken by misfortune to the extent of a few million dollars, is unfair and unwise.

# Teutons Would Negotiate

## *Peace Proposals Not Accepted at Par in Allied Nations*

If all the civilized nations of the world were not determined to see Prussianism completely wiped from the earth and if they did not see the certainty of its annihilation in the present developments of the war, the reports of peace movements in the Teuton countries might be taken as a more sensational feature of the year than they are. That the Prussian leaders realize that it is only a matter of time until Germany and her allies will be overwhelmed can not be doubted. Hence movements looking toward a "peace by negotiation" before a final military overthrow are not unexpected by allied leaders, and the allied peoples, realizing victory in the comparatively near future as a certainty, will not be lured into acceptance of any peace terms except those of an unconditional surrender.

Dispatches from all of the enemy countries indicate that a definite desire and a definite movement for peace negotiations are evident. Two outstanding developments that have been reached are noteworthy: First, the appointment by the kaiser of Prince Maximilian of Baden to become imperial German chancellor, filling the vacancy made by the resignation of Chancellor von Hertling; second, the formal appeal by Austro-Hungary to Holland asking the diplomats of that country to call upon all of the belligerent nations to enter into a peace conference at once.

The new German chancellor, Maximilian, is recognized as a leader of the anti-pan-Prussianism movement. Former Ambassador Gerard, who represented the United States in Berlin during the first two years of the war, describes Maximilian as "a real human being," saying that he was the only man among those whom he met in Germany who thought and acted like a citizen of a democratic country. That his appointment by the emperor is a definite move on the latter's part to make it easier for peace conditions to be brought about and accepted is evident, as his appointment is one step toward the democratization of Germany. It is evident, however, that the imperial party has limited his power to such a degree as to safeguard the war party's control of German affairs.

### Would Consider Making Peace.

At this writing it is understood that the new chancellor has made a strong appeal to the German house of representatives for consideration by them of the allied terms of peace as set forth by President Wilson on numerous occasions. One report published in Sweden as a dispatch from Berlin says that the new chancellor is willing to accept President Wilson's full list of 14 peace terms as expressed several months ago, but at this time there is no confirmation of the report, and it is not generally accepted as reliable. Reports also say that the Turkish government is on record as favoring steps toward peace.

All of these peace movements, however, are looked upon by the leaders in the allied nations as matters to receive no consideration at this time. The allies are unshaken in their determination to dictate such terms of peace to Germany as will restore all of the territory taken by the enemy, including Russia as well as Belgium, break the autocratic control over Austria-Hungary by Germany and even liberate the people of Germany itself from the imperialism that has made a war such as the present one possible. Whatever may be the real truth about the peace movements in the enemy countries, it is evident that the allied nations will not relax in any of their efforts until the military power of Germany and Austria is ready to forget "peace by negotiation" and consider a peace by the method of unconditional surrender.

### Bulgarian Peace Was Hard Blow.

The acceptance a week ago of the allied terms of surrender by Bulgaria probably was the hardest single blow dealt to the central powers since the war began. It practically isolates Turkey from her allies, and apparently is the first definite breaking of the German line of communication from Asia Minor to the North sea. Whether a special concentration of effort will be made against Turkey, with a view to putting the whole of Germany's southeastern allies out of the war, is problematic at this time. It hardly seems likely, however, since a military victory on the western front would humble Turkey automatically with the surrender of Germany.

### Allies Continue to Advance.

The last week has been one of the most successful of the war from the standpoint of actual military victory on the part of the allies. The drive has been prosecuted with vigor from the northern end of the line to the Albanian front in the south. Along the entire distance the forces of the central powers have been giving way until at this writing it seems practically certain that Germany will soon be compelled to withdraw from all of northern France and probably all of Belgium as well. The successful fighting of the Belgians and English a few miles inland from the Belgian coast is apparently about to compel Germany to evacuate the submarine bases established on that coast since Belgium was first overrun. This is one of the most significant features of recent developments.

From Belgium south practically all of the old Hindenburg line has crumbled, notwithstanding vigorous defense and counter offensive movements by the Germans. In the vicinity of Verdun the American forces are practically within artillery range of the railway line which has been one of Germany's greatest feeders for her army in the west. If this line can be reached and cut it will do much toward cutting off the supply both of men and materials for the southern portion of the main western front.

### Liberty Loan Moves Slowly.

The first week of the fourth Liberty loan campaign, which is designed to raise $6,000,000,000 for war purposes, resulted in the subscription of only a little more than $1,000,000,000, according to the figures compiled by the treasury department. As a result, activity will be speeded up during the remaining two weeks of the campaign, during which time it is necessary to take subscriptions totaling an average of over $4,000,000 a day to reach the proposed $6,000,000,000. The total amount allotted to the west under the twelfth federal reserve bank district is $402,000,000, of which approximately $104,000,000 had been subscribed at the end of the first week. It is notable that loan campaigns are on at the present time in both Germany and France. Reports indicate that the German loan is finding rough sledding, owing to the reverses that the German armies have felt during recent weeks.

### Austrian Navy Is Crippled.

The allied navies added another triumph to their share in the war when American, British and Italian warships entered the Austrian naval base at Durazzo, on the Adriatic sea, last week and destroyed a number of vessels and the effectiveness of the base fortifications. It is stated that this practically eliminates the Austrian navy as a factor in the war, for the time being at least.

### Germans Practice Vandalism.

Ancient history is repeating itself as the Germans retire from the territory that they have been holding. Scores of the cities and villages that they have held have been destroyed by fire when the enemy discovered that he was unable to prevent their recapture by the allies. It is understood that the allied nations are warning Germany that if this practice is not stopped at once for every city or village destroyed in France or Belgium a like city or village will be destroyed by the allies in Germany when that country is invaded, as it is certain to be unless peace is agreed upon before next summer.

### Spanish Influenza Is Spreading.

Reports from most of the army camps throughout the country indicate that the Spanish influenza epidemic is increasing in proportions. At this writing the total number of cases approximates 140,000, scattered throughout the entire country. Extreme preventive and curative methods have been brought into play, and the authorities express confidence that within a short time the epidemic will be checked. Considerable interference with the movement of troops to and from camp has been experienced as a result of the sickness, but the war department announces that the number of men embarking for Europe this month will reach the monthly average for this year, and it is believed that the epidemic will be controlled soon enough to prevent any serious interference with the training and concentration of troops this fall and winter. Considerable pneumonia in army camps has been reported also. Approximately 12,000 cases in all the camps are on record at this writing.

### Woman Suffrage Gets Setback.

By two votes the United States senate last week failed to pass the act amending the federal constitution so as to grant national suffrage to women. A two-thirds majority vote is necessary to adopt a constitutional amendment. All of the senators from the Pacific northwest states voted for the amendment except Senator Borah of Idaho. Senator Borah was absent, being "paired" with another senator. He would have voted against the amendment had he been present, as he had repeatedly stated he would not vote for it at this time. One of the friends of the amendment changed his vote from yes to no in order to be entitled to move for its reconsideration at a later date. It is planned to bring the matter before the senate again some time within the next few months.

### Regulate Price of Clothing.

The war industries board has taken action designed to regulate the price of clothing of all kinds. One of the first actions of the board in regulating the price of wearing apparel was the ruling that shoes may range in price from $3 to $12, though no shoe shall be sold for more than the top figure. Three grades of shoes will be manufactured and priced according to quality. Where certain varieties and fancy styles have been manufactured already they may be sold up to June 1 of next year at a price higher than $12, but no shoe manufactured after the first of October shall command more than the price as fixed.

## War Map Is Coming.

How far are the allied armies from Berlin? How far are the German armies from Paris and London? Just what part and how much of Europe is devastated by the present war?

The answers to these questions and a great many more are not very clear to many of us. With a view to assisting the readers of this paper in seeing clearly at a glance the relation of the countries of Europe, the territory involved in the fighting, the location of and the distances between the principal places and cities affected by it, we will publish next week a full page map which we believe will present the situation in a way to be of great value to those who study it and follow the events of the war.

In connection with this map we will publish on this page a smaller map of the fighting front only, showing the location of the battle line. Each week a similar map will be published showing the changes in the line resulting from the week's fighting.

Do not forget to watch for these next week and keep them for reference week after week as developments occur.

## *Washington Gleanings*

The Pomeroy Methodist church, which was erected in 1884, was burned to the ground last week.

Mount Vernon's Red Cross shop has proven successful. During September, without expense, this store has earned $562.58.

Albion schools have organized a Junior Red Cross, 100 strong, every pupil and teacher joining, with paid-up membership.

Arthur Muller of Mabton, 14 years old, earned an even $200 during the school vacation working as a farmhand in the Glade country.

The preliminary work for the big hydro-electric power plant to be erected in the upper Skagit river valley by the city of Seattle is now well under way.

The contract for the construction of five miles of the Meyers Falls-Davenport highway from Kettle Falls south has been awarded to Paul La Plant of Colville for the sum of $6000.

The A. P. Peterson Mercantile company of Granger has been acquired by L. H. Nichols of Yakima. Mr. Peterson receives a large tract of land in Bonner county, Idaho, in exchange for his store.

The ranchers under the P. T. D. ditch, near Pateros, have cut and in the stack their fourth crop of alfalfa and are pasturing the fifth. There were four big cuttings, even in the orchards.

The boys' and girls' agricultural clubs of Skagit county will hold a fair and exhibit at Mount Vernon October 11 and 12. The funds for the premium list have been donated by the business men of Mount Vernon.

When the Ferris steamer Chino, put out by the Seaborn Shipbuilding company at Tacoma, went over her trial course she averaged 13 knots. It is said by marine men that her record is new to the northwest for vessels of this type.

The Carnation Milk Products company of Chehalis announces a price of $3.30 per 100 pounds of milk for the first half of October. This is an advance of 20 cents per 100 pounds over September, and is the highest price ever offered dairymen there.

Approximately 40 acres of sphagnum moss have been burned over, one mile north of Ilwaco, rendering one of the northwest's principal sources of the moss supply practically valueless. The moss is considered most valuable for surgical dressings.

Members of the Yakima Potato Growers' association, which is said to control about three-fourths of the valley's spud production, have agreed to stand by $40 a ton as the minimum price for No. 1 Netted Gem potatoes and $36 as the minimum for other varieties.

E. B. Gay of Oroville has demonstrated that a cannery is the solution for the handling of the surplus fruit and vegetables grown under the irrigation system there. He put in a small cannery and has canned upward of 40,000 cans of tomatoes gathered from some five acres of valley land.

Many farmers in the vicinity of Ritzville have bought seed wheat for seeding this fall, paying about $2.30 per bushel, hoping to be able to seed soon. There has been practically no fall wheat in the county for two years, and new seed is shipped from Montana and other northern states.

Game Warden Jack Winslow of Grays Harbor county has been notified that 15,000 cutthroat trout fry are ready for planting in the streams of that county. They are at the Chambers Creek hatchery, near Tacoma, and will be called for at once. A total of 50,000 fry is assigned to the county.

A statement showing that of the $1200 appropriated by the Thurston county commissioners for the expense of the county farm agent's office during the last year only $978.09 has been expended and the salary paid by the county amounts to $900, was issued recently by C. H. Bergstrom, county agent.

Water was struck in the well of the Columbia River Natural Gas company, about 20 miles west of Hanford. The well is over 600 feet deep, and the water was flowing out of the top of the casing. The formation is a blue shale with pieces of preserved wood which looks like peat or lignite mixed through it.

J. McPhee Ferguson of Yakima has claimed the record return of the season on a pear crop. Ferguson has two and three-quarters acres of pears in the Naches. He harvested four carloads of pears from them, which brought him a gross return here of $5467. After deducting expenses for picking, packing and the like he had $4220, a net return of $1534 an acre for the fruit.

James Hulburt Jr. of Mount Vernon is one of the three members of the industrial and agricultural advisers of the draft board which will convene in Seattle a few days each week. The object of the board, which has been recently created, is to encourage the farmers of draft age to remain on their farms, as the government considers this as important as any other branch of war service.

Fred Loeffler, a logger, who was one of the men who, while fighting fire in the Matlock district, had to flee for their lives, had a terrible experience after he became separated from the other men who escaped. He followed the Wynoochee river, and at many points was forced to wade, some places almost up to his shoulders, to get away from the fire and smoke. He was without food for 84 hours.

With the exception of a small amount of outlet work, construction of the Lake Keechelus dam, near Yakima, was completed last week, according to R. K. Tiffany, project manager of the U. S. R. S. The dam, which has cost $1,700,000, will store 152,000 acre feet of water. The dam itself is 70 feet high and 6500 feet long, 639,000 cubic yards of earth and gravel being used in the construction.

# Farmers Borrow $20,000,000

## *Splendid Growth of Spokane Federal Farm Loan Bank*

By N. W. DURHAM.

President D. G. O'Shea of the Spokane Federal Farm Loan bank reports that at the close of business September 30, the bank had completed and paid on first mortgage loans to farmers an aggregate of $20,422,520. The loans run from $100 to $10,000 and the average is $2330.

**Since the bank began operations in May, 1917, 22,062 applications for loans have been received for the grand total of $56,827,535. To date 12,396 loans have been approved in sums aggregating $28,388,000.**

In the same period 7789 loans were rejected and withdrawn, aggregating $19,934,000.

This is a splendid growth and there is every reason to believe it is only the beginning. Farmers everywhere are appreciating more and more the advantages offered by the government and they have learned by long experience of the disadvantages of the old system. These disadvantages were clearly set forth in Farmers' Bulletin 792 of the United States department of agriculture, published in January, 1917.

"The borrower often pays excess rates of interest and commission, with additional charges for the abstracts for recording and so forth, while interest rates may be relatively low in the more highly developed sections of the country. In these areas the borrower, even the man with well established credit, is often forced in times of stringency to pay high rates for loans. The usual mortgage loan runs for a relatively short period, thus making it necessary to incur added expenses for renewals. In many sections the borrower has no opportunity to pay off any part of his principal before maturity and as a result the indebtedness remains undiminished to the end of the term."

When the federal farm loan act was passed, farmers in the Pacific northwest were paying interest rates far in excess of the present government rate of 5 1-2 per cent. Naturally they turn to the federal land bank for relief. Under the old system, if a farmer paid 8 per cent, or if his charges for interest, renewals, commissions and so forth, aggregated 8 per cent, he had to pay every year in interest charges a sum of $80 for every $1000 of his mortgage. If he went on borrowing for 20 years, he had to pay that $80 every year and at the end of the 20 years he still owed the $1000.

Under the government system, borrowing money at 5 1-2 per cent on a mortgage running for 20 years, he pays $83.68 a year and at the end of the 20 years his mortgage is entirely extinguished and he has nothing more to pay on the principal.

**In other words, it costs him only $3.68 a year to wipe out a thousand dollar principal in 20 years.**

The full benefit of this law, however, is not measured by the volume of business transacted by a federal farm loan bank. The government's entrance into the business has forced the mortgage companies to lower their rates approximately to the government rates, thus thousands of farmers who are not themselves members of federal farm loan associations are benefited by the law.

The growth of the Spokane Federal Farm Loan bank is particularly gratifying to the committee which worked so hard for the creation of a Pacific northwest district and the location of a bank at Spokane. The splendid growth of the institution thoroughly bears out every representation the committee made to the representatives of the government.

# Are Wheat Farmers Satisfied?

## *Is the Reduction From $3 to $2.20 Fair and Liberal?*

Whatever may be the prospects or lack of prospects for an increase in the price of wheat for 1919, the subject is still fraught with interest. Senator Gore of Oklahoma, a leader in the fight for higher wheat, is still fighting, as indicated by a recent speech in the senate.

Here are passages from Senator Gore's speech:

**Are Farmers Satisfied?**

"The president in his veto message declared that an overwhelming majority of the farmers regard the administrative price upon wheat as fair and liberal; that an overwhelming majority of the farmers regard the reduction of the price of wheat from $3 a bushel to $2.20 a bushel as fair and liberal. I have often thought that the farmer is the only class of our citizenship who has occasion to feel that his luck is high when he happens to get justice. In his veto message of December last the President declared, with truth, that the farmers complain, with justice, that they are obliged to sell in a restricted market and are obliged to buy in an unrestricted market.

"Mr. President, when did the farmer come to regard a situation fraught with injustice as fair and liberal? How could the farmers complain with justice of a system or of a situation which they regard as fair and as liberal? Such a thing is little short of a moral miracle. It is a moral miracle unless something has happened to change the situation, unless something has happened to reconcile the farmers to injustice, or rather to remove the injustice.

**Dollar's Value Shrinks.**

"What has happened to convert a system and a situation, admittedly characterized with injustice, into a system and a situation now hailed as fair and liberal by its victims? Since December last the cost of living has greatly increased; the cost of production has greatly increased; the wages of farm labor have greatly increased; the price of farm implements has greatly increased. The $2 and less which the farmer actually receives for his wheat today will buy one-third less than when the price was fixed in August last. The $2 and less which the farmer receives for his wheat today will buy 25 per cent less than it would buy in December last, when the farmer complained with justice that he was obliged to sell in a restricted and to buy in an unrestricted market.

"I have no choice but to believe. Indeed, I could believe without proof that all the political farmers who have conferred or communicated with the president upon the subject have assured him that this 30 per cent reduction below the market price was a realization of poetic justice and of the highest ideals of fairness and of liberality. I mean the agricultural courtiers, whose chief delight is to stir and fan the incense in no unseen censers; I will not say censers swung by sycophants whose footfalls tinkle on the tuffed floor. It is no fault of rulers; it is rather their misfortune that they are ofttimes surrounded by courtiers and by flatterers who speak to them what they imagine will be pleasing to the ear and do not speak the plain unvarnished truth."

**Price Put Below Cost.**

Senator Fletcher of Florida interrupted Senator Gore with a remark that a farmer who owned land in both Nebraska and Montana had told him that any amount he could get over a dollar a bushel for wheat was profit. Senator Gore countered with the question whether Fletcher would support an order reducing the market price of cotton in the same proportion that the price of wheat had been reduced, and Senator Fletcher evaded answering. Gore continued:

"When the wheat committee met here in Washington last August there were a few representatives upon that committee who were qualified to speak for the wheat farmer and for the wheat section. The president of the Agricultural college of North Dakota made a survey of his state, and upon his responsibility reported to that committee that the cost of producing wheat in North Dakota last year was $2.19; but the farmers have been receiving under government control only $2.05 and $2.10 in that state. A similar study was made in the state of Minnesota, and the report was that the cost of producing wheat last year was $3.01; and yet they were obliged to take $2.10 and $2.10 for wheat in the state of Minnesota.

**Drastic Cut Is Made.**

"It may be true that the senator from Florida fell into the arms and listened to the siren voice of one of these agricultural courtiers, who whispered sweet suggestions in the president's ear.

"Mr. President, the day this government broke the price of wheat it was selling for $3.06 in Minneapolis. From that time forward it has been selling for $2.19 in Minneapolis—a reduction of more than 80 cents. Cotton today is selling for 30 cents a pound. Is the senator from Florida willing to vote to reduce the price of cotton to 22 1-2 cents a pound?

"Mr. President, $2.50 a bushel for wheat is 20 per cent less than the market price when the government broke the price. Twenty-four cents a pound for cotton would be 20 per cent less than the prevailing price. Would the senator vote for such a reduction on cotton? There was a meeting in this city yesterday of the agricultural commissioners of a number of southern states, a meeting of representatives of farm organizations from a number of southern states, to protest against meddling with the price of cotton and the breaking of the price of cotton. I assert now that they will find in the senator from Florida an unyielding champion of their position. Nobody will obtain power to reduce the price of cotton with his vote or with his consent. I only ask, Mr. President, that the senator apply the same principle and the same protection to the wheat farmers that he will extend to the cotton farmers of the state of Florida."

TO the Editor of The Washington Farmer: Enclosed find five cents, for which please send me a Farm Service flag printed on enamel paper with four extra stars.

A. J. WARNER.

Orin, Wash.

### GOOD ROADS MEETING.

**State Convention Sets Date Forward One Week.**

The dates of the Washington State Good Roads association convention have been set forward one week on account of the United war fund drive, this being acceptable to the state council of defense.

The new dates for the Pasco convention are Thursday and Friday, November 21 and 22.

### SUGAR RULES REVISED.

While it is just as essential to save sugar now as it has been heretofore, the food administration has revised the ruling so that a family may purchase a month's supply at one time. The following extracts from a letter sent to dealers by State Administrator Charles Hebberd, explain the change:

"Effective October 1 you are allowed to sell at one time a month's supply of sugar to the consumer. This supply, of course, is based on two pounds per person per month. For example, if there are five in the family they may buy 10 pounds at one time, but are not entitled to buy another supply until a month has elapsed.

"This supersedes the rule allowing sale of two pounds to town trade and five pounds to the country.

"The change is not made because there is any less need of conservation in sugar. The domestic canning demand, however, will soon decrease and the available spot stocks of sugar will make possible this change as a convenience to both the consumer and the retailers."

### FOUNDATION IDEA IN BREEDING.

"Away off down the line I've got a mile post which I hope to reach. That mile post approaches perfection in the breeding of Duroc-Jersey hogs. Maybe I won't get there, but I hope the work I do now will help somebody else to and that will be just as well as if I had done it myself."

So remarked L. S. Otto of Filer, Idaho, the other day. Mr. Otto expressed the sentiment of a real breeder—the kind who will bring the northwest into prominence as a producer of quality stuff in all breeds of animals. The Otto farm is not only noted for its excellent type of Durocs, but also for the general agricultural products it turns out.

# Good Show at Colville

The Stevens County Live Stock association held its fifth annual show at Colville last week. Notwithstanding the influence of the war the show was one of the most successful in the organization's history. Except in the horse exhibits the entries were nearly as numerous and as high class as in previous years.

For the fourth time Joseph Turner of Myers Falls, widely known throughout the west as a breeder of Shorthorns, was elected president. He will also be acting secretary until such time as he selects some one to act in that capacity. H. T. Skeels of Addy was chosen vice president and M. A. Daggy of Colville treasurer.

The movement to secure reduced rates on registered live stock shipments was given a boost when the association went on record pledging its cooperation with the Northwest Live Stock show and the Pacific International Live Stock show in an effort to secure from the railroads reduced rates both by freight and express for the transportation of such stock.

The development of the baby beef industry is favored by the association, which has undertaken to assist in the formation of boys' and girls' baby beef clubs throughout the county. The animals that will be cared for by the boys and girls will be exhibited and offered for sale if desired at the next annual show, which will be held the first week in October next year.

The show next year will have a fund of from $1000 to $1200, with which to carry out its program, half of this amount having been raised in or about Colville. Spokane men interested in the work of the association have agreed to contribute an equal amount.

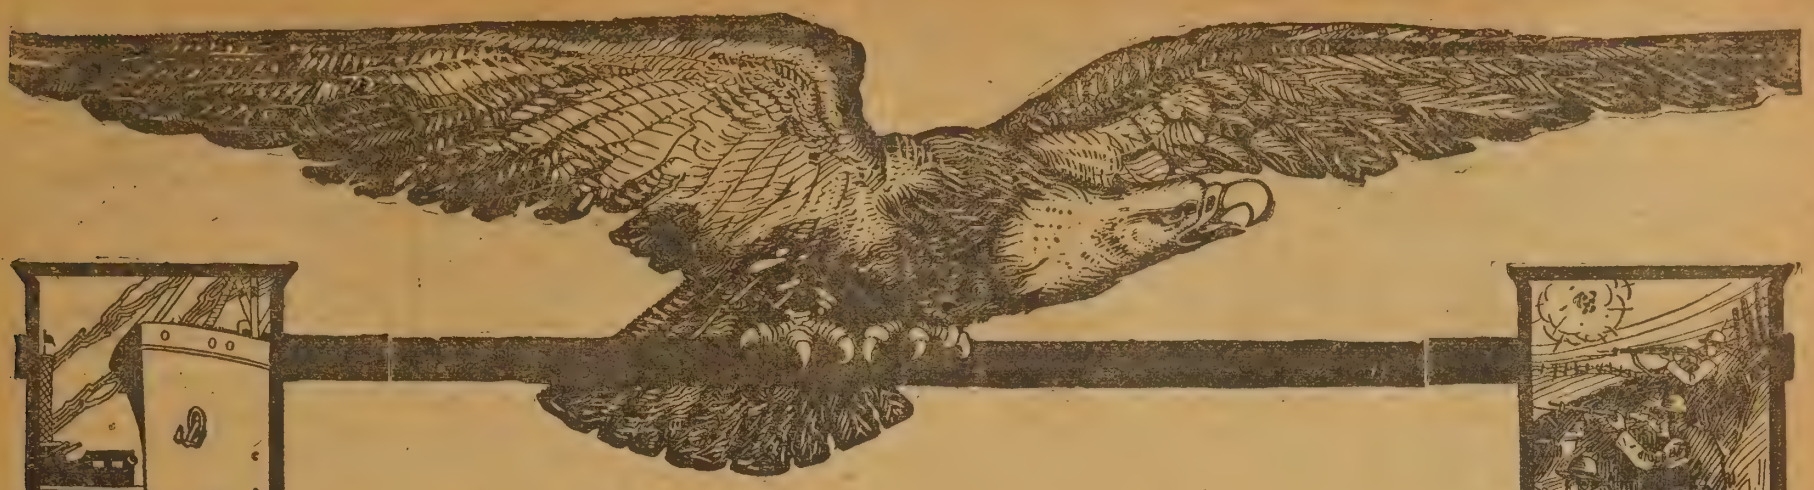
# Open Mohair Market

Textile and trade papers in the east have much to say concerning the recent conference between Chief Penwell and the mohair growers and dealers, as the mohair situation is of interest, not only to those making a specialty of handling this raw material, but to the wool trade generally. Chief Penwell gave as the reason why the fall clip would be released until further notice: "The needs of the government are not such at present that it feels justified in taking any arbitrary action in fixing the price below the cost of production. The accredited representatives of the National Mohair Growers' association, the Texas Goat and Sheep Raisers' association and the Arizona Goat Raisers' association have all stated that if a price less than 85 cents per pound were fixed it would be less than the cost cost of production and would work a great hardship upon the industry."

Mr. Penwell's added remark that "it is hoped advantage will not be taken of the situation, and that profiteering on the part of speculators will not force the government to take further action" is an implied threat which appears to have sobered the market. The situation from this viewpoint is complicated by the fact that considerable mohair is in transit from Cape Colony.

# Paternalism in Government

Pater was the Roman father. He was the center and circumference of the Roman family of the earlier day. The slaves, the sons and the wife were "in his hand." That is to say, not only was his word law for all, but he had the power of life and death over all. With this power there went the highest responsibility for the action of every member of his household. The Roman government was organized on the principle of the primitive family, the "patria potestas" being transferred to the state as the father of all its citizens.



The American people are just now caught and held by the ideal of paternalism in the central government. Government regulation of all public concerns and most of the private concerns of life; government ownership of public utilities; government ownership of all the instruments of production; government ownership for any and all who can not or do not take care of themselves; government determination of wages; government regulation of prices; all needs, aspirations and desires to find their fulfilment in government provision.

For some centuries the race had been struggling in precisely the opposite direction—namely, to get away from the o'erweening power of government and toward the largest liberty of action of the individual. It is needless to point out that the modern tendency toward paternalism is against personal liberty—the freedom of the individual. The tastes, needs, desires of the one must be sacrificed for the good of the many, is the fundamental trend. The modern tenet assumes that government is necessarily beneficent, that it is always wise, that it knows the facts, that it is all efficient, that officialdom will never be selfish, stupid, ignorant, partial, oppressive or tyrannical. Yet, officialdom in all the past has been the exemplification of these very things. Power has always turned the head. Governments have always been prostituted by some for selfish ends. Our modern paternalistic tendencies are toward the creation of two classes—officialdom and the rest of us; those who feed at the public crib and those who gather up the crumbs which fall from the rich man's table.

Officialdom never creates anything. Then the rest of us must create enough for ourselves and for them. By how much soever they increase in numbers, by so much the more must we create to support them. For a while all will go well, for we can make the transfer under the name of taxes. But when the accumulations out of which taxes may be paid are exhausted, then what? We will do as they did in Egypt under Pharoah—turn the property over to the state. That is what some already most earnestly desire. But what then? Then we will be a race of tenants-at-will, on the national domain, working for officialdom. And officialdom will use the same old tricks of the demagogue to get the places, and once in the high places the same tyrannical tendencies of necessity will appear. There be those who think that the only tyrant is a monarch, though all history shows that a heartless government bureau may be more tyrannical than any individual.

The doctrine of our forefathers, the doctrine of Jefferson, that "that people is the best governed which is least governed" is yet worthy of our consideration. Trust in ourselves, in our own creative power, in local self-government, deserves more consideration than it is now receiving.

# Dairymen's Question

## What Shall We Feed This Winter?

By A. B. NYSTROM.

Dairymen of the northwest are confronting a serious feed problem for the coming winter. Hay is scarcer than it has ever been before. Mill feeds are impossible to buy for some unknown reason, and the ground grains such as barley and oats are likewise so high that it does not seem advisable to use them in large quantities.

To the farmer who has a silo, with fair prospects of getting something to put in it this year, this high price of mill feeds does not make much difference. He can get good results without feeding any or but very little grain. This has been proved numbers of times by practical farmers and experimenters. The dairyman without a silo or without succulent feed of any sort is certainly in hard circumstances.

The following suggestions on feeding and management may help some dairymen in solving their problems:

1. Give cows all the water they can drink all the time. Don't make them walk a mile or more for it. During cold weather see that the water is at least 50 degrees fahrenheit.

2. Don't let cows stand out in the rain. If they are feeding or are kept moving they can stand exposure to rain, but they should have access to a covered shed at all times. Remember it takes feed to warm the rain which falls on their backs. Put yourself in the cow's place. Can you do better work in the wet or in the dry?

3. Use bedding freely no matter where the cow lies down. Never allow her to lie down in filth. She will produce more milk on less feed if you make her comfortable. Give her fresh air when inside.

4. Feed all the hay the cow will eat. What she leaves feed to the young stock or to the horses. If the hay is course and unpalatable sprinkle a little salt water on before feeding.

5. If you have roots or silage feed just enough of this to make it last through the winter season, or until green feed is available next spring.

6. If only dry hay is used make sure that the cows' bowels are kept in good shape. You may find it necessary to feed linseed oil meal in small quantities. One-half pound per cow each day is usually sufficient.

7. Use the legume hays, (clover, alfalfa, etc.) even at $32 per ton rather than timothy and native grass hays at $20 to $25.

8. Treat the cows kindly at all times.

### DAIRYMEN ASK FOR RELIEF.

At the convention of 200 farmers and dairymen in Washington county, Oregon, resolutions were adopted reviewing the serious condition of the dairy industry and asking the food administration, the Oregon delegation in congress and the department of agriculture to come to their assistance. The sane judgment of the meeting was expressed by Judge George Bagley, presiding officer, who declared that the dairy industry of Oregon was one of the greatest assets of the state and must be maintained, "the splendid herds must have feed; the dairymen must keep heart." J. D. Mickle, state dairy and food commissioner, promised the hearty cooperation of his office. The message sent to Washington asked the government to provide shipping and storage facilities for flour manufactured on the Coast so that mills may continue operations and furnish additional feed.

### HAS 19 COWS ON TEST.

To the Editor: I am sending you a report of the herd of A. H. Reilly of Waukon, whose herd I just finished testing. Mr. Reilly has a small dairy ranch, milking about 20 cows. He put 19 cows in the Whitman-Spokane Cow Testing association. Mr. Reilly is a graduate of the Washington State college and from the department of dairy husbandry in the class of 1914.

The cattle are of excellent type and well kept. The monthly records are proof of these facts. His herd of 19 cows averaged as follows:

Average daily milk production, 37.6 pounds; average monthly milk production, 1093 pounds; average test, 3.63 per cent; average monthly fat production, 39.7 pounds; average cost of feed per month, $17.33; average profit above feed cost, $2173.

RUDOLPH C. JOHNSON,
Tester.

### DAIRY HERDS LISTED.

Every dairy herd in the United States that on July 1 had been officially accredited as free from tuberculosis or that had passed successfully one test with a view to certification is listed in a publication just issued by the bureau of animal industry, United States department of agriculture. Copies of the list are available for the use of state and municipal officials and private persons.

Certificates of freedom from tuberculosis are soon to be issued by the bureau of animal industry to all owners of the accredited herds. Certificate No. 1 is to go to the United States soldiers' home in the District of Columbia. The Holstein-Friesian dairy herd at this institution includes 134 registered purebred cows and is one of the oldest accredited herds in the United States.

### SENATOR FAULKNER RESIGNS.

Senator J. W. Faulkner, representing Okanogan, Grant, Douglas and Ferry counties in the Washington state senate, has placed his resignation as a member of the state senate in the hands of Governor Lister. Senator Faulkner has moved to Wyoming and expects to take up his permanent residence there. The governor is now preparing the writ of election and hopes to be able to fix the time when the selection of a successor to Senator Faulkner will be made on November 5, the general election day, so that the holding of a special election may be avoided.

### Prepare for Coming of Peace.

The city or community that keeps its present industrial life most nearly normal during the war will feel the shock of the reconstruction at the close of the war less than the "mushroom" city or community. A reaction is inevitable, and now is the time to brace ourselves to withstand it.

# Profit in Winter Wheat and Vetch

To the Editor of The Washington Farmer: I believe that other farmers living on the cut-over lands in the northern end of Spokane and in Stevens and in Pend Oreille counties will be interested in the results which I secured this year from a field of winter wheat and vetch. Six years ago a field which I had rented was seeded to hairy vetch, and since that time no vetch seed has been used except that which volunteered upon the field. Two years ago, in 1916, I had a wonderful crop of wheat and vetch grown together, but I was unable to market the wheat which I threshed, owing to the fact that vetch was mixed with it so badly that wheat buyers and mills did not wish the wheat. In fact, I believe that I had fully two to four times as much vetch seed in the 1916 crop as I was able to secure this season.

The land was summer fallowed in 1917 and planted to winter wheat a year ago this fall. In this wheat vetch volunteered in a more or less degree—so much so that I feared I would be up against it to market the wheat in case it was threshed. I had fully made up my mind to cut the crop for hay, but first of all I desired to consult the food administration, and was advised by him to take the matter up with the county agent of Spokane county, Mr. Shinn.

Mr. Shinn advised me to cut the crop for grain and seed, stating that he could supply me with a machine that would separate the wheat from the vetch. As a result I cut the crop for threshing, and the following figures show the returns I have had from this crop, showing that I was warranted in following Mr. Shinn's advice. They are the returns from 16 acres of vetch and wheat:

| | |
|---|---|
| 387 bushels wheat at $2 per bushel | $774.00 |
| 3777 pounds vetch seed at $2 per bushel | 755.40 |
| 44950 pounds baled straw at $15 per ton | 337.12 |
| 1 1-2 tons hay at $30 per ton | 45.00 |
| Total | $1911.52 |

One reason why such satisfactory results were secured with the wheat on this light soil is the fact that the vetch builds up the land the same as peas. The vetch, which has been volunteering ever since it was first planted, was well inoculated, and the nodules were very profuse on the roots of the vetch plants. This is a point that should not be overlooked, because it adds to the value of vetch as a seed crop and also exercises a beneficial effect upon the soil in supplying nitrogen through the nodules from the bacteria on its roots.

The vetch separator works very satisfactorily in separating the wheat from the vetch, although the process is rather a slow one.

### BUYS PURE-BRED JERSEYS.

R. E. Bean, secretary-treasurer of the Hudson Bay creamery at Umapine, Ore., attended a sale at Hermiston recently and purchased three pure-bred Jersey heifers which were selected in the Willamette valley and shipped to Hermiston and sold at auction. These animals have exceptional productive records secured from the Ed Carey herd of pure-bred Jerseys at Carlton, Ore. One of the heifers, St. Mawes Rosaire Girl, is a great-granddaughter of St. Mawes Poppy, who has a record of 1120 pounds of butter in one year, and her grandsire on her sire's side has 30 daughters in the register of merit. Golden Rosaire's Esther is a great-granddaughter of Golden Dotsey, who is a sister of King of Nehalem, sire of Goldie's Nehalem Beauty, who has a world's record of 750 pounds of butter fat as a 3-year-old. The other heifer is Rosaires Lady Mabel 1 year old, whose grandmother made 561 pounds butter fat and great-grandmother on her sire's side produced 677 pounds butterfat. There were 22 animals in the shipment, the balance being purchased by a Hermiston butcher. Prices ranged from $95 to $335 each.

## VETERINARY

By DR. S. B. NELSON.

**Warts on Heifer's Flank**—I have a heifer 1 1-2 years old, in good flesh, running on pasture, that since June has been growing warts along her flank and down her leg in front of her udder. They grow in clusters large as a man's fist. What will remove them and prevent others from forming. D. C. B.

Ione, Wash.

Try covering the wart daily with castor oil. Give internally one-half ounce of Fowler's Solution of Arsenate morning and evening. This may give you good results. It has given good results in many cases. In some cases it has failed. The warts are due to a malnutrition, which may be overcome by the arsenic.

**Cows Need Phosphorus**—Can you tell me the reason for cows eating old bones? They stand around for hours eating them instead of their feed. They are on white clover pasture and are eating alfalfa hay. I have put lime with their salt, but that seems to have no effect. W. C. R.

Troutlake, Wash.

I think possibly that other mineral salts besides salt and lime are what you want for your cows. I have an idea that if you could add precipitated calcium phosphates to the salt or if you could grind up the old bone and give them the phosphorus that is in the bone, that would be of value to them. The fact that they try to eat the old bone is simply because they lack certain mineral salts and I think phosphorus is the one. A dose of precipitated calcium phosphate is about a half a teaspoonful once daily, kept up for a long period of time.

**Result of Injury**—I wish you could tell me what is the matter with my cow. About five or six weeks ago she had a bunch come on her left side in front and to the left of her udder about 15 inches in diameter and out about five or six inches which opened on the outside a couple of days ago. She will be fresh in about six weeks. Her milk got bitter about seven weeks ago and we had to dry her up. The stuff coming out is of a thin mattery substance which has quite an odor. Please answer as soon as possible and tell me if there is anything I can do for her. F. A. W.

Locke, Wash.

You give a pretty good description of an injury to the tissues of the abdomen which may have been caused in various ways, such as a kick, a blow from a heavy stick, the throwing of a rock, or various kinds of injuries. This has crushed the tissues and nature is trying to remedy the trouble by forming an abscess and eliminating the diseased tissue. I would recommend that a little larger opening be made to give drainage, and then wash out with a two per cent solution of creolin or other coaltar disinfectant once daily. There should be an opening at the most dependent part of the injury, then healing will begin above and gradually heal toward the opening.

**To Remedy Seam on Hoof**—I have a mare that was cut in the wire over a year ago on the hoof of the right hind foot and about an inch and a half from the heel. The seam has cracked open and is sore as it gets the heel piece work. Is there anything that can be done to have the seam grow together again, or can it be cut off so as to kill that part of the hoof? P. H. C.

Fernwood, Idaho.

If the seam or crack extends up to the hair then the injury can not be permanently remedied except in very rare instances. If it does not extend clear to the hair, but stops below the growing ring of horn, just under the hair, then it can be permanently remedied. There are two ways of doing this, by cutting across the top of the injury and trimming it out, and then blistering and making the hoof grow down. Secondly, by using splints and setting them into the horn on each side of the seam and then drawing the horn together and afterward using the first treatment. You ought to have a veterinarian see the animal to do this work for you.

### NEED HELP TO PLANT.

Though the northwest got along fairly well harvesting its short crop with short help, a full strength of labor is needed to sow the seed for next year's crop, which, it is hoped, will be above normal. A labor shortage is being felt.

JAMES DRYDEN,
Editorial Contributor

# Cull the Slackers

By JAMES DRYDEN.

Heavy egg laying is correlated with certain visible or physical characteristics of the hen. This has been demonstrated by studies of trap-nest records of individual hens. A knowledge of these characteristics makes it possible, at certain seasons of the year, to cull the poor layers of the flock with a fair degree of accuracy.

Judging and culling by physical charteristics is not as accurate as the trap-nest, but it is possible to pick out a large proportion of the unprofitable hens in the flock by this method.

Trap-nest records prove that the poor layer discontinues laying early in the season. The hen that stops laying and molts in July and August is, on the average, a poor layer. She will not lay as many eggs in the following year as the hen that continues laying throughout the summer and early fall. Neither has she laid as many eggs in the months preceding. The hens that have stopped laying in July and August should, therefore, be culled. Hens that have made a poor record in the first year will, generally speaking, make a poor record the second and subsequent years.

If the trap nests are used it is a simple matter to go over the records and pick out the non-layers. In the absence of trap-nests non-laying is indicated by:

1. The shriveled condition of the comb, wattles and ear lobes.
2. Closeness of pelvic bones.
3. Contracted or hardened condition of the abdomen.

Another indiciation of non-laying, which may be called the color test, is valuable only with breeds that naturally have yellow skin and shanks, as for example, White or Brown Leghorns and Plymouth Rocks. This test can be used on breeds of naturally pale or dark skin and shanks, such as the Orpingtons, Black Minorcas, or Campines. Hens of the former breeds that show distinctly yellow shanks and beaks have not been laying for several weeks. If, in addition to this yellow color, their combs and wattles are shriveled and the abdomen is hard they are certainly not laying. The yellow in shanks and beaks does not necessarily indicate non-laying, but it does indicate that the hen had a rest period for several weeks. They may have started again to lay and the color not yet become pale. It requires several weeks for the color to disappear.

Non-laying is also indicated by the molting of the feathers. Occasionally, however, a hen may be observed to lay while in partial molt, in which case the comb and wattles will indicate a laying condition.

In culling by these methods there will be greater accuracy if the flock has received normal feeding and care throughout the year. Any irregularities in feeding or care, or sudden changes therein, may cause a good layer to stop laying and sometimes to molt early. Where the feeding and care have been normal the culling will be accurate. If the flock should be producing an abnormally low yield of eggs it would indicate that many good layers had stopped laying.

In the average flock, it is possible, during July and August, to cull 20 per cent of the hens without decreasing the egg yield of the flock.

Cull in July, August and early September the hens that show:

A. Well-developed molting and distinctly contracted comb and wattles.

B. Contracted abdomen or dry, puckered vent.

C. Yellow shanks and beak.

Test "A" will usually be sufficient, but sometimes it will need to be combined with "B" to insure greater accuracy. Test "C" alone is not sufficient. It should be combined with "A" or "B."

The above tells how to select the poorest layers. This method, however, does not tell how to separate the medium good layers from the best.

If the poultryman wishes to cull everything but the very best, or those with a capacity of about 200 eggs in a year, he should make the selection from October 15 to November 15 by the following tests:

Keep those hens showing:

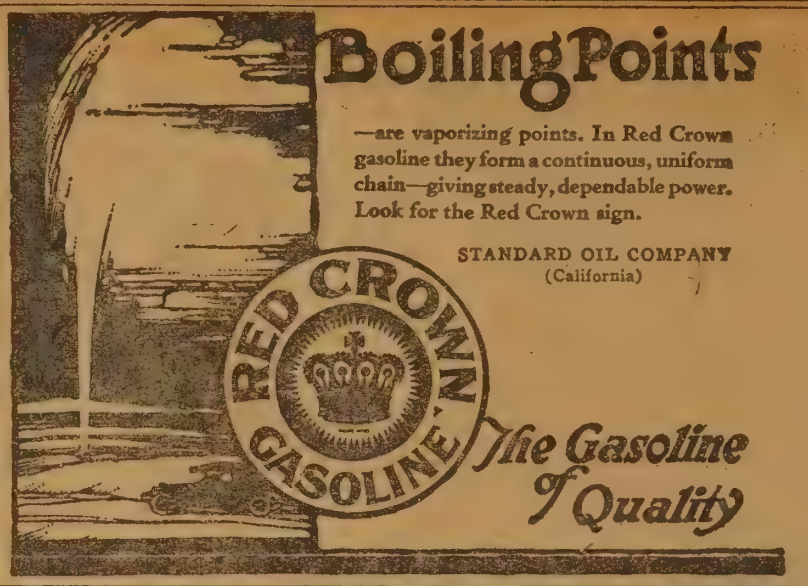
1. Incomplete molt, red comb and wattles, and bright eyes.
2. Well-spread pelvic bones, good depth from pelvic bones to keel bone, and soft abdomen.
3. Pale shanks and beak and vent, among breeds that have naturally yellow skin and shanks.

To make the selection with the greatest accuracy, use all three tests.

The high price of feedstuffs, as well as the added expense of labor and other items which enter into the cost of producing eggs, makes it imperative that there should be a careful culling of the laying flock if a profit is to be made by the producer.

# Artificial Heat

## Is It Good in Poultry House?



"A Reader" sends us the following: "Is artificial heat in a chicken house in winter all right? What is the best temperature when the heat doesn't cost anything? It is electric."

Artificial heat has to be handled very carefully, otherwise it will be worse than artificial cold. Artificial heat is not used in practice. The chicken can stand a good deal of cold without injury. If the spring temperature could be reproduced in winter it would no doubt result in a better egg yield, but the trouble is to reproduce it. It will not do to make the house warm unless it is kept warm all the time. To heat up the house for a week or more and then let the heat go out would result seriously to the hens. Or to keep the house cold and then put in a heater for a day would result in an epidemic of colds and sickness that would take the fowls months to recover from. Again, a heated house during the night and a cold house during the day also would bring disaster. What causes more colds and so-called roup among fowls is a close, overheated house at night a cold room or yard for them during the day. They need in such cases less heat rather than more. I have no doubt that with good ventilation or plenty of fresh air, artificial heat could be used successfully, but it has never been used successfully in a commercial way, to my knowledge. Fresh air is just as essential as feed to the hen. If artificial heat is to be used, the temperature should not be allowed to go much higher than 35 or 40 degrees in cold weather at night. Artificial lighting of houses has been successfully used, but artificial heating is a more disputed point. But if the temperature and ventilation can be controlled, there seems to be no reason why it might not result in better egg yield in winter.

J. D.

### Won't Lend for Non-Essentials.

There is a growing sentiment among bankers to discriminate between necessary and unnecessary industry in making loans, the general policy being followed of making no loans where the expenditures of the money would not aid in winning the war.

# Orchard Troubles

## Currant Diseases; Treatment For

By GRANVILLE LOWTHER.

The principal diseases of currants are supposed to be caused by various forms of fungi, and are listed as anthracnose, cane blight, currant blight, dropsy and leaf spot. As is true in fungus diseases in general, the standard remedy is the Bordeaux mixture, which is a preparation of copper sulphate (bluestone) and lime. The ordinary formula for Bordeaux is unslacked lime, four pounds; copper sulphate, four pounds; water, 50 gallons. Now, when it is remembered that nearly all diseases of plants are the results of fungi, and that Bordeaux is the standard remedy, it simplifies the treatment of diseases.

Currant anthracnose is probably the most common fungus disease on currants in the United States; or perhaps in the world. It is very common on the Pacific coast, and is more severe on the red and white currants, than upon the black. Primarily it is a leaf disease, although it may grow on any part of the plant above the ground. When on the leaf, the disease causes small brown spots, which, if they appear in sufficient number, cause the leaves to turn yellow and fall. This injury to the leaves devitalizes the plant, and prevents a normal development of fruit. If the plants are partially shaded, the disease is not so severe as in the continuous hot sunshine. The fungus holds over winter on the leaves that lie upon the ground, and on the branches of the plants.

Treatment may be by various methods such as raking the leaves and burning them, plowing them under, spraying with Bordeaux, and where the disease is bad, repeat the spraying at intervals of about 10 days, except the blossoming period, until the fruit is two-thirds grown.

Currant blight, currant cane blight and currant cane necrosis are caused by the same fungus. On certain portions of the canes, or branches of the canes, the leaves wilt, turn brown and die.

This disease is common in Hudson valley, New York, but has not been found to any considerable extent in other portions of the United States. The experts at the stations of Geneva and Cornell, N. Y., have given the matter attention, and have not, in so far as I am informed, discovered a remedy.

Dropsy is an enlargement of the stems, and somewhat resembles gall. It is not considered serious, and the only remedy I have seen recommended is to prune out the disease portions.

European currant rust—This disease, until 1906, was supposed to have been confined to Europe and Asia; but it recently appeared in New York, and in so far as I know has not spread to other portions of the United States.

Leaf spot is characterized by spotting, and premature dropping of the leaves. The remedy is to spray with Bordeaux. It is better to spray more than once, but late applications may make it necessary to wash the fruit, which is not desirable.

Powdery mildew in currants is controlled by the same means as the same fungus on other fruits, the Bordeaux.

The currant blight is so similar to pear blight that the same means of control are recommended. Cut out the blighted portions and burn them.

### GRAPE GROWERS ORGANIZE.

A grape growers' association has been formed in the eastern part of Mason county, Washington, in the vicinity of Detroit and along Pickering passage.

Grape growing has been practiced for about 20 years in this locality with very marked success, and on a commercial basis, says Roy Larsen the county agent. Mr. Eckert, president of the organization, has had a varied experience and has a wide reputation throughout western Washington for grape growing.

The purpose of this organization is to organize the grape growers in order to develop that industry through the improvement of marketing conditions, and particularly in the standardization of product, and in developing markets.

### LEWISTON DISTRICT APPLE CROP.

According to H. H. S. Rowell of Lewiston Orchards association the total apple crop in that district is approximately 50 per cent of last year. The state, taken as a whole, will give only a 20 per cent crop, according to Mr. Rowell.

### Exactness Is Lesson of War.

One of the lessons taught by the war is the necessity for exactness in every act. No haphazard methods are permissible in a matter of such vital import.

# The Farm Labor Army *de*creases as the National Army *in*creases

In spite of the labor shortage *more* food must be produced—*more* acreage must be put under cultivation. *More* work must be done by *fewer* men.

There is just one solution,—machinery must fill the gaps in the ranks of farm labor.

Tractors must be used—thousands of them—tractors that will actually *do* the things you *want* a tractor to do—tractors that will work on practically *any* kind of ground—in *any* part of the country.

These are exacting demands but Cleveland tractors by the thousands are meeting them effectively.

They are producing food—in larger quantities than ever before—*and are consuming none of it.*

They are plowing 3½ miles an hour, eight to ten acres a day and under medium soil conditions are pulling two fourteen inch bottoms. This is equal to the work of three men and three good three-horse teams.

And the work is not only done faster but *better* with the Cleveland.

The Cleveland is an all-purpose tractor that does a wider range of work than is possible with other types. It is the tractor that works successfully on the side hill.

It plows, harrows, sows and reaps. It hauls, does grading and road work, cuts ensilage and does the hundred and one odd jobs which are always to be done about the farm.

It is tractor and stationary engine in one.

The Cleveland is built on the same principle as the giant battle "tanks." It crawls on its own tracks, laying them down and picking them up as it goes along. It will work practically anywhere—over rough ground, ditches and hummocks, close up to fence corners, and under small trees.

With 600 square inches of traction surface, it goes through sand, gravel, gumbo, mud and even wet clay. It travels over the newly plowed ground without packing the soil.

The Cleveland is only 96 inches long, 52 inches high and 50 inches wide. It can easily be operated by one man and can be housed in less space than is required for a single horse. It weighs less than 3200 pounds.

Yet in spite of its small size the Cleveland develops twelve horsepower at the drawbar and twenty at the pulley.

The Cleveland Tractor was designed by Rollin H. White, the well-known automotive engineer, and is built under his personal supervision. Only the best materials are used throughout. Tracks and gears are protected from dirt and dust, and the track sections are joined by hardened steel pins which have their bearings in hardened steel bushings.

Every farmer can fill up the gaps in the ranks of his farm labor *profitably*—can help the nation meet the food crisis *profitably*—by installing one or more Cleveland Tractors *now.*

Speed up *your* production. Make more money. Write us for complete information and the name of the nearest Cleveland dealer.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

### SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight.

## CHAPTER V.

### A Song in the Night.

Now, even more than before, I wished myself a thousand miles from this uncanny creature and his cabin. No telling what he might do. But for the fact that he was standing in front of the door, I should doubtless have tried to slip out and steal away. But before I could decide upon any course of action, the shepherd took another look around the corner of his cabin, then began to sing again.

The contrast between this song and his others could scarcely have been greater. Those, with their silly words, were shouted out loudly, boisterously, almost with insane vehemence; but this song was sung with such expression and feeling as affected me strangely. Both the words and the air I had never heard before; nor have I ever heard them since. Perhaps the shepherd had composed both; for, in spite of some crudities of speech, he was an intelligent fellow, and, I think, a born musician.

Most of the words I have forgotten, but the beginning of the refrain was: "I'm far, far from home." It was the heart-broken plaint of an exile, homesick for the home to which he dared not return.

I have heard some famous singers since, but never one that seemed to me to sing from the heart as this man did, and never a song that affected me as this song did. Perhaps my surroundings, and what I had learned, and guessed, of the hermit shepherd's life, may have had something to do with it; but as I sat and listened, I could scarcely keep the tears out of my eyes. Such was the pathos pouring out with the exile's words.

Verse followed verse, and until the song was concluded I scarcely moved. When he had finished, the shepherd sang no more, but stood motionless, gazing far away. Before I had been a little afraid, not knowing what the fellow might take it into his crazy head to do. But now I felt that, however insane the man might be, there was, for the present at least, no violence in his insanity.

Laying the six-shooter aside, I stole to the door and stood watching him. At last, when he did not turn, I worked up courage enough to speak:

"What are you doing out here, Mr. Groves?"

He spun round instantly. "Oh, it's you, is it?" he exclaimed, in relieved tones. "I'd forgot you were here. When you spoke, thought the cattle-men had come back. But I might have known better. They never show their heads after the moon rises. They only come when it's dark—pitch-dark, the scoundrels! They know what's ready for 'em if they come about when I can see. I was singing to—did you hear me singing? I was just singing to let 'em know I'm not afraid of 'em. That was what the first songs were for. When they hear me singing like that they know I'm not afraid, and it makes the scoundrels shiver. Yessirree, you'd better believe it makes 'em shiver! And they go sneaking back to their holes."

"Yes, they've all gone back now," I said, thinking it better to humor him. "Why don't you come in and sleep awhile? You've been up all night. It's my turn to stand guard now. Come in and lie down, and I'll take your place."

"Think you can keep 'em off if they all come together?" he inquired, somewhat doubtfully.

"But they won't come, now that the moon's up," I reminded him.

"Why, yes, of course. I'd forgot about the moon." He turned and gazed at it. "Sure enough, there it is. Well, maybe I'd better sleep awhile."

He went inside and stretched himself on his bed. I was hoping he had gone to sleep, when he rose to his elbow and said:

"Did you hear that last song I sung?"

"Yes. Did you sing that to the cattle-men, too?"

"No!" he answered, scornfully. "What would they know about such a song as that? I never cast pearls before swine. I was singing that to the folks at home. It has been a year or two since I heard from 'em. I used to write when I first came out here, and they wrote to me. But I got afraid—afraid somebody else might read the letters; and so I don't write any more. But sometimes in the night, when I'm too restless to sleep, I go out and sing 'em that song—the song you heard me sing. But I'm afraid they don't hear it. Two thousand miles is a long, long way. Do you think they could hear it as far as that?" he asked, appealingly.

"Well, sound carries a good distance on a still night like this."

"That's so," he said. "But it would carry further if the wind came from the west. Maybe it will be blowing from the west by tomorrow night, and then I'll sing it to 'em again. If they're asleep and can't hear it, maybe they'll dream they hear it. Almost every night I see them in my dreams and talk to 'em."

He lay down again, but soon came to the door.

"You haven't found that spotted ox of yours, have you? That's because you've not looked in the right place. I happened to glance through a crack just now, and saw him first thing. Yonder he is!" He was pointing straight at the moon.

I turned and gazed in the same direction. "My eyes are not as good as yours," I finally answered.

"Well, now, that's strange. I can see him as plainly as I can see you. His horns sprouted feathers and turned to wings, and he flew up to the moon. And the man in the moon has yoked him up and gone plowing with him. Strange you can't see that."

"Oh, well, no matter," I answered, carelessly. "It serves the old rascal right for running away. Let the man in the moon plow him as much as he pleases. You go back and get some sleep."

The shepherd returned to his bed, and this time he remained there. I sat down on the door-sill and waited. At last his regular breathing told me he was asleep. That was what I was waiting for.

My saddle was lying by the house, and I took it up, as noiselessly as possible, and started. Vic was at my heels.

As I passed round the cabin, something impelled me to turn aside and take a look at that lifeless form. The moon had crept around till part of the corpse was now in the light. I gave a frightened start and a half-gasp at the sight of a long-grayish beard. The slain cattle-raiser must have been an old man. But the next moment I breathed freely again. I had seen the face above the beard. It was the face of a goat—the Billy-goat that had been stalking about near the milking-pen. Poor Billy was stone-dead! His insane master had given him a fatal bullet.

While hurrying on in search of my pony, I was almost laughing, so great was my relief at learning that no human life had gone out here tonight. "That loony sheep-man has got blood enough on his hands," I reflected.

The pony found and saddled, I lost no time in mounting and riding away. This had been a horrible night to me—the most horrible of my life—and very glad was I to escape from the sheep-ranch and its crazy hermit shepherd.

By the time I had regained the road day was tingeing the eastern sky. More than once during the night I had half decided that, if I ever got safely away, I would take the back track and go straight home. But now, the danger escaped, my courage had revived, and without hesitation I started on after the runaway.

My plan was to keep riding till I came to a house; and then, after informing his neighbors that the shepherd had become a lunatic, I would determine what to do next by the information received there.

Rapidly I rode, and the sun was just peeping over the horizon when I looked down into a valley and discovered a farm and a neat-appearing farm-house. A boy and a girl, both bare-headed, were in the stake-and-ridered cow-pen, milking. I rode up to the pen.

The boy, who was tall, light-haired and fair-faced, and not much older than myself, came over to the fence.

Scarcely had I mentioned a spotted ox with unusually long horns, when the young fellow broke in:

"Yes, that steer is here now. That is, he's close around somewhere. We found him lying at the gate day-before-yesterday morning when we came out to milk. He went off with our cattle, and was here again yesterday morning. My sister and I noticed him on account of his horns. And we noticed him still more closely because we knew he didn't belong around here. He has taken up with our cattle. You couldn't run him off. They failed to come home last night—our dry cattle, I mean. But your ox went off with them, and he's still with them. They're all somewhere close around. Have you followed him far?" he inquired, with friendly interest.

"Seventy-five or 80 miles. This is my third day out from home.

"Your third day! You are having a chase of it. Where did you sleep last night?"

"I didn't sleep, to speak of. I spent the night a few miles back on a sheep-ranch, with a wild, raving lunatic. The night before I camped with a mountain-lion, and managed to get along fairly well. But sleep was out of the question last night."

"So you stayed with Sam Groves, did you? I know the fellow but I'd rather not spend a night with him, if you please. Guess you had a time of it."

"I never spent such a night before, and hope I may never again," I replied with some feeling, the memory of my recent experiences being still vivid.

"What did he do, anyhow?" the young fellow inquired, eagerly. And his sister left off her milking and came over to the fence to listen.

I related some of the night's happenings, and concluded by saying:

"The fellow is crazy as crazy as a loon. Remorse for all those lives he has taken has driven him insane. The blood of seven human beings on one conscience is too much for anybody to stand."

The boy smiled as he answered: "Sam Groves is about half-crazy as you say. But it wasn't remorse that upset him. If he ever hurt anybody in his life, it was before he came here."

"Then what made him tell me he did?" I demanded, in amazement.

"Oh, that's just one of his insane delusions" spoke up the girl, quickly.

"That's right," said her brother. "He hasn't killed anybody yet; but he may if he keeps on shooting around at night, like he's been doing for some time. He's wounded a yearling steer and a horse for people in this settlement, that we know of; and no telling how many others that nobody knows of yet. People that know the fellow is wrong make it convenient to keep away from him. But if a stranger was to ride up to Sam's cabin at night, he'd stand a fine change to get his head shot off."

"It's a wonder he didn't take a shot at me," I remarked.

"Not if you went there in daylight. That's the strangest thing about him. He has crazy spells after dark, but in the daytime he's all right, at least so far as anybody can tell."

"If it wasn't remorse that drove the fellow crazy, what did?" I wanted to know.

"Herding sheep—being so much alone," said the girl. And her brother added:

"Sheep-men have a saying that six years of steady herding will get the best man 'a little out of fix upstairs,' especially if he lives a hermit's life. And Sam has been at it longer than that, he says. He sticks to it so closely, too. Every day in the year, cold or hot, rain or shine, those sheep must go out to grass. Once in a long while he takes half a day off to ride somewhere that he has to go. But even then he hurries back as if his life depended on it. Unless he drops the sheep business and goes at something else, no telling how crazy he will get. Cattle-men don't like sheep, because no other animal likes to graze after a sheep. There are some cattle-men here, and every settler has cattle; and Sam has got an idea from somewhere that they're all down on him, and would like to run him out. But it's just a delusion of his."

"Do you mean to tell me there wasn't any danger last night?" I demanded, incredulously. Such a thing had never occurred to me before.

The young fellow smiled. "Not from the cattle-men—no more than there is this minute. Sam did have some trouble where he came from, I understand. Somebody stuck a few warnings on his door, and Sam rounded up his sheep and traveled. But there never has been the slightest trouble where he is now. He has a flock of several hundred head; but there's plenty of grass for them and all the other stock here, and a good deal to spare.

"But get down and hitch your pony. You're at the end of your hunt now. After breakfast I'll saddle up and ride out with you, and we'll soon bring in your lost ox."

The girl now left off her milking and hurried away to the house. I dismounted, turning Dick loose to graze, and climbed over into the pen to help with the cows. There were still three to be attended to. While I roped the calves and pulled them off, the young fellow did the milking. We talked all the time, and when the last cow was "stripped" and her calf turned loose, we had arrived at a very friendly footing.

His name was Frank Booth. The family had come here from Missouri three years before. They owned a good farm here in the creek-valley, and better improvements than most of the settlers.

"My sister and I are alone just now," he explained. "Father and mother left home nearly two weeks ago to visit our married sister, down close to Wasco. We're expecting them back tomorrow or next day—don't know just when."

We now started for the house, Frank carrying one bucket of milk and I the other. He took the buckets into the kitchen and left them on the table. After washing, out by the well, and getting ready for breakfast, we entered the principal room of the house and sat down. The girl soon appeared at the door to announce that breakfast was ready, and we passed out into the room which was both dining-room and kitchen.

"Stella," Frank said, "this is Travis Holloway. He used to live in Bates county, Missouri. Bates joins Henry on the west, you recollect. It was the only county between us and the Kansas line."

The girl came to meet me with a friendly smile and a warm, firm hand-clasp that I have never forgotten. She was not quite 15, and though not large, was as tall as she would ever be. In appearance she was in marked contrast to her big, light-haired brother, both her eyes and her hair being dark. The most noticeable thing about her was her alert, wide-awake look. While not at all bold in her ways, she was more friendly than timid. Her face, viewed from the standpoint of my nearly 17 masculine years, was very attractive to the eye.

"And so you're another Missourian," she said, smiling up at me confidently. "As we're from adjoining counties, I almost feel that we've been neighbors, and are acquaintances already."

"No, I'm not quite a Missourian," I had to tell her. "I happened to be born in Texas. But my father and mother came from Missouri, and we've been back there since. We lived there four years, and most of my mother's relatives live up there somewhere—those that don't live in Kansas or Iowa or Illinois."

"Then you're a Texan, a sure-enough Texan, are you? Most of the people one meets here were born somewhere else. Oh, I know? They named you Travis for the hero of the Alamo, didn't they?"

"That's right. I was named for Colonel Travis, the commander at the Alamo."

"I've read all about him, in the History of Texas," cried the girl, her dark eyes shining. "Only I pronounced his name with the 'a' long—Trayvis—instead of the short sound you give it. I can't forget those words: 'Thermopylae had its messenger of defeat; the Alamo had none.' Wasn't it grand—and awful? Are you as brave as your distinguished namesake? He died rather than retreat or surrender."

Remembering how badly frightened I had been the night before, at nothing, I looked down.

"No, I'm not," I had to answer. "I'd be an out-and-out failure at the hero business."

The girl and her brother laughed, and we sat down and went to eating.

During the meal it developed that we three had one ambition in common—to get an education. Good schools were very scarce in this part of Texas at the time. But in a little town over on the Brazos two brothers, both ministers, both fine scholars and fine-looking men, and both young and full of enthusiasm, had opened a a mixed school. Though its age was less than half a dozen years, so many young men and women had flocked to it that it now numbered several hundred students, with nearly a score of teachers, and its reputation had covered the big state.

Frank and his sister had a catalogue from this school, and so had I. And we were all planning to enter it just as soon as we could. The fact that we expected to meet again put us at once on the friendliest terms.

(To be continued.)

# SIDELIGHTS

### The Boy Was Hep.

The Honorable—My boy, do you realize how great is the solemnity of an oath, before you commit yourself?

The Boy—Why—why, yes, sir. I caddied for you last Sunday.—Widow.

### Oh, Yes.

Flatbush—Are you doing anything to cut down your table supplies?

Bensonhurst—Oh, yes; we've eliminated the finger bowls.—Yonkers Statesman.

### Right!

Mr. Titus was traveling in Italy and one morning was quite surprised to meet some people from his native town.

"Why, Mrs. Clarke!" he cried, "How do you do? You are the last person I expected to see in Italy."

"If it isn't Mr. Titus!" exclaimed the lady, in surprise. "Yes, we are spending the winter here. You must call on us often. You know just how it is—persons we never think much of at home seem like dear friends when we meet them in a strange country."—Elsie May Lutes, Iowa.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**GILLIE GISLASON, Blaine, Wash.**—On April 26, 1918, entered the U. S. army service and was sent to Camp Lewis for training. Here he remained for a while and was later sent to Kansas as a member of the medical corps.

**LESLIE L. CARPENTER, Krupp, Wash.**—Is the youngest son of P. D. Carpenter of Krupp, Wash., and entered the U. S. naval service as a fireman during the fall of 1917. Now he is on the U. S. S. Chatham, "somewhere at sea."

**EDWARD E. BALCOM, Peach, Wash.**—In November, 1916, he enlisted in the U. S. navy and is now on board the U. S. S. Paul Jones, "somewhere on the ocean." He is the oldest son of Mr. and Mrs. W. H. Balcom of Peach.

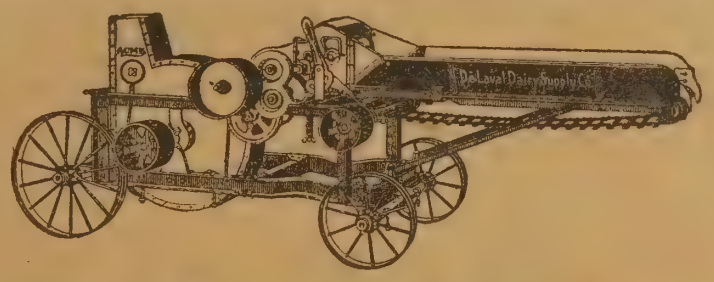
# Would Adjust Rates

## Local Freights Appear Excessive

With a view to securing relief for the farmers who have to ship grain or feed over two railroad lines and at present have to pay two "local" freight charges, amounting to considerably more than the distance seems to justify, the farmers' union is undertaking to have the railroad administration approve and put into effect a revised schedule that eliminates the excess charge. Under the present system of rates, if a person desires to ship grain or feed between such points that the shipment has to go part way over one line and part way over another, he has to pay the local rate on the first line to the point of transfer and then the local rate on the second line to the final destination. In some cases this results in a total rate equal to or more than the rate twice the distance on one line only.

Secretary A. D. Cross of the Washington and North Idaho Farmers' union, some time ago took the matter up with Director General McAdoo of the railroad administration, who replied that the matter would have to be acted upon by the Portland District Freight Traffic committee before any changes could be considered. Consequently Secretary Cross, acting for the farmers' union, has prepared a schedule of proposed rates which has been approved by the officials of the union and submitted to F. W. Robinson at Portland, chairman of the district committee. It is hoped that the committee will approve the suggested changes and that the railroad administration will adopt them.

The proposed changes are not a reduction of rates except where the two local rates, when added together, are considered unjustifiably higher than the total distance warrants. It is the desire of the union to have the distance determine the rate, and that it be the same even though it is necessary that the shipment pass over two roads to reach its destination.



The rates are drawn up, one set to cover grain and grain products, and another set to cover hay and straw.

### Need More Water.

Shortage of water in many irrigation districts prevented maximum production during the last season, and there still remain hundreds of thousands of acres of valuable land without reclamation.

# Chop Your Dry Feed

**Don't Lose $3 to $5 Worth of Hay Out of Every Ton You Feed**

## The ACME Cutter

USE THE ACME AT ALL SEASONS

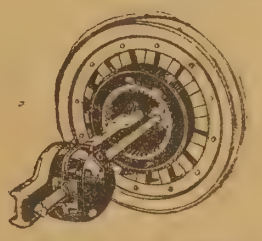
# REPUBLIC

## Internal Gear Drive MOTOR TRUCKS

*Save Time and Labor on the Farm*



Farmers who own Republic Trucks don't have to depend on extra teams to help them out when the rush of getting fall crops to market is on.

Republic Trucks are a profitable investment on any farm. They are built with the extra strength and durability that insure their working for you day in and day out in any kind of weather.

The Internal Gear Drive has nothing to do but to drive the truck. It applies the power near the rim of the wheel and gets a big increase in pulling ability. The load is carried on a separate I-beam axle of solid forged steel, much lighter than any other form of construction and at the same time stronger.

This saving in unsprung weight means longer life to tires and important savings in gasoline and all other upkeep expense. 45% greater road clearance make these trucks travel any country road easily without fear of stalling even in mud and snow.

Republic trucks have been proved efficient in every kind of hauling. Last year Republic produced and sold more than twice as many motor trucks as any other maker.

The Internal Gear Drive delivers 92% of the motor power to the wheels. We know of no other drive that delivers as much.

More than 1300 Republic Service Stations distributed all over the United States, back up Republic quality.

*Seven Models—¾ ton to 5 ton*

See the nearest Republic dealer and write us for late booklet.

# Max Houser's Work

## Genius, Industry and Patriotism

In pursuance of its steadfast policy of fairness and thoroughness in discussing topics of vital interest to its readers, the Farmer is glad to publish the following words in appreciation of the ability and character of Max Houser by C. C. Chapman, editor of the Oregon Voter:

It is fortunate for the grain growers of Oregon and the Pacific northwest that a man of Max Houser's genius, industry and patriotism is at the head of the grain administration of this territory. The extent to which Houser is on the job and the ability which he has brought to bear are hard to realize.

Houser's business career certainly was a schooling for his present patriotic responsibilities as grain administrator. He was a little, odd-mannered, peculiar and impetuous grain dealer of eastern Washington before he located in Portland. On his trips here he made little impression except with a few with whom he actually transacted business. He called upon a good many people in a business way, but only those with whom he established actual business relations seemed to sense anything of the power of the man. His conversations were short and jerky and his mannerisms so unusual that he was looked upon as somewhat of a curiosity and then was forgotten for the time.

After he came to Portland he began to cut a figure in the grain trade. He gave offense to some of the old-established firms by his aggressive buying. He seemed to smell conditions, to have an intuitive faculty for correctly interpreting signs of a rising market. Perhaps, though, it was not so much intuition. He is an investigator, who makes many trips to get at the facts, is always observing and who asks penetrating questions, the object of which often is not clear, but the answers to which are full of meaning for his acute understanding.

Before he had his big establishment, he covered the whole northwest himself by long distance telephone—call after call in rapid succession to buyers, dealers, growers in every part of his territory. He went after information by wire, got it in a hurry, acted on it instantaneously and closed up deals in rapid succession. Swinging from one telephone to another he handled calls with a snappy quickness that was marvelous. And he didn't wait for the other fellow to call him. He was shoving the out calls faster than the crowd could come back with the in calls.

He made some losses after he cleared a fortune of unknown great or small size in his big barley season, but he had the money with which to meet his losses and then had some left. He always seemed to play safe, taking no chances on deals where he could not cover himself should he figure wrong. It was his policy to clean up about once in so often, and get his cash in bank, so he would know he had it. Then he would breathe for a spell before jumping into the nerve-racking game again.

When the European war broke out, Houser got grain to the allies. The prodigies he performed in getting cars and ships were stupendous. Houser was on the job everywhere. His outfit was a big one by that time; he foresaw conditions accurately, and kept his buying organization so invigorated with his own nervous energy that it kept at least one jump ahead of competition and got the grain. The farmers rejoiced in Houser, for it was his aggressiveness that kept crowding the prices up. Houser was always in the lead with his offers; the other growled and had to follow. How much money he made no one knows outside of himself. Likewise, the stories of losses at sea, owing to failure to deliver cargoes upon which he had guaranteed delivery to the allies—he and the income tax collector alone know how the debit and credit sides balanced up, for he is intensely secretive about his private affairs.

When the United States entered the war, Houser ceased to be a private citizen. He bought a shipbuilding plant at Astoria and it has made a fine record of production. He was appointed grain administrator.

With this appointment he transferred his private business—built up by such slavish hard work for 18-hour days—to a corporation. This corporation runs entirely without his direction, and all its profits for the war period go to the Red Cross. He has visited its offices only twice in the last six months, and then only to hurry up the reports that would make possible quicker donations of the profits to the Red Cross.

After the death of Theodore B. Wilcox, the great figure in the flour milling trade of the Pacific northwest, the heirs to the estate decided to dispose of the Wilcox interest in the flouring mills—a big interest—variously rated as worth $1,000,000 to $3,000,000 or $4,000,000. There were buyers in sight, but none of them were Portland interests. Actuated very largely by the desire to keep the ownership of this interest in Portland, Houser bought the Wilcox interest.

Last year the biggest problem was to get cars to get the grain shipped eastward. Houser had fought for cars to get his own grain to the Atlantic seaboard. Similarly he fought for cars to get his country's grain forwarded in the same direction. And he fought a winning fight. His success as a fighter meant everything to the grain growers.

The car shortage made it necessary for grain to be held in the interior. The general plans of the grain corporation laid down in the east did not fit the northwest conditions that were aggravated by the car shortage. To hold this grain was a stupendous financial burden to the farmers. Unless it could be bought for cash and held in the interior until cars were available, farmers would have to pay interest on the money they had tied up in their crops.

Houser made a heroic fight to get the government to allow these carrying charges on the wheat, so the farmers could get their money without having to

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Uniformity is another word for economy and safety. When the same things happen with each pound of Giant Farm Powder, you know not only how much to use, but what results to expect and how to handle the explosive.

Giant Farm Powders are surer, safer and more economical because our tests guarantee every pound. We maintain our own completely equipped chemical division to inspect Giant Farm Powders during every process of manufacture. Absolute uniformity means absolute dependability. Like results always obtained under like conditions make western farmers prefer Giant Farm Powders.

"Giant Powder is the most satisfactory," says John Zurr, Santa Rosa, Cal. "I account for this because Giant Powder is made with the utmost care."

**Caution:** Be sure you get the genuine. That other explosives are often called "Giant Powder" indicates the high quality of the original. Look for the Giant trade-mark on every case.

The coupon (or a postal mentioning this paper) will bring you the big book "Better Farming." Tells how to remove stumps, prepare tree beds, and do all kinds of farm work cheaper and better. Write for it now.

Correct Lubrication for the "L"-Head Type Engine

This, the "L"-Head type of automobile engine, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude*

"Proven Entirely Satifactory"

Only perfect satisfaction can account for the use of ZEROLENE by the majority of automobile owners.

Leading coast distributors also testify that it is "a most satisfactory motor oil."

They know from the records of their service departments—and we know from exhaustive tests—that Zerolene, correctly refined from selected California asphalt-base crude, gives perfect lubrication with least carbon deposit. Get our lubrication chart showing the correct consistency for your car.

*At dealers everywhere and Standard Oil Service Stations.*

pay the interest. It cost Houser's office more than $1,000,000 paid out in carrying this wheat. This amount was more than what was paid out for the same purpose by the government in all parts of the United States outside of Houser's jurisdiction. The fact is cited to show that the Pacific northwest has special and peculiar problems that require an energetic, resourceful, thinking man at the helm to solve them and then get action. Houser made good wonderfully.

This year the big fight is to get ships to get the grain away from our Coast ports. Already there is a congestion, and grain is being left in the interior because of the congestion at the terminals. It was supposed there would be plenty of ships among all those being manufactured here in the Pacific northwest. There were plenty of ships completed, but they were diverted to Chile to get nitrates. This held up the grain situation. It took all of Houser's impetuous resourcefulness to get some of these ships called off the nitrate mission so they could be used to relieve the grain congestion. It is only within the last few days that Houser won out by getting some of the ships that were needed, and he is still actively on the job to get more.

## Apple Situation

### Outlook Is for Steady Prices

Commercial apple growers who read the Farmer will be interested in knowing that the outlook for steady good prices is better than it has been for some years.

The writer, while in central Kansas, Omaha, Kansas City, St. Louis and Denver, was in touch with dealers, as well as consumers and growers, and with scarcely an exception the information showed a light crop, particularly of certain varieties like Jonathan and Delicious, and the certainty of good prices for good stuff.

There were no western apples on the markets at the places named up to September 22—barring California Belleflowers. This variety, poorly colored, was selling at $2.25 to $2.50 per box.

Local Jonathans, fairly good, but which would not rank with northwest apples, were selling at $7 to $7.50 a barrel in St. Louis. Box stuff of the same variety sold at $3 to $3.25 a box, as the writer was told. This was the report from several markets, with an active demand.

While most dealers wanted boxed apples, there was some call, especially at Omaha and Kansas points, for bulk apples. One extensive dealer told the writer that he could sell a car of Jonathans with a rush on that day at $3 a box.

As to the probable price for western Jonathans, dealers seemed to be at sea and said they could not tell, but some of them thought they would be able to pay around $2 for extra fancy, f. o. b. shipping point. The other grades would run proportionately less.

An extensive Colorado grower said that his crop of Jonathans had been contracted at $1.90 per box, fancy and extra fancy—jumble pack.

In several of the cities the bushel basket was being used by nearby growers, but did not seem to be in great favor. It is, however, convenient in some ways, and will have a place in marketing methods. Reports from different states received by dealers indicated that the Winesap apples were, as a rule, yielding better than almost any other variety. But, as before stated, the reports were practically in accord that there would be a shortage of good apples and that prices would be pretty certain to be profitable to growers.

The fruit in the retail market was, as a rule, inferior, and considerable of it was wormy and scale marked, and of course would not be permitted to be sold in the markets of the Pacific northwest. However, the leading dealers realize the importance and seem willing to pay for and to encourage the production of good fruit.

Summarizing the apple situation, then, it seems to be this: Crop below normal, and this means considerably below the forecast earlier in the season, prices to growers around $1.75 to $2 and $2.25 per box for leading commercial sorts, with some better for Delicious, which is reported scarce, and choice Winter Bananas. Bulk stuff, taking a good average orchard run—culls and cider apples excluded—ought to reach $50 a ton when compared with other prices.

In talking with the writer a heavy wholesale dealer declared that if he owned a commercial orchard of good leading varieties he would be inclined to refuse any offer under $60 a ton for them in bulk. While this was a considerable admission for a dealer, it reflects the general belief that good apples are going to rule firm in price and that growers who have good stuff should not be stampeded into selling at any ordinary average price through fear that the apple market is going to slump or go to pieces. It may have some "off" days, but if present indications can be relied on as a safe guide there will be an active demand at worth-while prices for good stuff. Growers should therefore harvest their apples as soon as ready, handle them carefully, whether to be sold in bulk or boxes. But if to be marketed boxed, then grade and pack with care, so that you know your pack is right. Sell, if possible, cash f. o. b. at your home station. But if you deal in any other way know your men and see that your fruit is properly inspected before shipment. Buyers now understand that the government will take a hand and will permit no "snap judgment" on deliveries at the other end of the line, as has often been the case in the past. It is a good practice, for that reason, to have inspection both at shipping point and at the place of destination.

A. E. G.

### DR. PEARSON RESIGNS.

Dr. R. A. Pearson has resigned from the position as assistant secretary of agriculture in order that he may resume his duties as president of the Iowa State College of Agriculture and Mechanic Arts.

The nomination of G. I. Christie of Indiana to succeed Mr. Pearson has been transmitted to the senate. In April of this year Mr. Christie came to Washington as assistant to the secretary to aid the department in further organizing and developing its farm-labor activities. More recently he has been representing the secretary in the field in connection with loans from the president's special fund to farmers in Montana, North Dakota and Washington.

### CHERRY TREE IN BLOOM.

Councilman Taylor has a freak cherry tree in bloom in the yard of his home in Jackson street, says Pendleton, Ore., Tribune. The tree shed its leaves earlier in the year and Mrs. Taylor said at the time that the tree was dying. A few days ago, however, the tree showed signs of life again, and now the blossoms are out in full force. The tree bears the May Duke variety of cherry.

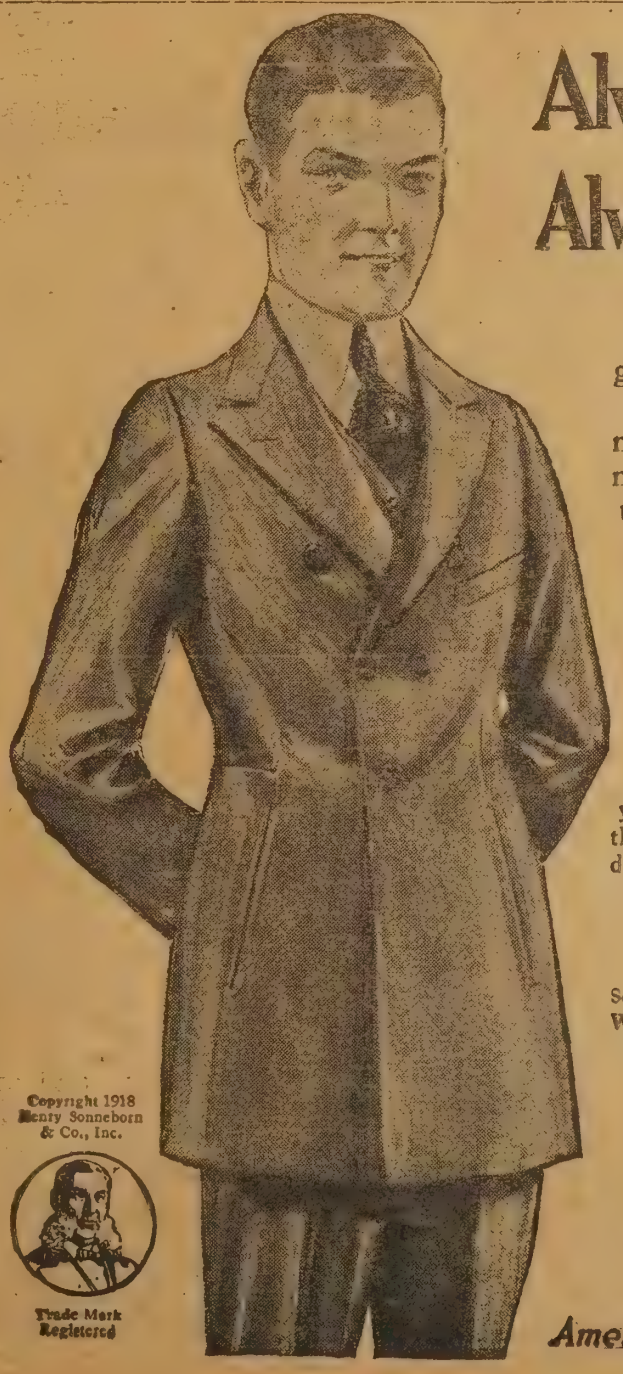
NONE of us can afford to neglect a single opportunity to help win the war. You can help by posting the first page of The Washington Farmer this week in a conspicuous place, in your house or on your farm, so that others passing by can see it. These colored patriotic posters help to keep national war needs before the minds of all the people.

# Do Not Delay the Purchase of a Piano Too Long

Owing to difficulty in obtaining raw materials and labor, and the rising costs of both, Piano manufacturers raised their prices to us several times in the past year and a half—we were forced to raise our prices accordingly. The manufacturers now warn us that as their production has been cut down by the War Industries Board to a small fraction of their original output, they can not manufacture pianos on a quantity basis and sell at a quantity price—that the prices of the small number of pianos they will be permitted to make, will soon increase enormously.

In fairness to our customers and friends, whose good will we value above all else, we issue the warning—**purchase now (in the next month) if you want a Piano**—otherwise those in moderate or even comfortable circumstances must defer the purchase of a Piano for several years until the greatly increased prices go down because of a return to normal manufacturing conditions.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**



*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, etc.*

**Sherman, Clay & Co.**

Sixth and Morrison Streets, Portland.
Third Avenue at Pine Street, Seattle.
928-30 Broadway, Tacoma.
808-10 Sprague Avenue, Spokane.

Stores also at San Francisco, Oakland, Sacramento, Stockton, Fresno, San Jose, Vallejo.

# Always good clothes Always moderate price

Styleplus are made on a plan that insures good quality at a moderate price.

By making a few standard grades and making a big volume in each grade we cut manufacturing costs and produce exceptional style and exceptional quality at the price.

Back up Uncle Sam with your dollars as well as your patriotism. Spend wisely. Buy only the clothes you need and be sure that you are getting good honest value at a fair price.

Styleplus Clothes are moderately priced, carefully made of good materials, stylish in appearance and built to give you faithful wear.

The best way to buy clothes is to go to a store, where you can see them and try them on. Then you know the clothes will fit you and please you when they are delivered.

Visit the Styleplus Store today!

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. S ) for Styleplus booklet and name of local dealer.

# Build Up Men for Country's Use

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

He came to the big training camp in a recent draft from a rural district. The draft board accepted him, although he was so round-shouldered that he looked like a hunchback.

He drilled with his company in the depot brigade. At least, he tried to drill. But no amount of exercise nor of coaxing by the drill officer could get him to straighten up and throw back his shoulders. To make matters worse, his feet went bad, and finally he could scarcely hobble about. Then he was sent to the army surgeon, where he became a patient in the new base hospital.

Surgeons looked over his bent form and then went to work. They massaged his back, and even baked it under an electric heater. They compelled him to undergo exercises until he winced at the pain of muscles and tendons put into play that had been useless for years. The crooked spine became supple. With a supreme effort he could straighten his back while in bed. When he sat up or walked, however, he slouched into the same old stoop-shouldered posture.

Dr. Hirschberg.

**Physically Impossible.**

"It's no use. I can't do it," he pleaded when a physical director told him to straighten up and go through a certain series of exercises. And apparently he couldn't. But the experts of the new department had another card to play. They began to teach him self-confidence. Before another week ended they had proved to his own satisfaction that he could straighten those shoulders.

To eliminate further detail it is merely necessary to relate that he is now ready to go back to his company—not for a clerk job nor even for the new United States guards, but as fit for a first-line unit. The orthopedic experts actually have inverted that hump on his back, and have made it bulge out his chest. He carries his head erect, his shoulders are thrown back, and he walks with a confident, easy stride, for they have straightened, by special exercises, the arches of his feet and have given him special shoes to correct any threatening pedal defects.

**Betters the Mind.**

Marvelous as has been the physical change in the man, it can scarcely be compared with his improved mental condition. He was inclined to be dull, listless and careless. The straightening of his body seems to have given him a higher, brighter outlook on life, and there is a snappiness even in his conversation that is impressive. The doctors have made a better citizen as well as a good soldier.

The story of this recruit is one of many cases in which really wonderful results have been obtained in this new branch of the army hospital service, which has been made the experimental center for this science, which aims, figuratively and actually, to "put a man on his feet again."

The treatment does not, however, confine itself merely to correction of foot defects. It covers the subject of joints in any part of the body. A knee, a stiff shoulder and a dislodged vertebra, all come under ministrations.

Foot troubles, of course, send the greatest number of patients to the army doctors. Some estimate that as high as 95 per cent of negroes and 49 per cent of whites called in the draft have foot defects of one kind or another, a considerable percentage of which are likely to become acute under the stress of continued marching.

**Other Valuable Services.**

A year ago the flat-footed recruit was rejected for military service. Today he is accepted and eventually lands in the orthopedic hospital for a course of treatment that it would be almost impossible for him to procure in civil life. One of the patients recently discharged as cured was the son of a wealthy physician, who had been unable to obtain for the boy the very special treatment which he received free as one of Uncle Sam's soldier nephews.

So-called broken arches are built up by massage, various prescribed exercises, development of self-confidence, and last but not least the equipment of the patient with shoes specially built to overcome any pedal defects from which he may be suffering. A special cobbler's shop has been opened in the main ward. Former cobblers among the patients sent to the hospital are now doing the work, and, incidentally, are learning a special branch of their trade that will enable them to demand big wages when they leave the army.

War doctors do another important service for the army in that they can quickly spot the man who may be "stalling" in the hope of getting out of the service. A few of the tests they have devised make the faker quickly convict himself. At the same time they discover many instances of real debility in cases that have aroused the suspicion of others.

Occupation is playing a big part in hastening cures among the more serious cases in these camps. The army physicians have found that a patient is much benefited physically and mentally when he can be given some definite work to offset the monotony of hospital days. Hench some knit socks on bedside looms, others weave baskets, make checker boards and other games, or do other work that their condition will permit.

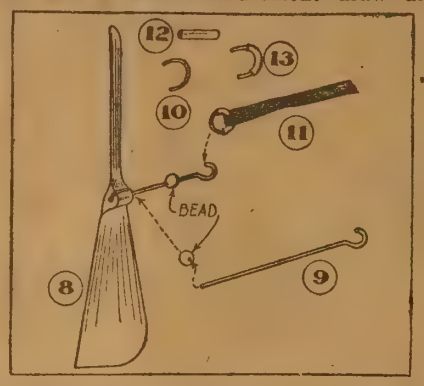
## MODEL AEROPLANE PROPELLERS AND A MOTOR WINDER.

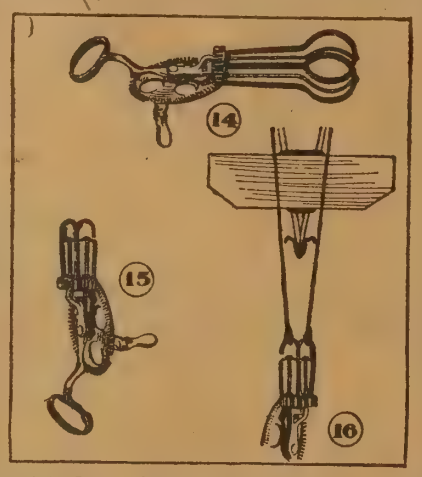
In the recent article upon model aeroplane construction, lack of space prevented us from going into the matter of propeller making. One-half of the secret of successful model building lies in this work.



A pair of propellers must be of identical size, but opposites—right-hand and left-hand; that is, the upper end of the right-hand propeller must be shaped to turn to the right, and that of the left-hand propeller to turn to the left, when viewing

the mounted pair from the rear of the model. After preparing one propeller in the manner described below, make the second one with blades turned in the opposite direction.

Figures 1 to 7 show the seven steps in preparing a propeller. Let the "Figure" numbers also represent the "Step" numbers. First of all prepare a propeller "blank" of the dimensions shown in Step 1. This block should be of straight-grained white pine, and be planed up straight and true on all sides.



Draw a line around the four faces of the block at the exact center of its length. Then on faces C and D, lay off a distance of one-half inch on the center-line, measuring from the edge of face B, to provide for the thickness of the propeller-hub (Step 2), and from the point representing the end of this measurement draw di-

agonal lines to the upper left and upper right-hand corners (Step 2). Then with a saw cut away the portions above these lines, as shown in Step 3. Mark out the one-half-inch hub upon faces A and B of the block, and bore a small hole through the center for the propeller-shaft to run through (Step 3). Then draw diagonal lines from the ends of the hub center-line to all four corners (Step 4), and saw away the wood above and below these lines (Step 5).

Step 6 consists in laying out the form of the propeller blade upon all four sides and ends of the block, and Step 7 is the final cutting and shaping of the blades, scooping them concave on one side, and carving them convex on the other side. Use a very sharp knife and cut slowly and carefully.

After finishing the cutting, place the propeller at its center upon the edge of your knife, and if it does not balance perfectly, cut away enough of the heavy end

until it does. Smooth up the surfaces with emery-paper, then shellac them.

In the previous article you learned how to bend the propeller shafts out of piano-wire (Figs. 8 and 9). You also learned that the rubber-strand motors are looped over rings bent out of wire (Figs. 10 and 11), and that the rings hook over the propeller-shaft hooks. A short piece of small rubber-tubing should be slipped over the wire (Figs. 12 and 13), to prevent the wire from cutting the rubber strands.

The rubber-strand motors are wound 1000 turns or more, for a flight. The pair must be wound an equal number of times. To simplify this winding, boys take a Dover egg-beater (Fig. 14), and cut off the ends of the wire loops, and the central pivot wires on which the loops turn. Then they bend the cut-off ends of the loops into hooks, punch the loop ends for the pivot wire ends to stick through (Fig. 15), and rivet these to keep the hooks in position. Figure 16 shows how the bow ends of the rubber-strand motors are removed from the framework, and slipped on to the winder hooks, for winding.

## TO REMOVE INK STAINS.

Ink stains can usually be removed from colored fabrics by soaking the stain in either sweet or sour milk; but unless the colors are fast they will probably fade to some extent.

As soon as possible after spilling the ink, the spot should be put in the milk. As the milk becomes discolored it should be poured off and replaced by a fresh supply. It will take a day or two to remove all the stain. If the material is gathered together just above the stain and wrapped tightly with many turns of cord, the milk will not spread and disfigure so large a portion of the garment.

Red ink may be removed by soaking the stain in clear water, to which ammonia has been added. The water will need to be changed several times.

India ink may be removed by washing the material in a warm soap solution.

**Order Prevents Losses.**

If everything were put exactly where it belongs each time it is handled, much loss of time and material would be prevented every year.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |

## Just What You Want

may be offered in this weeks' Want Ads at a bargain. It's a good idea to look them over every week.

## Now Commands Armies.

Copyright, Underwood & Underwood.

Would you recognize in the above the great General Pershing, in command of the expeditionary forces in France? It is he at the age of six years.

## Girls From France to Enter Our Universities

Copyright, Underwood & Underwood.

Sixty-two young French girls, energetic and ambitious to receive an American education, arrived at an Atlantic port not very long ago. They are the first of a group of 230 girls chosen for scholarships at the various American universities. They are to study at American colleges so that, when the war is over, they may return to their homes in France with American educational ideals, and teach them there among their own people. The people of France, as well as the officials, are very enthusiastic about the plan.

## Cited in Army Orders.

Miss Morgan, vice president of the American committee for relief of devastated regions of France, has been cited by General Degoutee, commanding the Sixth French army, for having for more than a year "consecrated herself with intelligent activity and admirable devotion to restoring French firesides devastated by the enemy."

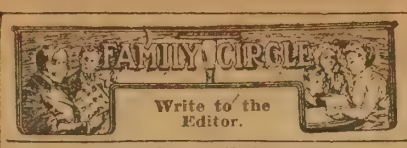
## The Truth of It

—Washington Times.

## Boy Scouts Show Grown-Ups How to Raise Corn



The boy scouts of Washington, D. C., not only have made two ears of corn grow where one grew before, in the fields about the nation's capital, but they have made as many as five, six and seven ears grow where none grew before. Enlisting regulars in the great food conservation army of the food administration, they planned and planted their crop unaided.

A perfect swarm of small persons in khaki, replicas of their older brothers across the sea, are flocking into the corn fields and stripping the tall stalks of their juicy burdens.

The boy scout food administration regulars are away up and "over the top," when it comes to growing corn.

Visitors from all over the United States have wondered all spring and summer about the beautiful corn crop—who planted it, whose was it, and who was going to take it away.

ALICE W. BARLAND,
Editorial Contributor.

# Preparing the Way

## To Attend School a Little Later

By MRS. ALVARA P. WILLIAMS.

THIRD ARTICLE.

If there is one thing dear to any heart, it is the daughter, who for many reasons must give up or at least defer going away from home, who goes about it with a stiff upper lip and does not slump. And most fascinating to me are the means these stay-at-homes may use in their endeavor to keep abreast of those with more advantages within arms' reach.

When I was a child, I lived too far from school to go alone and as a result, was educated at home until I entered high school. I can still remember my semi-annual visits to the office of the superintendent of schools, when I climbed up his big ladder and was pushed around the book-lined walls to pick out for myself copies of the free text books to take home and study. A fascinating room it was to me, even with the background of our well-assorted library at home. The most startling feature of this system of education was that when, after a schooling of an hour or two a day for several years at home, I entered high school. I had a better knowledge of English and American literature, fiction, Latin, and science in general, than the average high school senior, but I was hopelessly out of my depth for a year or so in mathematics and history.

I quote this bit of personal experience to show what may be accomplished by a very little home study. And if this was achieved with grade school subjects, how much more could be done by any one with the foundations properly learned, simply building upon a grammar school education.

This is not theory, but a proven fact, and the fact that school and government authorities have spent so much time and money to perfect every means of helping home students, shows how valuable the results must be. Comparatively few years ago, we began to hear about university extension courses which might be carried on by correspondence. Gradually the idea has broadened until now the government furnishes outlines and help for home courses, and many public schools give credit for home work which is far from being the old type of "book learning."

Now let us suppose that you are a typical "Ruth" as described before wanting to get away for education, change, broader views of life, and so on. And let us see how under present conditions it may be most desirable for many to stay at home for a year or two, distasteful as that may seem. Aside from more or less patriotic reasons why your help may be needed just now in the country, there are the considerations of excessively high prices of food, clothing and shelter in cities just now and indeed difficulty in many cities in finding suitable living quarters, crowded as they are with soldiers' families, shipyard workers and so on. If you had seen, as I have, soldiers walking up and down one street after another, ringing every doorbell and asking for any information about any kind of a place to sleep, anywhere, you would realize what advantage there is in staying away if you can.

If I were in your place, living in one of these western states, under present war conditions, here is what I would plan for a ear's work supposing I were ready to enter high school. First of all, if I lived in or near a section which has any harvesting or canning of any kind to be done, I would work at that as late in the fall as necessary. If at home, I would try to have a definite arrangement for at least small wages, allowing, of course, for board. If conditions were such that I must give my services at home, I would bargain for a vacation of an equal length of time away from home, after harvest is over—a month or two, perhaps. Never mind if that seems to occupy your time till the first of the year, without ever starting that course of home study.

Can you guess how I'd spend this vacation? Not in play entirely, not visiting, at all. I would, through the secretary of a city Y. W. C. A., as the most reliable agency, get a position doing housework in the city, for a small family where the work would not be too hard or hours too confining. Present day wages are such that at the end of two months you would have at least 40 or 50 dollars, maybe more, besides much experience. Why do this? First, a complete change of scene and work will prepare you better for a few months' hard work with books. Second, you will earn for yourself the wherewithal for books and any other supplies you may desire before the winter is over—a few music lessons if you can get them. Third, you will learn the ways of the city in the home where you work, and will save yourself much trouble if you go later to work and study at the same time. Fourth, you will have a valuable lesson in keeping your aim of a winter's learning clearly before you through all your varied work. Remember the arguments put forth by all government and school officials, to urge pupils to stay in school. I do not consider that the course I am suggesting is contrary to this advice, but merely preferable for some temporarily. The final aim must be clear. Fifth, you will have some leisure time, and opportunity to obtain personally from schools and libraries much help as to outlines of your course of study, references, etc., which you would find it hard to obtain by mail. You may even have a chance to start one or more of your subjects in night school, and in this way get most valuable ideas of how to continue such a course by yourself later. You should be able, before you leave the city, to map out your entire plan of action up to the next school year, with the help any school or library officials are always glad to give.

Then, when the time you have set for yourself is up, go. Don't be persuaded to stay on at housework, or don't spend your money for clothes and pleasure. Your purpose should be definite enough to keep you from this, and the things you can do at home, valuable enough to influence you. And I do hope that every family thus situated can spare its daughter for a month or two, as I thoroughly believe this part of the year's work is most valuable to her and to you. Think of the fresh life she can bring back to you, aside from her own new ideas.

---

In an early issue of the Farmer, Mrs. Williams will continue her discussion on how a girl may best prepare herself to attend school away from home.

---

# Answers to Prayer

By IDA C. YOUNG.

In a large percentage of cases God does not answer prayer and the reason for this is that so very few people really know how to pray effectively. We look up the passage "Whatsoever thing ye desire, when ye pray ask believing that ye receive and ye shall have it." Then we present our petition and straightway proceed to cut ourselves from any and all good things that a kind and beneficent God is ever ready and waiting to bestow upon us.

This is because we do not understand that our minds and bodies must work in unison with our prayer. We must carry in our minds pictures of fulfillment, and we must persistently and everlastingly do unto others as we would have them do unto us and do it cheerfully; not merely a semblance of cheerfulness, but a deep, sweet good nature in which there exists no trace of worry, irritation, envy or rebellion.

Who has not prayed for a good crop and then let his imagination picture his hay ruined by rain, and his wheat shriveled by drouth? We pray for safety and see with our minds visions of wrecks, illness and disaster. Then when these visions materialize we wonder why the hand of God is so hard upon us.

It matters not whether our imagination busies itself with ourselves or others, the result is very much the same. The man who broods over revenge brings upon himself, or loved ones, sure disaster; while the same man, with his mind continually serene and sweet and busied with active and successful planning, can accomplish all things.

This is especially true if he is careful in the coordination of his body; that is, the doing to the very best of his ability any and all work that lies nearest at hand. Even though it may seem to lead directly away from the thing prayed for, he will find in the end that only in this way comes the answer to prayer and the blue bird of happiness comes singing and winging its way into human life.

There is no work so humble that it can not be done a little better, a little more sweetly each day of our lives. And when it is so done, patiently and persistently, we shall soon find ourselves mounting upward and onward into higher and larger circles of work, success and usefulness and our prayers become higher and finer, and more quickly answered.

Do You Need Farm Help?

Farm help is scarce, but one way to overcome the scarcity is to make your own time count for more.

The Self-Starting

Remington

Typewriter

will **save from one-third to two-thirds** of the time you now spend in pen-writing letters.
The typewriter is becoming as necessary on the farm as any other time and labor saving machine, and the longer the war lasts the more necessary it will become.

The Remington Typewriter

is easy to learn to operate, and the whole family can use it.

Let us send you our latest booklet, "How the Typewriter Captured the Family." It will place you under no obligation and a postcard with you name and address will bring it to you.

Remington Typewriter Co.

374 Broadway, New York City

I Am Public Opinion

All men fear me!

I declare that Uncle Sam shall not go to his knees to beg you to buy his bonds. That is no position for a fighting man. But if you have the money to buy and do not buy, I will make this No Man's Land for you!

I will judge you not by an allegiance expressed in mere words.

I will judge you not by your mad cheers as our boys march away to whatever fate may have in store for them.

I will judge you not by the warmth of the tears you shed over the lists of the dead and the injured that come to us from time to time.

I will judge you not by your uncovered head and solemn mien as our maimed in battle return to our shores for loving care.

But, as wise as I am just, I will judge you by the material aid you give to the fighting men who are facing death that you may live and move and have your being in a world made safe.

I warn you—don't talk patriotism over here unless your money is talking victory Over There.

*I am public opinion!*

*As I judge, all men stand or fall!*

## MAY BUY MONTH'S SUPPLY OF SUGAR.

Effective on October 1, retail dealers are allowed to sell at one time a month's supply of sugar to the consumer. This supply, of course, is based on two pounds per person per month. For example, if there are five in the family they may buy 10 pounds at one time, but are not entitled to buy another supply until a month has elapsed.

This supersedes the rule allowing sale of two pounds to town trade and five pounds to the country.

The change is not made because there is any less need of conservation in sugar. The domestic canning demand, however, will soon decrease and the available spot stocks of sugar will make possible this change as a convenience to both the consumers and the retailers.

In order to supply our army and allies with the sugar that is absolutely essential in winning the war we must not exceed the two pounds per person per month allowance.

## RED CROSS TO HAVE DAIRY PLANT.

Fresh milk will be supplied to 20,000 sick and wounded soldiers in France by 1000 cows which the French government has agreed to loan to the American Red Cross, according to an announcement just issued by the Red Cross. With these cows the Red Cross will establish a model experimental dairy plant at the largest American army hospital in France, $5000 having been set aside for the inauguration of the plant. As the dairy will be operated by convalescent soldiers, the cost of maintenance will be comparatively small. It is pointed out, however, that cost is not important, as fresh, pure milk is absolutely essential in the proper diet of the cases at the hospitals.

# MUGGSY'S PREMATURE FOURTH PREVENTS A COLLISION

My Dear Corner Boys and Girls: When the judging time comes it would make the work much easier if I could find on every letter your age. Just put it at the end of the letter and not in a sentence. Even though you have told me how old you are in other letters, please put it at the end of every letter you write. This will save me from looking up each one of you, over and over. Will you do that for me? I know you will if you can remember. Lovingly, AUNT NELLIE.

Elizabeth Brown of Delrio believes her birthday is unlucky because she can not find a twin. It comes on August 26, and she is 13 years old. This summer, her mother, two sisters and two brothers went to her aunt's ranch in Idaho to can strawberries. Elizabeth stayed at home to keep house for father. She wishes Sally Garry would write again because she likes her letters so well. She wants the girl who wrote from Delrio to visit the Corner again.

One of our cousins, Anna Entel, wishes the war would quit, so she is doing all she possibly can to help win. She has a war saving stamp. Anna lives at Colton, and was 15 years old May 27. She would like to hear from her twin.

It is a great treat to go to the country, Cousin Alice Reinhold of Davenport, thinks. She writes and tells us about the good times she had when she went this summer. While she was there a snake was killed and so some of the girls had a regular funeral for the snake, picked flowers for the grave, made a coffin for it, and let the poor thing rest in peace. Alice had a good time when she visited Spokane, too. She was 12 years old June 12.

The first thing that Cousin Teresa Germont of Greenacres does when the Farmer comes is to turn right to the Children's corner and read every single letter. Teresa has a little pet calf and 10 little chickens. When they see Teresa, they always come running after her.

Henry Yoss of Whitcomb, doesn't see why so few boys write to the Corner. He turns to the Corner the first thing whenever the Farmer comes. Henry has four war savings stamps and belongs to the Junior and Senior Red Cross.

Herding cows, pulling weeds, watering gardens and helping dad haul hay are the things Lila Warner of Wallula did to earn her shift stamps. Lila lives by the Walla Walla river on a 140-acre farm. This summer they made three trips after fruit in their car. Lila was 12 years old April 7, and she would like to get some letters from Washington cousins.

Lela Thorpe's pet cat comes in the house every morning, climbs up on Lela's chair and meows for his milk. Lela knows some of the girls who write to the Corner. She would like to hear from a cousin who was 11 years old last May 22, because she was herself. Lela lives at Edwall and has knitted 12 afghan squares and has two war savings stamps.

January 16 is the day that Minnie Cardwell is looking forward to, because that is her birthday and she will be 10 years old. Minnie lives at Harrington. She has a dog named Buster. She wishes the cousins and Aunt Nellie good luck.

A cousin, whose last name is Miller, and who lives at Aladdin, wrote a nice letter to the Corner, but forgot to give his or her first name. This cousin was 10 years old July 25, is in the sixth grade and has a brother, Paul, in the army.

At a basket social held at the schoolhouse, $95 was made and turned over to the Red Cross, writes Dorothy Phinney of St. John. Dorothy enjoys reading the letters. She was 15 years old August 5, and is going to high school this year. She wishes her twin would write to her, and she would like to correspond with any of the girls of the Corner.

Vacation was a great pleasure to one of the little cousins, Irma Joyner, of Deer Park, because she likes being outdoors so much. Irma lives on an 80-acre farm and they keep 20 head of cattle and milk 12 cows. Irma was 7 years old January 29. She would rather live in the country than in the city.

A large farm near St. John is Esther Phinney's home. Esther is going to write to the Corner again. There are two horses on the farm that she can ride. She was 13 years old November 10. Has she a twin?

Papa and mama had an accident with the car and papa's foot was broken, writes Cousin Ella Brown of Miles. They have six horses, three dozen chickens and eight pigs on their farm.

Callie is the name of the cow that Violet Howell milks every morning and night. Two cousins and one uncle are serving Uncle Sam. Violet lives on a 71-acre farm at Farmington. A cat named Jim is one of her pets.

Paul Craddock's grandfather came as far west as the Columbia river in 1885. Paul lives at Paterson, with his uncle. He is in the sixth grade at school, was 13 June 29, and wants to know if he has a twin.

Washing and drying the dishes is part of the work that Mary Foster of Pomeroy does every day. Mary was 12 years old September 3. For a pet she has a little black chicken. She has a big brother and a little sister.

Violet Wheeler has to ride 11 miles every day in a bus to school. Violet lives at Blewett, in a small lumber camp. She will be 13 next April 11, and would like to correspond with her twin or with some other Corner boy or girl.

Any letters which she receives from cousins will be gladly answered by Winnie Davenport of Pomeroy. Winnie likes to read about what the other boys and girls are doing. She was 12 years old April 10. Has she a twin?

One cousin is going to have a birthday pretty soon, Frankie Baldwin, of La Crosse, who will be 13 years old November 14. Frankie was glad to get a letter from Cousin Sally Garry. Frankie was sick in bed for two weeks, but is better now and we are glad. She wants some of the cousins to write to her.

Evelyn McKinney likes to read the Corner letters. Evelyn's address is R. F. D., Box 59, Rockford, Wash., and she was 10 years old July 11. She has one brother and one sister.

Hazel Haydon's home is in Spokane, but she spent the summer with her Aunt Nellie and Uncle Arthur on a big 360-acre ranch at Republic and it was while there that she wrote to us. Uncle Arthur has 18 head of cattle, three pigs, three cats, 30 little chickens and 22 big ones. At home, Hazel has a pet dog, Spot. She was 10 years old, September 30, and she wants her twin to write to her.

Effie Luddington would write to any of the cousins if they would write to her first, but she doesn't know which one to write to. Effie, who lives at Baird, goes on horseback after the cows and to the mail box for the mail. She found a little chicken with a broken leg, and is going to make a pet of it.

Eight little goslings, seven little ducks, some chickens, and Fanny, the dog, are Erma Broyles' pets. Erma lives on a farm near Penawawa, and goes to a country school. She hopes the cousins will write to her sometimes. Erma was 9 February 25.

Jewel Howard of Waitsburg milks two cows. She can knit and so can her little 6-year-old brother. Jewel is 9 November 14, and she wants to hear from her twin.

One of Mabel Stevens' brothers enlisted in the army in 1916, and is now in Mexico. Mabel lives on a 400-acre ranch near Okanogan now, but she used to live in Canada. She will be 13 September 23.

Cousin Evelyn Engstrom of Aladdin spent the summer on a ranch. She used to live in town. Evelyn was 11 years old March 25. She belongs to the Red Cross and has $4 worth of war savings stamps. The children in her room at school pieced a quilt for the Red Cross.

"The state highway is being built past our house," writes Ada Warner, of Wallula. Ada will be 11 years old January 3. She has five sisters and one brother, and they have eight pet lambs, one of which belongs to Ada. Ada has a thrift card with seven thrift stamps in it, and has money enough to buy seven more.

**A Letter From Springdale.**

Dear Aunt Nellie: May I join the Corner? I have been reading the letters and enjoy them very much. I also read "The Trappers of the Ozarks," and thought it an interesting story. I am 13 years old and am in the sixth grade. My birthday is October 25. Have I a twin? If so I wish he or she would write to me. I live on an 80-acre farm, 40 of which is cleared and 40 covered with timber. We have 27 head of cattle and two work-horses. The horses' names are Babe and Bill. I have seven brothers and four sisters. I think two of my brothers will have to go and fight for Uncle Sam.—Dorothy Canary, Springdale, Wash.

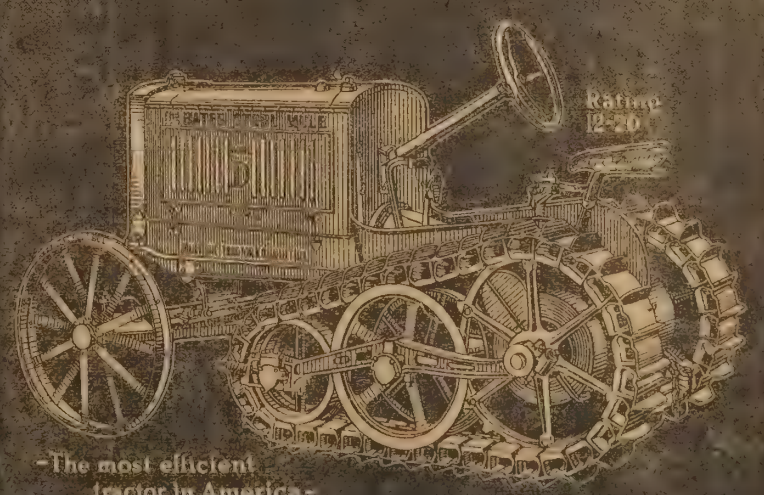
GOOD PROFITS TO AGENTS
Cabbage Cutter with 6 Knives
that always keep sharp. Slices cabbage and all other vegetables easily and rapidly. Sent prepaid for $1.00. 3 for $2.00. LUSHER BROS., Elkhart, Ind.

**Both Drivers Level When Plowing**



When plowing both drivers run level on the unplowed ground and one front wheel runs in the furrow for self steering. This keeps the tractor standing straight, and eliminates any of the side thrust on bearings that is always present in tractors where they *lean over* because of a driver running in the furrow.

Perfect flexibility; unit construction of working parts; hardened cut steel transmission gears; Timken bearings; heavy duty valve-in-head kerosene motor; and crawlers that double the usefulness of the tractor are some of the additional features of superiority.

*The livest and most progressive dealer in your territory probably has some Steel Mules on order and a demonstrator in transit. If he has not been able to get his—write us direct and we will give you full information.*

# The Disk in Farming

**The following paragraphs are taken from a recent document issued by the government, entitled "Hints From a Practical Farmer," designed especially for settlers on the projects of the United States reclamation service, by I. D. O'Donnell, supervisor of irrigation.**

Ordinarily I would begin with the plow, for plowing is generally understood to be the first important operation in preparation of the fields for seeding. I am, however, starting with the disk, for the reason that the use of this implement on the irrigated farm—on any farm—is very important as a preparatory step to plowing.

For irrigation farming it is important that the soil be handled in such a manner that it will be kept in a physical condition favorable to use by plants of the moisture in the soil. When plowing time comes on the irrigated farm the soil dries out on top very rapidly unless preventive measures be taken. If the plowing is started when the soil is just right, it is likely to be breaking up in a cloddy condition before the field is finished, having air spaces where a good, compact seed bed should be. Double disking the ground ahead of the plowing will thoroughly pulverize the surface and effectively prevent drying out of the soil; also, this pulverized surface is turned by the plow into the bottom of the furrow, making a perfect contact between the bottom of the furrow and soil turned by the plow. While this disking ahead of the plow appears to be extra work, it is really labor saved, as much less work is required to bring the plowed ground into good condition for seeding, and the farmer may be positive that the all-important seed and root bed is in first-class condition.

A similar use of the disk following the grain binder prepares the ground for fall plowing, retaining the moisture in the soil until the grain is removed for threshing, and opportunity given for plowing.

Following the plow the disk may be used to good advantage in two ways. Set at an angle it will pulverize the surface, and followed by the harrow prepares a good top to the seed bed. Set to run straight or nearly so it acts as a packer to settle freshly plowed ground which is soon to be seeded.

The disk is also a labor saver in putting in crops on land that has been in cultivated crops the year before. Here the farmer gets the advantage of crop rotation. By going from a cultivated crop to a small grain crop he is enabled to prepare the land in the spring with the disk for seeding, which is a quick and easy operation as compared with the plow.

If stubble ground is not to be fall-plowed it should at least be gone over with the disk, turning under the scattered grain and weed seed which will be sprouted by fall rains and later winter killed. Otherwise these seed would volunteer in the next year's crop and cause trouble.

As outlined, the disk has its use, but it should not be substituted for the plow. It is a surface worker and does fine execution both before and after the plow. Where it is necessary to turn the soil to a considerable depth the plow must be used.

Cross disking does not give as satisfactory results as double disking or lapping the disk one-half its width.

A number of companies manufacture disks, for which they make various claims. All disks work on the same principle. An important item is the size of the disk. This implement operates with a combined cutting and revolving motion and the smaller in diameter the disk the more efficient it is in pulverizing the soil. From this it may be judged that preference should be given to the smaller disk. A 14-inch diameter gives good all-around service. The width of the disk will depend upon the amount of horsepower available. As this implement is worked at a time when speed is important it is well to get the widest size consistent with the available horsepower.

Keep the disk sharp; it is impossible to get good work out of this implement when it is dull.

### Next Year Looms Up.

The work of this season is about over and the problems of how to produce the most food and save it next year are the things to be considered now.

STATEMENT OF THE OWNERSHIP, MANagement, circulation, etc., required by the act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for October 1, 1918.

State of Washington, county of Spokane, ss.

Before me, a notary public in and for the state and county aforesaid, personally appeared J. F. Young, who, having been duly sworn according to law, deposes and says that he is the vice president of The Washington Farmer, and that the following, is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing Company, Spokane, Washington; editor, ——; managing editor, Edwin A. Smith, Spokane, Washington; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Cowles Publishing Company (a corporation), Spokane, Washington; W. H. Cowles, Spokane, Washington; H. C. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.) none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stock holders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

COWLES PUBLISHING COMPANY,
By J. F. YOUNG, Vice Pres.

Sworn to and subscribed before me this 26th day of September, 1918.
(Seal) F. J. WHALEY,
(My commission expires Oct. 17, 1919.)

# Rush to Cities

## In Australia as Well as America

At the present time the bulk of the population in Australia is confined to the five big cities on the coast, and these cities are rapidly growing larger and larger, says the Pastoral Review. Although huge flats are erected and immediately let, and building, especially in the suburbs of Sydney and Melbourne, is rapidly being pushed, it is hard to find a vacant house or cottage. If the official statistics are studied, Australia has only increased its population by 100,000 souls in the last five years, therefore there can be no doubt but what the population is leaving the country and going to the towns. And it is not to be wondered at. Our "democratic" governments have put handicap upon handicap on our producers, and cater only for the big bulk votes of the cities. The result is that our farmers are made the galley slaves of the big town unions, and have to slave month after month with a very poor return to themselves to keep the city men in luxury and higher wages. Now they are having the last straw put on their backs by the fixing of maximum prices for their meat. Ignoring all history where price-fixing has ever brought chaos, our "national" government have indulged in this folly. If they expect to get labor votes by it they will be grievously disappointed, and they will lose votes which put them into power at the last election. As has been done in true democratic countries, the price fixed should be a minimum one, so as to encourage the producer to enormously increase his supply, then the law of supply and demand will bring down the price. Fixing a maximum price means under-supply and starvation. Fixing a high minimum means ample supply and plenty.

### Seed Has Been Saved.

There probably never was a year before when so much seed of various kinds of agricultural crops was saved on the farms or in the gardens, and this only goes to indicate further the widespread growth of the conservation idea.

If the same determination and system were employed in carrying out the normal activities of normal times as are absolutely necessary in carrying out the abnormal activities of abnormal war times, the wealth of the world in material and spiritual things would be multiplied many fold.

## The Business End of a JERSEY

THE business end of a Jersey is the udder. It's a money-making machine. One of the marvels of nature. Automatic and sure! The Jersey does not adulterate her own milk. She gets the utmost nourishment from the least feed. She gives it to you in milk richer in butter fat than that produced by any other breed. Hundreds of farmers who started with one Jersey now have herds bringing them a continuous income that makes them independent of crop conditions. The facts about Jerseys will surprise you. We send them FREE.

Write to breeders for prices and pedigrees.

THE AMERICAN JERSEY CATTLE CLUB. 314 West 23rd Street, New York City.

## ASHBURN FARM

REGISTER OF MERIT JERSEYS.

A bred herd, tried out for several generations by every breeding test. Only the best blood lines. Three proven matings. Nothing for sale except from tried sires. Increase of both sexes for sale.

J. M. DICKSON & SON.
Shedd, Ore.

## Golden Glows Chief 61460

One of two gold medal Jersey bulls west of New England states. Bred by us. Two of his sons in service in our herd. A few animals, all ages, both sexes, for sale.

IRON MINE FARM, Oswego, Ore.
W. M. LADD, Owner.
D. BROOKS HOGAN, Mgr.

## All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

## Doerfler Farm Jerseys

Have largest herd average in the world considering size. Entire herd of eleven head average 599.42 fat. Herd headed by Gertie's Poppy's St. Mawes. The Cary breeding is our standard.

See us at the state fair.

F. A. DOERFLER, Silverton, Ore.
Phone 54 Silverton or 43F24 Salem.

## Anoka Farm Jerseys

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120 lb. granddam. St. Mawes breeding. The Best in the West. Prices very reasonable. Address

R. B. SEELY,
R. 5, Sherwood, Ore.
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

## Register of Merit Cows

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.

FOX BROS. Silverton, Ore.

## LYNDEN JERSEY FARM

Herd sire son of Fororio's Olindes Pogis, of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to

P. MEENDERINCH, Lynden, Wash.

## Ready for Service

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.

HENRY STEWART, Albany, Ore.

## Desirable Young Bulls

Sons of Sultan Star, whose dam, now on official test, will qualify for gold medal, with over 800 lbs. of butter. His sire's dam, Knight Star, has record of 865 lbs. butter.

Priced right.

JERSEY HOME DAIRY.
Erickson Bros. Yakima, Wash.

## Dairymen, $75.00

buys your choice of two bull calves, both two months old; solid color, good individuals; out of register of merit dams and by bulls with heavy R. of M. backing. If you are looking for a bargain here it is.

JOHN B. STUMP & SON, Monmouth, Ore.

## Who Wants This Bull?

A double grandson of Kadia F., world's Jersey milk record, for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.

N. H. SMITH, Oregon City, Ore.

## Goldie's Nehalem Beauty

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring.

CLIFFORD F. REID.
Wilcox Bldg., Portland, Ore.

## Jersey Bull for Sale

I am offering at a sacrifice my young herd bull, dropped December 15, 1916. Has blood of Golden Glow's Chief and Majesty's Togo. None better anywhere. Write

E. F. MARYATT, Grandview, Wash.

## Edgewater Farm, Breeders

Foundation stock is from most noted Island Jersey families—Golden Lad, Golden Jolly, Oxford Lad, Old Raleigh—names that stand for high production and showring winners as well.

E. T. SMITH. Myrtle Creek, Ore.

## Meridian Dairy and Fruit Farm

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.

B. C. CRABTREE, Lynden, Wash.

## Luckiamute Farm

Register of Merit A. J. C. C. Jerseys. Home of Octavia's Duke breeding. Daughters test as high as 7.53, second highest in U. S. A few good young bulls for sale.

FRANK LAUGHARY & SON,
MONMOUTH, ORE.

## Where Can You Beat It?

Young bull, ready for service. Sire's dam, St. Mawes Poppy, 1120 lbs. 35 per cent butter, or 1100 lbs. 80 per cent, in a year. Is 75 per cent same blood as Poppy's Grace, that has recently finished year's test as junior 2-year-old, with 601 lbs. 35 per cent butter. His dam and dam's dam both register of merit cows. Priced at $250 for quick sale.

F. E. LYNN
Perrydale, Ore.

## Must Be Sold

Bull calf dropped July 26, 1918. Sire, St. Mawes Koffee Violet Lad, whose dam's official record is 777 lbs. fat, 914 lbs. 85 per cent butter, 971 lbs. 80 per cent. A show bull, son of Rosaire Olga Lad, sire of 27 R. of M. daughters. Calf's dam a register of merit cow. Only $75 if taken at once.

WARD L. HULL, Ballston, Ore.

## Rose Lawn Jerseys

The Island bull (Rosy's Jolly Golden Fine 135028) at head of herd. Bulls for sale out of Register of Merit and high-testing dams. Bred right, of right type; priced right.

S. H. KAYLER
Twin Falls, Idaho.

## WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

## Ashnook Farm Jerseys

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 80 per cent butter. A few good cows and heifers for sale.

DEL PERKINS, Carlton, Ore.

## Jersey Home Jerseys

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (842.5 lbs. butter), both 80 per cent. Also other good young bulls.

THOMAS WILLIAMS, Forest Grove, Ore.

## St. Mawes—Rinda Lad

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.

G. G. HEWITT, Monmouth, Ore.

## Jersey Farm Dairy

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.

E. S. PELOT, R. F. D. 5, Idaho Falls, Ida.

## Three Prize-Winning Herefords

The three Hereford bulls shown in the picture are from the prize-winning herd of the Curtice Cattle company of Calgary, Alberta, that have been shown at Spokane, Yakima and Salem, making a practical clean sweep at each place. From left to right they are: Beau Perfection 48, grand champion at nine fairs in Canada, before crossing the line. Beau Donald 92, undefeated in any Canadian show or at those named above. Beau Donald 215, sired by Beau Donald 192, and junior champion of Canada in 1918. They were all bred by the company that owns them.

### DECREASE IN HOGS AND CATTLE.

According to a recent report of County Agent A. W. Holland of Adams county, Wash., the scarcity of feed is causing the county to be depleted of hogs and cattle. Popular opinion places the number of hogs in Adams county at 50 per cent of last year and a rapid decrease. Hogs and cattle are being thrown on the market in a very poor condition. Many are selling their breeding stock.

A serious hay shortage and the high price of feed is going to seriously damage the live stock interests of Okanogan county, reports County Agent W. A. Holt. Many are contemplating the shipment of all classes of live stock, fat or unfinished, with the result that in the years to come it will be necessary to repeat the building up of the live stock business as it has been done in the past.

### FORM LIVE STOCK ASSOCIATION

A live stock association with 24 members was recently formed in Pend Oreille county. The main purpose of this organization is to market cooperatively the cattle of the county, to standardize and improve all the live stock of the county.

### CAVALIER GALE MAKES RECORD.

"Cavalier Gale" is the name of the trotter that made a world's record racing in hopples at the Washington State fair, instead of "Baron Gale," as published in a recent issue of The Washington Farmer.

### WAIT FOR RAIN TO SOW.

In many parts of the northwest the farmers have been compelled to wait long and patiently for rain before sowing their fall crops.

## HOLSTEIN CATTLE

**SOME CHOICE OFFERINGS FROM WORLD'S RECORD STOCK**

Don't just buy Holsteins; buy Von Heim High-Testing Holsteins that give both milk and butter and that make you profits in the increase of your herd. Why not your next herd sire a Von Heim Holstein? We have a few fine young bulls at the right prices. Photos, pedigrees and prices on request.

M. J. WALTHER SUPT.

Young stock for sale, including senior calf, Edgewater Lentine, grand champion 1918 Washington state fair. Herd government tuberculin tested.

ELBERT M. CHANDLER, Burbank, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Oct. 5.—Progress in the smashing of German defense lines made the corn market today average lower, and so likewise did a renewal of peace talk. The close was heavy, 1-4 to 1 1-4 down, with November 129 1-2 to 129 3-4 and December 128 3-8. Oats gained 1-4 to 5-8. Provisions finished irregular, 5 cents off to 12 cents advance.

Sharp watch of war developments, especially in France and Belgium, shut out all other factors in the corn market except peace tactics and the need of week-end adjustments of trade. As a whole business was light.

Scantiness of offerings seemed to be chiefly responsible for the firmness of oats. Seaboard call was slow, but industrial demand quite keen.

Liberal shipments sent provisions upgrade most of the session. At the end pork sagged owing to weakness of hogs.

### Cash Quotations.

CHICAGO, Oct. 5.—Corn—No. 2 yellow, $1.55@1.59; No. 3 yellow, $1.45@1.48; No. 4 yellow, $1.38@1.40. Oats, No. 3 white, 72@72 3-4c; standard, 72 1-2@73c. Rye, No. 2, $1.62 1-2. Barley, 95c@$1.05. Timothy, $7.50@10. Clover, nominal. Pork, nominal. Lard, $27.12. Ribs, $23@23.87.

### Pacific Northwest Grain.

PORTLAND, Ore., Oct. 5.—Grain—October delivery, bids—Oats, No. 2 white feed, $58.25; barley, standard feed, $47.50, $48.25 asked. November bids—Oats, No. 2, $58.25; barley, feed, $48, $48.25 asked; oats, No. 3, $51.25; clipper, $51.25; corn, yellow, $58; mixed, $57. Eastern oats and corn in bulk—Oats, No. 3 white, $51.25; 38-pound clipped, $52; corn, No. 3 yellow, $58.50; No. 3 mixed, $57.50.

### Minneapolis Grain.

MINNEAPOLIS, Minn., Oct. 5.—Flour unchanged; shipments, 84,883 bbls. Barley, 85@93c. Rye, $1.57@1.58. Bran, $28.77. Wheat receipts, 526 cars, compared with 452 cars a year ago. Cash, No. 1 northern, old, $2.22 1-2. Corn, No. 3 yellow, $1.33@1.37. Oats, No. 3 white, 67@68c. Flax, $3.76

## Live Stock Quotations.

### At Portland.

PORTLAND, Ore., Oct. 5.—Cattle—Top stuff good; rest slow. Receipts 156. | Year ago ..... | 96 | 7 | 60 | .... |
| Two years ago ... | 150 | .. | 81 | .... |

Receipts of cattle were heavy for Saturday. The market was active from the start at steady to strong prices. The offerings were mostly of the common to medium grades. Stockers and feeders were a feature, one load of extra good feeders averaging 1120 pounds going to a Montana feeder at $10.50. Another load of lighter weights sold at $8, and several small lots at from $7.50 to $8.50. The offerings of cow stuffs was of the ordinary kinds, with a few choice cows which sold at $8. Compared with a week ago the prices are unchanged. The market closed steady to strong at the following:

| | |
|---|---|
| Prime steers | $12.00@13.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.75@ 8.75 |
| Medium to good cows and heifers | 6.00@ 7.00 |
| Common to medium cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 4.25 |
| Bulls | 5.00@ 7.00 |
| Calves | 6.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

Only a few hogs of the light half finished kinds on the market. The market is firm at Friday's close. The demand is good. Compared with a week ago all grades declined from 10 to 25 cents.

| | |
|---|---|
| Prime mixed | $19.40@19.50 |

| Prime wethers | 8.50@10.00 |
| Best mutton ewes | 6.50@ 9.00 |
| Breeding ewes, 1 to 4 years | 13.00@17.50 |

### At North Salt Lake.

NORTH SALT LAKE, Utah, Oct. 3.—Cattle—Receipts, 78 head. Choice heavy steers, $11@12; good steers, $9.50@10.50; fair steers, $8@8.50; choice cows and heavy heifers, $7.50@8.25; fair to good cows and heifers, $6.50@7.25; cutters, $5.75@6.25; canners, $4.75@5.50; fat bulls, $6.50@7; bologna bulls, $5.50@6.25; veal calves, $9@11.

Hogs—Receipts, 314 head. Choice fat hogs, 175 to 250 pounds, $18.25@18.50.

Sheep—Choice spring lambs, $14@15; wethers, $9@10; fat ewes, $8@9.

## Portland Markets.

PORTLAND, Ore., Oct. 5.—The potato market is holding steady with sufficient receipts for current local demand. The best Oregon Burbanks bring $2.50 with average sales at $2@2.25. Yakima Gems are selling at $2.25 and Idaho Rurals at $2.25@2.50.

There is a fair demand for apples and supplies are increasing. Jonathans, Gravensteins and Winter Bananas are moving at $1.75@2.25 for extra fancy, according to size.

The Oregon butter shortage continues acute, with cube extras readily selling at 63 cents. Fresh eastern butter is offered at 61 cents.

Eggs are firm at the 55 cent basis, as receipts are small. The demand is not extensive.

Butter—Cubes, extras, 63c; prints, 61@62c; butterfat, No. 1, 65c.

Eggs—Oregon ranch, candled, 50@53c; selects, 54@55c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 33c; Young Americas, 34c per lb.; Coos and Curry, f. o. b. Myrtle Point, triplets, 32 1-2c; long horns, 33 1-2c per lb.

Poultry—Hens, 26@27c; broilers, 28c; ducks, 32c; turkeys, 28@32c; geese, nominal.

Pork—Fancy, 25c.

Veal—Fancy, 21 1-2@22c.

Potatoes—Oregon, $2@2.50 per cwt.

Hay—Buying prices, f. o. b. Portland; Eastern Oregon timothy, $30 per ton; valley timothy, $29; alfalfa, $27; valley grain hay, $26@27; clover, $28; straw, $9@10.

## Seattle Wheat.

SEATTLE, Oct. 5.—The lifting of the embargo against receipts of wheat into this terminal from eastern Washington points to a limit of 60 cars daily has been taken care of in the domestic flour trade without creating a demand for any additional storage space. The unloading capacity here is about 180 to 200 cars a day.

The rules regarding the percentage of wheat allowed in poultry foods have been modified for the benefit of wheat growers on the Olympic peninsula, who have raised a large crop of unmillable grain, and have been unable to find a market. The percentage of wheat allowed in poultry feed has been increased to 25 per cent. Under the former rules these farmers were not allowed to sell nor millers to buy.

## Seattle Market.

SEATTLE, Oct. 5.—In order to protect the crop of Winesaps from depletion by reason of the raid from eastern buyers on Jonathans orchardists have advanced their price on Winesaps 15c per box. The movement and demand of applies is brisk, and with all Jonathans in the hands of firm buyers and Spitzenbergs and Rome Beauties coming on in two weeks for attention. Winesaps, the longest keepers of all, are coming into a much more active price zone.

The actual movement of extra fancy apples has now practically begun. For the first time, as indicating the widespread strength of apples, Spitzenbergs are opening on Jonathan prices of $3 to $3.50 per box, with Rome Beauties at $3.

Due to the heavy crop in southern California orange prices are expected to be normal, with outline of sales of medium to small sizes down to $3.50@4 per box.

The potato market is very unsettled. White River valley growers have been selling this week what carload buyers claim is No. 1 stock at $24, concededly an actual loss to growers on the basis of high labor costs, bags, culling and cartage to station platform. Valley growers claim they can break even only at $30. Sales at $28 have been frequent. The most active buyers are carload shippers to eastern and southern markets, who are brought into stiff competition with middle western producers. Yakima baking Gems, No. 1 stock, are being quoted at $35 f. o. b. which would mean $30 for Puget sound whites.

In searching through other centers for a supply of butter to keep down the local shortage, city creamery men today declared that they will be unable to replenish depleted stocks until the Seattle market reaches 70 cents. Creamery men would be compelled to sell butter shipped from Chicago at 63 cents to get a profit and California butter would be a loss under 72 cents. On this basis it is contended that the Seattle market commercially is too low.

The fresh ranch egg market is stronger for the week-end. Jobbers paid up to 61 cents Saturday. The bulk of sales is at 64 cents.

### Purchasing Prices.

Eggs—Select ranch, 58@59c per doz.; pullets nominal.

Butter—Fresh dairy, 32c per lb.; butterfat, 68c per lb.; bakers, 46c per lb.; raw milk, $3.30 per cwt.

Poultry—Broilers, live, 1918, under 2 lbs., 32c per lb.; hens, 3 1-2 to 4 lbs. and up, 28c per lb.; under 3 1-2 lbs., 26c per lb.; old roosters, 17@18c per lb.; ducks, live, fat, 23c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 21@22c per lb.; Belgian hares, 11@14c per lb.; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 36c per lb.

Hogs—Light, 22@25c per lb.; heavy, 19@21c per lb.

Beef—Steers, fat, 12@15c per lb.; heifers, fat, 14@15c per lb.; cows and bulls, 11@14c per lb.

Veal—Fancy, light, 20@21c per lb.; do., heavy, 10@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

### Hides, Tallow and Wool.

Bid prices to producers: Salted hides, cows and steers, No. 1, 15c lb.; do. No. 2, 14c lb.; green hides, cows and steers, No. 1, 12c; do. No. 2, 11c lb.; salted bulls or stags, No. 1, 10c lb.; do. No. 2, 11c lb.; green bulls or stags, No. 1, 10c lb.; do. No. 2, 9c lb.; salted or green calfskins, No. 1, 32c lb.; No. 2, 30 1-2c; salted or green kip skins, No. 1, 16c lb.; do. No. 2, 14 1-2c lb.; dry hides No. 1, 30c lb; do. No. 2, 29c lb.; dry bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calfskins (5 lbs. and under), No. 1, 35c lb.; do. No. 2, 33c; tallow, No. 1, 13c lb.

Horse hides, green or salted, each, $2@4; do. dry, each, 50c@$2.

Clean ranch wool, full growth, lb., 50@55c.

Sheep pelts—Long wool, each $2.50@4.50; medium wool, each, $1.50@2.50; short wool, each, $1@1.50; shearlings, each, 35@75c.

Beeswax, per lb., 25@27c.

### City Prices.

Hay and feed quotations, city prices, truckload delivery, are as follows:

Feed—Millrun, $34@37 ton; scratch feed, $82; all grain chop, $74; oats, $70; sprouting oats, $72; rolled oats, $70; whole corn, $82; cracked corn, $84; rolled barley, $ clipped barley, $69; alfalfa meal, $44; meal, $82; egg mash, $66.

Hay—Eastern Washington timothy, per ton; do., double compressed, $42; alfalfa, $34; straw, $17.

The LAUSON 15-25

DUST PROOF-ALL GEARS ENCLOSED

Surplus Power

The engine is the heart of a tractor. It must supply a steady flow of power. There must be power to spare. Soil conditions increase the draft at the drawbar. Wet grain requires more power at the belt pulley.

THE LAUSON FARM TRACTOR

is made by the John Lauson Manufacturing Co. and equipped with the famous LAUSON-BEAVER valve-in-head motor, which is noted for its efficiency under heavy loads. It burns kerosene successfully. It is dust-proof, but accessible. It has 30 per cent surplus power, a giant force always in reserve, ready for any emergency.

Designed for Field or Belt Work

The LAUSON 15-25 pulls three 14-inch plows in any soil and four under favorable conditions; runs the ensilage cutter, grain separator, corn sheller, feed grinder, rock crusher; in fact, does any kind of field work or belt work requiring surplus power.

When other tractors fail at the last trench—you can go "over the top" with a LAUSON.

## Motor on the Farm

Unless the user of farm machinery is familiar with the mechanical makeup of his machine, the ends which both the agriculturist and the maker strive to reach will not be gained, farm work will be held up while the tractor is in the shop, doubt regarding the availability of the tractor for farm work will creep in, and food growing will suffer.

The prospective buyer will have a better idea of the sort of tractor which is fitted to his needs if he can get into a shop where many makes of tractors are assembled or repaired. He can then make his own selection more intelligently, armed with a technical knowledge of the makeup of farm tractors.

The National Automobile school of Los Angeles was established largely for the purpose of instructing farmers and others in tractor construction, repair, operation and maintenance as well as all repair work associated with the motor. At the present time there are 135 men at the school engaged in absorbing the details of motors, parts and operation.

### NATION'S FINANCES SOUND.

Unlike many of the nations of the world, the United States' financial condition is sound in spite of the abnormalities of the war period.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7c cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

For 1 Year
**50c**
For 3 Years
**$1**
For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your nieghbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

# SPEED
# Is Winning the War

When the news was flashed over the wires, "America Declares War," the answering thought of the people of the world was the one word—"speed."

That was their conception of our characteristic national trait—"speed."

Coincident with this news came the demand upon America's farmers to feed the world.

This demand continued to increase calling for the utilization of the most efficient time saving and production increasing methods.

The value of the motor car to farmers cannot be measured in dollars.

It has won its place as a necessity together with the reaper, the plow and other modern implements.

The economy, steady performance, and all 'round usefulness and complete satisfaction of the Overland Model 90 car has earned the universal esteem of American farmers.

Overland cars everywhere are helping their owners speed up the work of a nation at war, dependably, thriftily, saving time and economizing man power, alike for the captains of industry, the workers in industry, and for the farmers, large and small, and the farm workers.

Everywhere lines of communication between the great agricultural sections and the great industrial centers are being kept open by time-saving, man-saving Overlands.

We want every Overland built and delivered during the war to contribute its share to the war-speed of the nation.

And speed is winning the war.

# Every Liberty Bond You Buy Brings the War's End That Much Nearer

The kaiser is watching you. His peace moves are plain fakes to fool you, if he can!

America is in the war to the hilt. There can be no compromise with the Beast of Berlin or with the gray-coated hordes that brutishly carry out his orders.

Germany is weakening, but not yet beaten. We're almost over the top, but it's the last ounce that counts. We're gaining every time we attack, but the gains are being measured in kilometers. They must be measured in miles, before we can hit our stride on the road to Berlin.

What does all this mean to you?

It means you must buy more Liberty Bonds. The Fourth Liberty Loan, America's latest and greatest financial drive, must show the same speed, the same pep, the same go-get-'em spirit that our boys showed at Chateau Thierry and St. Mihiel.

Buy more Liberty Bonds and prove to the kaiser that you're with our boys in France in their demand for "Unconditional Surrender to the U. S. A."

## Apple Men Win

### Freight Increase Is Not So Great

A dispatch says that a maximum rate of $1.10 per hundred pounds on Washington, Idaho and Oregon apples shipped to Atlantic seaboard points has been agreed upon by representatives of the railway commissions of the three states, shippers and the railroad administration before the interstate commerce commission.

This rate takes the place of the rate of $1.25 recently authorized by Director General McAdoo. The established rate is the one asked for by the public service commissions of Washington, Idaho and Oregon.

It was agreed that the proposed increase in freight rates of 25 per cent over the old rates would be made effective on other fruits than apples, and that some increase would be made on apples where it would not make the total rate more than $1.10 a hundred pounds.

Some time ago the apple growers, through the public service commissions of the three northwestern states, appealed to the interstate commerce commission to grant relief from the 25 per cent blanket increase freight announced some months ago by Secretary McAdoo when he took over the operation of the railroads for the government. Hearings were recently held, and the announcement of the maximum $1.10 rate is the result.

## English Walnuts

### Can Be Grown in East Washington

By GRANVILLE LOWTHER.

I have been asked three questions concerning the growing of English walnuts in the Spokane district of eastern Washington, as follows:

(1) Can they be grown successfully in this part of the country? (2) When should the nuts be planted? (3) How should they be cultivated and how soon after planting should they come into bearing?

I am not positive that they can be grown successfully under the conditions that obtain in the vicinity of Spokane, but am reasonably certain that they can. One reason for believing so is that we have in our orchard four English walnut trees 22 years of age, and the conditions at North Yakima, where our orchard is located, are not so very different from those that obtain in the vicinity of Spokane. It is true that at Spokane it is a little colder, but I think not enough colder to make very much difference and I feel reasonably certain that if the hardier varieties of the English walnut are planted, such as the Franquette, that they would suceeed in that climate.

Second—When should the nuts be planted? I would plant the nuts late in the fall or early in the spring and let them grow one year and bud them without transplanting. Generally trees are bought at the nursery and transplanted, but I believe it is better to plant the nuts where we want the tree to grow. Plant three or four nuts in a place and select the strongest after they are budded and it is assured that the buds will grow. They should be planted in a rich, deep soil. The walnut tree is a heavy feeder, and needs plenty of rich, deep soil in order to make the best results. The tree has a heavy tap root and large, long laterals. The root system of the walnut tree is much larger than that of the top, if the conditions are favorable for the development of the root. If they are planted in a soil where there is sub-irrigation and a gravel base so that the roots will go to the sheet water or moisture beneath the surface it is all the better.

In answer to the last question I would say that our experience in growing young orchards of English walnuts in those sections where they are now being planted for commercial purposes proves that in 10 years they ought to bear profitably. In other words, it takes about the same time for a walnut tree to come into profitable bearing that it does for an apple. After they have begun to bear profitably, if the soil and climatic conditions are right, they ought to live and bear profitably for 100 to 200 years.

**Perhaps He Deserved It.**

"What's your objection to this motto, 'Work or Fight'," asked Mr. Rafferty.

"It's too easy," answered Mr. Dolan. "Many and many's the time I had to do both." -Washington Star.

## Up-to-Date War Maps Published This Week

Turn to page 17 of this paper and get at a glance a lot of information, the lack of which has heretofore made war reports more or less meaningless. On that page is a map that answers the two most common questions of the day: "Where is it? How far is it?" It shows the geographical relationship between the great centers of the warring nations. It shows how far it is from Paris to Berlin, from Paris to the German border, from the cities on the present fighting line to the fortifications on the Rhine, to which the Germans will soon be compelled to retreat. Turn to that map, study it a few minutes, and then turn to page 5. You will find a smaller map on page 5, but one that gives vital details that are omitted from the large one to avoid confusion. The small map shows the battle line of the famous "western front," where General Foch is directing the most remarkable warfare in the world's history. The large map shows the main points; the small map shows the details of the small area where the stupendous battle is raging. The large map is permanent; the small one is ever-changing. Therefore, the large one will be published this once only, but the small one, brought up to date each time, will be published weekly. The big idea is this: Clip out the large map and paste it on a large sheet of paper. Put it on the wall somewhere. Then each week paste below it the small map clipped from your copy of THE FARMER. This will give you a birdseye view of the whole situation and a detailed record of the progress on the battlefield. By no means fail to begin now, this week, today, to preserve these maps. Then, when next you wonder "Where is it?" or "How far is it?" you can look it up and see.

## Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

RUDOLPH TURNER, Alameda, Wash.—On December 7, 1917, he and his brother, Marcus, enlisted in the U. S. navy and he is now on the U. S. S. West Alseck, serving with his brother, Louie.

LOUIE B. TURNER, Alameda, Wash. — Enlisted January 23, 1918, and is now serving as a cook on the same ship as his brother, Rudolph—the West Alseck. They are now on their way to France.

MARCUS TURNER, Alameda, Wash., who is the oldest son of Mrs. C. J. Turner, enlisted with his brother, Rudolph, December 7, 1917. He is now stationed on the flagship Virginia at Fortress Monroe.

**BUY PUREBRED COWS.**

Three hundred and thirty-seven cows were tested in the Walla Walla Cow Testing association, of which William Dawson is tester, during the month of September. Sixty-four of that number were dry. The average pounds of milk per cow, including dry cows, was 475; the average pounds of butterfat per cow, including dry cows, 22.2; the average cost of feed per cow, $6.62; the average cost of producing 100 pounds of milk, $1.37.

The three high herds for the month belong to William Reser, Washington state penitentiary and H. G. Gordon.

Many dairymen are buying purebred cows. Some of the cow testing association buyers are: R. E. Bean, Umapine; D. O. Saunders and A. A. Bixby, Freewater. At the state fair J. H. Compau bought for the John Ankeny herd two purebred Guernsey cows and one heifer; V. E. Brown, one heifer. These four head were purchased from the famous Middledale herd, and averaged over $300 per head.

**BEE MEETING ANNOUNCED.**

The Washington State Bee Keepers' association will hold its annual convention at Yakima November 14-16. President J. B. Ramage of the association has announced that H. A. Scullen, bee specialist for the United States department of agriculture, will be present to address the conference. Owing to the dry weather of the present year, the output of honey in the northwest is estimated at considerably less than normal. The price, apparently, is correspondingly higher, one of the Yakima valley producers having sold a carload of honey at 24 cents a pound, which is believed to be the highest price on record for honey in wholesale quantities.

**THE AMERICAN LANGUAGE.**

At a recent meeting of the Wayside War Saving society, in school district No. 137, Lewis county, Washington, F. T. Lambert presented a resolution which was unanimously adopted advocating a unified American language for all the people of the United States and "free our educational departments from all dead languages and all difficult and doubtful names and methods of expression."

TO the Editor of The Washington Farmer: Enclosed find 75 cents, for which please send me The Washington Farmer. I am also enclosing five cents, for which please mail me a Farm Service Flag with three extra small stars.

CARROLL RICKETS.

Aberdeen, Wash.

## Crop Prospects

### Billion Bushels Almost Reached

General improvement in crop prospects on October 1 over a month ago is shown by the department of agriculture's monthly report.

Spring wheat improved to the extent of about 20,000,000 bushels more than that produced last year. With this addition to spring wheat the total wheat crop, including 555,725,000 bushels of winter wheat now in prospect, is 919,920,000 bushels. That comes close to the billion-bushel mark set by the government last fall to meet the war needs of America and the allies.

Corn improved to the extent of 46,000,000 bushels, and now gives prospect of a 2,717,775,000-bushel crop, smaller than last year's.

"Crop prospects generally and materially improved during September," a statement of the department of agriculture said in commenting on crop conditions as shown October 1.

"Moisture was sufficient and farm work was favored. Though killing frosts were earlier than usual over large areas of the northern states, relatively small damage was done.

"Corn in the main belt matured earlier than usual as a result of summer heat and droughty periods. An increase of 46,000,000 bushels is shown in the expected outturn, now promising 2,717,775,000 bushels. That is 441,000,000 bushels below the crop of last year, which was, however, of extremely poor quality. It is 43,000,000 bushels, or 1.6 per cent less than the five-year average.

"Spring wheat is turning out better than expected, except in the Pacific northwest, showing a gain of about 20,000,000 bushels over last month's promise and giving a present estimate of 919,920,000 bushels of spring and winter wheat combined. This is 267,000,000 above last year and 110,000,000 above the five-year average, being exceeded only by the bumper crop of 1,025,800,000 bushels in 1915.

"Oats, too, are turning out well above earlier hopes. A crop of 1,536,000,000 bushels is estimated, the third of record, and but 3.4 per cent below the bumper crop of last year. The quality is high, .94.

"Barley, potatoes, both white and sweet; rice, tobacco, cotton, apples and sugar beets show gains over last month's outlook, and buckwheat, flax and kaffirs only show slight losses."

Condition of crops October 1 follows:

Corn, 63.6 per cent of a normal; buckwheat, 75.6; white potatoes, 73.7; sweet potatoes, 77.4; flax, 70.8; rice, 85.4; tobacco, 87.45; sugar beets, 89.6; kaffir, 49.

Estimates of production of other crops follow:

Oats, 1,535,297,000 bushels; barley, 286,505,000; buckwheat, 19,473,000; white potatoes, 391,279,000; sweet potatoes, 85,473,000; flax, 15,606,000; rice, 41,918,000; tobacco, 1,265,362,000 pounds; pears, 10,194,000 bushels; apples, 198,389,000; sugar beets, 6,458,000; kaffirs, 72,650,000; beans, 17,802,000.

**WILL CONSIDER OAT GRADES.**

Hearings upon the proposed official grain standards for oats are being held throughout the country the last half of this month. Hearings will be held at Spokane October 22 and at Portland October 23, both sessions beginning in the forenoon. The hearings will be under the direction of the federal bureau of markets, and will be for the purpose of getting the point of view of those persons interested in various parts of the nation. Producers, millers, merchants, bankers and any other persons directly interested are invited to attend these sessions. Upon the basis of the information received at this series of hearings the bureau will announce the standards agreed upon as soon as the information can be compiled and applied.

**IMPROVE SEED CORN.**

Professor Leonard Hagnauer of the state college and E. S. Scott, assistant Yakima county agriculturist, have been holding a series of meetings throughout the county recently, with a view to assisting the farmers in the selection of proper seed corn. The development of the corn industry in the Yakima valley during the last few years has indicated great possibilities for a northwestern "corn belt" comparable in quality almost to that of the middle western states.

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Give Freely and Forget It

There must be no fear in the matter of giving. If you have only a sandwich to give to a beggar, give it freely and gladly and forget it. Anything given in the proper spirit can result only in good to both parties in the transaction, and some way as the habit of giving grows upon us, circumstances arrange themeslves in wonderful and mysterious ways so that our gifts fall upon the truly deserving.

Not the least interesting part of it all is the fact that all our giving comes back to us at some time or place. The more and better we give, the more and better we get. So the matter of friendship, of prosperity, of health and comfort and happiness lies entirely within our own hands; for just as we measure out these things to others, just so far as we give out these things to others they will come back to us and more, for they will be pressed down, heaped up and running over. I. C. Y.

Praise and blame are like disturbing factors; content comes from neither.

## Wheat Must Be Milled at Home

Portland advices say ruin impends in the dairy industry of Oregon because of lack of mill feed. At least 75,000 tons of feed are needed to keep the herds through the winter, and at present virtually none is available.

There seems to be no justifiable excuse for this lamentable condition. For months well informed dairymen have been warning the food administration that the dairy interests were coming to this disaster. Time and again THE FARMER has pointed out the peril of food administration regulations which required the sending of northwest wheat to distant mills for grinding. Long ago it was apparent that the welfare of the dairy and live stock industry of this great region required the grinding of northwest flour to the capacity of the mills in order that the live stock of these states might have the mill feed that was grown in this region.

As we pointed out long ago, a practice that sends our wheat to distant mills and requires our live stock interests to import stock feeds from distant regions is shortsighted, burdensome and an interference to the winning of the war.

It is not agreeable for THE FARMER to criticize an organization that is under the able and patriotic leadership of Mr. Hoover. This journal has gladly and cordially supported the food administration in nearly all its orders and regulations, but it has seen from the beginning that in this matter of milling our own wheat some one was advising Mr. Hoover badly.

## Why Not Put All on Record?

It has been suggested that every man, woman and child able to work should be registered. Why not put us all on record?

There are some too old to do military service, or even hard manual labor, but all can do something. There are some too young to do much, but they are growing into usefulness.

Then when it is all over and the war is won, we shall know who went to France and what he surrendered to go; who stayed at home and what he sacrificed that others might go; who silently gave what he could for the cause of liberty and country; who gave money; who took advantage of the opportunity to amass wealth at the expense of his fellows when they needed his best efforts; who demanded unreasonable wages just because his employers dared not refuse.

These things should be on record that none may have injustice in the days to come.

Success largely depends upon seeing things as they are and not as colored by your own likes or dislikes.

## To Visualize War Demand for Yet Greater Food Production

Last year the United States shipped to the allies 10,000,000 tons of food of all kinds. It was a great achievement, made possible only by the loyal response of the farmers to the government's urgent appeal to put extraordinary effort into food production.

But greater effort is demanded. Mr. Hoover told the state food administrators at the recent conference in Washington, that this year the program requires the shipment of 15,000,000 tons, or an increase of 50 per cent.

To meet these requirements it is indispensable that enough labor be retained on the farm—that vigorous action be taken to counteract the farmer's natural and commendable desire to break away from the soil and go into the army, or seek employment in the shipyards.

The government has emphasized the fact that the farmer who, in patriotic spirit, puts the limit of his strength into food production, is serving the country's cause just as much as the willing worker who puts all his energy into ship-building.

Men engaged in ship-building are entitled to display an adopted emblem. Workers in food production are entitled to display the farm service flag designed by The Washington Farmer. The mere fact that the emblem was given to the country by this journal should not limit its adoption and use anywhere, for we studiously refrained from putting any marking on it to indicate its origin.

Its broadcast use on the farms of the United States will stimulate food production immensely. The fact that the emblem is displayed in his home is a constant reminder to the individual of his duty to give his full strength to food production. Even the labor slacker will feel its inspiring influence.

The right to display this farm service emblem stands on the same footing with the right to display the emblem that tells of military service, for the latter is not dealt out by any committee, but is used at will by the family of the soldier. Any tendency to misuse the farm service war flag of our designing can safely be left to local public opinion. If one of its stars is displayed for a farm worker who is not putting real service into his labor, the slacker will quickly feel the sting of protesting neighbor comment.

From the day that marked America's entrance into the war we have been told, and told truthfully, that increased food production is essential to the winning of that war. But mere words lose their effect from constant repetition. An emblem is needed to visualize any great truth, and in The Washington Farmer's design the country has a beautiful emblem which dignifies farm service.

## The Champion Bread Maker

In these times of high patriotic spirit and commendable admiration for our soldiers and sailors, Red Cross nurses, Salvation Army lassies and all others who are going over seas to win the war, we are going to digress a moment to lay our tribute of respect and admiration at the feet of Miss Andelia Swanson of Kenyon, Minn.

We are truthfully told that food will win the war, and it follows that the hand that is capable of making the best food is rendering patriotic service. Miss Swanson has the honor of being declared the champion bread maker of Minnesota. She competed with 4000 contestants, and we may be sure that many of them were A1 bread-makers.

Miss Swanson is only 16 years old, but she has had domestic science training, so evidently she is a mighty bright girl. She is certainly deserving of her prize of $25 and a gold medal.

Do not try to understand your neighbor's affairs. Your own keys will not fit his locks.

## Watch for Dangerous Weeds

It is a common sight in the summer time to notice two fields on either side of the road. One field full of foul weeds, and the other free from them. Farms that have been cultivated for some years are weedy, due to the fact that not as much precaution was taken in the past to spread foul seeds. Land that has recently been brought under cultivation is usually free of weeds.

There is not so much danger of getting foul weeds in purchasing seeds as there is in purchasing feed and hay. It is not an uncommon instance that farmers who have purchased hay, straw or grain for feed to also have purchased the stubborn weeds, Canadian thistles, wild mustard and white daisies. In feeding it to stock the seeds pass through the animals and are returned to the soil with the manure. When a farm becomes infested with these three weeds, it is only by constant, intelligent efforts that they can be removed.

On the farms where new land is being brought under cultivation if care is taken in buying grain for seed, grain, hay and straw for stock, the main avenue for the introduction of foul weeds will be closed. On the farms where the weeds have a foothold there is only one remedy and that is rotation of crops, cultivation, preventing them from forming tops which shuts off the air supply, cleaning the seed continued over a long period of years and used with constant and intelligent efforts according to local conditions.

Eating records every trait of the individual.

## To Check Undesirable Curiosity

To stop undesirable curiosity, state the facts of the case in plain language. Years ago I was serving my apprenticeship in the editorial office of a daily newspaper. The editor-in-chief was a wise man, and occupied a high place in the counsels of the nation. One day a prominent manufacturer of the city came in and requested the suppression of an item of news reflecting upon the financial reputation of a young man of good family. I remember hearing the editor tell that leading manufacturer: "If you will let us state in plain language all the material facts in this case that will end its publicity. If you try to hide it, there will be all sorts of surmises and mysterious complications. It will make a newspaper story day after day until the truth is finally sifted out by the public authorities."

It is pitiable, but it is true, that misdeeds of one sort or another happen. A simple statement of one of these outward events in the paper satisfies the reader and he is ready to forget it in reading the next and perhaps far more interesting item involving a good measure of mystery. It would be better if there were no occasions for this kind of news and less people who read it with avidity. This is not the time or place, however, to discuss the morals of publishing all sorts of news. It is simply the occasion of saying that the best way to stop undesirable curiosity is to state the plain facts of the case in a plain way. E.A.S.

## Vegetable Oil Trade

Tank steamships are now being used in the vegetable oil trade centering in Seattle. This oil, most of which is a byproduct of Manchurian soy beans, was formerly handled by way of Suez to New York. The closing of this route, due to war-time conditions, made Seattle the port of entry for this class of business for the United States. The introduction of tank ships, to take the place of the small cases formerly used, marks a big step in eliminating wasteful methods of handling this trade. The various vegetable oils are used in many ways, ranging from soup to explosives.

# Germany Makes Peace Offer

## *Must Make Sweeping Concessions Before Allies Will Listen*

Germany has offered to withdraw her armies from all invaded territory, including France, Belgium, Serbia, Rumania and Russia, as a prerequisite for the discussion of peace between the warring nations. She has also asked President Wilson to call a conference of representatives of the allies and the central powers to decide upon the terms of an armistice while the peace discussions are going on.

The overture has caused an interchange of notes, the last of which was a refusal by President Wilson to consider an armistice until German atrocities on land and sea cease, and in no case till the maintenance of the present military advantage is guaranteed.

This action comes at a time when the allied armies are wreaking havoc with the German lines, and apparently indicates that Germany realizes that she is beaten and wants to secure peace before her own soil is invaded and laid waste by battle. The form of her messages to President Wilson, through whom she is making her overtures, indicates that she is almost ready to make the "unconditional surrender" that the allies demand. The allies, however, look with grave suspicion upon the movement, realizing that no faith can be put in any promise or pledge of the German government with which they have been dealing.

In the notes between the German government and President Wilson mention is made of the terms of peace enumerated by the president on January 8. A summary of these terms is given in this paper on page 19.

The peace talk of the last week began with many rumors of moves by Germany and her allies. Then came a formal note to President Wilson reading as follows:

**"The German government requests the president of the United States of America to take steps for the restoration of peace, to notify all belligerents of this request and to invite them to delegate the plenipotentiaries for the purpose of taking up negotiations.**

**"The German government accepts as a basis for the peace negotiations the program laid down by the president of the United States in his message to congress of January 8, 1918, and in his subsequent pronouncements, particularly in his address of September 27, 1918.**

**"In order to avoid further bloodshed the German government requests to bring about immediate conclusion of a general armistice on land and water and in the air."**

This was signed by the new imperial chancellor of Germany, Maximilian of Baden.

To discover whether this was a trick or a sincere proposal, President Wilson prepared the following note of inquiry in reply, it being sent by Secretary of State Lansing:

**"Before making reply to the request of the imperial German government, and in order that the reply shall be candid and straightforward, as the momentous interests involved require, the president of the United States deems it necessary to assure himself of the exact meaning of the note of the imperial chancellor.**

**"Does the imperial chancellor mean that the imperial German government accepts the terms laid down by the president in his address to the congress of the United States on the 8th of January last and in subsequent addresses, and that its object in entering into discussions would be only to agree upon the practical details of their application?**

**"The president feels bound to say, with regard to the suggestion of an armistice, that he would not feel at liberty to propose a cessation of arms to the governments with which the government of the United States is associated against the central powers as long as the armies of those powers are upon their soil.**

**"The good faith of any discussion would manifestly depend upon the consent of the central powers immediately to withdraw their forces everywhere from invaded territory.**

**"The president also feels that he is justified in asking whether the imperial chancellor is speaking merely for the constituted authorities of the empire who have so far conducted the war. He deems the answer to these questions vital from every point of view."**

This note brought an immediate reply from Germany reaffirming the purpose of that country and apparently accepting the terms laid down by the president last January and in recent addresses. The following is the German reply, received unofficially in Washington Saturday night:

**"The German government has accepted the terms laid down by President Wilson in his address of January 8 and in his subsequent addresses on the foundation of a permanent peace of justice. Consequently, its object in entering into discussion would be only to agree upon practical details of the application of these terms. The German government believes that the governments of the powers associated with the government of the United States also take the position taken by President Wilson in his address. The German government, in accordance with the Austro-Hungarian government, for the purpose of bringing about an armistice, declares itself ready to comply with the propositions of the president in regard to evacuation.**

**"The German government suggests that the president may occasion the meeting of a mixed commission for making the necessary arrangements concerning the evacuation. The present German government, which has undertaken the responsibility for this step toward peace, has been formed by conferences and is in agreement with the great majority of the reichstag. The chancellor, supported in all of his actions by the will of this majority, speaks in the name of the German government and of the German people."**

In reply to this message, Secretary Lansing sent the following message for the president:

"The unqualified acceptance by the present German government and by a large majority of the reichstag of the terms laid down by the president of the United States of America in his address to the congress of the United States on the 8th of January, 1918, and in his subsequent addresses justifies the president in making a frank and direct statement of his decision with regard to the communication of the German government of the 8th and 12th of October, 1918.

"It must be clearly understood that the process of evacuation and the conditions of an armistice are matters which must be left to the judgment and advice of the military advisers of the government of the United States and the allied governments, and the president feels it his duty to say that no arrangement can be accepted by the government of the United States which does not provide absolutely satisfactory safeguards and guarantees of the maintenance of the present military supremacy of the armies of the United States and the allies on the field.

"He feels confident that he can safely assume that this will also be the judgment and decision of the allied governments.

"The president feels that it is also his duty to add that neither the government of the United States nor, he is quite sure, the governments with which the government of the United States is associated as a belligerent, will consent to consider an armistice so long as the armed forces of Germany continue the illegal and inhumane practices which they still persist in.

"At the very time that the German government approaches the government of the United States with proposals of peace its submarines are engaged in sinking passenger ships at sea, and not the ships alone, but the very boats in which their passengers and crews seek to make their way to safety; and in their present enforced withdrawal from Flanders and France the German armies are pursuing a course of wanton destruction which has always been regarded as in direct violation of the rules and practices of civilized warfare. Cities and villages, if not destroyed, are being not only stripped of all they contain, but often of their very inhabitants. The nations associated against Germany can not be expected to agree to a cessation of arms while acts of inhumanity, spoliation and desolation are being continue, which they justly look upon with horror and with burning hearts.

"It is necessary, also, in order that there may be no possibility of misunderstanding, that the president should very solemnly call the attention of the government of Germany to the language and plain intent of one of the terms of peace which the German government has new accepted. It is contained in the address of the president, delivered at Mount Vernon on the Fourth of July, last.

"It is as follows:

"'The destruction of every arbitrary power anywhere that can separately, secretly and of its single choice disturb the peace of the world; or if it can not be presently destroyed, at least its reduction to virtual impotence.'

"The power which has hitherto controlled the German nation is of the sort here described. It is within the choice of the German nation to alter it. The president's words just quoted naturally constitute a condition precedent to peace, if peace is to come by the action of the German people themselves. The president feels bound to say that the whole process of pace will, in his judgment, depend upon the definiteness and the satisfactory character of the guarantees which can be given in this fundamental. It is indispensable that the governments associated against Germany should know beyond a peradventure with whom they are dealing."

### Where the Battles Are Being Won.

Herewith is a map showing the present battle line of the "western front." With increasing speed the allies are forcing the enemy back. Before this reaches the readers it is probable that the towns of Douai and Lille, both important, will have been taken by the English and French, as have Laon and La Fere, since this map was made. Great changes are being wrought daily, and a sweeping German retreat is imminent unless the proposed peace terms are accepted immediately. Turn to page 17 and find there the Farmer's large war map showing the relationship of France, Germany and England and their principal cities, rivers and strategic points. Then return to this map and see just the position of the fighting front with reference to the whole. Next week this map will be reproduced on this page with the position of the battle line brought up to that date. Each week thereafter an up-to-date map will appear. If you desire to have always before you a clear view of the situation, clip the large map and each week the small one and paste them on a large sheet of paper, to be hung on the wall. This will give you a complete record week by week. The dotted line on the map herewith shows the present fighting front.

## *Remember Belgium! Fight On!*

Germany knows she is defeated. She asks an armistice during which she would discuss peace. She desires to withdraw before the victorious armies of the allies without the losses that are resulting from her retreat under fire. She desires to save her own villages and countryside from the fate that she heaped upon Belgium and northern France. Her heart is not changed. She is still an outlaw nation ruled over by fiends.

The civilized world wants peace, but it does not want it bad enough to negotiate with murderers and libertines and slave drivers. Germany can have peace when William Hohenzollern and his gang are hog tied with cords that time can not sever; when he and his damnable philosophy are banished from Germany never to return; when Belgium and France and Serbia and Russia are paid as far as humanly possible for the unspeakable wrongs done them by the heathen war lords and their hordes.

Until then, remember Belgium and fight on! General Foch, General Haig, General Pershing have not quit! We at home must not quit until the kaiser is delivered, a burnt offering on the altar of peace, by the German people who have blindly and unpardonably followed his leadership. Every drafted son of America must prepare to go; every soldier in camp must drill for battle; every private citizen must produce and save and contribute to war needs with redoubled determination; the Fourth Liberty loan must go over the top. Potsdam must know, once and for all, that the terms of peace will be of allied making, and must be unconditionally accepted now or next spring, when the heroic and long-suffering armies of France and England will have beside them four million invincible allies from U. S. A.

## *Washington Gleanings*

Gerard Clarke, a farmer near Colfax, reports the soil in excellent condition for fall seeding, due to recent rains.

Farmers in the Walla Walla section are bringing hogs to market, and the price last week dropped from $18 to $17.50.

Owing to the outbreak of Spanish influenza in Colfax—some five or six cases having been reported—the county fair has been called off.

J. E. Miller, formerly of the Albion State bank, has leased several hundred acres four miles south of Albion, and will do extensive farming.

Pupils of the Fruitvale school, near Yakima, of which Miss Mae Mark is principal, recently held a peach pit drive, which netted 1314 pounds.

Eleven hundred lambs were shipped last week from the Walla Walla section to R. H. Stanfield at Stanfield, Ore., the lambs averaging 71 pounds.

Another effort will be made soon by the Chelan and Douglas county commissioners to have the Columbia river bridge paved with asphalt macadam.

A. S. Beede of Portland, Ore., has purchased a half section of wheat land two miles east of Eltopia, and will at once begin operations for seeding 200 acres of rye.

The flow of artesian water in the well of the Columbia River Gas company is increasing as the drilling continues. The flow now is about 500 gallons per minute.

The contract for building a wooden bridge across the Cowlitz river near Harmony has been awarded to Ward & Jarvis by the Lewis county commissioners. The bid was $6975.

Lester Robinson has bought the old Chris Ennis ranch from Pat Hughes, who bought it a year ago. The ranch is rated as one of the most valuable in Walla Walla county. It lies just north of Walla Walla.

The Stillwater Lumber company, of Vader, has decided not to rebuild its plant, which was recently destroyed by fire. The company's holdings of timber have been sold to the Winlock Lumber company, of Winlock.

Yakima county commissioners have adopted the 1919 budget, which is slightly higher than that of 1918. No allowances are made for additional road construction, though there is a large allowance for road maintenance and repair.

Yakima will entertain the state beekeepers' association for its annual convention on November 14-16. According to the announcement made by J. B. Ramage, H. A. Scullen, bee specialist for the United States department of agriculture, will be the chief speaker. Mr. Ramage estimates the honey output for 1918 of Yakima valley at 600,000 pounds, as compared with last year's output of 750,000 pounds.

# Compares Increase in Prices

## *Federal Committee Says Wheat Increase Is Greatest*

The federal committee on public information has just issued a statement citing figures designed to show that the price of wheat has increased more during the four years of the war than have the prices of most other commodities, including those things which the wheat producer must buy. The committee's figures were compiled by the bureau of labor statistics and the United States department of agriculture. They indicate that from July 1, 1914, to July 1, 1918, wheat increased about 164 per cent in price. Corn during the same period showed an increase of about 103 per cent, oats 197 per cent, hay 42 per cent, cotton 131 per cent, hogs 107 per cent, beef cattle 65 per cent and lambs 132 per cent. The report does not include the comparative prices of wool during that period.

Turning to the things that the farmer has to buy the report of the committee shows that such articles as barb wire, cultivators, drills, gasoline engines, plows, wagons and harvesting machinery increased in price during the four years an average of about 78 per cent. Barbed wire led in this increase with about 92 per cent. Gasoline engines increased 44 per cent, wagons increased 66 per cent, drills about 75 per cent, cultivators about 86 per cent, and plows about 85 per cent.

Comparing the prices of food stuffs the committee's figures indicate that wheat flour advanced about 115 per cent, sugar about 55 per cent, cheese 52 per cent, salt 95 per cent, rice 78 per cent and molasses 45 per cent. The figures do not include the price of meats, the only thing along this line being preserved fish, which shows an increase of from 36 to 116 per cent.

Comparing the price of clothing in June, 1914, with those of June, 1918, the committee shows an increase in the price of cotton wear of from 118 to 295 per cent. The increase in woolens apparently was considerably less. Serge suitings increased 192 per cent, all-wool blankets increased 161 per cent.

Fuel showed a comparatively low increase. Wood is not included in the report, which shows that hard coal increased 21 per cent and soft coal 41 per cent. Kerosene increased approximately 42 per cent, while gasoline showed an increase of about 66 per cent.

In building materials, brick showed an increase of from 27 per cent in Chicago to 97 per cent in New York, cement increased 64 per cent, lime 110 per cent and common building lumber from 40 to 61 per cent.

A miscellaneous list of items, the prices of which are compared, show linseed oil to have increased 214 per cent, shingles about 82 per cent, window glass 75 per cent, wire nails 114 per cent, household cuttlery 107 per cent, tobacco 59 per cent, soap 53 per cent, cotton seed meal 76 per cent and rope 168 per cent.

### BEET SUGAR REDUCED.

Henry C. Bonsall, manager of the sugar distribution committee of the food administration for southern California, estimates the beet sugar production in that section at about 75 per cent of the normal yield. Southern California, he says, will produce approximately 1,750,000 bags of beet sugar this year, as against a normal production of 2,500,000 bags.

# Save Mill Feed

With a view to more uniform distribution of mill feeds so that all sections will receive a reasonable supply, Food Administrator Hoover has issued a direct appeal to the farmers who feed it. The following is the appeal in part, explaining the plan which Mr. Hoover desires followed:

"Owing to the extension of the drouth area, the shortening of the corn crop, the larger population in the country, and the allied demands upon us for feeding stuffs for their own animals because of their own shortage in produce of feed grain, it is necessary that we should exert every effort in the proper conservation of feeding stuffs during the next 12 months. It is necessary that we should ship a larger proportion of wheat as compared with flour during the next 12 months than during the last 12 months to the allied countries, because their own shortage of feeding stuffs is such that if they are to keep alive their dairy herds, they must have a larger supply of wheat milled.

"Already, the milk supply in the allied countries has been limited practically to the supply of children and other vitally necessary national uses, and any failure on our part to supply them with necessary feed stuffs for their dairy herd means that we shall cut into the actual safety of the children among the allies. On the other hand, both our own population and the allies are dependent upon our production of animal products, and we do not in any way wish to stifle this production. What we must secure is the utmost conservation in feed, and the total elimination of waste by the careful feeding of animals and the use of all the roughage available.

"One of the difficult problems is the distribution of wheat mill feeds, and this is made more difficult by the fact that the food administration, in an endeavor to protect the farmer, is maintaining an artificially low price on these feeds. One consequence is that a great deal of mill feeds are now going unnecessarily into work animals or beef production. Every farmer will recognize that the wheat mill feeds are vitally necessary for the dairy cattle, to some extent for the poultry, and for young pigs. Owing to the absorption of mill feeds at local points near the mill, considerable sections of the dairy industry are practically without mill feeds and our dairy production is thereby in danger.

"With view to correcting this, so far as possible, the food administration desires to appeal for the assistance of the farmers of the country in the use and distribution of wheat mill feeds, in addition to general conservation of feeding stuffs. In this view, we are asking every buyer of wheat mill feeds, outside of the acute drouth area, to sign a pledge of honor not to use the wheat mill feeds for any purpose except the essential use in dairy, young pig and poultry production, and not to purchase or hold at any one time more than 60 days' supply. Unless we can secure this careful and specialized use of mill feeds, our dairy production in the congested eastern areas of the United States is bound to fall and to jeopardize the food supply of our people in that section. Otherwise it will be necessary to release the price restrictions on mill feeds and allow them to take their natural course.

"With a view to securing this cooperation from the farmers all over the country in the interests of their industry as a whole, we are instructing the mills and all dealers in feeds to secure from the buyer of wheat mill feeds the following pledge:

"In order to assist the food administration in the distribution of wheat mill feeds, I hearby undertake on honor not to use wheat mill feeds for any other purpose than the feeding of dairy cattle, poultry, young pigs, or young calves, or the preparation of a weekly bran mash for work animals.

"I will not feed and more wheat mill feeds than is customarily fed to such animals, and I further agree not to have at any one time more than a 60-day supply of wheat feeds on hand."

# Storing Potatoes in Pits

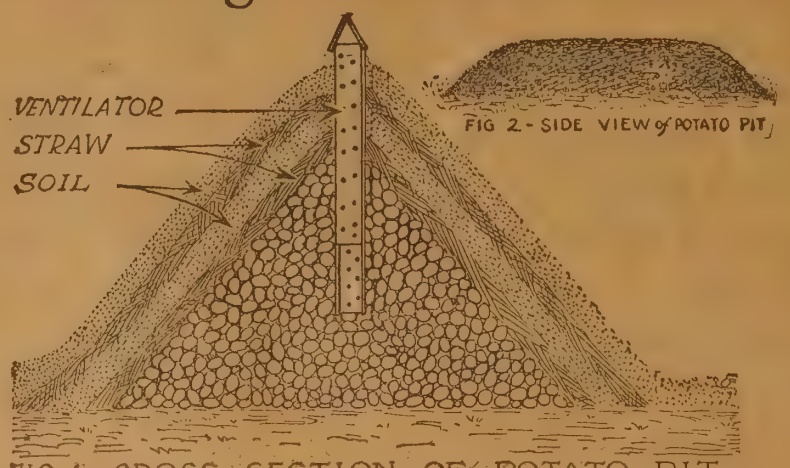

FIG 1.-CROSS SECTION OF POTATO PIT SHOWING LAYERS OF STRAW AND SOIL.

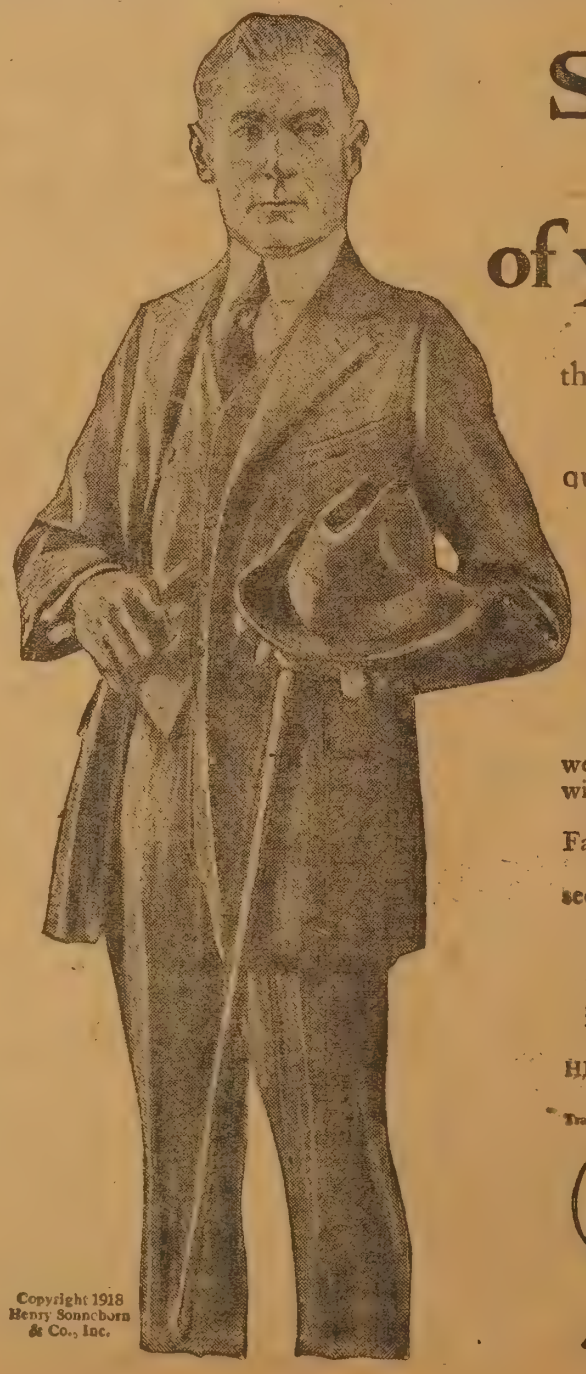
By P. G. HOLDEN.

Potatoes may be stored in pits, out of doors, successfully if the pits are provided with good drainage and ventilation and the potatoes are given such covering as will protect them from external heat and cold.

For such a pit a well-drained site, or one which can be easily drained, is the first essential. In depth the excavation may be anywhere from practically nothing to two or more feet, but it is generally best not to excavate more than six inches. The pit should be long and narrow, as shown in figure 2.

The size of the pit, to a certain extent, must depend upon the quantity of potatoes to be stored, but too large a quantity should never be stored in one pit.

In preparing the pit a light layer of straw should be placed on the floor to keep the potatoes from coming in direct contact with the soil, and some provision should be made for ventilation to permit the evaporation of such moisture as may rise from the potatoes.



The potatoes should be piled in a ridge, in the shape of an inverted V, as shown in figure 1. This will expose a greater area of the pile to the circulation of air, and will shed rain much better.

To protect the potatoes from cold and heat, they should be covered with alternate layers of straw, or hay, and soil.

The first layer should be straw or hay; the second should be just sufficient soil to prevent injury to the potatoes by light or frost. This will quickly cool off the potatoes and free them from the moisture resulting from the sweating process. As the temperature lowers, more hay or straw and another layer of soil should be added.

### WOULD DEVELOP IRRIGATION.

With a view to speeding up the development of Five Mile rapids, on the Snake river, for the purpose of adding probably 60,000 acres to the irrigated land of that part of the state, representatives of the Burbank company have taken the matter up with Secretary Lane of the department of the interior. Secretary Lane has asked congress for an appropriation to survey various prospective irrigation projects, including the proposed Five Mile rapids development.

# Styleplus make both sides of your dollar count

Good resolutions for every man to make in these war times are:

"I will buy only the clothes that I *need*.

"I will pay the price that brings genuine quality—*and not one cent more.*"

Every dollar you spend should count. Count for you and country.

You will be stylish and thrifty *both* if you buy Styleplus Clothes.

You get reliable quality and style at a nationally known price—*a sensible, medium price.*

By making only a few standard grades in big volume we reduce costs and produce clothing values justly famous with well dressed and economical men.

Correct style. Careful tailoring. Finished workmanship. Faithful wear. Known price.

The best place to buy clothes is at a store, where you can see the different styles, make your selection and get a good fit.

You buy with both eyes open at the Styleplus Store!

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. 6 ) for Styleplus booklet and name of local dealer.

# Good for Harvest; Poor for Feed

## Eastern Part of the Stae Has Unusually Dry Season; Seeding Will Be Late in Some parts of the West Side

LA CROSSE, Whitman County, Wash., Oct. 4.—Weather conditions have been most ideal for finishing up all harvest, but very detrimental for pastures and field work in general. The last two fall seasons have made farmers most cautious as to seeding dry land or seeding too late, and on the other hand, spring crops as a whole are very unsatisfactory both as to yield and crowding farm work. The lack of rain since breaking up of last winter followed by drying winds left the summerfallowed ground in a very rough condition and a good soaking rain is needed to put the ground in good condition for seeding. A few little tracts have been seeded and most farmers are holding off until next week, hoping the longed-for rain arrives. The rainfall since January 1 to October was 7.06 inches and the total amount since October 1, 1917, to October 1, 1918, was 11.65 inches, which is one of the driest on record. War conditions made many seed a larger acreage in the past, but costly lessons of the last two years are making farmers more conservative as land needs to be in prime condition to produce maximum crops. Haphazard farming spells poor crops. M. E. SCHRECK.

### HORSES ARE VERY CHEAP.

FAIRFIELD, Spokane County, Wash., Oct. 3.—Fall wheat acreage has been increased over last year by 25 to 30 per cent, and indications point to an increase of spring wheat, especially if the proposed $2.50 price goes into effect for the 1919 crop. Unless the price is fixed high more oats will be seeded. The early sown fall wheat is up, but not an even stand. The wheat sown on pea stubble has not had sufficient moisture yet to bring it up. There seems to be plenty of feed for the stock in this section. Some pea straw is being shipped out at a fairly good price to the grower. The fall sales are revealing the fact that horses are a drug on the market. Fairly good work horses have been sold as low as $5 with others at $8 to $10, that a year ago would have brought $75 to $100. Hogs and cattle bring good prices. A grade Jersey sold today for $88. She gives two and one-half gallons of milk a day. ROY G. ADAMS.

### SEEDING WILL BE LATE.

RAINIER, Thurston County, Wash., Oct. 5.—Sunday night, September 29, was the first rain in a long time and it helped to put out the timber fires. Since then we have had frequent showers, making plowing possible. Weather is warm and we have had no frost. Grass is starting and with a warm fall we will get some green pasture for winter. All seeding will be late, as we can seed up to Thanksgiving time. Late potatoes are green and growing, late tomatoes and cucumbers are ripening up to finish out the vegetable part of the household, along with the squash, pumpkin and the growing cabbage. This country was hard hit by drouth conditions. Seed grain is high in price. Wages are very high and many ranchers will work in the saw mills through fall and winter and let farm work go. Feed is also very high. While many farmers are short on feed and seed they will meet the situation as a business proposition. Dairying is one of the principal occupations here. Rather than dispose of a whole or a part of the herd of cattle, it will pay to buy and haul straw and buy some hay even at the present high price, as cattle will be in good price next season. The farmer should have his fall and winter cows to do this in order to get the benefit of the high prices of milk products. The price of wheat straw is $4 and oat straw is $5 per load. Home grown hay is $20 per ton in the barn and haul it yourself, and not much to be had at that. Alfalfa is $35 per ton, mill feed $40 per ton. Some banks are willing to help out the farmers to carry over their dairy herds till next season. L. F. DAVIS.

### BRISK DEMAND FOR HONEY.

TWISP, Okanogan County, Wash., Sept. 26.—This section is very dry and farmers are making no effort to comply with the request of the government for an increased acreage of fall grain. Some grain is produced here, but this section is better adapted to fruit and stock growing. Farmers that irrigate, as a rule, have good crops, but crops are very light on non-irrigated land here. Most of the dry land farmers are selling their stock in preference to buying high priced hay. Farmers are willing to make extra efforts to produce more but weather conditions have been very unfavorable the last season for upland farmers in this section. Bees have done well this summer and there is a brisk demand for all the honey produced here. Most of the farmers seem to be possessed with a patriotic spirit and are willing to make sacrifices to help the government win its object. GEORGE LA RUE.

### BUYING POWER MACHINERY.

CENTERVILLE, Klickitat County, Wash., Sept. 27.—Running through Klickitat September 13 was a rain storm of various degrees of intensity. In the vicinity of the Larger Klickitat there was a cloud-burst or nearly so, causing those having sown grain to work the ground immediately, as the rain came so hard as to bake the ground hard. About two-thirds of the wheat has been seeded up to date, perhaps a larger percentage than that. All the first sowing is looking fine with a good deal better prospect for the coming winter wheat crop than for several years at this time of year. This is all a winter wheat section, that being the principal grain grown when the season is right, to the exclusion of every other grain. Everything here is set on a winter wheat crop and if that fails then something else is sown in the spring. There has been a great rush in the seeding of the fall grain. Everything else has been dropped to get the seeding done and get it up. The weather has been warm enough to bring the wheat up rapidly and give it a good start. War conditions here simply mean that every farmer is studying how he can get his next season's crop taken care of. With the new draft regulations going into effect a great many like myself are left with a 16-year-old son on a 400-acre ranch. Some even have less help than I have. Many farmers are getting tractor machinery to help out and considerable of it is being contracted for now. The harvest this year reveals the fact that a great many are harder hit than usual. In places along the Columbia river section the rain was heavy enough to start the fall growth so that sheepmen and stockmen are relieved. Some after harvesting have just about enough to seed back again without much left for last year's expenses. Farmers that are used to good yields every year fell down in proportion the same as others. The small combines are cutting into the large steam thresher job this year and there will be more next year. There is a fair crop of apples in places through the county, but the main crop was killed by frost in the spring. Our special winter needs will be an extra allowance of feed, which is rather scarce. Some will have little for next spring's work.

C. A. LESTER.

TO the Editor of The Washington Farmer: Have received your circulars. Have just finished reading "The Trappers of the Ozarks." Ben and Jodo are certainly interesting boys. I have received the Washington Farmer of September 12, 1918, containing the first chapter of "A Crooked Trail." I want to watch that young man hunting for Lep, the ox, and see where he finds him, and what a time he has taking him back home. I herewith enclose a money order for 50 cents for a subscription to The Washington Farmer for three years. Please let this subscription commence with the issue of September 19, 1918, so that I can get the whole story of "A Crooked Trail."

WILLIAM GARLAND.
Port Ludlow, Wash.

### Pick Apples Carefully.

Apples will keep better if they are picked carefully from the trees and wrapped immediately in paper and placed in boxes in a cool cellar. Rough handling causes quick decay.

# LEND AS THEY FIGHT

THE GOVERNMENT OF THE UNITED STATES asks you for a loan - - all you can spare - - - - to make up a total of Six Billion Dollars.

This money is necessary to keep those boys fighting in France - - to keep them well fed, well armed and fully supplied with ammunition.

If you lend as they fight, victory will come, and if you lend as willingly victory will come quickly.

## Need More Speed

Many dairy experts are agreed that much butterfat is lost each year by the failure of the dairymen to operate their separators at a sufficiently high rate of speed. Experiments carried on for the purpose of the speed at which various makes of separators should be operated, together with experiments to discover at what rate the average dairyman operates his machine, seem to indicate that many use too low a speed. A speedometer to indicate the speed obtained is recommended, as no one is capable of judging speed sufficiently accurately enough.

While loss of butterfat by this means is a great loss, it should not be considered wholly loss if the skim milk is fed to pigs or chickens as it always should be unless used in the preparation of food for the table.

## Conditions Change

A few seasons ago the Farmer said in its dairy department: "When a farmer gives up dairying in disgust, being convinced that it does not pay, it is not the business that is at fault. It is the method, or, rather, the lack of method, that is wrong."

This principle is still sound, though conditions have changed since that was written. Today many are giving up dairying more or less in disgust because it does not pay them, but the fault does not lie entirely with the "method or lack of method" pursued. There are conditions over which the best methods known can scarcely exercise control. Nothing short of the most scientific and skilful conduct of the dairy business can carry the farm through the perils of the present month.

There are feed and labor conditions over which the dairyman can hardly be expected to have control, however excellent his method of dairying may be. There are marketing conditions and restrictions that baffle the most learned student of dairy products marketing.

The one who fails now or who gives up temporarily is not to be condemned for a lack of method or the use of a poor method, but the one who persists, who breaks even or makes a little profit, or who actually loses money but clings to that finest branch of agriculture until normal times return, is greatly to be praised. The dairy business now in many sections is one to try the patriotism of the dairy farmer.

## Give Salt and Water

Sometimes with the approach of cold weather there is a tendency on the part of cows to drink considerably less water, and a corresponding tendency on the part of dairymen to consider that they should be given less. The truth about it seems to be that a cow that produces heavily requires much water. Experiments indicate that the water she needs varies with the amount of milk she gives. Extremely heavy milkers sometimes require as much as 200 pounds of water a day. The average milker needs 60 to 100 pounds, it is claimed. Every effort should be made at all times of the year to induce heavy drinking.

Care should always be taken to insure the taking of plenty of salt. As a rule, the cow will attend to this if she has the opportunity and all the opportunity needed is a trough of salt where she can get at it. It is a wasteful and generally unsatisfactory practice to dump salt out on a salt lick somewhere about the yard or field. It isn't the natural thing for a cow to eat dirt. She does it only because she can not get salt without doing it. Give her some feed on the ground and see if she appears to relish the dirt that she has to take to get the feed.

### KEEPING BUTTER FOR WINTER.

**Cream Should Be Not More Than Three or Four Days Old for Best Results.**

Fifty years ago, before the cold storage and the creameries were developed, it was common practice, to preserve the butter made in the summer time for use in the winter by packing it in jars and storing in a cool place. The market at that time, as compared to now was not critical. Such butter could not be sold in the city market at present. It is possible, however, to preserve butter in fairly good condition, says C. H. Eckles of the University of Missouri college of agriculture, and those who are willing to use butter that is not first-class may find it of advantage to use this plan:

Butter that is to be kept for several months should be made from cream that has not been kept more than two or three days before churning. The quicker it is churned the better. The churning should be stopped when the butter is in small granules, so that as much buttermilk as possible can be worked out. It should be worked and salted and packed in a glazed crock or jar. A layer of about one inch of brine as strong as can be made should be kept over the butter. Keep the jar cool by placing it in the basement or an ice-box. Special attention should be given to keeping the butter entirely away from light and air, because light and air cause butter to spoil rapidly.

### IMPORT GERMAN PRISONERS?

Why this country should not bring German prisoners from Europe to America and put them on American farms to relieve the present shortage of labor is the question asked by Representative Young of North Dakota, who has proposed such a movement to Food Administrator Hoover. Representative Young suggests that the prisoners be employed at $1 for themselves and 33 1-3 cents a day to go to the government to pay the expenses of importing them.

### MANY STUDENTS ENROLL.

Many thousands of young men have enrolled or are enrolling in the universities and colleges of the country as members of the student army training corps. Under this head a young man of draft age may go to school, taking certain required military courses and training in connection with the regular college work. He receives his uniform and board and regular army pay. It is a great opportunity for the boy to go to school and get paid for it.

### Impossible!

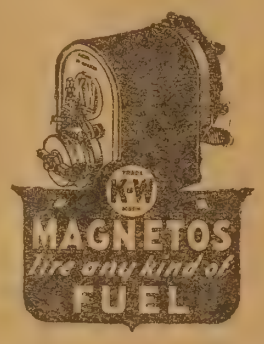
**K-W High Tension Magnetos are Protected Against Powder Fine Dust-Oil and Water**



IN many localities tractor manufacturers find it necessary to equip their tractors with "periscope" air intakes which reach up above the cloud of fine dust. But the Magneto must be mounted on the engine and give satisfactory service under these same conditions. This is one feature that has made the K-W Magnetos the standard on tractor work.

These tractor manufacturers don't worry about dust getting into a K-W Magneto. They know its working parts are protected against even the finest Alkaline dust, and oil and water, can't reach its internal parts and give trouble.

The protection of all working parts is only *one* feature of K-W Magnetos. K-W users get quick and easy starting without troublesome batteries or coils; more power out of the same fuel, and continuous, reliable, no-trouble ignition.

If you are not using K-W Ignition now, write us and let us show you how a K-W Magneto will cut your fuel bills and free you from ignition troubles, regardless of the weather or working conditions.

Insist that your new tractor be K-W equipped. Forty tractor manufacturers pay more for K-W Magnetos because of K-W superiority. Write for list of K-W equipped tractors.

THE K-W IGNITION Co
2891 CHESTER AVE. CLEVELAND, OHIO. U.S.A.

**Your Calves Are War Babies**

*Raise Them!—*

Give to the country all the dairy products that you can possible produce. Instead of feeding milk, raise your calves on Albers Calf Meal at one-quarter the cost. They will thrive on it, grow rapidly and will be valuable additions to your herd, because they will be sturdy, and free from disease.

Albers Calf Meal is made on a basis of Ground Oat Meal, exactly what calves should have for bone and body building. It is not a stock food made of waste products, but a perfect milk substitute high in food value, every ingredient easily digested.

Your dealer sells Albers Calf Meal in 25 and 50 pound sacks—if he happens to be out of a supply, he will get it for you.

**Albers CALF MEAL**

# Meat Is Regulated in Australia

By A. C. MILLS, Melbourne, Australia.

(From the Pastoral Review.)

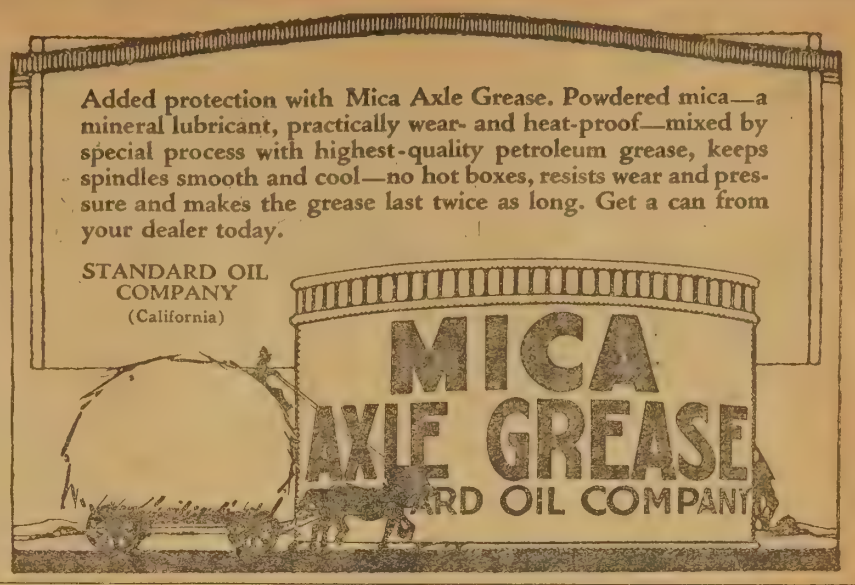
The item of overshadowing interest to graziers just now is the commonwealth government's action in fixing the maximum price of meat for local consumption. Nobody knows where it will lead, but it is very certain that the policy is creating an air of uncertainty and unrest that can not be good for the live stock industry. I may explain that the national government, contrary to its previously avowed intentions, about six weeks ago decided to fix the price of meat for local consumption. Schedules containing wholesale and retail rates were hurriedly drawn up and came into force on the 29th of July. Wholesale rates for beef range from $10.2 to $12 per 100 pounds, mutton from 10 to 12 cents, and lamb from 12 to 14 cents per pound, according to locality. The retail rates vary more widely and run from 28 cents for fillet steak to 12 cents for the cheaper cuts of beef; from 18 cents for loin chops to 10 cents for forequarters of mutton, and from 22 cents for lamb chops to 14 cents for forequarters. Pork, veal and small goods are not dealt with.

Compared with the values that were ruling during July, the proclaimed wholesale rates meant a reduction of about 1 1-2 cents per pound on prime light beef and 1 cent per pound on mutton and lamb. When graziers realized this those who could decided to hold off the market until they saw how things were likely to go. Being winter and the period of natural scarcity of fats, the result has been that the supply of stock sent in for sale has been quite inadequate since the schedule came into force. Butchers have been scrambling for the limited offerings, paying a good deal more than they were justified in doing and are now appealing to the government to help them out. Up to the present the government has mostly contented itself with issuing vague threats of commandeering stock in the country (it will be difficult to find the fats), but whether it will dare go to such lengths remains to be proved. Temporary relief is to be afforded this week by releasing certain stocks of frozen mutton and beef held in cold store on account of the British government, but the quantity is small and it is doubtful if it will tide the local trade over until spring, when more fats are in the country and the markets may be better supplied.

The absurd feature about the whole business is that the fixed retail prices have not benefited consumers, for whose sake solely the policy was adopted. As a matter of fact they are rather worse off than before. The schedule only applies to prime quality meat sold at the block for cash. Booking or delivery may be charged extra and it is. Those customers who buy for cash are getting poorer quality of meat, and, what is more, the joints and cuts are not trimmed as they used to be. Many a housewife is finding to her disgust that she is now getting one chop less to the pound and a mighty lot of useless skirt.

The season over practically the whole of the country south of the tropics is developing satisfactorily and gives promise of a fair to excellent spring. As far as Victoria, South Australia and the southern half of New South Wales are concerned conditions right through the winter have been moderately favorable. There has been an abundance of rain and the subsoil must have received a thorough soaking. On the other hand northern South Wales and southern Queensland were under a dry spell until three weeks back and things got into a pretty bad way in many districts before the weather broke. However, the last rains extended well into this territory and matters are now greatly improved. Within the tropical belt conditions are dry though there is still plenty of feed of a sort about. Given the thunder storms that usually turn up about this time graziers should be able to carry on without anxiety until the regular northern wet season sets in toward the end of the year.

**Autumn and Winter Lambing.**

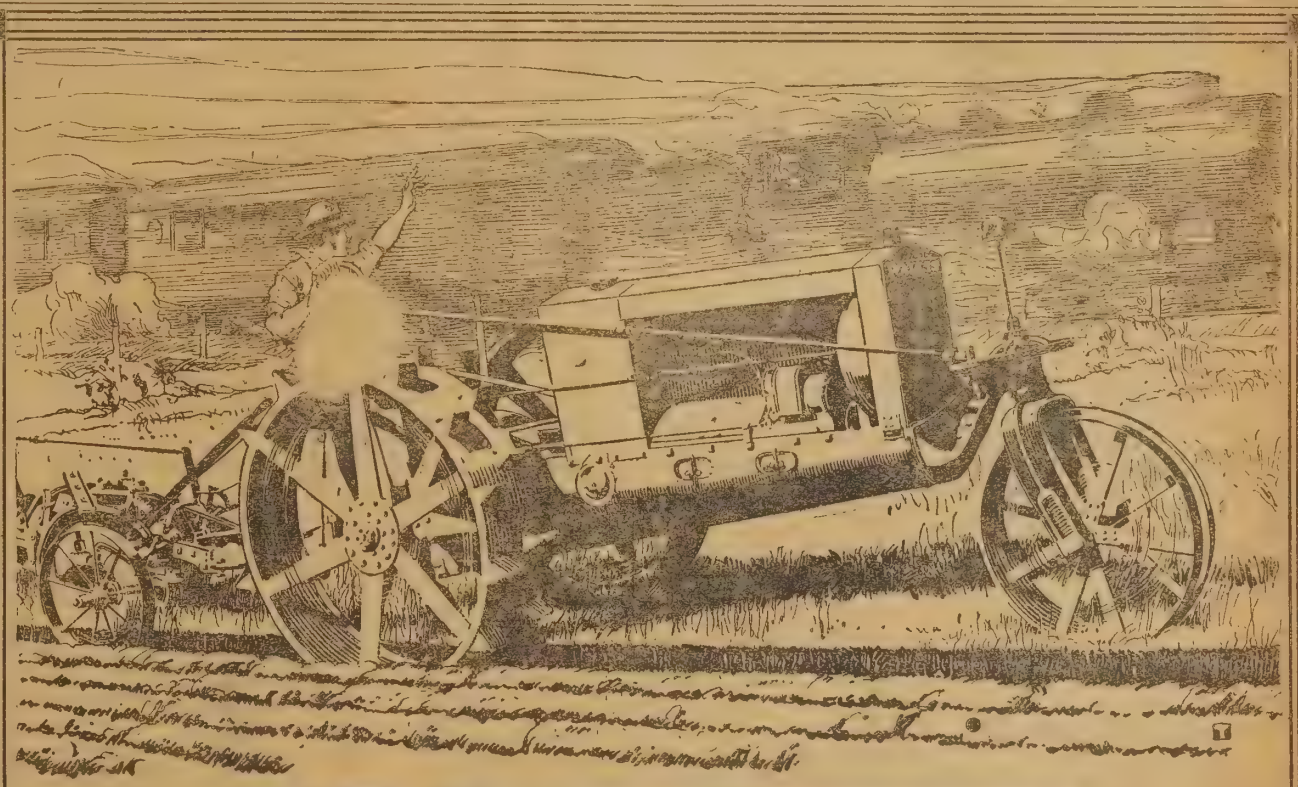


A return just published by the New South Wales government statist shows that of the 19 odd million ewes in that state at the end of last year 13,310,000 were put to the ram for the autumn and winter lambing. The lambs dropped are given as 9,719,000, an average of 73 to the 100, which, considering that the bulk are Merinos, and practically every sheep has to fend for itself in the open, is a fair percentage. However, it appears that the losses between lambing and marking were unduly heavy, owing to the dry weather in the northern districts. The numbers marked are estimated to have outreached 7,720,000. This will give a net return for the ewes mated of but 58 per cent, which is poor, and seeing that the country is still understocked to be regretted. It is confidently anticipated that a much better average will be obtained with the spring lambing for which it is estimated 3,260,000 ewes have been reserved.

No official statistics are published in any other state, but it is possible to gather reasonably accurate figures from other sources. The season over Victoria, South Australia, Tasmania and most of western Australia has been fairly favorable, and the percentages must be a good deal better than in New South Wales. Also apart from climatic conditions, the part that the more prolific crossbreds and various British breeds form, the greater part of the sheep stocks of those states indicate higher averages. Probably there were 15,000,000 ewes in the country at the beginning of the season. It may be estimated that nearly 12,000,000 were mated and the lambs marked to be between 8,000,000 and 9,000,000, say from 70 to 75 per cent. The season in Queensland has been much on a par with New South Wales and Merinos again predominated there. Allowing for 8,500,000 ewes in the state probably 7,000,000 were mated and the ultimate marking was about 4,000,000, or say 60 per cent.

These estimates give a net increase to the sheep stocks of the commonwealth of roughly 20,000,000 lambs as a result of the autumn and winter lambing to which may be added another 3,000,000 in the spring. The total number of sheep of all sexes in Australia at the beginning of 1918 was 79,000,000.

**DECLINE IN STOCK ON FARMS.**



On about 5000 representative farms, scattered throughout the United States, reporting to the bureau of crop estimates, the decline in the number of cattle was 0.8 per cent from last July 1 to August 1, 2.9 per cent in hogs, and 3.3 per cent in sheep.

WALLIS

*America's Foremost Tractor*

WALLIS is today conceded to be America's Foremost Tractor, because it does the most work and lasts the longest.

Wallis was the first to successfully combine great power, light weight and durability. The result is long wanted economy. Due to its advanced type of simplified construction the Wallis weighs from 1000 lbs. to 5000 lbs. less than tractors designed to do the same work. The power released is delivered at the draw bar.

The Wallis has completely enclosed gears, operating in oil. This includes the rear axle drive. All gears are drop forged, cut and hardened steel. Vital points operate on Hyatt bearings. Throughout this advanced type tractor every part is as carefully designed and finished as a modern motor car. As a result the Wallis does from 30 per cent to 50 per cent more plowing per gallon of fuel.

Investigate the Wallis. Write for name of local dealer and a copy of new Wallis Catalog.

### SHOWN AT WALLA WALLA FAIR.

The picture is not a circus animal; he is a mule, shown at the recent fair at Walla Walla, Wash., and he won a prize, not for his spots, but on his qualities as a mule.

### POOL WOOL SHIPMENTS.

**Idaho Farmers Receive Sum of $76,400.**

Two hundred and thirty thousand pounds of wool were handled by a farmers' wool pool organized with the help of the farm bureaus of Ada and Canyon counties, Idaho, and the United States department of agriculture. The wool sold at 60 cents a pound, and the total amount received by the farmers was $76,400. The cost of handling was prorated and found to be 3-1000 of a cent a pound. The farmers feel that the pool saved them several thousand dollars. Members of this year's pool are planning for next year. They are learning something of the different grades of wool, so that next year they can grade and classify to better advantage, says the weekly news letter of the United States department of agriculture. Through the help of the Lewis county farm bureau, a similar pool was organized, which shipped 10,000 pounds of wool to Salem, Ore. Since the organization of the farm bureau, a great interest has been developed in sheep-raising. Ninety-five thousand pounds of wool were sold by the Jerome Woolgrowers' association, developed with the help of the farm bureau in Lincoln county.

## VETERINARY

By DR. S. B. NELSON.

**Severe Case of Mange.**—I have a bob-tail English sheep dog, one year and a half old, has had mange for six months. Have been using a mange cure, but he does not get well. He has had distemper and worms. He has had the best of care. Can you tell what to do for him? G. S.

Seattle, Wash.

If your dog has had mange for six months and you have not been able to cure it, the chances are the disease is very deeply seated, and for that reason, I would suggest to you that you consult one of your local Seattle veterinarians. I regret that I can not give you a treatment that you can use in as severe a case as this either has been or is at the present time.

**To Wean Mule Colt**—I have a mare with a mule colt 3 months old. The mother is rather thin and pretty old. I would like to wean the colt. What is your opinion?

P. N. A.

Box 18 Rainier, Wash.

If you possibly can, let the mule colt run with the mother a little while longer. While you are doing this try and have the colt eat a little hay and feed a little grain to him—ground grain; not very much; but start him on it, and then in from four to six weeks, you can wean the colt without any trouble. Feed the mare pretty strongly especially on grain, until you get ready to wean the colt, and then when you wean it, decrease the grain being fed to the mare.

**Is Pen Safe for Use?**—Are pig pens that had 40 hogs die with cholera 18 months ago safe to put hogs in at present? There has been nothing in the pens for 18 months. If not, kindly advise what disinfectant to use and if it will be perfectly safe for hogs at present time.

A SUBSCRIBER.

Camas, Wash.

Whether or not a pen would be safe to use would depend somewhat on the weather and general conditions. With this length of time I believe it would be safe if you would disinfect the pen. First, if there are wooden floors, wash all the woodwork with a one to 1000 solution of corrosive sublimate. Four days later wash the floors and up the sides with a saturated solution of bluestone. Four days later whitewash the woodwork thoroughly, cracks and all. If the floors are of dirt sprinkle the floors thoroughly with lime (unslaked) and then either plow or have them spaded up and then sprinkle lime on top of it. After this has been done I believe the pen would be safe for use.

**Wire Cut in Fetlock**—I have a horse obtained about 10 weeks ago that had a bad wire cut in the fetlock, which was done about a year ago. The injured foot was not properly taken care of and proud flesh grew in. About the middle of June, just before I got him, a veterinarian operated on him, cutting out the surplus flesh. I am unable to get the sore to heal. I am of the opinion more should have been cut out or else proud flesh is coming in again. The local veterinarian looked at him about two weeks ago and said there was no proud flesh now and gave me a liquid to apply with a feather. It is a hard matter to keep dirt out, as I have to work him. Cloths on the foot irritate it. He is a nervous beast—never still. When in the barn he is pawing and jumping around half the time. When hitched to the wagon will paw and fret unless on the move. When in the barn at night will rub the sore foot with the other foot and keep it raw, or sometimes uses his teeth. I am of the opinion it needs cutting or burning out more. Have been told to use blue vitriol. How would one use it, and how strong? I keep a leather boot on him now at night, but it seems to irritate the sore, as he keeps in motion so much.—L. D. B., Newport, Wash.

Wounds in the fetlock are very serious things, because they are low in vitality to build up, and therefore it takes a long time to get the tissues to heal. I believe that your veterinarian is on the right track, and he should see the horse frequently to see if the skin heals and around the edge of the wound is gradually closing in. If the cells grow too rapidly in the center of the wound, naturally they will have to be burned out either with a cauter as you suggest or by strong drugs. Blue vitriol can be used quite strong in these cases—20 to 30 per cent even is not too strong.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

Reduces Strained, Puffy Ankles, Lymphangitis, Poll Evil, Fistula, Boils, Swellings; Stops Lameness and allays pain. Heals Sores, Cuts, Bruises, Boot Chafes. It is a SAFE ANTISEPTIC AND GERMICIDE

Does not blister or remove the hair and horse can be worked. Pleasant to use. $2.50 a bottle, delivered. Describe your case for special instructions and Book 5 R free.

ABSORBINE, JR., antiseptic liniment for mankind, reduces Strains, Painful, Knotted, Swollen Veins. Concentrated—only a few drops required at an application. Price $1.25 per bottle at dealers or delivered.

W. F. YOUNG, P. D. F., 371 Temple St., Springfield, Mass.

15,000 to 30,000 Pounds of Milk

Seventy-seven cows have been admitted to the Holstein-Friesian Advanced Register that have produced 7000 to 15,000 quarts of milk in periods of ten months to a year. The capacity of the Holstein cow for milk is a matter of extraordinary interest.

# Three-in-One Pay

## Trappers Scent Season's Opening

The capture of fur-bearing animals in the northwest offers a three-in-one profit in most cases, and in some even more than that. The season is about here when the profits can be taken, in fact, it is here, but not yet at its best.

It is real sport to trap for any animal that has a value when captured, or that is a pest that should be destroyed. Possibly sport should be enumerated as the first common inducement to trap coyotes, muskrats, moles and the like in the northwest. Second, there is the riddance of a real pest when one of these animals is killed. Third, there is in some cases, depending on the animal and the locality, a bounty that is well worth considering. Fourth, and by no means least these days, there is the value of the fur. Any good fur has high value, and in localities where there are any considerable number of fur-bearing animals either man or boy is safe to figure an actual money profit from his leisure time during the winter season spent in trapping.

Of course, there are other ways than trapping that the animals may be taken. They may be poisoned or shot. Drawbacks to these methods, however, are that many animals when poisoned are never found and the bounty and fur value are lost, while shooting, especially with the smaller animals, often damages the fur to such extent that it is of little value.

Furthermore, it is a real art to trap successfully. One has to set his cunning against that of the wild animal, and it affords a contest that appeals to the average boy or man.

### HOLD BIG FUR SALE.

The first three days of the international fur auction at St. Louis, Mo., last week brought a total of $2,595,500. Red fox pelts were the largest sellers today, 20,400 of them bringing $611,840. Many sold as high as $70 a pelt. The highest price paid for a single skin was $410 for a silver fox. Hudson bay sables brought $81 a pelt, and polar bear pelts sold for as high as $110 apiece.

# SIDELIGHTS

### Joy in Hearing.

"What would your mother say, little boy," demanded the passer-by virtuously, "if she could hear you swear like that?"

"She's be tickled to death if she could hear it," answered the bad little boy. "She's stone deaf."

### Some Bird.

Officer of the guard (to sentinel No. 1)—Would you know the commanding officer if you were to see him?

"Yes, sir," replied the rookie; "he's the man with the chickens on his shoulder."—Judge.

### Dignity of a Doctor.

An army officer's wife wrote to an R. A. M. C. officer saying her child was suffering during teething. She addressed the letter to "Mr. Brown."

The recipient returned it with the remark that he should be addressed "Brigade Surgeon Lieutenant Colonel Brown."

"Whereup the lady wrote back:

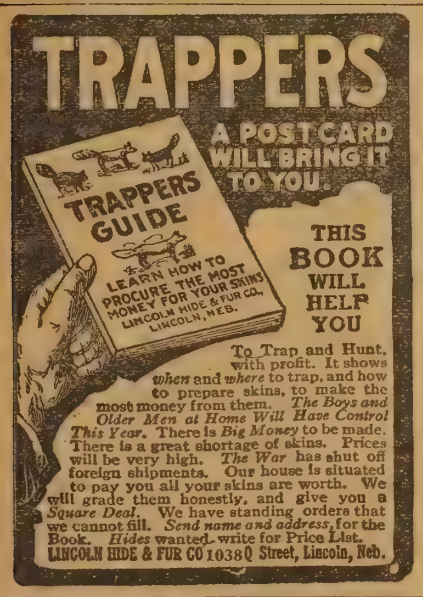
"Dear Brigade Surgeon Lieutenant Colonel Brown: I am sorry about mistake. —Yours, May Jones.

"P. S.—Please bring your sword to lance baby's gums."

### Fond Mother Critic.

Recently an entertainment was given by the pupils of a public school. The fond mothers of nearly all the youngsters were assembled in the audience. Finally the boy orator of the occasion arose.

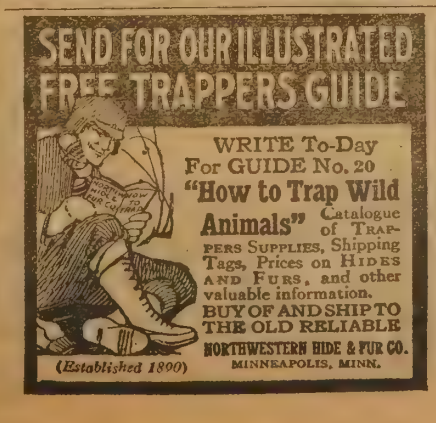
"Friends, Romans, countrymen," he began, in a loud voice, "lend me your ears."

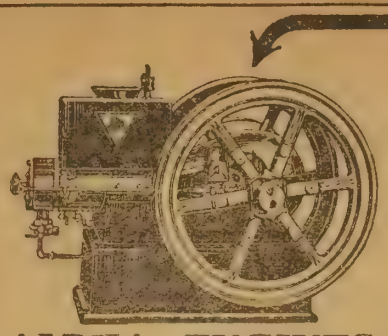


"There!" whispered one of the fond mothers to the woman next to her. "I knew it! Just like his mother!"

"Just like his mother!" returned the other, wonderingly.

"Yes," answered the first. "He's Mary Jones' boy. He wouldn't be his mother's son if he didn't want to borrow something."—Philadelphia Telegraph.





Reduce Feed Costs

ALPHA ENGINES

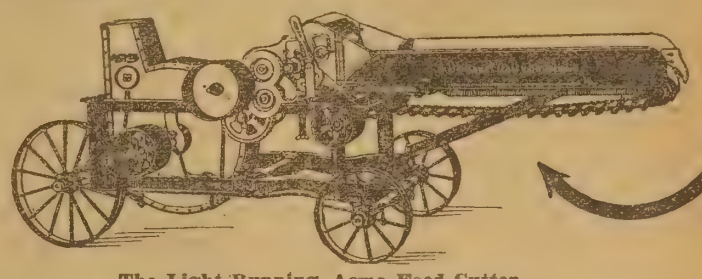
1¾ to 28 H. P.

Economical power for feed cutting or any other power requirement. An Alpha will last longer, do better work for you at a much lower operating cost than any cheaply constructed machine. No troubles, no breakdowns. Start on magneto without cranking. Complete description free on request.

**Chop All Your Dry Feed**

Bulk feeding is wasteful; $3 to $5 worth of hay out of every ton is lost that way. Chopped feed is all eaten. Feed more cows per ton.

ACME FEED CUTTERS



This steel frame cylinder cutter will save its cost every season in feed cutting alone. Use it at all seasons. It cuts dry feed, fills the silo and makes excellent alfalfa meal.

The steel frame can't warp or sag. All bearings stay in rigid alignment, reducing wear and vibration.

Its three-bearing cutter shaft and center hung blower are examples of superior design and stanch construction.

A SIZE FOR EVERY DAIRY.

Special hay cutting machines of extra large capacity for sheepmen and stockmen.

The Light-Running Acme Feed Cutter.

# Hen's Measure

## Different Ways of Judging It

The hen's productive capacity may be measured in different ways. In egg-laying contests the number of eggs laid is the measure used, but the eggs must be of marketable size and in some contests the eggs must reach a certain minimum weight. It does not necessarily follow that the pen that has laid the greatest number of eggs has laid the greatest weight of eggs. It might be that the greatest weight of eggs laid was the best measure of production. But this would be open to the objection that the pen that laid the greatest weight of eggs would not necessarily lay the greatest weight of marketable eggs; in other words, on account of a lack of uniformity in shape and texture of shell the heavier eggs might not be worth as much as the lighter. Again, if the heavier eggs sold for the greater amount of money, it would not necessarily follow that the pen that laid them had the greatest productive value. It might happen that this pen ate so much more food than the others that it fell behind when put to the test of profit on feed.

In the fifth international egg laying contest at Storrs, Conn., the pen winning the contest laid eggs weighing 23.8 ounces a dozen; total weight of eggs was 281.21 pounds, cost of feed $19.26, return above cost of feed $49.35. It happened that this pen won the contest, whether measured by number of eggs laid, weight of eggs or return above cost of feed; but when it came to weight of eggs a dozen it was beaten by half the other pens in the contest. The eggs of all pens averaged 24.3 ounces a dozen.

The pen that laid the second greatest number of eggs and won second on that account, would lhave been beaten, if weight of eggs had been the deciding point, by the third and also by the ninth pens, both of them laying a greater weight of eggs. When it came to the return above feed cost the first, second and third pens were properly placed.

There is considerable variation in weight of eggs laid by different breeds and different pens of the same breed. But it can not be said that one breed has a monopoly of large eggs. In the contest mentioned the eggs varied among the 100 pens from 21.8 to 28.2 ounces a dozen. The heaviest eggs were laid by a pen of Rhode Island Reds, the average for the pen being 28.2 ounces a dozen. They were indifferent layers, however, the average being 139.6 eggs a hen. The smallest eggs were laid by a pen of Leghorns; they averaged only 21.8 ounces. They were good layers, averaging 184.8 eggs a hen. Though they laid the smallest eggs of any pen in the contest they laid so many more that the weight of all the eggs laid in the year was greater than those laid by the pen that laid the heaviest eggs, the weights being as follows: The large egg pen laid in the year 203.48 pounds and the smallest egg pen 209.59. The latter pen, though it laid the more eggs and the greater weight of eggs, ate less food than the other. The net returns on feed was $15.66 for the small egg pen and $19.07 for the large egg pen.

The pen that laid the smallest number of eggs laid the fifth largest eggs in the contest. This pen averaged 92.4 eggs a hen and the eggs weighed 26.6 ounces a dozen.

The second place in the contest was won by a pen that laid the second smallest eggs. This pen averaged 219.8 eggs a hen and the eggs averaged in weight 22.1 ounces a dozen.

It is noteworthy that in this contest all the pens that averaged over 200 eggs, and there were six of them, laid eggs weighing less than 24 ounces, and in the whole contest there were 43 pens, whose eggs averaged less than 24 ounces. These 43 pens averaged 170.6 eggs a hen, while the 57 whose eggs weighed 24 ounces or more, averaged 155.5 eggs a hen.

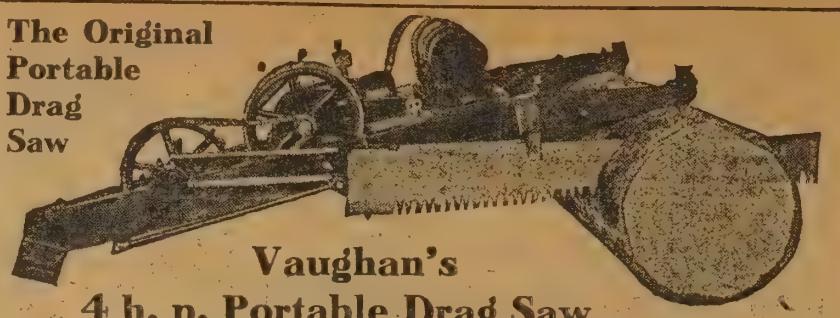
The evidence seems to indicate that there is some correlation between high production and small eggs, and it may be that if selection of breeding stock were made on the basis of number of eggs laid without regard to size of eggs, there would in time be a decrease in size of eggs.

The evidence is pretty clear, however, that the hens that win the contests, even though they lay small eggs, lay so many that they lay a greater weight of eggs than the hens that lay large eggs and not so many.

The size of egg is a question of breeding or inheritance, and by picking out the large eggs for hatching it is a simple matter to breed a strain that will lay large eggs.

There is no particular object, however, in breeding for very large eggs. A flock that averages as pullets 23 ounces and as hens 24 or 25 ounces is all right. Eggs are made from the food eaten and the larger the egg the greater the cost of the food for making it has been. Neither under-size nor over-size eggs should be used for hatching.

The real measure of a laying hen is not the number of eggs laid, nor the size or weight of eggs produced, but the use she makes of the food she eats; or, in other words, the product in eggs for a given amount of food eaten. J. D.



### Lumps on Her Head.

To the Editor: I just found a hen that has large lumps all over her head. They appear larger on her earlobes. She eats and drinks well. What can I do for her? —Subscriber, Dietrich, Idaho.

This case is not described fully enough. If they are wart-like growths it is probably chickenpox. If that is the trouble paint the spots with iodine and then grease with vaseline. If the trouble continues, would suggest that you take the matter up with the poultry department of the state university.

**CHICKENS SICK?** Roup, Colds, Canker, Bowel Complaint, Limberneck, Sorehead, etc., the best remedy is always GERMOZONE. At most dealers or 75c postpaid with 5-book poultry library free. GEO. H. LEE CO., Dept. 421, Omaha, Neb.

# Orchard Troubles

## The Diseases and Pests of Pears

By Granville Lowther.

There is no disease to which pears are subject that is so destructive as "pear blight," known technically as Bacillus amylovorus. First in alphabetical order of diseases, we would mention "black leaf," but it is of sight importance when compared with blight. This black leaf is in some respects similar to blight. One side of the limb of a pear tree dies, the leaves turn black and hang on for some time. Sometimes there is a narrow strip of uniform width of dead bark, but there is not the red, juicy condition of the inner bark and cambium found in blight, nor is there the blight-producing organism, nor the infection from limb to limb and from tree to tree through the blossoms, young shoots or suckers. The disease appears to be mostly in the nature of sour sap, possibly caused by too much water in the late fall or early spring; or it may be some injury to the root that causes the corresponding limbs on the same side of the tree to die.

The history of pear blight dates from 1780 and the first record was published by the Massachusetts society in 1794. It is supposed to be of American origin, but has found its way to Europe and other parts of the world. The true character of the disease was worked out by Professor T. J. Burrill of the University of Illinois in 1878. The germ affects in a greater or lesser degree all the pome fruits, such as service berry, thorn apple, christmas berry, wild pear, crab apple, mountain ash, apples and pears.

There is scarcely a fruit-producing district in the United States not affected with blight, and in some sections it has wiped out the pear industry. The first appearance is likely to be in the blossoms, the young shoots and twigs becoming withered, leaves a dark brown, and a sticky substance oozing from the bark. Later, the larger branches, the body, and even the roots and fruit may become infected. Birds, bees and other insects carry the infection from flower to flower and from tree to tree.

The only remedy known is to cut it out and burn it. In cutting, care should be observed in disinfecting the tools, lest the germs be carried to healthy parts of the tree. It can be controlled if properly watched and guarded. One year it was spreading rapidly in the Yakima valley, and the industry of growing pears seemed imperiled. We organized ourselves into "blight fighters," under district leaders, and inspected every orchard at stated periods. Personally, I examined every pear tree in our orchard and certain varieties of apple trees susceptible to blight twice every week. We were two years bringing it under complete control, but now we are seldom troubled with it. It is easily detected when passing through the orchard in cultivating, irrigating and other work, and needs but little attention besides.

Pear rust is similar to rust on apples and may be cured by the Bordeaux spray.

Pear scab is similar to apple scab, and the remedy is to spray with Bordeaux.

### Pear Pests.

The pests that affect apples and fruits in general, most of them affect pears, and the same remedies may be applied as on other fruits.

Aphids are of several varieties, such as white aphis, black aphis, green aphis and brown aphis. Kerosene emulsion may be applied in any form of aphis; but, after careful experiment, I believe the tobacco spray is the best insecticide I have ever known. Tobacco will kill the apple leaf hopper, bean thrips, black scale, blight beetle, blister mite, bud worm and any other insect to which it may be applied. The only trouble is to reach them. On account of this difficulty, other sprays are better for such insects as bore into the wood, bark or fruit. Take the codling moth, for instance—arsenate of lead is better, because the codling moth is a chewing insect, and after it enters the apple is protected from a contact spray. There are certain stages in the life history of beetles, caterpillars and boring insects when they may be reached with contact sprays. A list of the pests known to affect pears and the remedies generally applied may be given as follows:

Aphids of all classes, kerosene emulsion or tobacco.

Apple leaf hopper, spray with coal oil emulsion or tobacco.

Black scale, San Jose scale or any other kind of scale, spray with lime-sulphur or tobacco.

Climbing cut worms, various species, spray with arsenate.

Codling moth, spray with arsenate. However, the pear is not much troubled with codling moth.

Fall canker worm, spray with arsenate of lead.

Fall canker worm, spray with arsenate cut off the webs and burn them.

The pear slug is a tender, soft insect that is easily killed by the use of almost any kind of contact spray. A dust spray will kill it, and it need not be a poison. Road dust, ashes, lime or anything that will adhere to the slimy or mucilaginous coating of the body will kill it.

### WILL OFFER SHORTHORNS.

The Northwest Shorthorn Breeders' association has announced that it will place on sale at auction a considerable number of registered Shorthorns at Lewiston, Idaho, November 11, one of the days of the Northwest live stock show. The stock will be consigned by a number of the well-known Shorthorn breeders. Joe Turner of Myers Falls, Wash., will be sales manager.

### Care of Grape Vines.

Trim and lay down the grape vines ready for covering as soon as the ground begins to freeze.

ATKINS
SILVER STEEL SAWS

Atkins Saws will save you lumber, labor and money

A really good saw will save you lumber, labor and money. You can easily waste the price of an Atkins Silver Steel Saw in a single day. Stop the sticking and binding that makes sawing hard and expensive by insisting upon an Atkins saw.

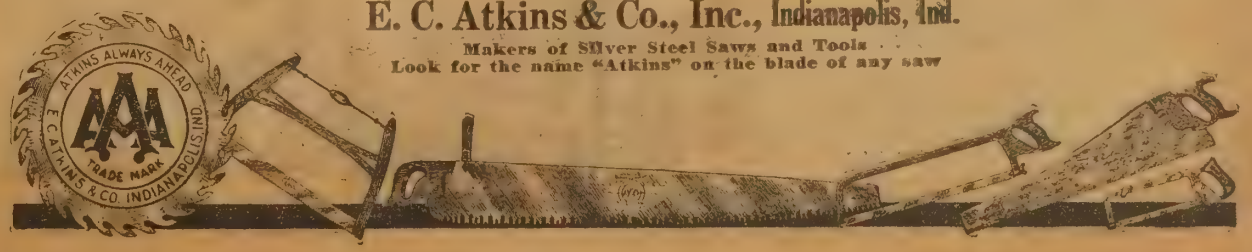
The famous Silver Steel—the highest grade of saw steel, used only in Atkins saws—insures you longer service. Every Atkins saw is designed to make sawing easier and quicker.

The government, the greatest lumber concerns, leading industries and experienced carpenters realize this—and use Atkins saws.

**Look for the Atkins Name on the blade.** It is a guarantee that the saw will run easier, cut faster and hold its edge longer than any saw without the name Atkins.

You will find the Atkins name and guarantee on all kinds of saws; one-man or two-man cross-cut saws, hand saws of all styles, hack saws, circular saws, meat saws, buck saws. In fact, there is an Atkins saw for every purpose. If the name isn't there, it isn't an Atkins. Nearly all dealers are proud to sell and guarantee you the time-and-money-saving Atkins satisfaction. If your dealer does not, write us.

**CROSS-CUT SAWS—The Atkins is the choice of expert woodsmen everywhere. Every stroke brings out a clean, thin ribbon of wood, instead of ordinary saw dust, and goes through the log with surprising speed.**



**WOOD SAWS—The hardest money you ever earned was the fifty cents you "saved" on a poor buck saw. An Atkins Saw will give you a new idea of sawing up stove-wood.**

**HAND SAWS—For your carpenter work, use the kind of saws most carpenters use—the Atkins. You'll do better work, easier and quicker, when you are repairing or building things.**

**CIRCULAR AND OTHER SAWS—There is an Atkins Saw for every purpose. When you need a circular saw, hack saw, meat saw, ice saw, or any other kind, try an Atkins. It will cost little if any more at the start, and you will find it the truly economical kind to buy.**

**CARPENTERS' HELPS FREE—"The Saw on the Farm" tells how to make neat joints, how to build things, how to file saws and take care of them, etc. Sent free on request.**

E. C. Atkins & Co., Inc., Indianapolis, Ind.
Makers of Silver Steel Saws and Tools
Look for the name "Atkins" on the blade of any saw

*Makes Sawing Easier and Faster*

Atkins invented and developed the segment grinding process—you can not get it in any other saw. It means faster, easier sawing.

The tooth edge of an Atkins saw is the thickest part of the blade—each tooth is made to cut, and wherever the teeth go the blade follows without sticking or binding.

The illustration on the left above shows how the blade tapers from tooth to back. In addition, the blade tapers from the ends to the middle.

This scientific construction, developed by years of experience, puts an Atkins saw in a class by itself for fast, easy, perfect work.

*Holds the Edge Longer*

The Atkins family has been making saws for three hundred years. And Atkins laboratories today have worked out the finest saw steel formulas known—in Atkins Silver Steel. In material, tempering, rolling and every particular, Silver Steel is a guarantee that your Atkins will hold a keen edge, stay sharp longer and need less fitting. It means the best in material and workmanship.

# War Takes M

## The Washington Farmer Will Contin
## Plan Which Saves Man Power and S

At this season The Washington Farmer in common with other general and family magazines, maps out its subscription campaign for the year ahead.

Last autumn, it will be remembered, we were face to face with a new and critical condition. The government had strongly urged employers to release as many men as possible for productive labor in field, forest, mine and factory. To meet the situation we virtually cut out the entire force of agents who had been handling our subscription business and depended on our readers to send in their own subscriptions unsolicited; also to do the friendly missionary work among their neighbors which is so necessary in introducing a publication to additional homes.

Today we find even stronger reasons for *continuing* our cooperative system than we had last year in *adopting* it.

Wartime industries have been speeded up. Shipbuilding and other government activities have absorbed thousands upon thousands of men previously available for civilian work. Greater demands for output have been put upon mines, lumber mills and farms. Finally the sweeping draft measure became effective, calling upon all men between 18 and 45 to register for war service, meaning a still greater tax and drain upon the country's man power in the cause of justice.

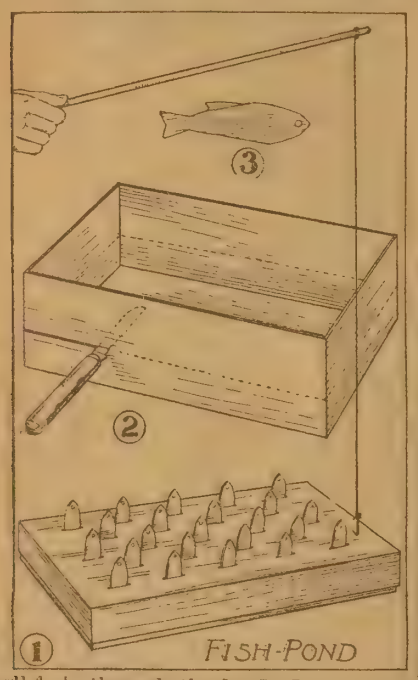
# Handicraft for Girls

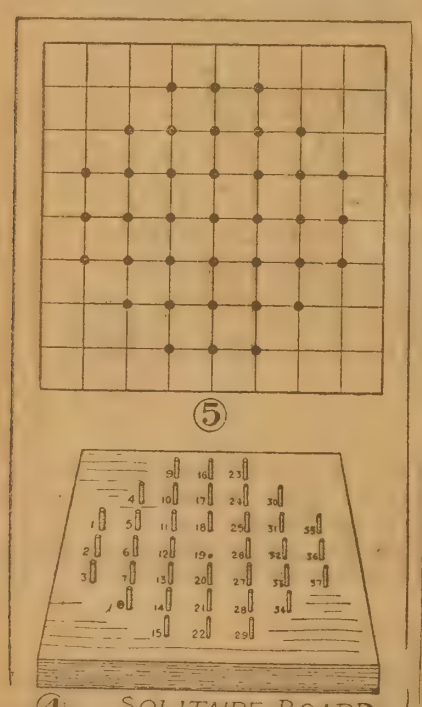


By DOROTHY PERKINS.
(Copyright by A. Neely Hall.)

## THREE HOME-MADE GAMES.

If you have never played the game of fish-pond (Fig. 1) you have missed a great deal of fun.

Get a cardboard box for the pond, and cut down its depth to 1 inch (Fig. 2). Then cut rows of slots through the cover, as shown, for the fish to stick into.

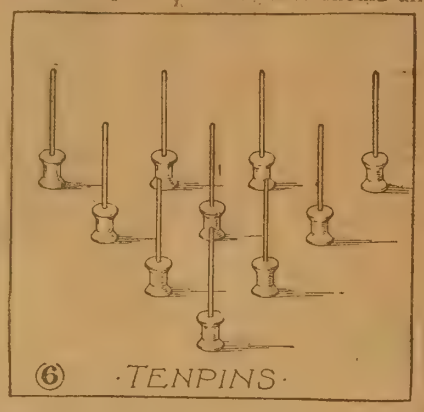


Draw the outline of a fish upon a piece of cardboard, as shown in Fig. 3. Make it two inches long. Then cut it out and use it as a pattern for marking out one fish for every slot in the pond. Punch a

small hole through the head of each fish, to provide for hooking it. Number the fish 5, 10, 15, 20 and 25.

Each player must have a stick for a fishing pole, with a short piece of string attached to the end for a line, and a bent pin tied to the end of the line for a hook. In fishing, the line must be lowered and the fish hooked out of the pond without allowing the hook to strike any part of the fish. If the hook strikes, the turn passes to the next player. The points scored are determined by the numbers on the fish.

The solitaire board (Fig. 4) should be eight inches square. Divide the edges of



this into eight equal parts, and with ruler and pencil draw lines across from side to side, connecting the points of division (Fig. 5). Then with a large nail and a hammer (or, better still, with a gimlet, if there is one in the house), make holes at the intersections of the lines indicated in Fig. 5.

When the holes have been made, cut enough wooden pegs to fit all but one. If the holes are small enough, match ends will do for pegs.

The game is played by one person. The pegs are stuck in all but the center hole, and the game is started with a peg second from the hole, jumping it over the peg between it and the hole, into the hole. The peg jumped over is removed. Then, one by one, the pegs are jumped over and removed. The object of the game is to jump the pegs in such an order that, finally, all but one will have been removed. Unless the jumps are made in the proper order, several pegs will remain scattered over the board when the last possible jump has been made; then you will have to try all over again.

Fig. 6 shows a quickly made set of tenpins. The spools for the bases should all

be of an equal size. Cut the stick uprights six or seven inches long and drive them into the spool bases.

Arrange the ten pins upon the floor in the positions shown in Fig. 6, and use three rubber balls with which to bowl them over. Each player in her turn should roll the three balls at the pins. One point is scored for each pin bowled over, and, if by striking the center pin all 10 pins are bowled over, a score of 10 points is made.

---

"Do you think that the things one eats influences one's dreams?"

"Undoubtedly, I ate a porterhouse steak the other evening and dreamed about bankruptcy all night."

# The Cheapest Way To Pull Stumps

No horses needed with a *Kirstin Puller*—no extra help required. One man alone pulls biggest stumps in 4 to 10 minutes. The wonderful *Kirstin One-Man Puller* pulls little, tough or green stumps as low as 5c each; also brush, hedges and trees. Cuts land clearing cost *way down*. Costs less to buy—less to operate. Weighs less—has greater strength—more power.

Get Our Big FREE BOOK

Tells how to clear land quickly and economically. Guides you at every point. Worth many dollars to any farmer. Also get special proposition.

**Kirstin One-Man Stump Puller**

Works on wonderful leverage principle—gives one man giant's power. Its six speeds and patented cable take-up save time, cable and machine. All steel—three years' *guarantee* against breakage. Pulls acre from one anchor. Sold on 30 days' free trial—no money in advance. One man style or HORSE POWER. Shipment from nearest distributing point saves time and freight. # What 15c will bring You from the Nation's Capital

*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*

The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 28th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

The Pathfinder, Box 89, Washington, D.C.

# Western Electric POWER and LIGHT

**The line is complete. There is a size and type to suit your farm.**

**Belted outfits to run from your present gas engine—or engine built in.**

Direct-Connected Set

IN buying a plant from the Western Electric Company, you enjoy unusual advantages—all of which help you get just the outfit that you need, at the price you want to pay.

We realize that it is not good business to offer you only one kind of an outfit. That is why you can choose from several kinds of Western Electric plants—and why our advice is impartial.

If you already have a gas, gasoline or steam engine, we can furnish the electrical equipment. If you desire a belt-driven plant with engine that can be used for other purposes, we can supply that kind of a plant also. The direct connected plant illustrated is our newest model. The 3¼-horse power silent engine burns gasoline or kerosene; is throttle governed, air cooled and automatically stops when the batteries are fully charged. The engine can also be used for other power purposes.

To be sure that you get the right plant—right in size and equipment—see the Western Electric man near you. We stand behind him with our forty years manufacturing experience. He can tell you all about Western Electric outfits, motors, water systems, milking machines, irons, vacuum cleaners and other electrical helps for farm and home.

*There is a Western Electric man near you. Mail the coupon for Booklet No. WNF-10 and we will tell him to get in touch with you.*

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

### SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray ox.

## CHAPTER VI.

### Friends and a Fellow-Traveler.

Frank Booth was an easy-going, good-natured fellow, not quite 18 years old, and brighter out of books than in them. Stella, though three years younger, had already outstripped her brother in some of her studies. And, like myself, she had read everything she could put her hands on in this country of few books. She was not only remarkably bright and wide-awake, but a bundle of energy and ambition. Their plans for getting an education were, I soon found, mostly of her making.

I myself had not been in school for almost two years; but I had read Aesop's Fables and Roman History in Latin, and knew some algebra, a little geometry, and a little—a very little—Spanish. Neither of my new friends had ever studied any language except their own; and the fact that I had explored some of the mysteries of a strange, dead tongue gave me a standing with Frank and Stella Booth that would have been hard for me to attain otherwise.

"We had planned to enter school this fall," Stella said during the meal, "but father thinks now that he won't have money enough to send both of us. I wanted Frank to go alone—he's so much older than I am, and of course has more need to be in school. But he won't go without me. Says he must have me with him, to spur him on to study hard."

"She's a pretty sharp spur," spoke up Frank, smilingly.

"No sharper than I ought to be—for you," she answered, smilingly also. For they were very courteous to each other, this brother and sister. "Then I proposed that we both go, and economize by renting a little house and boarding ourselves. I could do the work for two, and never miss the time. I even wrote to President Clark about it, and he wrote back that two or three of the girl students did that very thing last year—kept house for themselves and their brothers. I was just wild to go. I've read of plenty of men that worked their way through college, but never a woman. Though I can't see why girls shouldn't do that kind of thing just as well as boys."

"They could—they all could if they were as work-brittle as my sister Stella," Frank remarked.

"Oh, I like to work. I like to make things go!" cried the girl. "I can stand anybody but a lazy somebody."

"No insinuations, if you please, ma'am," interrupted her brother.

"Oh, Frank's not lazy. He would be, just a little bit, if I'd let him, but I won't. Of course I won't. I'd make life a burden to him if he were half as lazy as some people I know. But I've got off the subject. As I was saying, I wanted to go to school and keep house, but father and mother have decided that we'd better wait for another cotton-crop. And we expect to have some cattle to sell next fall, too. Then we can go as boarding school students and have nothing to do but mind our books. Father says, 'One thing at a time. Work when you work and study when you study.' But I can do both; or could if I had half a chance. When do you expect to go?" she inquired of me.

"That all depends. For awhile I counted on getting off this fall—this coming fall. When I gave that up, I thought I could start next year without fail. But now I don't feel even half-way sure of that."

"What a pity—what a great pity!" said Stella, sympathizingly. "It would be so nice if Frank and I could meet you over there—so much better than going among utter strangers."

"Oh, I'll be there sooner or later. You can drive a nail into that," I assured her. "I expect to go and keep going till I graduate, if it takes me 15 years."

"That's the way to talk!" cried the girl, enthusiastically. "If Frank would only talk like that! But I do wish you could go next year, when we go. Why can't you?"

"Well, you see, it's this way," I explained. "When we moved up to the Little Pecan Creek country, father had money enough to buy all the land he cared for, and a few hundred dollars more to improve it with. But he wanted the best land; and the piece he picked out was part of a big survey—a tract of about 1700 acres. The owner lived away down in south Texas. But father was so eager for that particular piece of ground that he drove 80 miles to Waco—that's our nearest railroad. There he took a train and went to see the owner. The man was willing to sell the whole tract, but not part of it. He was willing to sell for part cash, though; and rather than miss getting the land he wanted, father planked down all the money he had, and signed notes and a mortgage on the land for the balance. So we've got a big tract of good land, but we're nearly $2000 in debt. Our crop's on new ground, and won't turn out much this year. I doubt if we can pay the interest on what we owe—at 12 per cent—without selling our cattle. Part of the principal has to be paid each fall, too. The man has already agreed to postpone this fall's payment. But that means a double payment for next fall; and father says he can't see how we're going to meet that and the interest, let alone finding money for my schooling."

"Why don't you sell off the land you don't need?" inquired Frank.

"Father did sell a little of it, to some people we knew near Austin. They came a few weeks after we did. But he had to sell that on time. He'd be glad enough to get rid of the rest—all except the 500 acres he wants to keep. But there's nobody to sell it to yet."

"Maybe some new settlers will come in this fall, and buy all you have to sell," suggested hopeful Stella.

"Yes, maybe they will—I'm hoping they will; but I'm afraid they won't," I answered. "You see, it's a long, long way to a railroad, and people don't usually plunge so deep into the backwoods. They don't like to wagon their cotton so far to market. That's one thing makes me glad to find my ox. Work-cattle are high, and it took every cent we could rake and scrape to buy Lep and Coaly. But we had to have them to break new ground with."

"Have you no other team?" Frank wanted to know.

"Yes, father has a team of work-horses, but they're rather light for such heavy plowing. We've got a big lot of new ground to break this fall and winter, but we can't afford to buy another ox—another yoke of oxen it would be. People won't usually split a team. But without a heavy team we can't get much new ground broken; and without the new ground we can't put in much of a crop; and without a big cotton-crop we can't hope to meet the payments and interest on our land. So we'd stand a fine chance to lose both the land and all the money father paid on it. Then we'd have to pull up and roll out somewhere and start over again. And it would be years and years before I or my brother—he's five years younger than I am—before we could hope to see the inside of a schoolroom. I mean a good school. We've got some neighborhood, loghouse affairs, where the children learn to spell a little and read a little and cipher a little."

"So there was a great deal depending upon your overhauling that spotted ox, eh?" Frank remarked, thoughtfully. "Well, I'm glad your hunt has turned out all right."

"So am I," declared Stella. "But I should think you'd be afraid to work such a great-horned, fierce-looking fellow as that."

"Afraid of Lep! Why, you could look Texas over without finding a milk-cow gentler or better-natured than he is. I can handle him from his head to his heels. I can crawl under him or over him, or do anything else I want to with him. Instead of trying to hurt anybody with his long horns, he always turns his head slowly and cautiously when I'm close to him, for fear of hurting me accidentally."

"You can't always judge by appearances," observed Frank.

After breakfast—and a good breakfast the young cook had set before us—Frank and I went out into the cotton-field and carried in some big, ripe watermelons, which we stored away in the milk-house to keep cool. Afterwards we unsaddled Dick, and Frank insisted upon giving him a liberal feed of corn and oats. While the pony was eating, we went to the orchard and gathered a basketful of fat, red-cheeked peaches.

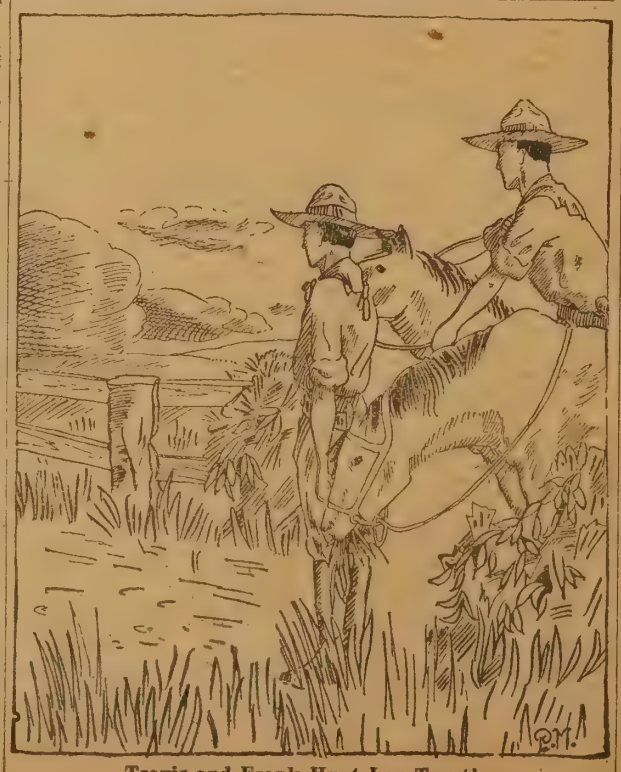
We had intended to ride out before dinner in search of the cattle. But the day was now growing sultry, and when Frank proposed that we wait till the afternoon, I readily agreed. After that we busied ourselves with shelling peas, peeling peaches and similar work.

Stella gave us a good dinner, with peach-cobbler for dessert. She rose high in my estimattion as a cook; and rose even higher by feeding Vic abundantly, without being asked. Frank and I helped to wash and wipe the dinner-dishes. After that we all sat on the front porch and talked. By this time we were calling one another by our first names, and were as well acquainted as if we had lived together years instead of hours.

So congenial were we that Frank now proposed that, instead of starting home with Lep next morning, I should remain with him and his sister for a few days. I objected that I ought to get home as early as possible, to begin plowing; but Frank insisted that I ought also to give my pony a rest before starting back. Stella joined her persuasions to his, with the result that I consented to remain at least another day.

As soon as the shadows began to grow long and the weather cooler, Fraank saddled a horse and I my pony, and we rode out in quest of the cattle. They were not so easily found as we had expected, and it was well on toward night when we came upon them, in some scattering woods.

"Here they are at last!" my companion sang out, on catching sight of the little drove.



"But Lep—he's not here," I replied, gazing around blankly.

"Oh, he's close about somewhere," Frank assured me.

"But we could hear his bell."

"He may be lying down. It won't take us long to scare him up."

But after scouring all the surrounding woods for an hour, we had convinced ourselves that Lep had abandoned his recent companions and started on his travels again.

Travis and Frank Hunt Lep Together.

"The sly old rascal!" I exclaimed, irritably, on learning that he had escaped. "I'll make him pay for this when I get him yoked to a plow-beam again. And the worst of the trouble is, nobody knows whether he's been gone two hours or two days."

"That's so," answered Frank, soberly. "We ought to have started out early this morning, instead of waiting. When we might have found him. But never mind! We'll nab him yet before he travels many miles. I'll ride with you tomorrow morning, and it won't take us long to strike his trail and track him down."

"I'd like to have company, Frank, but I'm not going to put you to as much trouble as that."

"Oh, don't worry about me," was the cheerful reply. "I could like in the saddle this fine weather. Guess it was my fault, too, that you missed your ox Believe we'll drive our cattle home as we go."

We rounded them up and started, but Frank soon made another discovery. Two of his cattle, a yearling steer and a two-year-old heifer, were missing.

"I recollect now," he said. "Those two animals acted like they'd fallen in love with your ox. Maybe they admired his horns, and hoped to grow some just like them—no telling. Anyhow, they kept hanging around him like two little boys around a big one. And there's only one conclusion; they've followed him off. There are three runaway cattle now instead of one."

"That's right. And it's a pity, too, Frank. I'm sorry to miss Lep, but sorrier to have him leading your young cattle astray."

"Oh, rest easy about that, Travis. I intended to go with you anyway, and now I have to go. It's all the same. If Stella had somebody to stay with her—but I can arrange that. There's a young man and his wife living just below us on the creek. I'll get them to come up for a night or two, till we get back or the folks come home. We'll have those runaways back here in three or four days at the longest."

"Don't be too sure of that," cautioned I, grown wise from experience. "That old longhorn of mine is a traveler. And he seems to have an instinct for eluding jursuit."

"Well, three or four days or three or four weeks, we'll camp on their trail till we run them down," declared Frank.

"Now that's too bad—too bad!" exclaimed Stella, when told that the three cattle were gone and must be followed. "It will spoil your visit."

"Not a bit of it," spoke up her brother. "It will only postpone it. He must spend at least a few days with us after we get back."

"Yes, we shall expect you to stay, and get acquainted with our father and mother," said his sister. "I'm glad of one thing; it won't be so lonely for you, now that Frank is to keep you company."

"No, but you'll find it very lonely here, I'm afraid."

"Oh, one doesn't get lonely at home. There are too many things to do and think about, and books and papers to read. And mother will be at home with me in a day or so, and father."

"I'm going down to get Tom Jones and his wife to come up and stay with you at night," said her brother.

"Huh! What do you want them to stay with me for? What will hurt me? I'm not afraid of the dark!"

"No, of course not. But it will be lonely here for you at night, and I want you to have company."

Scarcely had Stella learned that her brother and I expected to be off next morning, when she fell to cooking us a supply of eatables to carry with us. Various things that would keep several days she prepared, till Frank had pretty well filled a pair of capacious saddle-bags which he proposed to take. Besides these, he would carry a slicker, and he had laid us out a blanket apiece.

"Look out that you don't load us down with one thing and another," I warned him. "If you do, we may never overtake those cattle this side of the Rio Grande."

"We can make better time by carrying a full commissary department, I think," he answered.

That night I penned a letter home, borrowing paper and envelope and stamp for the purpose from my new friends. After detailing my experiences up to date, I explained that Lep was not far ahead, and that from here on I should have a traveling-companion. I also assured father that I would drop him a line every time I came to a postoffice. This letter Frank carried down and left with the people that were to stay with Stella, to be mailed.

We fed our horses well that night, and were up long before daylight to feed them again. My the time there was light enough to see, we had eaten our breakfast, girted on our saddles and were ready to start. As he was tying the saddle-bags behind his saddle, Frank showed me a big-mouthed, dangerous-looking six-shooter that he was about to stow away in their lighter end.

"It might come in pretty handy, and we'd better have it with us," he remarked. "When we first settled here, the Comanches raided the country a few times, and this is what father carried. Sometimes he would let me wear it, and I always felt very important when I got it buckled around me. It's against the law to 'tote' it in a scabbard now in this county. But the law says that a traveler may carry it in his saddle-bags or other baggage. I know that, because father is justice of the peace here. This is not a very good six-shooter. It has seen better days. But it's a deadener just the same."

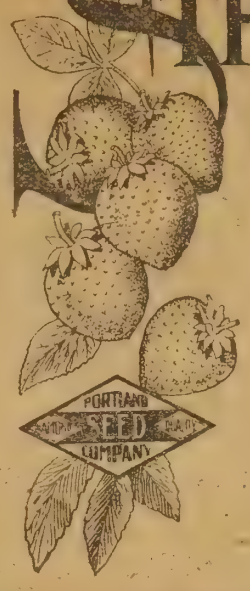
As we were starting ,Stella proposed to keep Vic till our return, and I readily consented. "That is, if she will stay with you," I explained.

"Oh, she likes me and I like her, and she'll stay all right—never fear about that. She's a nice little thing. But to make sure, I'll shut her up till you're gone. Then she'll have to stay."

She took the little dog into a room and left her there, closing both doors and windows securely.

"A short journey and a prosperous one!" the girl called after us from the front gate as we rode away, waving her good-bye.

Before we had got out of sight of the house, there was a crash and the jingle of broken glass behind us, and a minute later Vic came running, with some slight cuts on her nose. She had jumped through a window pane.



"Oh, never mind the glass," Frank said, when I had stopped and turned. "We've got a spare one or two. It's

(Continued on page twenty-seven.)

## Peace Conditions

News dispatches relative to the possibilities of peace frequently refer to "the 14 conditions of peace" as enunciated by President Wilson several months ago. While nearly every one knows in a general way what the peace terms of the allies must be, comparatively few are familiar even now with the comprehensive statement of terms made by President Wilson last January. They are as follows:

1. Open covenants of peace without private international understandings.
2. Absolute freedom of the seas in peace or war except as they may be closed by international action.
3. Removal of all economic barriers and establishment of equality of trade conditions among nations consenting to peace and associating themselves for its maintenance.
4. Guarantee for the reduction of national armaments to the lowest point consistent with domestic safety.
5. Impartial adjustment of all colonial claims based upon the principle that the peoples concerned have equal weight with the interest of the government.
6. Evacuation of all Russian territory and opportunity for Russian development.
7. Evacuation of Belgium without any attempt to limit her sovereignty.
8. All French territory to be freed and restored and reparation for the taking of Alsace-Lorraine.
9. Readjustment of Italy's frontiers along clearly recognizable lines of nationality.
10. Freest opportunity for autonomous development of the peoples of Austria-Hungary.
11. Evacuation of Rumania, Serbia and Montenegro, with access to the sea for Serbia and international guarantees of economic and political independence and territorial integrity of the Balkan states.
12. Secure sovereignty for Turkey's part of the Ottoman empire, but with other nationalities under Turkish rule assured security of life and opportunity for autonomous development, with the Dardanelles permanently opened to all nations.
13. Establishment of an independent Polish state, including territories inhabited by indisputably Polish populations, with free access to the sea, and political and economic integrity guaranteed by international covenant.
14. General association of nations under specific covenants for mutual guarantees of political independence and territorial integrity to large and small states alike.

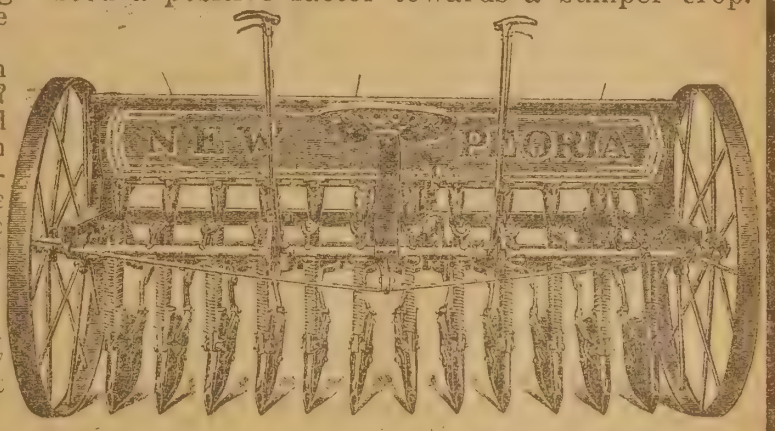
# Do You Know How The PEORIA DISC SHOE DRILL Can Increase YOUR Crop Production?



These Two Stalks Show a Close-up View of Peoria Drilled Oats and Oats Drilled With an Ordinary Seeder.

THE famous Disc Shoe is the secret, because every seed is laid in a packed seed bed—at the very bottom of the furrow. The soil is then released, covering the seed perfectly at a uniform depth below the surface. Seed can't be picked up by the birds, frozen in the ground, or blown away by the wind. The Disc Shoe makes every single seed a positive factor towards a bumper crop. There is absolutely no waste. The result is a large crop production from a smaller amount of seed.

Can you afford NOT to take advantage of a proven method to increase your crops in times like these? The New PEORIA DRILL means a bigger yield, and the profit to which you are rightfully entitled from your land and efforts. Note the two photographs—the difference between the work of a PEORIA and the ordinary drill is plainly seen. Time has proven that no other drill can duplicate the New PEORIA. It works in any soil. Use it for any of the small grains—or peas, beans or corn.

With the high price of grain you can well afford to discard any other drill, or any seeder, for the New PEORIA. Bigger and better crops pay back its cost quickly.

The Light Strips Are the PEORIA Drilled Oats. The Dark From Competitors' Drilling. The PEORIA Drilled Oats Average 12 Inches Higher, Are Much Heavier, Finer Quality and More Mature than the Competitors.

## Peoria Successes Made in the Northwest—Read Them

**Arthur Cole, Pullman, Wash., says: "I consider the New PEORIA DRILL the best drill on the market. I would not consider anything but a PEORIA DISC SHOE DRILL."**

**P. N. Huffman, Green Creek, Idaho, says: "Since 1903 I have sowed an average of 200 acres a year with my NEW PEORIA. I have also loaned it to my neighbors and it is safe to say they have sown 500 acres with it, making a sum total of over 2500 acres. I have never bought one repair. It feeds perfect, sows even and does as good work NOW as it did the first year I bought it."**

**G. L. Paxon, Madras, Oregon, says: "I consider the New PEORIA DRILL at least all that is claimed for it by those who make it. Chief among its features is the lightness of its draft. It can be easily regulated to sow from 18 lbs. of wheat up to any desired amount."**

**Sam J. Carlisle, Bonanza, Oregon, says: "I have used a good many different drills, but I have never used any that is equal to the NEW PEORIA DISC SHOE DRILL. The grain is all planted at the same depth and comes up even. A farmer will use no other drill after he has tried the NEW PEORIA."**

## $249.33 Extra Profit on 100 Acres of Wheat by Using the "New Peoria"

The average seed required for spring seeding is approximately 40 pounds to the acre, the average price of wheat $2.20 per bushel. The NEW PEORIA requires 20 per cent less seed than any other form of seeding, which means a saving of 29 1-3c cash saved per acre.

A farmer who sows 100 acres of wheat ordinarily would use 4000 pounds, or 66 bushels and 40 pounds. One-fifth, or 20 per cent, of this amount saved by the new Peoria Disc Shoe Drill would be 800 pounds, or, at $2.20 a bushel, would mean $29.33 he had saved in cash on the 100 acres sown.

While many farmers who use the NEW PEORIA say that grain will yield from 2 to 3 bushels more per acre when sown with the PEORIA DISC SHOE, we will be conservative and give the estimate of one bushel per acre, which on 100 acres would mean 100 bushels, or $220, together with $29.33 of seed saved at the time of seeding, would mean a total saving of $249.33.

# Study at Home

## Prepare for Future School Work

By ALVARA P. WILLIAMS.

The following is a continuation of Mrs. Williams' last article, in which she outlined a number of things a girl could do at home to fit herself for going to school away from home.

You can do whatever is possible by mail, to get an outline of studies and required books and to borrow what you need from state, county, city or school libraries. You can write to the United States department of agriculture and the United States bureau of education, Washington, D. C., for lists of their publications and find many to help you in several of your studies. Most of these are sent free upon request. Your state agricultural college will also have many bulletins which you should read, merely as a matter of information. If you are studying agriculture, domestic science, physical or commercial geography, botany, you will find dozens of pamphlets to help you. And no matter whether you have such studies now or not, you should add to your library and master, as a matter of common knowledge, the splendidly illustrated pamphlets on such subjects as textiles, food values, uses of different kinds of foods, such as milk, cheese, eggs, vegetables, meat; bulletins on sanitation; on kitchen planning; on vegetable and flower gardens; birds; weeds; local conditions of soil, live stock practices and crops.

There are three or four of the better class of women's magazines costing now about $2 a year, that would be of great benefit to any home student. These all have household articles, articles of current interest, especially dealing nowadays with women and war conditions, and besides a page at least which keeps in touch with all material published by the government, the needs of the government for workers of all kinds, and, most valuable, gives addresses of departments and bureaus at Washington from which all kinds of information may be obtained. Obviously, such magazines have more space, therefore more information, than can be crowded into a small paper such as ours.

If you have time and can possibly do the work you should get from your state college information about canning and similar clubs. These are not necessarily a community enterprise; but a system has been organized known generally as "mother-daughter clubs," under which any mother and daughter, or two sisters even, can take up work at home under the leadership of state club organizers. Free enrolment blanks, outlines of work, study pamphlets, questions on sewing, cooking and canning can be obtained. The state college can put you in touch with the leader of this work, which, as you can see, requires no elaborate equipment and can be started any time, in any isolated place.

There is one other avenue of learning open to us now which it is the duty of every girl to take advantage of wherever possible—that is Red Cross work. I do not mean by this that you are to take training to be a Red Cross nurse, but wherever you are there is sure to be some organization near you for Red Cross work, and it is a privilege to be allowed to learn what you can from their instructors. It may be knitting, sewing, surgical dressings or first aid work, but whatever it is you will profit by learning it. Did you ever stop to think how much better equipped our nation will be after this war, due entirely to the knowledge of such things our women are gaining?

One other thing should be mentioned in case you live where such an organization exists or can be formed—the Camp Fire girls. They correspond to the Boy Scouts, and like them base their membership upon knowledge which every well-informed person should have, but which hundreds of high school graduates do not possess—knowledge of first aid, cooking, sewing, help to selves and others along a dozen different lines.

I am saying nothing about your main studies in high school work—English, mathematics, history and so on—because tests and courses differ, and the school where you expect to do your future work can help you best. But I am trying to show a few ways in which you can broaden out your year's work to make up for lack of city material—ways which should interest your whole family along lines of which too often country girls are ignorant.

Your year at home should give you a definite start on your school work; a good working knowledge of your own home conditions, perhaps a record of some improvements made; and if you are quick to seize opportunities, a little ready money to start the next year. If your are able to do any work in gardening, poultry raising, canning, harvesting, housework or any work suggested by local conditions, you will be ready to start without handicaps the following year. Not only that, but you should have a better fund of general information, a readier mind and better health than if you had started earlier. But you must never, never falter in your determination to finish that schooling; you must never let the means overshadow the end and become a slacker. Study everything with this idea in mind: "This will be useful to me some day," and keep your goal in view.

# Can Poultry

## Stop Feeding the Non-Producers

Now is the time to store in glass cans the cockerels and the unproductive hens. In this way both unnecessary feeding and possible loss from storm and disease during the winter months will be avoided. Then, too, it is very convenient to have a few cans of chicken for emergency use.

The following directions for canning meat are given by O. H. Benson in "Home Canning by the One Period Cold Pack Method," Farmers' Bulletin 839, United States department of agriculture.

**Method of Canning Poultry.**

1. Kill fowl and draw at once; wash carefully; cool; allow to stand in cool place 12 to 24 hours. Scald in boiling water and dip at once into cold water. Pack immediately into glass jars or enameled cans; fill with boiling water; add level teaspoonful of salt per quart; put rubbers and caps into position, not tight. Process for the length of time given below for the particular type of outfit used:

| Type of Canner. | Hours. |
|---|---|
| Water bath | 6 |
| 5 pounds steam pressure | 2 |
| 10 to 15 pounds steam pressure | 1 |

Remove jars, tighten covers; invert to cool, test. Store in cool, dry place.

2. Kill fowl and draw at once; wash carefully and cool; allow to stand in a cool place 12 to 24 hours. Cut into convenient sections. Place in boiling water and boil slowly until meat can be removed from the bones; pack closely into glass jars or enameled cans; fill jars with hot liquid after it has been concentrated one-half; add level teaspoonful of salt per quart of meat; put rubbers and caps of jars into position, not tight. Process for the length of time given below for the particular type of outfit used:

| Type of Canner. | Hours. |
|---|---|
| Water bath | 6 |
| 5 pounds steam pressure | 2 |
| 10 to 15 pounds steam pressure | 1 |

Remove jars; tighten covers; invert to cool, test. Store in cool, dry place.

SAND VETCHES

As is well known, a few years ago Sand Vetches were all imported. We are just in receipt of a shipment of Oregon grown and suggest prompt ordering by any one wanting any of this.
We are also in receipt of a car of Eastern WINTER RYE.

THE INLAND SEED CO. Spokane, Wash.

WHY OWN A FORDSON TRACTOR?

FIRST—Experience has pointed to the small, light tractor as being the one machine that will fill all varying conditions satisfactorily.

SECOND—The Fordson is the result of many years' trials and experiments, and there are today nearly 30,000 of them in use in various parts of this country and abroad.

THIRD—It is as nearly dustproof as it is possible to build it, therefore insuring a long life of hard use.

FOURTH—This tractor has a low center of gravity and is well balanced, with a surplus of power which makes it the ideal tractor on hills or soft, loose ground.

FIFTH—It will pull two 14-inch plows in any kind of ground under any condition from 6 to 8 inches deep and it will also run a threshing machine, ensilage cutter, sawmill, in fact, is a universal tractor.

A trainload of **Fordsons** is now on the way to Washington and a few of them are still available.

If you are contemplating the purchase of a tractor, kindly **fill out the coupon** and we will send you a tractor booklet and also give you the name of your nearest dealer.

## GREEN TOMATO RECIPES.

By Elizabeth Quaker.

The following is a recipe for green tomato sauce: Two quarts green tomatoes, 3 lemons, 1 cup of water, 1 1-2 cups sugar. Wash the lemons and slice them very thin. Simmer in the water until tender. Then turn in the tomatoes, cut in thin rounds, and cook until translucent. Add the sugar, cook until thick and rich. Seal as usual. Ginger and cinnamon may be added if liked.

### Chow-Chow.

Two quarts of green tomatoes, 2 quarts of green cucumbers, 2 quarts of onions, 2 quarts of cabbage. Chop all fine and soak over night in weak brine. In the morning cook until tender, then drain. Take 1 gallon of vinegar, 1 large cup of flour, 1 1-2 pounds of sugar, 1-4 pound ground mustard. Put sugar into vinegar and place on stove. Mix flour and mustard in a little cold water. When sugar and vinegar are hot pour in the flour and mustard, stirring fast until it boils, then pour over the vegetables and can.

### Green Tomato Sweet Pickles.

To 7 pounds of tomatoes allow nearly a quart of vinegar, 2 ounces each of cinnamon, cloves and ginger, 4 pounds of sugar. When the vinegar boils after the sugar is dissolved add the tomatoes cut in quarters and cook all together 45 minutes, or until tender.

**THE BEST LINIMENT**
OR PAIN KILLER FOR THE HUMAN BODY
Gombault's
**Caustic Balsam**
IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for
Sore Throat
Chest Cold
Backache
Neuralgia
Sprains
Strains

# SMILIN' EDDIE HOPE RUNS OUT OF TOBACCO AGAIN

# PUP ONCE MORE PLAYS CUPID FOR BOOT

My Dear Corner Cousins: Some time ago one of our cousins asked for a recipe for honey cookies. The following one has been tried and found excellent:

One-half cupful of sugar and one cupful strained honey, three tablespoonfuls butter, one egg, one cupful sour cream, one teaspoonful soda, flour. Cream the honey, sugar and butter; add the well-beaten egg, then the soda dissolved with the sour cream, and mix the other ingredients, adding flour enough to roll. Knead carefully and make the cookies soft. Cut and bake in a moderate oven. These make a delicious cookie for the lunch basket, and I am sure the boys and girls will enjoy them. AUNT NELLIE.

---

For getting 90 per cent and above in the spelling contest all four times, Dick Engle of Krupp was awarded a diploma of honor. Dick has three war stamps and nine thrift stamps. He was 12 years old July 12, and wants a twin. Towser is his dog and besides he has three white rabbits for pets.

---

May Sanders will be 11 years old November 24, and she is in the fourth grade at school. Her address is R. F. D. 4, Box 138, Yakima, and she wishes to correspond with some girl or boy her age. Josie and Helen are her sisters and James is her only brother.

---

Here is a cousin who saves all the "funnies" in the Farmer because she likes to read them. She is Nellie Ruark of Pomeroy. Nellie receives letters from one of the cousins.

---

"Sister and I have a little pony named Vixen," writes Edith Callaway of Lantz, who will be 9 years old February 18. Edith can milk cows and for pets she has three cats, Gray, Brindle and Yellow Jacket, a dog, Tracy, and two of the cutest little goslings. Edith wants a twin.

---

A new cousin who is very much interested in the Corner, Ida Richert, of Farmer, writes a nice long letter. She was 11 years old just a little while ago, October 4; if she has any twins she wants them to write. Her baby sister has just learned to walk. When does a man sneeze three times? On which side has a dog the most hair? Ida lives on a 320-acre farm and feeds the little chickens every morning and night.

---

Did any of the cousins besides Myrtle Garret, have a birthday September 16? If you were 13 years old then, you are Myrtle's twin? Myrtle lives near Okanogan and she has two cows, Flossy and Mary Jane, seven hogs, 100 chickens, four horses and two colts.

---

"Grandma takes the Farmer and I like to read the letters the cousins write," says Thelma Auvil of Entiat. Thelma was 9 years old September 21, and if she has a twin she wants a letter from him or her. Thelma has two sisters.

---

"I saw in the paper that Harry Wegele wanted boys to write to the Children's Corner so I decided to do it," writes Cylde Walton of Mondovi. Clyde was 12 years old June 25. He has a brother, Elmer, and a sister, Esther. They live on a 160-acre farm and Clyde milks the cows. He has beans in his war garden.

---

The little country town of Grandview is the home of Evalena Crouch, who wants to know if town girls may join the cousins. To be sure they may. Evalena's papa has just started to build a new home. Evalena will be 12 years old December 13, and she is a Red Cross member. She and her chum go swimming.

---

It is lots of fun to watch the little ducks swim in the pond, Melvin Hadford thinks. Melvin lives at R. F. D. 6, Box 89, Spokane, is 9 years old and in the third grade. There are a dozen tame pheasants down at the spring. Melvin rides horseback on Billy, after the cows. He has three miles to go to school.

---

Most of her vacation time, Edith Templin spends in helping mama. She has a little baby brother and she has to watch him to see that he doesn't get into the irrigating ditches. Edith lives in the country on a 160-acre farm near Grandview. They have a large house and a nice lawn. Edith takes music lessons, crochets and sews. She has graduated from the eighth grade.

---

On a farm of 160 acres, south of Sprague, lives a little cousin of ours, Grace Cook, who was 13 years old January 4. Grace walks to school and to Sunday school. She has bought some thrift stamps.

---

Waffles and muffins, corn bread and cake, they sound good, don't they? Cecile Schlee knows how to make them. Cecile lives at Walla Walla, and enjoys reading the letters. She has knitted a scarf, a wash-rag and a flag. Star is her pet colt. Cecile and her brother, Fred, have $250 in Liberty bonds.

---

Eva Van Syke of Toroda has three sisters and four brothers. She is 10 years old and is in the fifth grade.

---

How many of our boy cousins know how to knit? I know one who does, J. Wright Baylor of Colfax, who was 11 years old January 10. He has read many of the cousins' letters and likes them very much. Wright has a sister and a brother. Babe is the name of his pony, and he has 50 rabbits also.

---

A homestead near the Columbia river is where Marie Proctor lives. Marie is in the fourth grade and is 10 years old. Her birthday is February 7. Richard, Robert and Gordon are her three brothers. Oakesdale is the nearest town.

---

Blanche Hamilton and her mother went to Rattlesnake to cook for the headers during the rye harvest. When she was there she saw a great big rattlesnake with 12 or 13 rattles, a coyote and a big eagle. Blanche's home is at Prosser.

---

Helen Callaway of Lantz lives on a farm where wheat, hogs, sheep and cattle are raised. Helen was 10 years old September 15. She likes to ride horseback after the cows. She and her sister are both in the third grade.

---

Some chickens, four pigs and three cows, one pup and one old dog, are the pets of Alice Fredrickson, Box 251, Northport. Alice was 9 years old July 10, and is looking earnestly for a twin. She will write again.

---

Grace Esch of Otis Orchards, is busy knitting a pair of socks for the Red Cross. She has already knitted eight afghan squares and a pair of wristlets. Grace has a cow, Browny, a little calf, Dick, and a kitten, Teeny. She was 12 years old August 13, and wants her twin to write. Do you know what is the difference between a soldier and a lady? Why is a caterpillar like a hot biscuit? What has teeth but can't bite.

---

Irene Templin lives in the country on a 160-acre farm near Grandview. She goes to a country school. Irene is the youngest girl in the family. Alice and Edith are her sisters. In the summer she helps mama with the work and in the winter she is busy with her lessons. Arithmetic is her hardest study.

---

**From the Land of Red Apples.**

Dear Aunt Nellie: Here is a girl from the land of red apples who wishes to join the Corner. I live on a 23-acre hay farm. I have a war garden. We have two horses, one cow, a calf, two pigs, 75 chickens, a cat, a kitten and a dog. We live two miles from school and ride in a truck to school. I have dark blue eyes, light hair, fair complexion, am five feet two and one-half inches tall, slender, weigh 85 pounds and I was 13 years old January 16. I have one sister. I have no brother. I can pack 25 boxes of apples a day. I am a member of the Red Cross, War Saving society, Garden club and Canning club. I am buying war saving stamps. My papa bought a Liberty bond. I am doing all I can to help can the kaiser. At school we have three blue stars in a field of white surrounded by a border of red, representing the three boys that are in United States service. If I have a twin it would please me very much if she would write to me. I would like to hear from any of the cousins if they wish to correspond with me.—Edna Vining, R. F. D, 1, Malaga, Wash.

**Camping in the Mountains.**

Dear Aunt Nellie: I will be 11 years old October 17. My sister and I went to the mountains with our neighbors and stayed 11 days. We had a fine time. We live on a 500-acre farm. We have lots of cows, horses and calves. We milk about 35 cows. We raised some sugar beets this summer. I hope all the cousins are doing all they can toward saving food. I have two brothers and one brother-in-law that may have to go to war. I live about six miles from town and about one mile from school. I am in the sixth grade. There are seven in our family. I have light hair, blue eyes and a light complexion. Have I a twin? We live by the Walla Walla river and we surely have fine times when we go swimming. We have been threshing barley, but we are all through now—Florence Swegle, Walla Walla, Wash.

**A New Baby Brother.**

Dear Aunt Nellie: How are you and all the cousins? Last time I wrote I said I was the only child in the family. I am not now because I have a new baby brother. He is 2 months old and has blue eyes and curly brown hair. His name is Vernon Lester. I just love to wash and iron his little dresses because they are so cute. He is just getting big enough to coo and play. I had quite a nice surprise this morning. Papa came in while I was doing the dishes and told me to go see what was out by the calf lot and what do you suppose it was? It was a little red and white calf. I haven't named it yet, but I will tell you its name next time. A man has eggs every morning for breakfast. He has no chickens. He does not buy them or steal them, but how does he get them? Green as grass and grass it isn't, white as snow and snow it isn't, red as blood and blood it isn't, black as ink and ink it isn't. Inez Gagen, Mt. Vernon, Wash., is my twin. I wish Sally Garry would write again because her letters are so interesting. I have been hoeing potatoes for war saving stamps. I helped papa shock hay. I am trying to save. I have not bought any candy or other sweet things for a long time. I hope all the cousins are trying to save. I wish some of the cousins would write to me. We have a fine big Corner. I will write again.—Thelma Green. Box 555, Hartline, Wash.

**Brother Is Safely Over Sea.**

Dear Aunt Nellie: I am 14 years old and in the eighth grade. I have blue eyes and light hair. Have I a twin? I walk two and one-half miles to school. The children all belong to the Junior Red Cross in our school. In school we made one quilt and nearly another, besides lots of snippings for pillows for the Red Cross. My sister's name is Ruth. My brothers' names are Ray and Alvin. We just received a card yesterday saying Brother Alvin arrived safely over sea to France. We live on an 80-acre farm. We have another farm. We will move on it in the spring. We have two cows, two calves, one pig and one dog. We have about 20 little chicks. Our cows' names are Beauty and Lady. We have three rooms in our school. I suppose Aunt Nellie enjoys reading the letters. I do.—Myrtle England, R. F. D. 2, Addy, Wash.

---

During the last week Aunt Nellie has received letters from the following cousins: Beulah Walker, Hazel Elsie Stock, Emily Florence Boldt, Celia Reichel, Stella B. Ervin, Elvin McQuarie, Anna Bell Gangewer, Pearle Smith, Alice Graham, Alfred Hall, Beulah Shaw, Norma Heuple, Mabel Main, Louisa Fries, Elsie McGlaughlin, Karin Molinder, Albert M. Needham, Lela Thorpe, Phoebe Collins, Lahville Fountain, Lester Collins.

ECLIPSE
38 years old
-still pumping

Think of it! 38 years old and still pumping—from a 200-foot well—and no repairs. This farmer adds: "It's a mighty still day when the Eclipse can't pump some water."
Let the Eclipse pump *your* water—it's the cheapest way. Figure its cost on

Reliable Service

for 38 years—not on the first cost of the mill. The Eclipse Wood Windmill has been sold for 50 years, always giving wonderful service. It is sensitive to light breezes—automatically turns in and out of wind—practically storm-proof. Requires only occasional oiling—has direct stroke, no gears—but little friction—noiseless. Buy an Eclipse from your dealer and get your water

for $1.65 a year

figured on a 38-year *service* basis. He'll prove why ECLIPSE pumping service costs almost nothing in the long run.

Start Your Moulted Hens to Laying

THE world is calling for more poultry and more eggs. Everybody must speed up—it's a patriotic duty. Now's the time to get ready for regular fall and winter laying.

DR. HESS POULTRY PAN-A-CE-A

**Will start your pullets and moulted hens to laying promptly**

Remember, going through the moult is like going through a long spell of sickness. The egg organs become dormant, but why let nature bide its own time to revive the egg organs? Feed a tonic.

Dr. Hess Poultry Pan-a-ce-a contains *Nux Vomica* and *Quassia*—tonics that promote digestion, that tone up the dormant egg organs. It has *Iron* for the blood, and *internal antiseptics*. This combination will keep your whole flock healthy and start your pullets and moulted hens to laying.

*IMPORTANT:* If your hens are not yet over the moult, supply them with Pan-a-ce-a daily to give them strength and vitality to force out the old quills and grow new feathers. Always buy Pan-a-ce-a according to the size of your flock—a penny's worth for each hen to start with. There is a package for all sizes of flocks.

You have no chances to take. The dealer in your town who sells Pan-a-ce-a will refund your money if it does not do as we claim. 30c, 60c and $1.25 packages. 25-lb. pail, $3.50; 100-lb. drum, $12.00.

# News for Breeders

Thomas Kay, the well-known sheep man of Mabton, Wash., recently purchased 40 Hampshire rams at Salt Lake, Utah. The purchase was made for him by William Hislop. Mr. Kay is well pleased with the type, size and vigor of the lot.

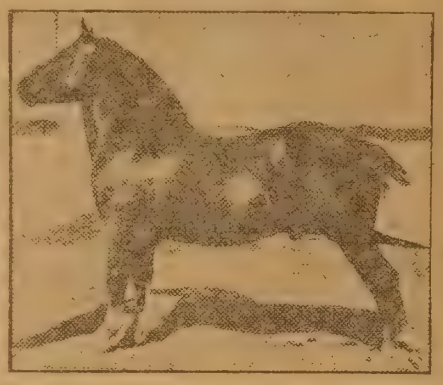
Nathan Hamilton, Holstein and Duroc Jersey breeders of Chehalis, Wash., has purchased a fine young boar from Doerfler Brothers of Silverton, Orc. The pig is a son of the great boar, Golden Rod, and is a fine individual. Doerfler Brothers also sold recently two good gilts to Mrs. Dunagan of Scotts Mills, Ore., all at good prices.

### NATIONAL SWINE SHOW.

The third annual national swine show was held the first few days of October at Cedar Rapids, Iowa, and proved to be probably the greatest swine show ever held. The number of animals exhibited was approximately that of last year, when the show was held at Omaha, Neb., but the quality of the exhibits was declared by experts to exceed that of either of the two previous shows. It is also reported that more people passed through the gates of the show this year on one day than attended the show at Omaha during the entire week last year. There were a considerable number of educational and entertainment features as a part of the week's program.

### PERCHERON SOCIETY TO MEET.

Announcement has been made by Wayne Dinsmore, secretary of the Percheron Society of America, that the next annual meeting of the stockholders of the society will be held in Chicago on the evening of December 2. The meeting occurs at the opening of the international live stock exposition, which takes place in Chicago that week.



### QUIT SHEEP BUSINESS.

C. B. Stewart, secretary of the Utah Wool Growers' association, is authority for the statement that many sheepmen of Utah are quitting the business, owing to the effects of war.

"The war has taken hundreds of the best herders," Mr. Stewart said. "Men can be secured, but they are not trained herders. When a sheepman entrusts $40,000 to $50,000 worth of sheep to one man the herder must be competent or great losses result.

"Sheep herding is a trade which a woman can not handle. I know that it is wholly out of the question for her to supplant man at this occupation, and so, as the draft calls more men into the service the woolmen are selling their flocks. I look, for this reason, to see a big decrease in sheep raising during the coming year."

### AIDS THE RED CROSS.

The lamb shown in the above picture is the little grade Southdown that was sold in the sheep sale at the Washington state fair for $1000 for the benefit of the Red Cross. The little girl holding it is Jeanette Olney, who gave the lamb to the Red Cross society, which in turn donated it to the sale. Jeanette is an Indian, 5 years old, whose home is at White Swan, some 15 miles from Yakima, on the Indian reservation. Jeanette held the lamb while the sale proceeded, and patiently posed for her picture to be taken.

### A GRAND CHAMPION AYRSHIRE.

Edgewater Sentinel is the very classy Ayrshire bull calf shown above. He is owned by Edgewater farms of Burbank, Wash., of which E. M. Chandler is proprietor. The young bull was grand champion at the Washington state fair, and Mr. Chandler, who, although engaged in engineering enterprises, is very proud of his farm and Ayrshire herd, is the man holding him.

### SULPHUR SOMETIMES A CURE.

To the Editor: In reading The Farmer of September 19, I came across the letter from W. R. H. of Vancouver, Wash., in regard to a sore on his cow which could not be healed. One year ago last spring we had exactly the same experience with a good cow, and in the same place. I disinfected and washed, and even bought all kinds of remedies recommended, but without avail. The sore on our cow gradually grew larger as every scab peeled off, till finally it began to have an offensive odor. Then, after some six months, or possibly more, we read in the Kansas City Star of a remedy that completely cured it, and in a very short time. It was as follows: Take fresh lard, but do not heat, and thicken with sulphur. Apply once a day, after milking. Do not wash off. I am writing, hoping this will help W. R. H. out of his trouble.

J. H. COLLINS.

Sunnyside, Wash.

Commenting on the above letter, Dr. S. B. Nelson says: Sulphur frequently overcomes the invasion of tissues by the hay bacillus, which probably was the cause of the trouble affecting J. H. C.'s cow. It may be that treatment would also be of value to W. R. H., but you must always keep in mind that very seldom do we find that there is only one treatment which is absolutely sure. Sometimes we find that there is no treatment absolutely sure.

## GET GUERNSEYS

Tabulations made by the U. S. department of agriculture show that the average income over cost of feed from one cow that produces 450 lbs. fat is equal to the average income over cost of feed from 20 cows that produce 100 lbs. each. The average of all official Guernsey records is 450 lbs. fat. Learn more about these profitable cows. Ask for our free booklet, "The Story of the Guernsey."

## HOLSTEIN CATTLE

### The HOLLYWOOD FARM Offers Four Registered Holstein Bulls

**Ready for service** **Well marked**
**Bred for production** **Straight on top**

The average of the official records of 20.3 lbs., 21.02 lbs., 23.02 lbs., 22.7 lbs. butter in 7 days, with lots of milk.

The average of the official records of their four nearest dams:

**Bull No. 779—7 days' milk, 523.5 lbs.; butter, 26.1 lbs. Average test, 4.0% fat.**
**Bull No. 780—7 days' milk, 558.8 lbs.; butter, 28.8 lbs. Average test, 4.1% fat.**
**Bull No. 784—7 days' milk, 542.4 lbs.; butter, 28.69 lbs. Average test, 4.4% fat.**
**Bull No. 785—7 days' milk, 461.0 lbs.; butter, 26.3 lbs. Average test, 4.5% fat.**

To make room for our increase, these Bulls are priced to sell. Consider the high feed prices and raise only high producers.

Near Seattle.

**HOLLYWOOD, WASH.** **HOLLYWOOD FARM.**

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific International sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days; 118.89 in 30 days, and big records all through his pedigree.

**ERNEST JOHNSON,** **Scappoose, Ore.**

### 365 DAY HOLSTEINS

We are offering a bull calf, born June 27th, the two nearest dams of which average 19,866 lbs. milk, 855 lbs. butter for their yearly A. R. records. One a Jr. 2, the other a junior 4-years-old. The herd with yearly records.

**ARCHIE CONLEY,** **Cove, Ore.**

### Chester White Swine

Choice weanling pigs; spring gilts and service boars.

**FRED H. HOFFMAN,** **Albion, Wash.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Oct. 11.—General evening up of trades so as to be prepared for any surprise during the double holiday ahead tended to bring about advances today in the corn market. Prices closed firm, 1 cent to 2 1-8 cents net higher, with November $1.13 7-8 to $1.14 1-8 and December $1.12 5-8 to $1.13. Oats finished 3-8c off to 3-4c up, and provisions varying from 17c decline to a rise of 40c.

Word that the German answer to President Wilson's note would be deferred until after a conference of the sovereigns of the German federated states was an important factor in curtailing the selling pressure which has been forcing down the value of corn. Buying, however, appeared to be restricted largely to shorts who wished to collect profits and to avoid the risks that would be invited if covering were delayed until Monday.

Oats averaged higher for the same reasons as corn.

Lard and ribs advanced sharply notwithstanding that buying was scattered. Pork continued minus of support.

### Pacific Northwest Grain.

PORTLAND, Ore., Oct. 11.—Grain, October delivery: Oats, No. 22 white feed, $54 bid; barley, standard feed, $46.75; barley, standard "A," $47.50. November oats, No. 2, $54; barley feed, $47; barley, "A," $47.50; oats, No. 3, $48; oats, clipped, $48.75; corn, yellow, $58; corn, mixed, $51. Eastern oats and corn in bulk: Oats, No. 3 white, $48; 38 pounds clipped white, $48.50; corn, No. 3 yellow, $53; corn, No. 3 mixed, $52.

### Minneapolis Grain.

MINNEAPOLIS, Oct. 11.—Wheat receipts 638 cars; holiday year ago. Cash No. 1 northern old, $2.21 1-2. Corn No. 3 yellow, $1.27@1.30. Oats, No. 3 white, 61@62c. Flax, $3.36@3.39. Flour unchanged. Shipments 82,894 barrels. Barley, 80@88c. Rye, $1.57 1-2@1.58 1-2. Bran, $28.77.

## Live Stock Quotations.

### At Chicago.

CHICAGO, Oct. 12.—(U. S. Bureau of Markets.)—Hogs, 8000. Market fully steady on hogs; packing grades dull, about steady with yesterday's close. Good pigs, butchers, $18.15@18.60; light $17.60@18.50; packing, $16.75@18; rough, $16.25@17.25; pigs, good to choice, $15.50@16.50.

Cattle—Receipts, 3000; compared with a week ago, beef and butcher cattle 75 cents to $1 lower; calves $1.50 to $1.75 lower; stockers and feeders, 50 cents to $1 lower.

Sheep—Receipts, 8000; compared with a week ago fat classes of lambs and ewes mostly steady; fat yearlings and wethers 25 cents lower; best feeding lambs 50 cents lower; others and feeding and breeding sheep unevenly, 50 cents to $1.50 lower.

### At Omaha.

OMAHA, Neb., Oct. 12.—Hogs—Receipts, 2700; market steady. Heavy, $17.40@17.75; mixed, $17.50@17.60; light, $17.55@17.90; pigs, $15@17.25; bulk of sales, $17.50@17.65.

Cattle—Receipts, 400; market steady. Native steers, $12@18; cows $9@15.50; Texas steers, $6.50@11.50; cows and heifers, $6.75@7.25; canners, $6@6.75; stockers and feeders, $6.50@14.50; calves $8.50@13.50.

Sheep—Receipts, 800; market steady. Wethers, $9@11; ewes, $7.25@8.75; lambs, $13@15; yearlings, $10@11.50; feeder lambs, $11@17.35; culls, $5.75@7.50.

### At Seattle.

SEATTLE, Oct. 12.—Hogs—Prime light, $19@19.25; medium to choice, $18.75@19; medium heavy, $17.75@18.25; rough $16.75@17.25; pigs, $14.25@15.75.

Cattle—Best steers, $11@12; medium to choice, $10@11; medium to good, $8@8.50; medium $7@7.50; bulls, $5@7.50; calves $5@8.

Sheep—Spring lambs, $17.50@19; yearlings, $9@12; ewes, $6@8.

### Spokane Union Stock Yards.

| Thursday, Oct. 10 | 137 | 5 | 31 | 121 |
| Wednesday, Oct. 9 | 145 | 6 | 254 | 37 |
| Tuesday, Oct. 8 | 78 | 23 | 55 | 571 |
| Monday, Oct. 7 | 274 | 27 | 80 | 55 |
| Week ago | 130 | 52 | 36 | 84 |
| Year ago | 174 | 30 | 536 | 132 |
| Two years ago | 34 | 1 | 89 | .... |

Saturday's cattle receipts were light, but the quality in a measure made up for the light receipts. The market opened with a continuation of Friday's activity at strong prices; in fact, today's market was the best in two or three weeks. A few choice steers were offered, selling at $11 to $11.50, and several drafts of the medium class at $9. Just a few of the fair kinds were offered and sold at $5.50 to $8. Choice cows were strong at $7.50 for the best offered, the good kinds going at $6 to $7 and the common butchers at $5.50. Heifers were steady to strong at $5.75 to $7. Compared with a week ago choice and prime steers are strong, the fair to medium killers steady to 25 higher and the cheaper grades steady. Cow stuff is steady to strong on all grades. Calves and bulls steady to strong. The week closed with a good strong demand for the good to better grades of both steers and cows.

| | |
|---|---|
| Primes steers | $11.00@11.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.50 |
| Medium to good cows and heifers | 6.00@ 7.00 |
| Common to medium cows and heifers | 4.75@ 5.75 |
| Canner | 3.00@ 5.00 |
| Bulls | 5.00@ 7.00 |
| Calves | 6.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

One car of prime hogs was the extent of the hog receipts. The market declined another 25 cents to $18.25 for the top. The quality was good. Compared with a week ago prices have declined from 75 cents to $1. Due to the weakness at other markets a further decline is predicted. The demand is strong but at the lower figure.

| | |
|---|---|
| Prime mixed | $18.00@18.25 |
| Medium mixed | 17.75@18.00 |
| Rough heavies | 17.00@17.50 |
| Pigs | 16.50@17.25 |
| Stockers and feeders | 15.50@17.25 |
| Bulk of sales | 18.25 |

Sheep receipts were very light the entire receipts being a small bunch of fat wethers, which sold at $10.50, or at a 50-cent advance. Fat lambs and sheep are steady to strong with a fair demand.

| | |
|---|---|
| Prime lambs | $12.00@13.00 |
| Fair to medium lambs | 11.00@12.00 |
| Prime yearlings | 9.50@10.50 |
| Prime wethers | 9.00@10.50 |
| Best mutton ewes | 6.50@ 9.00 |
| Breeding ewes | 13.00@17.50 |

## Portland Market.

PORTLAND, Ore., Oct. 14.—Creamery men report a further slight increase in production and with green feed plentiful in the country, an easing up of the butter situation is expected. The supply, however, is still under local needs and prices on cubes are holding firm. Extras bring 63 1-2 cents. Several cars of eastern butter are reported due.

Ranch egg receipts have fallen to the lowest point of the season. Jobbers have no trouble in getting 60 cents for the candled stock, and selects bring 62 cents.

Considerable poultry is coming in but the market remains steady on the basis of 25 cents for hens. Dressed meats are weaker, particularly pork.

Front street dealers report a good demand for apples and are getting $3 to $3.25 for extra fancy grades. From these prices the market ranges down to $1.35 for cooking apples. Picking of the late crop will be finished in Oregon this week. Shipments to the east are steadily increasing in volume.

The potato market is steady. The best Oregons bring $2.25 and ordinary grades $1.75 and $2. Yakimas and Idaho's are quoted at $2.25.

Onions are holding even with Oregon and California's selling at $1.75 to $2.25, according to size.

### Quotations.

Eggs—Oregon ranch, candled, 60 cents; selects 62 cents.

Cheese—Jobbers' buying prices, f. o. b. dock. Portland: Tillamook triplets, 36 cents; Young Americas, 37 cents a pound; Coos and Curry f. o. b. Myrtle Point, triplets 35 3-4 cents per pound.

Poultry—Hens, 25 cents; broilers, 26 cents; ducks, 32@34 cents; turkeys, 28@30 cents; geese, 16@18 cents.

Pork—Fancy, 24 cents.

Veal—Fancy, 20@20 1-2 cents.

Potatoes—Oregon, $1.75@$2 per cwt.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30 per ton; valley timothy, $29; alfalfa, $27; valley grain hay, $26@27; clover, $28; straw, $9@10.

## Seattle Market.

SEATTLE, Oct. 12.—Spud growers in the Yakima valley are quoting $30 and in the White River valley $24 and $25 f. o. b. for the week end, but there is little movement and no interest pending adjustment of costs to square with conditions in the east. Digging time has just begun at Yakima.

The state of the potato shipping trade is reflected in the fact that at Yakima, while digging time is on, only a few are moving. Growers are now discussing storage until prices right themselves. It is obvious to dealers who know conditions that unless a shipping demand is developed there will be no stability to the potato market of the state.

The effects of the heavy selling of extra fancy Jonathans and the ravages of the worms are showing in increasing arrivals of jumble pack Jonathans from eastern Washington and sales at $1.50. Jumble pack Delicious apples are selling at $1.75 and jobbers report that they will have a liberal supply. Buyers seem less inclined to look for fancy colors and paper wrappings this year and evidently convinced that in view of the high prices "apples are apples." Spitzenburgs are selling freely in eastern Washington, and $2.25 is being quoted for extra fancy. The crop of Winesaps is normal and the fruit is not yet in heavy demand, although a few eastern buyers are endeavoring to recoup the shortage of Jonathans with the long keepers.

Poultry prices will be bid off a cent Monday by Seattle jobbers due to the increase in the receipts. The street is unable to move the birds as fast as they come in, and cooler stocks are now well taken care of. First turkey shipments have begun to arrive from eastern Washington. Jobbers are not encouraging the trade, as cold weather is best adapted to feeding conditions. It was stated today that turkeys will job around 40 cents per pound this season, although this forecast is subject to modifications by possible increase in production or demand.

The fresh ranch egg market is firmer for the weekend, the bulk of sales being at 65 cents per dozen, as against 64 and 65 through the week. The straightening out of prices has been due more to failure of receipts than through any accentuation of the demand. Storage stocks are moving out at an abnormally heavy rate.

### Purchasing Prices.

Eggs—Select ranch, 58@59c per doz.; pullets nominal.

Butter—Fresh dairy, 32c por lb.; butterfat, 68c per lb.; bakers, 46c per lb.; raw milk, $3.30 per cwt.

Poultry—Broilers, live 1918, under 2 lbs., 31c per lb.; hens, 3 1-2 to 4 lbs. and up, 27c per lb.; under 3 1-2 lbs., 25c per lb.; old roosters, 17@18c per lb; ducks, live, fat, 23c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 21@22c per lb.; Belgian hares, 11@14c per lb; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up 36c per lb.

Hogs—Light, 22@25c per lb; heavy, 19@21c per lb.

Beef—Steers, fat, 12@15c per lb.; heifers, fat, 14@15c per lb.; cows and bulls, 11@14c per lb.

Veal—Fancy, light, 20@21c per lb.; do., heavy, 10@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

### Hides, Tallow and Wool.

Bid prices to producers: Salted hides, cows and steers, No. 1, 15c lb.; do., No. 2, 14c lb.; green hides, cows and steers, No. 1, 12c; do. No. 2, 11c lb.; salted bulls or stags, No. 1, 10c lb; do. No. 2, 11c lb.; green bulls or stags, No. 1, 10c lb.; do. No. 2, 9c lb.; salted or green calfskins, No. 1, 32c lb.; No. 2, 30 1-2c; salted or green kip skins, No. 1, 16c lb.; do. No. 2, 14 1-2c lb.; dry hides No. 1, 30c lb.; do. No. 2, 28c lb.; dry bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calfskins (5 lbs. and under), No. 1, 35c lb.; do. No. 2, 33c; tallow, No. 1, 13c lb.

Horse hides, green or salted, each $2@4; do., dry, each, 50c@$2.

Clean ranch wool, full growth, lb., 50@55c.

Sheep pelts—Long wool, each $2.50@4.50; medium wool, each $1.50@2.50; short wool, each, $1@1.50; shearlings, each 35@75c.

Beeswax, per lb., 25@27c.

### City Prices.

Hay and feed quotations, city prices, truckload delivery, are as follows:

Feed—Millrun, $34@37 ton; scratch feed, $81; all grain chop, $74; oats, $70; sprouting oats, $71; rolled oats, $65; whole corn, $78; cracked corn, $84; rolled barley, $63; clipped barley, $69; alfalfa meal, $44; oil meal, $78; egg mash, $66.

Hay—Eastern Washington timothy, $33 per ton; do., double compressed, $42; alfalfa, $34; straw, $17.

## Seattle Grain.

SEATTLE, Oct. 12.—Price cutting in flour all along the Pacific coast has brought the selling levels of eastern hard wheat flour to that of Washington soft wheat. Disappointed in the amount sold to the government on October delivery, these mills say they have been compelled to stimulate trade by offering price concessions. Local semi-hard wheat flour in the interior has been cut heavily, but soft wheat has held due to the conditions of the mill feed market.

Stocks of flour on Puget sound are accumulating heavily, a problem in which all Washington wheat farmers are directly interested. Accumulations here threaten to force millers off the buying market and to render the duration at which farmers must hold wheat in the country more or less conjectural. Puget sound millers are still buying wheat owing to competitive conditions. It is believed that the government will be able to provide ships for the haul and that the November and December business will be large enough to offset the accumulations.

But little more flour can be ground here without overcrowding the storage space, and the mills interested are rapidly coming to the point where they must close down. The most encouraging symptoms that have reached Seattle millers in 60 days were the telegrams from Herbert Hoover and Charles Hebberd urging farmers to be patient.

# More Rural Truck Lines

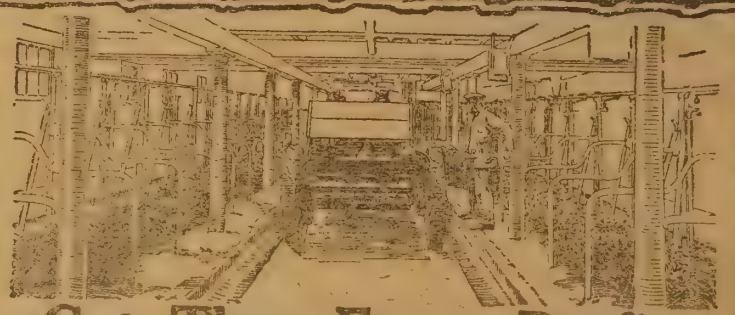
The national highways transport committee is working out ways and means increasing the number of motor truck lin to serve the farming districts. The immediate object is to relieve the railroa of much of the local traffic, thereby allowing them freer hand in handling w materials. Julius L. Meier, representi Oregon, Washington and Idaho on t transport committee, has recently return from a meeting at Washington, D. C.

"The committee fully realizes the vit importance of the motor truck as a tran portation factor in winning the war," sa Mr. Meier. "Its work has been organiz to cooperate with the railways in co gested terminal districts to create rur motor truck lines to take care of loc freight and express problems.

"The work already begun throughout t whole United States of establishing the lines is to be continued.

"These lines are to be operated with view to giving the farmer the same ser ice at his door that the railroads give their depots. It can readily be seen ho this will benefit not only the farmer, b providing cheap and speedy transport tion on a regular schedule, but also t whole population of the state, for t farmer's products can thus be brough quickly and cheaply to the consumer. A the same time the railroads will be le free to devote their facilities to the longe hauls.

"The committee is desirous that the ge eral public shall be brought to realiz the importance of these motor truck line in solving transportation problems. Shi pers, particularly, are urged to give ful est cooperation.



"Of course, it can readily be seen tha when the farmer is assured of transpo tation almost from his dooryard to th consumer he will be relieved of furthe worry about the distribution of his prod uct, and this will result in increased foo production. Such products as milk, egg vegetables and garden truck will b brought to the city the same day the leave the farm."

## Portland Grain.

PORTLAND, Ore., Oct. 14.—Corn is stil very weak but the other coarse grain have become steadier, particularly bar ley. At the closing session of exchang feed barley was posted at $47.50 bid an standard A at $46.50. The best bid fo sacked oats was $54 and for bulk oat $48.50. Corn was nominal at $53 for yel low and $52 for mixed. The hay marke is still holding steady.

### Boches Are Disappointed.

Many a boche who was thinking o luncheon in Paris now confines his aspira tions to any kind of a quick handout in hi home town.—Washington Star.

# Get That Extra Profit

SAVE stable manure. It's worth a lot of money now. Either spread it when it's fresh and contains all its fertility, or pile it where the losses will be smallest, and spread it as soon as you can. Balance it with phosphate if necessary, spread a little on many acres rather than much on a few, but don't waste a single lump. Stable manure is working capital. With it you can get bigger, better crops off the acres your present help can handle. Waste it, or neglect it, and you are losing an easy, handsome profit, probably more than enough to pay for a new

**Low Corn King, Cloverleaf, or 20th Century Manure Spreader.**

These machines do the kind of spreading that has been proved most profitable. They are all low, light draft, narrow box, wide spreading machines, made in three handy sizes, small, medium and large. They spread a full load in from three to five minutes, in an even coat that extends well beyond the rear wheel tracks.

Stable manure, properly handled, will increase the crop production from any soil. Buy one of these spreaders and get that extra profit. See the machine at the local dealer's place of business or write us for spreader information you ought to have.

# The Cause and the Control of Fevers

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D.

You sometimes hear the anxious one inquire about a relative, "Has she any temperature?" This is an inaccuracy as well as bad grammar. What is intended is this: "Is there any rise of temperature above the normal?" because there is always a temperature as long as a living thing is alive.

"Has she any fever?" would be a correct and intelligent inquiry. The temperature of the average person will rise above the normal whenever more heat is made than there is heat expended.

Whatever the cause of this overproduction or diminished output, it is fever. A very high temperature outside, with a generation of heat from too much food within, may be a momentary source of fever. Bacteria, poisons, congestions and severance of the coordinating brain wires between the various structures of the living anatomy also are causes of fevers.

It matters not what the cause, there will be a rise of temperature if the heat loss by perspiration, respiration and kidney fluids is interfered with.

The combination of arrested heat loss or excess heat production with high humidity leads to an accumulation of heat in the tissues. Of fever in general it may be averred that it is less the result of overproduction than of a failure of the flesh to dissipate what there is.

Dr. Hirshberg.

A rapid heart, high blood pressure and rapid breathing, to be sure, yields more heat than a quiet bed. Children and babies kept awake near older persons on hot summer nights, even in parks, are hotter than when undressed, asleep and in bed in their own homes. The earlier they are put to bed the cooler they are.

### Senses Are Unreliable.

Fever does not arise if the central stations, such as the gland juices or the brain fibers, send quick and accurate messages back and forth to balance the output and the manufacture of heat. If the balance between "thermotaxis" and "thermogenesis" is swiftly and precisely maintained there is no rise of temperature; that is to say, no fever. But this balance may be reestablished at a wrong point, several degrees above the standard. This is what happens when a fever is present and holds a steady course. Such a fever is at a false standard.

A man's sense of temperature, of touch, of recognition are not reliable as to a fever. Your senses would have to be as accurate as an instrument of precision, such as a spectroscope or a thermometer in order to indicate a man's temperature.

The proof of man's unreliability as a judge without instruments is well illustrated in a myriad of ways, one of which has to do with the sensation of heat.

# A Crooked Trail

(Continued from page eighteen.)

not needed now. I'll putty it in when we get back."

"I got Vic five years ago in Missouri, when I was a small boy and she was a little puppy," I explained. "She doesn't know what it is to stay away from home unless she's with some of the family."

We now struck the road we thought Lep had probably followed, and were soon riding it at a brisk gait. There were numerous cattle-tracks in it, and we felt practically sure that some of them had been made by our cattle.

"A good deal pleasanter to have company on a hunt like this—don't you think so, Travis?" Frank remarked, not long after we had got well under way.

"Yes, it is that—ever so much pleasanter," I answered heartily. "But my old longhorn has brought you a lot of trouble."

"No, he didn't," Frank protested. "I like trips of this kind. And to tell you the truth, it's a wonderful relief to find somebody that has an ambition to do something besides turn his hat up behind and down before, and wear high-heeled boots and spurs and spit tobacco. That's the kind of boys we have around here—mostly. Stella has two or three ardent admirers of that kind, and when I tease her about them she gets so mad she'll hardly speak to me. They like to station themselves where she can see them, and then go pegging about on their high heels, with their spurs jangling, to attract her attention. Sometimes she laughs at them, but usually she scorns to see them. With their boots and spurs they imagine themselves dead-shot lady-killers."

I laughed at his description. That type of young man was altogether too common.

Houses were far from plentiful, and we halted at every one to make inquiries. At length we found a man who had seen Lep and his two younger followers pass.

That was the day before, however. If they had traveled steadily, they must have a pretty good start of us by now. We pushed on till noon, then halted for dinner. But we were in the saddle again as soon as our horses had grazed and rested.

An hour later we came to where the road forked, one branch leading south and the other southwest. The number of tracks here prevented us from trailing our cattle; but we thought it probable that they would travel southward. So we turned our horses' heads in that direction.

Two or three miles further on we found a settler and questioned him. Lep and his traveling companion had not been seen here. Still we pushed on till we had passed two more houses.

Having heard nothing, we now became convinced that a this was the wrong road, and we turned back. A few miles brought us to the forks of the road, and we started out on the other fork.

We passed no houses now, but at one place we made out the tracks of three cattle in the road. This discovery encouraged us to push on.

The day had been warm to sultriness, and late in the afternoon a black cloud rose slowly in the west and northwest.

"That's beginning to look like a storm," I observed, turning in the saddle to gaze at that inky mountain of blackness.

"Yes, very much like a storm," Frank agreed. "We may have a bad night. I like to camp out in fine weather; but such a night as this promises to be I'd rather have a board or two over me, thank you. Hope we may discover a house about camping-time."

Heartily I echoed the wish, and we pushed ahead. The country seemed utter wilderness here, and no sign of a human habitation appeared.

(To be continued.)

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |
| Castle Rock Independent, Castle Rock, Wash., and The Washington Farmer | $1.50 |
| The Cheney Free Press, Cheney, Wash., and The Washington Farmer | $1.50 |

## A WONDERFUL DISCOVERY

## *Pure Condensed Buttermilk*

### Lactein for Chickens

Lactein is a scientific produce produced under perfect sanitary conditions from fresh buttermilk and whey at the creameries, cheese and casein factories on the Pacific Coast.

The solids of both buttermilk and whey are very rich in the one greatest tonic known for chickens, LACTIC ACID. They are also rich in protein (albumin and milk sugar or carbohydrates). Lactein is produced by separating the water from the solids at a temperature and in a manner that not only thoroughly Pasteurizes and sterilizes the solids, but retains and stimulates the Lactic Acid which in buttermilk is practically lost if brought either to a high temperature or reduced to a dry state.

### Lactein Is Buttermilk and Whey Without Water

Lactein retains all the health-giving food values and a uniform acidity without the useless bulk of water encountered in either whey or buttermilk and will keep pure and fresh under any condition or in any climate for any length of time.

### Lactic Acid Is a Tonic

For years the greatest poultry experts in the world have recognized the value of sour milk as a food tonic—a regulator for poultry, but when they have undertaken to use raw buttermilk have run up against objections which more than offset the many advantages for its use in poultry feeding. In the main these objections were the excessive cost, inconvenience, trouble and expense of handling and the poor keeping qualities. Lactein eliminates every objection to the use of raw buttermilk and reduces the cost to a mere trifle.

### One Gallon Lactein Equals 30 Gallons Buttermilk

One gallon of Lactein when mixed with 29 gallons of water has a tonic value for chickens equal to 30 gallons of the best buttermilk and will give better results than 30 gallons of raw buttermilk when fed according to our directions, not to mention the convenience in handling and the saving in price. Lactein is prepared by the chicken raiser in this manner each day in the amount required, and fed as drinking water or in mash feed or both.

### Lactein Saves the Baby Chicks

Lactein will cut your heaviest losses 90% in baby chicks. It prevents the dreaded white Diarrhoea and will show much more rapid growth in weight than for chicks given the same food without Lactein. This has been proven many times. Lactein is equally valuable for the entire feathered family—turkeys, ducks, geese, pigeons, etc.

Lactein is a tonic, appetizer, liver and bowel regulator, body builder and egg producer.

Any chicken raiser who will feed Lactein as directed for 30 days will thereafter never be without it, for it means more healthy chickens, more rapid growth, more eggs and more money.

CUT THIS OUT AND MAIL TODAY.

LACTEIN FOOD COMPANY,

### Lactein for Hogs

Lactic acid is the best appetizing agent known. It not only keeps the digestive tract free from putrefying bacteria, but it promotes the growth of acid-forming bacteria and maintains and regulates normal digestion. There is nothing that compares with Lactic acid in making a grain ration palatable for hogs.

### Better Than Buttermilk

Lactein has proven to be much better than raw buttermilk, because the acidity is always the same, having been sterilized and heated to such a degree that all pathogenic bacterial life has been destroyed and the concentration with the special treatment has increased the Lactic acid that makes it the most safe, reliable and profitable supplement to grain when fed to poultry and hogs.

### Lactein Is a Muscle Builder

Lactein, on account of its easily assimilable protein and high content of nutritive salts, is of great value as a muscle and bone builder, and especially for young pigs and brood sows. It creates appetite, increases assimilation and is a splendid conditioner.

### Lactein Increases Profits

Lactein is not only a safe feed, but considering its high factor in weight production and in adding food value to grain feed is the most valuable and economical feed to be secured.

### Lactein Prevents Disease

Lactein is both a tonic and a laxative. It keeps the hogs strong and healthy and reduces the death rate to a minimum. In fact if pigs are fed on Lactein they will not be subject to cholera or other diseases, as the Lactic acid destroys all poisonous bacterial growth in the intestines, thereby making disease impossible, but nothing will convince you of the value of Lactein like feeding it for a few months to your own hogs—and see them "kink their tails" and "squeal" when they come to feed. Try it.

### How to Feed Lactein to Hogs

There are no set rules for hog feeding, but we all must acknowledge that hogs should have a balanced ration. They must also be fed something they like, for hogs, like individuals, have appetites and know what they like or dislike. There is nothing so good as Lactein to keep a hog's apeptite at the top notch. It may be fed as a slop or drinking water by mixing one part Lactein to 30 parts water, or it may be first mixed as follows: Lactein one part to water 10 parts and then added to grain in the ratio of one gallon to 10 pounds of grain, or it may be fed both ways at the same time. It can be used with any feed where you would use raw buttermilk, and in the same way when the water has been added, as we only remove the water and you get the full feed and tonic value of the buttermilk with the added advantage of this product being thoroughly sterilized and Pasteurized, thereby killing all injurious bacterial growth which is only too common in raw buttermilk.

LACTEIN is a tonic, appetizer, liver and bowel regulator, body builder, flesh and bone producer. It is real buttermilk condensed.

Always keep one or two inches of water over Lactein in barrels or kegs. This prevents the air coming in contact with it and keeps it fresh. Always keep the sides of barrels scraped down and clean.

**Guarantee**—LACTEIN MUST BE USED ACCORDING TO OUR DIRECTIONS AND WHEN SO USED WE GUARANTEE RESULTS OR RETURN WHAT YOU HAVE PAID.

## LACTEIN

is put up in wood barrels holding five, ten, twenty-five or fifty-two gallons. Should your local feed dealer not have LACTEIN, write us direct and we will see that you are supplied without delay, or better yet, fill out and mail the coupon below or a copy of it, and we will send you a five-gallon keg by express, prepaid. This when diluted with water as per instructions is equal to 150 gallons of the best fresh butermilk, and is sufficient to acquaint you with the wonderful merit of LACTEIN. The price in 52-gallon barrels is 60c per gallon, or 2 cents a gallon when the water necessary for feeding is added.

# Fall Pasture Reported Excellent

## Heavy Rains Have Helped in Several Respects, but Done Damage in Others; Fall Is Good for Maturing of the Corn

TOPPENISH, Yakima County, Wash., Oct. 16.—Heavy rains falling the 15th and 16th have done considerable damage to hay, delayed threshing and baling, as well as apple picking, but will help late root crops, pastures, and will put the ground in good condition for plowing. The extra lateness of killing frosts (there has not yet been a killing frost) has allowed the corn to mature in fine shape, and many gardens and melons are yet producing. Apples are showing a large percentage of w[illegible] yet the late varieties are not so bad as the [illegible] apples. Jonathans, Grimes [illegible] Delicious, Spitzenb[illegible] and Bens are the wor[illegible] little short of help, [illegible] not as [illegible] Potatoes are selling at [illegible] from $2.25 to $1.25. Onions are n[illegible] The crop of onions in the valley is smaller than usual. Corn is good, but is a little too sappy to market. There are more turnips and rutabagas in the valley this year than ever before. Sugar beets are doing fine and have showed a wonderful improvement in the last two months. Practically no fall grain will be sown. Fall pastures are the best ever known in the country. Sheepmen report that the grass is coming fine, and many will not bring their sheep down to pasture until the snow drives them from the hills. The extremely high price of feed has kept many from enlarging the dairy herds, but those who have herds are getting very satisfactory results. The high price of feed is putting a good many good work horses on the market at prices considerably reduced from last spring. The number of hogs in the valley has not materially increased during the last year, while flocks of poultry are reduced about half. All those who have tried to keep poultry in town and have kept any accurate account of feed costs declare that poultry keeping in town is a very heavy losing proposition; the returns in eggs and the sale of fowls being much less than the cost of feed. Grain crops sown following the plowing up of beets yielded light crops of hay, but no grain. Many state that they would have been much better off to have left the beets stand. C. A. WYCOFF.

### WHEAT HAS FINE STAND.

BICKLETON, Klickitat County, Wash., Oct. 15.—Ideal fall weather prevails here. We have had two fine rains and the majority of the summer fallow is green with a fine stand of wheat. I have just returned from our county fair at Goldendale, 40 miles from here. The races were the main feature. The exhibits and stock were quite good, but the premiums on stock and agricultural products were too low to induce people to bring them in. The winning horses on the race track got most of the fair money. I think the fair would be better if the management would take some of the race track money and increase the premiums on farm products and live stock. I saw better stock at home on the ranches than were shown at the fair grounds. Crops were good here this year and people are in good circumstances. Several big wheat ranches have changed hands this summer, the latest was J. T. and Leland McCredy, who sold 400 acres of highly improved land, one mile southeast of Bickleton, to George and Clarence McCredy for $28,000. I never knew of this community being compelled to ship in feed. There is plenty of seed grain in the wheat line, barley and oats are plentiful, but are becoming badly mixed and there is a demand for pure seed, which is difficult to find. BERT H. FAULKNER.

### GET 13 BUSHELS PER ACRE.

COLFAX, Whitman County, Wash., Oct. 11.—Harvest is all cleaned up in the county and from reports received from threshers to date the indications are that wheat averaged approximately 13 bushels per acre. This is considerably below the published estimates, but in my estimation a great deal more nearly correct. Rains during the last week have put the soil in fair condition for seeding fall wheat and farmers are doing their utmost to put in the maximum acreage. Moisture has not gone deep enough to make plowing easy, but with very little more rain this condition will be remedied. The feed situation is beginning to look more and more serious. The food administrator states that there is sufficient only for 90 days. Barley is being shipped in from Minnesota and other points. It is to retail here at Colfax at $52 per ton. F. L. KENNARD, County Agent.

A. W. SWEAT.
Methow, Wash.

### UTAH BUTTERFAT IS HIGH.

A report from Salt Lake City says that creameries there are paying 62 cents for butterfat and about 26 cents a gallon for milk testing 4 per cent butterfat. These prices are attributed to the government's taking over much of the condensed milk output and partially to the high cost of production, due to high feed and labor. Utah dairymen, it is said, have in many cases depleted their herds because of the labor shortage.

## Should Feed Barley

### Price Is Reasonable, Says Hoover

In a recent telegram to Governor Withycombe of Oregon in answer to an inquiry made by the governor, Herbert Hoover, national food administrator, expressed the opinion that the solution of the feed problem on farms of the northwest was to feed barley instead of the ordinary wheat mill feeds.

In his message Mr. Hoover says that the northwest has been permitted to mill about twice as much wheat this year as last year and that more flour has been exported from the northwest than from the other milling sections of the country. He also says that barley costs 30 per cent less than last year, but that it is not being bought in the northwest because the price of mill feeds as recently fixed by the government is lower than that of barley.

"If you make an examination of the subject," he said, "you will find that the excess consumption of mill feeds arises largely out of their cheaper price and the unwillingness of the farmers to pay prices for barley and other feeds that are lower than last year. There are 200,000 tons of feed barley in California that can be purchased at from $40 to $45 a ton and can be advantageously mixed with oats for feeding."

## Prepare for Returning Soldiers

### *Land Settlement Plan Begins to Take Preliminary Form*

**Provide farm home opportunities for returning soldiers and industrial war workers.**

**Lands for settlement to be provided by the state, citizens, or communities.**

**The federal government to reclaim and put the lands in readiness for settlers, who shall repay the cost in small payments, extending over a long term (perhaps 40 years), at low rate of interest.**

**Every suitable tract in the state of Washington, containing not less than 5000 acres in a reasonably solid block, should at once be listed with Thomas B. Hill, secretary of the Washington Land Settlement association, Arctic building, Seattle, Wash. Secretary Lane of the department of the interior has asked Governor Lister for this information and the governor has requested the above association to furnish the data.**

The above are some of the suggestive points in the plan to provide homes and work for returning soldiers and industrial war workers after the close of the war. This plan is under serious consideration by the Washington State Land Settlement association, which was organized in Seattle in June, 1918, to secure the enactment of sound state and national laws looking toward the reclamation and settlement of unused lands. The association strongly indorsed Secretary Lane's land settlement program set forth in his letter to the president, May 31, 1918. The following officers were elected: E. F. Benson, state commissioner of agriculture, president; R. K. Tiffany, United States reclamation engineer, first vice president, and farm arid land group; W. A. Linklater, superintendent Puyallup experiment station, second vice president and farm logged-off land group; N. B. Coffman, Chehalis, third vice president and farm men's swamp and overflow land group; Colonel Howard A. Hanson, Seattle, secretary-treasurer. The above officers, together with Dr. C. A. Short of Bellingham, Senator Ralph Metcalf of Tacoma, T. H. Morrow of Walla Walla and R. Insinger of Spokane, make up the executive committee.

Thomas B. Hill of Yakima was elected executive secretary of the association, and will give all his time to the work of the association, this to include the collection of available information of reclamations of various types of waste land; the collection of information on land settlement as practiced in various counties and states and to assist in the formulation of national and state legislation to carry out the propositions of the association and put into operation the program outlined by Secretary Lane.

Believing that this problem of securing land for returning soldiers and industrial war workers could be most profitably taken up at the international farm congress scheduled at Kansas City, October 17, 18 and 19, the following men from the Pacific northwest attended: E. F. Benson, Olympia; W. A. Linklater, Puyallup; N. B. Coffman, Chehalis; George W. Dilling, Seattle; E. F. Blaine, Seattle; E. M. Chandler, Yakima; H. Loyd Miller, Sunnyside; S. K. Pingery, Burbank; T. B. Hill, Seattle; E. A. Smith, Spokane; together with F. B. Lindfield and J. A. Haradan, both of Bozeman, Mont.

With the International Farm congress was combined the annual session of the International Dry Farming congress and the International Irrigation congress. Previous action had been taken looking to the consolidation of these bodies and the report of a committee favoring such consolidation was to come up for action. The Washington delegation received a telegram from Governor Withycombe authorizing them to act for the state of Oregon.

The ban which had been placed on Kansas City because of the prevalence of influenza, which had been lifted, was again placed on the city Thursday, October 17, the opening day of the meeting of the International Farm congress. However, the congress was permitted to hold session on Thursday morning, followed by a short session on Thursday afternoon. All other sessions of the congress were cut off. During the meeting in connection with the farm congress the Washington delegation believed that a great opportunity presented itself for the combined bodies to form a new national land reclamation and land settlement association to aid in the big problem of reconstruction following the war. It was contended that such an association must be national and could not be named an international body, that all other objects of the dry farming and irrigation bodies become subordinate when considered in connection with the great outstanding problem of furnishing land for the returned soldiers and industrial war workers. This did not appeal to the delegations from the section of the country surrounding Kansas City, and it was decided to follow out the program of merging the dry farming and irrigation congress into International Farm congress.

Notable addresses were made to the farm congress by Dr. Ellwood Mead, high authority on land settlement and rural life problems, and by A. P. Davis, director and chief engineer of the United States reclamation service, who urged the necessity of immediate action on the land settlement policy to be pursued at the close of the war. This legislation needs to be enacted by state legislators and by congress during the coming winter.

Indicating the attitude of farm congress towards this matter is the following telegram, which was sent to Secretary Lane:

The undersigned, acting under the authority and direction of the International Farm congress assembled at Kansas City, Mo., this, the 17th day of October, A. D., 1918, representing the following states, desire to express to you our hearty approval of the policy outlined in your letter of May 30, 1918, to the president, to provide useful employment and homes for returning soldiers, and we desire to cooperate in every way in bringing that policy into effect.

We believe that the legislation that is to be enacted in regard to this matter should embrace the following features:

The proposed legislation should provide for the cooperation of the federal and state governments under laws to be enacted by the congress and legislatures of the several states.

A state board should be created in each state to act in cooperation with the federal authorities.

The federal government to provide the money for reclamation work, and to be expended in the preparation of farms for cultivation and the reclamation work to be carried out by the federal government.

If privately owned or state owned land is used, the state should provide it. The land submitted by the state should be subject to the approval of the federal government, both as to quality and cost.

The states provide facilities for the agricultural training of soldiers lacking experience or knowledge of local conditions.

Wherever such agricultural training is provided, the state and the federal government shall share the cost equally.

Money provided for the acquirement and reclamation of lands and the preparation of farms, shall be repaid in small payments, extending over long terms, at low rates of interest.

This telegram was signed by the following members of the executive committee: George Albert Smith, Utah; D. Mayes, Missouri; Leonard Tillotson, Texas; D. L. White, California; L. B. Linfield, Montana; Kurt Grunwald, Colorado; Frank M. Byrne, South Dakota; Fred D. Sherman, Minnesota; E. F. Benson, Washington; N. B. Coffman, for Oregon; C. L. Seagraves, Illinois; Thomas M. Potter, Kansas; Andrew Kimbull, New Mexico; Alfred C. Sicbeth, Arizona; W. W. Burr, Nebraska.

## Wheat Will Be Moved

There is no occasion for wheat growers to sell their wheat to any one at below the prizes fixed by the government, Herbert Hoover again declares with a view to preventing an unnecessary loss to the producers through a temporary ship shortage. He recently gave out the following message on the subject, and it is understood that the ship shortage to which he refers is already being somewhat relieved.

"Enlarged demands by General Pershing for material resulting from progress on the western front has necessitated temporary diversion of grain ships to his service. This temporarily curtails wheat movement from seaboard and has filled our seaboard and terminal elevators and thus checks movement. It is reported that some farmers have become panicky and are selling wheat at less than governmental price. There is no occasion for this. If holders will have a little patience, wheat will be moved and the full price secured by every grower."

## R. V. Mitchell

### Knows Poultry Marketing Game

When R. V. Mitchell was a small boy on the home farm near Mahaffey, in central Pennsylvania, he owned some chickens. A man came by one day and offered him 20 cents for a big, fine Plymouth Rock rooster. Master Mitchell held out for 25 cents, which in those days was a fairly respectable price for a fairly respectable chicken. The man held to the extra nickel, and the boy held fast to his big rooster.

"After I grew up I got into the business of selling flour, chicken feed and supplies and similar merchandise to the farmers," says Mr. Mitchell. "I saw more and more the shortcomings of the poultry industries, particularly in the marketing. A big problem was there I believed; and so, eventually, I was led to go to college and study poultry."

Such was the beginning of Professor R. V. Mitchell, recently made head of the department of poultry husbandry in the State College of Washington. His interest in the marketing side of the poultry business, beginning with the time when he clung to his rooster for the sake of the additional nickel which he knew was due him, was the spur which put him through college, established him in teaching and poultry investigations, caused him to make a tour through the states of Ohio, Kentucky, Tennessee, Arkansas, Texas, Oklahoma, Missouri, Kansas, Iowa and Indiana, making a first-hand study of poultry conditions, always with an eye to the marketing of poultry and their preparation for marketing.

R. V. Mitchell.

From 1907 till 1909 Mr. Mitchell had charge of the poultry work of the Pennsylvania state college. From 1909 till 1911 he did advanced studying at Cornell university. Returning to Penn State, he there had charge of the plant and the experimental work in poultry. In 1912 he was at the University of Missouri, which state is rated as one of the very foremost of the country in point of poultry production. He engaged in advanced study there, taught, and published some bulletins on the marketing of poultry.

In 1913 he went to New Hampshire State college, later to the Delaware Agricultural college, all the while being engaged in poultry teaching and investigation. Last spring he was commissioned by the food research laboratory of the United States bureau of chemistry to investigate and report upon the commercial handling of poultry and eggs in this country. A few weeks ago he arrived at the state college to assume charge of the poultry work of the institution, including the all northwest egg laying contest in progress there.

## It Pays to Plow in the Fall

### *Five Reasons Stand Out for Preparing Seed Bed Now*

By PROF. GEORGE SEVERANCE, W. S. C.

The recent rains have again made it possible to plow and we would urge as a patriotic duty, as well as a source of profit, that every acre that is to be planted to spring crops be plowed this fall if possible. There are several advantages in this practice.

First—The spring work will be lightened. With a continuation of present labor conditions, it will be almost impossible to seed all the land that is due to be seeded in the spring unless a great deal of plowing is done this fall.

Second—In the great majority of cases, a better seed bed can be prepared with a given amount of work in the spring or fall plowed ground than on spring plowed ground; for the firming of the furrow which is desirable for grain is accomplished by the settling effect of the winter precipitation.

Third—It is possible to seed earlier in the spring. Experience indicates that early seeding is much safer than late seeding and usually gives higher yields. Very late seeding is attended with risk of entire failure and practical certainty of low yields.

Fourth—Fall plowed ground left rough over winter absorbs a considerably higher percentage of the precipitation than unplowed land. Fall plowed ground stands drouth much better than spring plowed ground, the difference being quite marked in very dry seasons.

Fifth—Fall plowed ground is in better shape to begin early development of available plant food than spring plowed land.

Fall plowing should be of good depth, about seven inches being satisfactory under average conditions, and the furrows should be left rough till spring. Every day should be utilized between now and the final "freeze-up," when the weather and soil are both fit for plowing. Every day thus spent will be a blow against the kaiser and a source of profit to the producer.

### JAPANESE PROVE LOYALTY.

New light was thrown upon what used to be called the "Japanese problem" by the attitude of Japanese in the United States during war times. When a Liberty loan committee visited I. Keda, a successful Japanese dairyman of Kent, Wash., with the request that he buy bonds, Mr. Keda said:

"I will take $1000 worth of bonds. If that is not enough I will take $5000 worth. If that is not enough I will sell everything I have and will put all that I can raise in this way, about $10,000, into Liberty bonds. This country gave me the opportunity to earn this money, and now if the government needs it it can have every cent."

This same spirit of loyalty has been reported from many other Japanese colonies.

### GET GOPHER IN FALL.

Ezra Carter, a well-known Caldwell, Idaho, farmer, says that fall is the best time to catch the pocket gopher. Last fall he started in early and caught more than 50 on and around his premises. He uses a box trap, and says the animals seem to go into it much more readily in the fall than in the spring, or at any other season, so far as his observation has been. The farmer also has more time to devote to the job, and Mr. Carter strongly urges that the campaign be started right now. A. E. G.

### CANNERY SOON TO CLOSE.

The fruit and vegetable cannery at Yardley, near Spokane, plans to close its season about the middle of November, according to Manager S. B. Coon. Owing to the high price of apples this season it is not planned to can any considerable amount of them. The plant at present is putting up squashes and pumpkins, which will keep it busy for two or three weeks, by which time it is estimated approximately 300 tons will have been canned.

WASHINGTON FARMER

VOL. XLI. NO. 43.

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.
To either of which communications can be sent, but to avoid delay address office nearest you.

Tom D. Costello, Steger building ..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## New York Farmers Set Example

New York state farmers marketed this year 456,756 pounds of wool cooperatively through county associations. It is now planned to federate the county organizations into a state body next year for the sale of the entire wool supply through a single committee.

New York farmers seem to be learning the secret of true cooperation. It was New York dairymen, our readers will remember, who saved the dairy industry of that state from ruin by determined cooperative effort and set an example that has been adopted by dairy farmers in all parts of the union.

We have always been a stout contender for cooperative action by farmers—for genuine cooperation worked out by the producers themselves rather than the kind of cooperation that is peddled out by glib professional promoters, with the usual trimmings of stock selling and other devices designed to tap the farmer's pocketbook good and plenty. The New York brand of cooperation is the kind to be aimed at. It costs the members little and brings big results. Real farmers organize it, run it and make a success of it.

Happiness should not be rushed.

## Wheat Grower's Need Is Not Met

The United States department of agriculture's October crop report closely estimates the Washington wheat yield this year at 26,429,175 bushels. That is about half a crop, for under ordinary climatic conditions this state, with the acreage that was seeded to wheat this year, would yield from fifty to sixty million bushels.

Even in the banner wheat growing counties of Whitman and Walla Walla, the average yield this year is but a ltitle more than 13 bushels. Franklin and Grant counties had the lowest yield—an average in the former of five and a half bushels, and in the latter of five, amounting practically to a crop failure, for the government calculates that any yield below five bushels hardly justifies harvesting.

We are always reluctant to criticise the government, but it must be said that the department of agriculture and congress have not met this unfortunate situation in the quick and responsive spirit that was needed. It can not be pleaded that the responsible officials were taken by surprise, for months ago the true conditions were vigorously pointed out to Washington by representative farmers, commercial organizations and the Washington Farmer. After protracted controversy in congress, a bill was finally passed, apppropriating $5,000,000 to be loaned to wheatgrowers in drouth districts who were in urgent need of financial aid to enable them to go forward with seeding operations for the 1919 harvest.

That sum was ridiculously inadequate to the actual needs of the country and its expenditure is so hedged in with restricting conditions that it almost totally fails as a relief measure. Only those farmers who have suffered a total crop failure for two consecutive seasons can get credit under the measure, and even then, to the trifling limit of $300.

Here is an additional proof that the country needed, in this wartime emergency, a national food production administrator—a man of the initiative genius of Hoover, in his great work of food conservation; of Schwab in shipbuilding, and of Ryan in aircraft construction. The need was so apparent that it was incomprehensible that the goyernment at Washington did not fill it upon its own initiative. It is still more incomprehensible why the government persistently rejected the earnest counsel of well advised individuals and organizations, urging that this step be taken.

The longer you live the less satisfying is your knowledge of life.

## One Big War Work Campaign.

President Wilson decided before the Fourth Liberty loan was launched that all the activities of the seven organizations, the Y. M. C. A., the Y. W. C. A., the K. of C., the Jewish welfare board, war camp community service, the American Liberty association and the Salvation Army should be consolidated under one head, and instead of going to the country frequently for money to support them, it would be better to ask for one amount.

Speaking of this coming campaign, Charles Dillon, who is taking a leading part in the movement, says: "If we expect our men to do a good piece of work; if we want these boys to come back to us fit and able to take up their work on the farm, in the stores, colleges or business houses as strong as, or stronger than when they went away, we must respond freely whenever we are asked to give in the support of activities, such as are included in the United War Work Campaign."

There is nothing more tempting or practiced more liberally than to tell the other fellow how to do it.

## We Are Making It at Home Now

When the war started we were getting our supply of potash fertilizer from Germany. Last year we produced 32,000 tons of potash and this year's production will probably exceed 40,000 tons, manufactured out of material much of which until the chemists proved its availability was regarded as waste. Cement manufacturers are beginning to utilize the dust that heretofore floated off into the atmosphere and a very large recovery of potash from that source is possible. Another source, as demonstrated by chemists and scientists, may be secured from waste products of blast furnaces.

Science is working wonders for the benefit of the American people, and the agricultural colleges, once regarded contemptuously even by the farmers themselves, are fostering science in many serviceable ways. We are rapidly learning true education, getting away from the old dry forms of classical knowledge and carrying the wonders of science, through our scientific schools and colleges, direct to the people upon the soil.

Next to religion, a harmless hobby gives most peace of mind.

## Agriculture Is Dignified

Science is imparting a new soul to agriculture and giving it a dignity it had never known before through all the ages of the past. Boys and girls from the farm who enjoy the benefit of scientific education are learning more and more to appreciate and love the wonderful mysteries of nature. This beautiful and inspiring influence, in conjunction with other changes that have come upon the farm, brought by good roads, by the automobile, rural mail delivery and the parcel post, and by more frequent community gatherings, is lifting agriculture to a higher and more inspiring realm.

## Save the Fruit Pits

The pits from cooked fruits, such as cherries, peaches, prunes, plums and so on, are just as valuable for the manufacture of gas masks for the soldiers as are the pits taken from the fresh fruits. All pits should be saved. Every one furnishes its bit of carbon for the gas masks. The Red Cross is acting as the collection agent for the pits, each organization forwarding the pit harvests to the nearest general pit collecting center. Every boy and girl, every woman and man on the farms of this country should feel it as great a mistake to throw away a fruit pit as a spoonful of sugar or a handful of wheat.

To be saved from yourself is your biggest salvation.

## It's Up to the Producer

Whether he likes the fact or not, the producer is the man who eventually must take upon his shoulders the burden of discovering and developing markets for his goods. Much profitless abuse of the "middleman" has come about through failure to grasp this principle. On the other hand the lasting success of such institutions as the California Fruit Growers' association, or, in our own northwest, of the Salem Fruit Union, has been built on a foundation of development work. The Salem producers have not rested their case when they turned their fruit or their vegetables over to the canner or the wholesaler, but have watched the market and whenever production has threatened to tread on the heels of consumption, have found a way to increase the latter. This is real creative marketing, and the man who does it is entitled to the benefits secured in the way of increased profit.

The lesson learned by these fruit farmers is being rather slowly assimilated by dairy farmers and poultrymen. At times producers of these essentials have attempted to speed up the market by the old process of "pushing on the lines." They have insisted that the middleman return to them a larger share of the money he receives irrespective of his margin of profit. There is no gainsaying the fact that from a time when the memory of man goeth not to the contrary, commission men, jobbers and wholesalers have in many instanees gouged the farmer. But also it is a fact that where competition for buyers and markets is unusually keen, the man through whose hands farm products pass may have nothing to show for his trouble.

The moral of the whole tangled situation is obvious: ethically it may be the duty of the middleman to develop new markets, but practically it is up to the producer. His will be the ultimate loss if consumption lags behind production. If he wants to receive more for his milk or his eggs, he must take a hand in educating the public to consume his wares. Otherwise the channels of trade will become choked and the surplus will flow back upon the men who created it.

Half considered plans are worse than hasty ones.

## Keep Tax on Farm Auto Down

The house committee in congress proposed a 10 per cent tax on passenger automobiles and motorcycles, and the house ratified that action. The bill is now in the hands of the senate committee on finance and that body, wisely, we think, when all facts are considered, has cut the proposed tax to five per cent.

If there were some practical way of sorting out automobiles used distinctively for pleasure from the cars that are so helpful to the carrying on of essential industries, we should say that a 10 per cent tax would be too low upon pleasure cars, but a 10 per cent tax upon the farmer's automobile would result in very serious interference with food production.

The automobile, as every one can see, is a wonderful time saver, and time at this crisis means not only money, but food.

It is deplorable that owners of automobiles that are run almost entirely for pleasure must be allowed to escape under a general law with no greater tax than the farmer must pay upon his farm utility car, but unfortunately there seems to be no feasible way of separating the goats from the sheep.

# Germany Sends Evasive Reply

## *Allies Continue Pounding Enemy Regardless of Proposal*

Germany has sent her reply to President Wilson's last ote, in which he made it clear that the kaiser must go nd that German atrocities must cease before thought of n armistice can be entertained. The reply is evasive and nsatisfactory. It claims that the German people are actual- becoming a part of the government, but shows no proof f it. It denies that atrocities have been committed, hich denial serves to incense the allies who have suf- ered from these atrocities. Up to this writing President Vilson has made no statement regarding his view of the eply, and all the allies are continuing all their activities ust as if there was no possibility of early peace. No slack- ning has been allowed in any war activity. All operation f the draft law continues without check, and this country s carrying out its plans to a letter for the increasing of he American forces on the front next spring to 4,000,000 nen. Shipbuilding continues as usual; munition factories re rushing their output; airplane factories are building ircraft with increased speed. In other words, while the llied forces now on the battle fields are driving the Ger- nans back on every front, while Germany and Austria are truggling with their own internal problems that are con- inually threatening to disrupt their governments, this na- ion and her allies are getting ready to force the "uncon- itional surrender" either this fall or next spring that the nemy apparently finds himself unable to make now.

It is evident that Germany wants to continue the effort o involve the allies in a discussion. Her reply makes par- ial concession, with appeal for discussion of some of the uestions involved.

**AUSTRIA'S PEACE PLAN REJECTED.**

President Wilson last week caused Secretary Lansing o transmit to Austria, through the Swedish legation at Washington, a note in which he rejected on behalf of his country and the allies the peace proposal recently nade by Austria. In his note the president called atten- on to the fact that since his 14 terms of peace were id down last January the Czecho-Slovaks, a strong ele- ent heretofore under Austrian control, have formed a overnment of their own that is now opposing Austrian ule. This, he says, makes it impossible longer to be atisfied with the autonomous development of Austria- Hungary as provided in one of the original 14 terms of eace. Instead the president "is obliged to insist that ney (Czecho-Slovaks and Jugo-Slavs), and not he, shall e the judges of what action on the part of the Austro- ungarian government will satisfy their aspirations," the ote reads.

**ALLIES INCREASE SUCCESSES.**

The remarkable offensive by the allied armies has con- nued with no signs of a letup. Success has been piled pon success. No attempt to advance has failed at any oint, though stubborn resistance by the Germans has nade progress slow in some sections.

The most noteworthy development of the last week is n Belgium at the northern end of the line, extending rom the North sea to Cambrai. Advances greater han could have been reasonably predicted even a week go have been made. The entire Belgian coast has been leared of the enemy after he had held it since the first ig drive four years ago. Ostend and Zeebrugge, the wo great Belgian ports that have been used as German ubmarine bases, have been taken, and if the submarine arfare is to be continued it must be from bases farther ack and harder to get into and out of. A few miles nland the city of Bruges has been occupied by the allies. arther south the important city of Lille has been taken, nd south of that Douai has fallen to the allies. Indi- ating the scope of the advances, it is reported that during our days of last week the allies recaptured 800 square iles of Belgian territory that had been occupied by the uns since 1914. This is equal to a strip of land 100 iles long and eight miles wide, though it is in more ompact form.

The situation in Belgium at this writing is that the vacuation of the coast makes it possible for the allied orces to be landed for a drive southeastward along the olland border while the drive from the westward con- nues, virtually requiring the enemy in that section to ace attacks from two directions. At the present time he allied forces are driving directly toward Ghent, Ant- erp and Brussels, with the apparent assurance that all hese cities will be taken before many days, though sev- ral miles must be made before even the first of them, hent, is reached.

During the last week comparatively little fighting has een in progress farther south than Laon, though at no oint has the enemy been allowed to relax his defense.

**HOLLAND INTERNS GERMAN SOLDIERS.**

It is reported that when 15,000 German soldiers were ompelled to retreat from northwestern Belgium last week cross the Holland border or be captured by the Belgians nd English, they were promptly interned by Holland for he duration of the war.

**INFLUENZA IN CAMP DECREASES.**

The official report at the end of last week indicated hat the measures enforced against the Spanish influenza pidemic in the military camps in the country were bring- g results, as a considerable decrease in the number of ses was evident. Since the beginning of the epidemic here have been nearly 285,000 cases reported in the mili- ry camps. The deaths reported total more than 14,000. is stated, however, that the disease continues to spread rough the civilian population of the country, though is believed that the measures being used against it ill soon bring about a decrease in the number of cases.

**LIBERTY LOAN SEEMS OVERSUBSCRIBED.**

Apparently, though official figures are not available at his writing, the American people have made their an- wer to Germany's peace-by-negotiation proposal by over- ubscribing the fourth Liberty loan to finance the war. p to the last two days of the campaign, it looked as if he $6,000,000,000 would not be reached, but the subscrip- ons came in strong at the finish and indications that ore than that amount by several millions of dollars has een subscribed. It is estimated that 25,000,000 people, early one-fourth of all those in the country, bought bonds f this loan. This is by far the largest number of people ever in the world's history, to subscribe to a government loan.

**TURN THE CLOCKS BACK SUNDAY.**

It is announced from the national capital that there will be no further effort made to continue the "daylight saving" plan through the winter, but that the clocks, which were turned up one hour last spring, will be turned back that hour at midnight Saturday night, October 26. This will have the effect of making Sunday, October 27, a 25-hour day. Every watch and clock in the nation should be turned back one hour when its owner retires Saturday night. Then the change will cause no inconvenience at all, as it will not only take effect on a Sunday, but practically during sleep.

# Stick to Hoover's Plan!

## There Is No Danger of Too Much Wheat

Julius H. Barnes, president of the food administration's grain corporation, has written the following surprising letter to Senator Hitchcock of Nebraska:

**"I feel it to be a fact that the wheat acreage of this country has already been stimulated as far as it should soundly be developed and any further stimulation or expansion of wheat acreage is liable to be at the expense of the necessary acreage of other crops, particularly fodder grain. Last year's acreage of wheat of 65,000,000 acres was much the largest ever sown yet. This year's acreage promises to exceed that.**

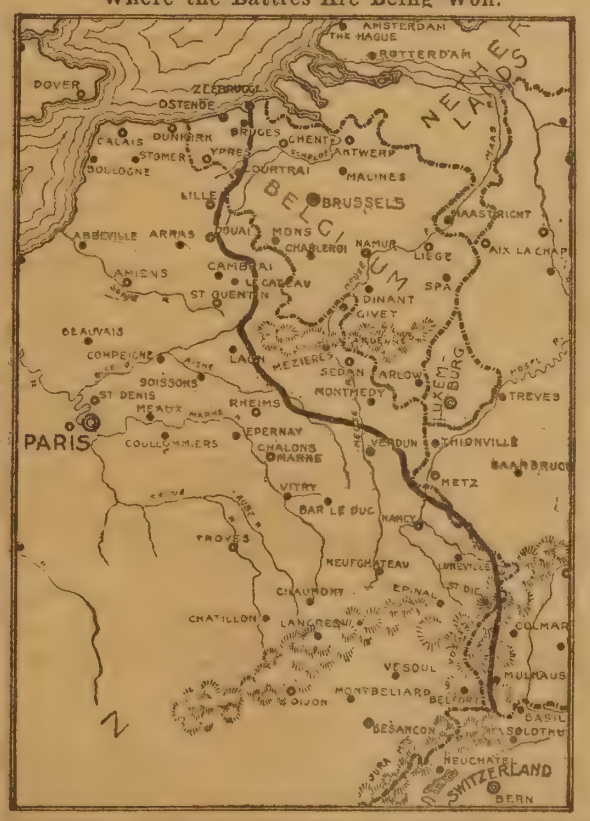
**"Last year's acreage produced a wheat crop which is exceedingly burdensome in all sections, while a large acreage next year presents some problems under the price guarantee given which must probably be solved by congress. With a fair normal yield on the acreage now in sight for the coming crops and with any developments of peace which restrain the demand upon us by throwing open other sources of wheat supply it will probably require a large appropriation by congress to make effective the present price guarantee."**

The country will wonder if that letter was written with the knowledge and approval of Mr. Hoover. Mr. Barnes' views on wheat production are in direct variance with everything that Mr. Hoover has said upon the subject. Mr. Barnes seems to think that even a slight surplus or carry-over in this country is a national burden, but Mr. Hoover, who has been consistently and constantly urging increased production and decreased consumption, has repeatedly said that America ought to build up a large reserve as a safeguard against possible crop shortage.

If, as Mr. Barnes says, the present crop has become burdensome, would it not be better, instead of actually discouraging increased production next year, for the food administration to lift its restrictive substitute regulations and encourage the American people to consume more wheat bread?

Present government figures indicate that this year's crop will be sufficient to permit the American people to consume wheat flour normally, without substitutes, and still meet all calls of the allies for export. The government's October crop report calculations indicate that this year's wheat yield will be 919,000,000 bushels. The military requirements call for the exportation of about 300,000,000 bushels. If allowance be made of 80,000,000 bushels for seed there would be left of this year's crop 539,000,000 bushels for home food consumption.

Only twice in the nine years between 1908 and 1916, inclusive, did the American people consume more wheat. In 1916, prior to our entrance into the war, it was down to 479,000,000 bushels, according to the statistics of the United States department of agriculture.



If the American people consume 479,000,000 bushels this year there would remain a surplus beyond the 300,000,000 bushels we are sending to the allies and the 80,000,000 bushels reserved for seed of 60,000,000, assuming that the government's crop estimate of this year's crop is accurate.

It is our opinion that Mr. Hoover's judgment, as previously expressed, should be followed by the government, instead of the judgment of Mr. Barnes. We must remember that extraordinary efforts were made by the government to increase wheat acreage this year. That the crop harvested is the greatest, with a single exception of 1915 when 1,026,000,000 bushels was the yield, in the history of the country.

Even so, accepting the foregoing statistics as dependable, there will be a carrying over of only 60,000,000 bushels. In past times that would be ample, but it is too close a margin for war times. With a short crop next year this surplus would be quickly wiped out and America might find it impossible to supply the needs of its allies.

We fear that Mr. Barnes, having to deal only with the problem of handling a single year's grain crop, has a wrong perspective of allied requirements. We hope that Mr. Hoover will adhere to his previously expressed judgment that the farmers go on producing more wheat, the people continue to use substitutes and that, if possible, a safe reserve be built up as a bulwark against future shortage.

## Where the Battles Are Being Won.

Herewith is given the Farmer's second weekly map of the European battle line. Those who clipped from this paper the large map of Europe and the small battle line map last week and preserved them as suggested on this page in last week's issue may see the advances made by the allies by comparing the map given herewith with that of a week ago. If last week's maps were not clipped and preserved on a large sheet of paper it should be done now, so that each new map may be added and a permanent record of the progress of the fight kept. A map similar to this one will be published on this page each week hereafter, showing the position of the battle front.

## *Washington Gleanings*

Fine rains last week insure a good stand of fall grain in the wheat fields south of Mabton.

A. M. Holman of Oysterville, on Willapa bay, recently harvested 208 barrels of cranberries from a one-acre bog. This 208 barrels counts only the first-class berries, the culls and smaller berries being additional.

A postoffice inspector has recommended the discontinuance of the Boistfort postoffice, in Lewis county, owing to the fact that he was unable to secure an applicant to succeed Postmaster Jochim Baumann, resigned.

E. B. Wood, Yakima county horticulturist, has announced that he would ask the government to station an entomologist in the valley to study the codling moth and see if something could not be done to prevent its ravages another season.

The Thurston county board of commissioners will rescind their action by which appropriation for maintaining a county agricultural agent was eliminated from the budget for the coming year, and provision will be made to continue the office.

Surfacing of the eight-mile stretch of Sunset highway between Creston and Wilbur commenced last week from a pit near Creston. Two miles of the eight, on the Creston end, have been graded, and grading of the remainder of the highway is progressing rapidly.

After spending the last month working in the vicinity of Yakima Dr. J. H. Martin of the state veterinarian's force has completed the task of giving the tuberculin test to 1401 Yakima valley dairy cows. In this number he found but 14 reactors, practically 1 per cent.

Walla Walla County Agent H. H. Boone recently brought to Walla Walla 85 pounds of ladybugs to be put in cold storage during the winter and liberated next spring to fight apsis, which destroyed vegetables and alfalfa this year. The supply is sufficient for 650 acres.

Work is well under way on the new plant of the Shepard Fruit Packing company at Wenatchee. This building will be 52x115 feet and two stories high. The Shepard fruit brick is a form of concentrated apple butter. The process is the invention of Mrs. Hulda Shepard of Chelan.

J. W. Susses, who has been secretary-treasurer and manager of the Cashmere Fruit Growers' union, has tendered his resignation to the trustees. Miss Gooding was appointed secretary and W. S. Tallman treasurer and manager, to take charge of the receiving, packing and shipping department.

The water users of the Okanogan government irrigation project have taken steps looking toward the organization of the project into an irrigation district under the state laws. At the recent election he following officers were elected directors: John S. Peterson, Dr. E. E. Copple and Frank Garber.

On Friday and Saturday, November 29 and 30, a southwest Washington improvement conference will be held at Chehalis. The meeting is the outcome of the get-together session recently, when more than 20 representatives of Cowlitz, Wahkiakum, Pacific, Clarke and Lewis counties met to consider road improvements in Pacific and Wahkiakum counties.

Anton Hylant, a pioneer Newaukim valley farmer, accidentally shot and killed himself recently while driving a bull from a field. Mr. Hylant was carrying a shotgun, and in crawling through a barbed-wire fence pulled the gun toward him, the weapon discharging. Mr. Hylant had lived most of his life in Lewis county.

Agriculturist Charles D. Gaines has completed a partial survey of yields of the different varieties of wheat produced in Lincoln county the present season. South of Odessa he found two varieties grown, bluestem, averaging 6.43 bushels per acre and early Bart, averaging 7.15 bushels, the survey in that territory covering more than 8000 acres. On the Almira flats, between Almira and Wilbur, the survey covered approximately 7000 acres, with bluestem, marquis and early Bart under examination. Marquis averaged 14.44 bushels, bluestem 13.32 and early Bart 13.14 bushels per acre.

# Half Rate on Feed May Come

## *U. S. Grain Administration Representative Promises Help*

"I think the most important thing you people can concentrate on is a half rate from the east on feed and we will do all we can to help bring it about."

In these words John R. Shanahan, personal representative of Julius H. Barnes, head of the grain corporation of the food administration, brought to a climax a meeting with the agricultural bureau of the chamber of commerce of Spokane October 16, and R. Insinger, chairman of the committee, who presided at the meeting, brought renewed cheers when in closing the meeting he said: "While we need and hope to get assistance from the food and railroad administrations, so far as our business is concerned it can go to h—l until the war is won."

Mr. Insinger opened the meeting by explaining the shortage of crops and the lack of iompleteness in railroad rates, especially in the fact that some rates do not apply to branch lines. He told how the Inland Empire is more dependent than any other part of the country on mill feeds and that the dairy industry is now in a deplorable condition.

A. A. Newbery, secretary of the Inland Empire Dairymen's association, said the danger of a shortage is more prospective than present, as it seems certain now that the mills will shut down and that means ruin to the dairymen. If the mills go on, they might be able to manage with the importation of barley and oats, he said. If bran and shorts are cut off he did not know what dairymen could do.

J. R. Shinn, county agriculturist, said he was primarily interested in keeping breeding stock on hand. He said the dairy industry can be conducted if we can get mill feed, but pigs and other stock need other feed. He was encouraging the use of other feed. He hoped to get the farmers together when the influenza epidemic is over and arrange to get barley cheaper. He spoke of the value of velvet bean meal and there was considerable discussion regarding the value and availability of that and other protein feeds. He declared that dairymen are getting rid of their breeding stock now and thought organization might save and situation to some extent.

J. M. Van Kleek, manager of the Armour Packing plant at Spokane, said every part of the United States except the Pacific northwest has shown an increase in hog production. Here we have stood still on account of not having feed or of high prices. The northwest has to market part of its hogs and lard outside in times of a normal run, so the food administration set a price of $1 less than Chicago. The price on this market has been as high as $20.35, but we must have cheaper freight rates so we can get corn in here or there will be fewer instead of more hogs.

R. J. Stevens, manager of the Stevens-Smith Milling company, told of the increase in rates by the railroad administration on oats, while wheat and barley retained the old rate. There is now a rate on branch lines, but barley is omitted, so his mill and others are afraid to quote prices on barley. A number of inequalities, besides the omission of barley, were discussed by several of those present.

S. M. Glasgow, miller, reviewed the loss of oriental trade as well as the fact that the government is not taking all the orders it promised. He said he is a stockman himself and the owner of three mills and yet can not get a pound of bran for his cows. If we were allowed to ship flour by rail it would relieve the situation, he said. To a suggestion by Mr. Shanahan that lower flour rates east would amount to a bonus, he replied that a bonus had been talked of, but Mr. Shanahan said it is impracticable.

Mr. Insinger called attention to the fact that the shipping out of wheat from the northwest, instead of milling it, would not only accentuate the feed shortage, but create a great problem of seed wheat.

R. J. Lord, Spokane manager of the Seattle Grain company, suggested the government buy and store flour. The farmers want money for their wheat and the mills can not buy, but will have to shut down unless something is done. He called attention to the incorrectness of the government reports on the amount of barley at northwest points, and said neither oats nor barley exist in the quantities quoted. He said we must look to barley and corn to feed hogs and that barley is really a cheaper hog feed than wheat.

The danger of a shortage of seed wheat was emphasized by several speakers.

Mr. Insinger suggested that the railroad administration could give a half rate on feed, as is done for Montana. The Canadian government has supplied the farmers with seed wheat for 35 years. What it has done our government can do. The food administration, he said, is the only governmental department to which we can explain our situation and look for a way out.

Mr. Bryan, secretary of the Merchants' association, read a telegram from Montana telling how and to whom special rates on barley are given. It is through a permit from the county agriculturist or certain other persons.

In beginning his address Mr. Shanahan said: "The first object and desire of the food administration is to supply our soldiers and those of the allies with sufficient food for their needs. The first object of the government is to transport the many and various things needed to win the war and this it is going to do regardless of the desires or needs of any section of the Union or any class of people."

As patriotic citizens he relied upon them to agree to this program. Mr. Shanahan briefly referred to similar conditions in other parts of the Pacific northwest and closed with the remark quoted above. In part he said:

"The wheat price of $2.20, Pacific coast, was possible because Pacific coast congressional representation induced the shipping board to name a very low rate on wheat and flour to establish at the Coast approximately the same price as at Chicago. Necessarily, this has changed the basis, and mills can not rail their flour into their old markets, but must depend for flour outlet on local demands and export aid furnished them at the Coast. The amount of flour to be exported from this country, limited by factors of port facilities and absorption abroad, and the per cent of Pacific coast flour that can be taken is influenced by necessary consideration to the fair claims of millers east of the Rockies also for export outlet.

"The grain corporation believes that 40 per cent of its flour export outlet to be taken from the Coast is treating the Coast very generously, and the practical effect of taking that amount should be to provide fully as large an export outlet as last year, and consequently should enable the mills to operate almost as largely as a year ago.

"As to the feed situation: Other feeds are cheap this year. California has a large surplus of barley, offered at much lower than last year's basis, and North Dakota and South Dakota also have cheap barley, available at not a great expense into the Pacific northwest. Pressure seems to be for mill feed because it is cheap, and not alone, as somtimes claimed, because it is the only feed.

"The shipping board now assures us, outside of further interference in its plans by war requirements, they will furnish us at least 50,000 tons monthly of Pacific coast shipping, and will probably increase this slightly. Their allocations to us for October, if carried out as we expect, will make a total of 240,000 tons Pacific coast shipping furnished for four months. Last year our flour exports from this country ran 22,000,000 to 24,000,000 barrels. As nearly as we can estimate this year the outlook is for 17,000,000 to 18,000,000 barrels, and 40 per cent would indicate a total outlet for flour from the Pacific coast of about 7,000,000 barrels. Last year, commencing October 1, with the grain corporation's first buying, exports were as follows: Pacific northwest, 4,165,826 barrels, out of 6,474,285 produced. California exports, 1,160,811 barrels out of 2,028,032 barrels produced. As this is for nine months, it is at the rate of 7,100,000 barrels annually, or 32 per cent of our total exports; whereas, this year, we expect to give the Pacific coast 40 per cent of our exports.

"Present figures indicate mill production for the Pacific northwest will run larger than a year ago. The weekly marketing sheet will show the percentage of crop in each state which has left the farm, and this would indicate that the producer has had a fair opportunity of securing some measure of relief in cashing in his crop.

"The total crop production, excluding seed, was apparently:

| | |
|---|---|
| Idaho | 17,000,000 |
| Oregon | 16,000,000 |
| Washington | 27,000,000 |
| California | 5,500,000 |
| Total | 65,500,000 |

"This amount of wheat, plus Australian brought in, which might be three or four millions additional, and less that part of Idaho which moves east, probably 10,000,000 bushels, would furnish a net amount of wheat available for milling, of about 60,000,000 bushels. Last year's nine-months' production was 8,500,000 barrels, or at the rate of about 12,000,000 barrels per year, representing about 54,000,000 bushels. As some wheat may be fed it looks as if not much wheat, if any, should be moved out as wheat, if the mills are to grind at this rate."

The meeting closed by Mr. Insinger saying: "So far as our business is concerned it can go to —— until the war is over."

# Wheat Not Cheapest

J. K. Smith, representing the mill feed division of the food administration, told a meeting of stockmen, feed dealers and manufacturers at Colfax last week, that barley and oats, if transportation to bring them in from outside territory could be made available, were a cheaper feed than wheat, even if stockmen were allowed to feed wheat at this time.

The meeting had been called by J. N. Emerson, Whitman county food administrator, for the discussion of the feed situation. It was agreed that the feed shortage is local and not national and that if transportation difficulties could be overcome it would be possible for every section that has a feed shortage to secure enough to carry it over the critical period.

As one means of improving the feed situation, R. C. McCroskey Jr., of Garfield recommended that straw and alfalfa be mixed, not only because it would enable the feeding of a considerable amount of straw, but because, as he believed, it would actually improve the alfalfa for horse feed.

A resolutions committee consisting of L. W. Lanning, acting chairman; A. C. Whistler, secretary; J. Emert, John L. Lanritzen, Roy Jones, Carl Grieff and J. A. Henderson, was appointed. The meeting expressed its attitude on certain points by adopting a resolution, part of which reads as follows:

"We find that there exists a shortage of feed grain and hay throughout the county, no locality having a surplus. We also find that the barley and corn supply of California and the east will be sufficient to take care of the needs of the country providing transportation can be obtained. We also find that there is a reasonable supply of alfalfa hay in southern Idaho and the Yakima valley.

"We recommend that owing to the scarcity of hay in this county, farmers be urged to conserve straw by fencing their stacks or securing it in some way so stock can not waste it and we suggest that alfalfa hay be mixed with one-third straw and two-thirds hay, as the ration will be improved by the mixture for the feeding of horses.

"We call attention to the order of the food administration that milk feed can only be fed to dairy cows giving milk. In order that we do our part in the perpetuation of the live stock industry we especially urge the farmers to keep their breeding stock, both cattle and hogs, in order that we may help replenish our herds and flocks and those of our allies when we have won the war. Taking the present price of barley and corn in comparison with the price of mill feed and their feed value for hogs and stock cattle, we believe that the grains have more feed value than the mill feeds."

# Unite War Work Drives

On November 11 there will be started throughout this country a campaign by which it is planned to raise $170,500,000 to carry on the war work activities of seven humanitarian organizations. Some time ago, at the request of President Wilson, these organizations agreed to unite in the raising of one large sum at one time rather than for each to wage a campaign of its own for the smaller amount that is required. The organizations for which the fund is to be raised and the amount for each are as follows:

Young Men's Christian association, $100,000,000; Young Women's Christian association, $15,000,000; National Catholic war council, including the work of the Knights of Columbus and special war activities for women, $30,000,000; Jewish Welfare board, $3,500,000; American Library association, $3,500,000; War Camp Community service, $15,000,000, and Salvation Army, $3,500,000.

# Live Stock Men Urge Congress to Act

A memorial has just been issued under the auspices of the American National Live Stock association indorsing the report of the federal trade commission on the meat packing industry. It is addressed "To the President of the United States, to Congress and to the Federal Trade Commission." It is signed by H. H. Jastro, Edward L. Burke, Dwight B. Heard, Joseph M. Carey, Henry C. Wallace, E. C. Lacater and W. R. Stubbs, composing the market committee of the American National Live Stock association. The memorial follows:

The live stock producers of this nation, in a spirit of loyal service, wish to give their utmost efforts to assist our government in winning this war. The most practical service which we believe they can render is to produce an adequate supply of meat animals for the military and civilian needs of ourselves and allies, and to aid in opening the channels of distribution so as to free the industry completely from practices which have encouraged the growth of monopoly and special privilege.

The market committee of the American National Live Stock association was fully conversant with the critical meat situation at home and abroad, and the menace to the food supply of the nation which existed when the president, on February 7, 1916, directed the federal trade commisison to make its investigation; and later, on March 18, 1918, when, at the earnest solicitation of Mr. Hoover, he appointed a committee of five capable members of his own official family to determine a "positive national live stock policy." The extremely unsatisfactory conditions prevailing in the live stock business fully justified the action of the president in both instances, as well as the action of congress in appropriating the necessary funds.

After carefully considering the report of the federal trade commission, the American National Live Stock association, through its market committee, and on behalf of the live stock producers of the country, desires to convey to the president, to congress and to the commission its deep appreciation of the fearless, convincing and constructive summary of the report of the commission on the meat packing industry, and to express its belief that both producers and consumers should unite in vigorous support of the prompt enactment of appropriate legislation to carry into effect constructive policies and remedies of the character recommended by the commission.

The misrepresentation of these recommendations, which has been given widespread publicity, must not be permitted to mislead either congress or the people. The commission did not recommend that the packing plants of the five large packers should be taken over by the government. It did recommend that these packers should be deprived of the means by which they have acquired and maintained their monopolistic control of the live stock markets, and of meats and a constantly increasing list of other food products.

We have carefully considered the report of the committee of five and thoroughly indorse the idea of a positive national stock policy. It must be borne in mind, however, that the report of the committee of five is essentially a war measure, while the report of the federal trade commission relates more especially to the permanent conditions that should prevail after the close of hostilities. While we deeply regret that the report of the committee of five did not touch on the great question of production, we especially commend that portion of it which dealt with the necessity of a uniform system of accounting in the packers' industry, the regulation of stockyards and commission men by the department of agriculture, the advisability of greater publicity regarding wholesale prices of meats, and the need of an investigation into the conditions of the retail trade, and we strongly urge the early appointment of a commission clothed with ample power to investigtae thoroughly this situation and present a definite plan for a simplification of retail distribution which will assure the consumer a wholesome meat supply under a system free from waste and needless expense; and, most important of all, we indorse the need of a revision of the packers' license, being thoroughly convinced that the welfare of the live stock industry and the consuming public demands effective regulation of the packers' entire business instead of only a portion.

We therefore respectfully, but earnestly, urge the prompt and favorable consideration by congress of the remedies recommended by the federal trade commission.

Accompanying the above, the market committee of the American National Live-Stock association, under date of September 23, 1918, says:

All and more than all the market committee has charged is abundantly confirmed by this report. The commission not only gives the facts and proves its case by convincing evidence, largely taken from the letter files and records of the packers, but it suggests what it believes to be the remedies which strike at the root of the evil practices, and which, if put into effect, will "open the channels of commerce in foods and related products, and insure their free and unrestricted flow from the producer to the consumer."

The remedies suggested by the federal trade commission are as follows:

"1. That the government acquire, through the railroad administration, all rolling stock used for the transportation of meat animals and that such ownership be declared a government monopoly.

"2. That the government acquire, through the railroad administration, the principal and necessary stockyards of the country, to be treated as freight depots and to be operated under such conditions as will insure open, competitive markets, with uniform scale of charges for all services performed, and the acquisition or establishment of such additional yards from time to time as the future development of live stock production in the United States may require. This to include customary adjuncts of stockyards.

"3. That the government acquire, through the railroad administration, all privately-owned refrigerator cars and all necessary equipment for their proper operation and that such ownership be declared a government monopoly.

"4. That the federal government acquire such of the branch houses, cold-storage plants and warehouses as are necessary to provide facilities for the competitive marketing and storage of food products in the principal centers of distribution and consumption. The same to be operated by the government as public markets and storage places under such conditions as will afford an outlet for all manufacturers and handlers of food products on equal terms. Supplementing the marketing and storage facilities thus acquired, the federal government establish, through the railroad administration, at the terminals of all principal points of distribution and consumption, central wholesale markets and storage plants, with facilities open to all upon payment of just and fair charges."

# Urge More for Wheat

Representatives of the National Wheat Growers' association are presenting to President Wilson an appeal that he increase the minimum price of wheat for next year to $2.46 a bushel, based on No. 1 northern grade for Chicago delivery. A brief of the argument that is being presented to him says:

"Cost-of-production figures prepared independently by trained statisticians show that the 1918 wheat prices barely cover the average cost of production of wheat this year and will be far below the inevitable cost of production of the year 1919 wheat crop."

# Wheat Too Low

## Statistics Warrant Higher Prices

Statistics just published by the United States department of labor present convincing proof that the American farmer needs and is entitled to a better price for wheat. Since December, 1914, men's clothing has advanced 105 per cent; women's garments, 120 per cent; furniture and furnishings, 116 per cent; fuel and lights, 80 per cent. It costs the farmer more to produce a bushel of wheat and it costs him more to live.

There was a time in the Pacific northwest when it was profitable to grow 60-cent wheat, and even a 50-cent price left the grower some margin. But those conditions are gone, and the growers have to face enormously increased costs of production all along the line. A maximum price of $2.20 in 1917-18 was based upon production and living costs of the former year. Every one knows that these costs have gone upward since 1917, probably to a considerably greater extent than the difference between $2.20 and $2.50 wheat.

Not only that, but the growers here in the Pacific northwest have to face a decreasing yield, partly due to over-forcing the soil and partly to the increasing difficulty of finding efficient help.

American wheat farmers are patriotic, none more so, and are deserving of more sympathetic treatment than the government has yet accorded them. They can not understand why the price of their product should be held down by government restrictions when the price of cotton is allowed to take its unrestrained high course under the normal law of supply and demand. They must sell their wheat in a restricted market and buy all manner of cotton goods in an unrestricted market.

Notwithstanding this injustice, it is the duty, of course, of the farmers to respond to the limit of their ability to every call of their government, and they will do it without a doubt, but their fine, loyal spirit ought to have more responsive recognition at Washington. N. W. D.

# Smut Travels Far

## Progress Being Made Against It

At a conference on smut control at the Oregon Agricultural college recently, H. B. Humphrey, cereal specialist of Washington, D. C., predicted that within two years the annual grain loss from smut in the northwest will be reduced at least half by methods that have been previously put into effect and by new methods yet to be put into operation.

While this prediction is encouraging to those who have been active in the fight against smut and to those farmers who are heavy losers each year because of it, a report from the State College of Washington indicates that there is yet a difficult problem to solve as a result of what it terms the "harvest time smut shower." The state college has been getting data on this subject under the direction of George I. Zundell, some of this data indicating that the smut spore, which is the germlike organism that infects the sprouting grain, is sometimes carried hundreds of miles in the air and deposited to infect the grain sown in that particular locality. The state college has been making observations by means of what it calls "spore traps" all over the wheat producing sections of Washington.

Counts have just been made from spore-traps set out in both eastern and western Washington. The western Washington trap, placed at Puyallup, showed that in that region from 12,000 to 69,000 smut spores settled on a square foot of soil surface in harvest. In Columbia county the smut-shower per square foot went as high as 288,000 spores. In Asotin county the counts ran as high as 334,000 per square foot, and in Garfield county 100,000 smut spores were caught to the square foot. In Klickitat county the spore counts went as high as 912,000 to the square foot; In Lincoln county, 20,000; Walla Walla county, 285,000; Whitman county, 225,000.

Mr. Zundel states that the variation in spore counts should not be taken as an indication of the prevailing amount of smut there, since the spore catches of the traps were so greatly dependent upon prevailing directions of wind currents, and other causes.

In the Blue mountain section near Pendleton, Ore., spores were discovered on vegetation which must have floated in from parts of California, northern Utah, or southern Oregon, these being the nearest localities in which threshing was in progress at that time, meaning that the wind-borne smut had floated from 200 to 500 miles. One particular variety of smut was discovered there which occurred no nearer than the immediate vicinity of Portland, Ore. It had floated no less than 300 miles before settling on the vegetation.

Reports at the Oregon conference on the use of smut traps brought out the fact that smut spores had traveled from Umatilla county to Union, a distance of 100 miles. Time of sowing proved to be a factor in the amount of infection, fields sown in October showing but 1 per cent infection, while those sown between the 10th and 20th of November showed an infection varying from 1 to 5.6 per cent. The time of greatest infection appeared to vary with the season, reaching a maximum at a temperature of between 40 and 45 degrees, and less at a higher or lower temperature.

While much benefit has been derived and much more will yet be derived from the treatment of seed grain for the prevention of smut, it is the belief of the experimentors that in many cases grain thoroughly treated and in which all smut infection has been destroyed is again infected by the smut spores that are sown broadcast by the winds during the threshing season. Mr. Humphrey, who predicts the winning of the fight against smut, is a firm believer in the effectiveness of formaldehyde as a seed treatment. Fear is expressed that some of the advantage gained against smut will be lost through the shortage of wood alcohol needed for the manufacture of formaldehyde.

# Hold School Fair

## Communities Unite in Enterprise

The recent community school fair and teachers' institute at Ridgefield added its bit of evidence as to the value of community undertakings of this nature. Five districts were represented.

One of the features of the fair was the display of agricultural products and domestic science work by the boys' and girls' clubs. In the contests of this department Albert Sederburg, aged 14 years, was the winner of the greatest number of prizes, being a contestant in the sewing and canning work as well as in agriculture. The displays of the boys and girls included all kinds of agricultural products, sewing, cooking, knitting and the like. This department of the fair was under the supervision of C. E. Alexander, who had been in charge of the clubs during the summer.

A program of entertainment and educational features was given, among which were a lecture by Professor Stahl of the state college experiment station and addresses and demonstrations by a representative of the United States department of agriculture. A number of local speakers discussed agricultural and general farming subjects. The program also included vocal and instrumental musical numbers.

### BEET PRICE TO BE GOOD.

The Utah-Idaho Sugar company has announced through its representative at Yakima, Wash., that it will pay $12 a ton for beets grown in the Yakima valley next season. Already considerable acreage has been signed up at $10 a ton, but it is stated that those who have so contracted will receive the benefit of the increased price the same as those who have not yet signed up. Other districts throughout the northwest are understood to be offering corresponding prices. This is twice the price first offered for beets of the 1917 crop. Later that year's price was increased to $7.50 a ton. Much of last season's crop was contracted at $10 a ton.

# Care of the Bull

## Good Feed and Plenty Exercise

By A. B. Nystrom.

Most dairymen consider that "the bull is half the herd," and this is the right way to look at it. But how many take care of him in that light? To be sure it is not necessary to give the bull as much care as the rest of the herd is given, but surely he should be given more attention than a single cow in the herd. Many dairymen do not even look after him to that extent.

The same kind of a ration that your best cows are getting is none too good for the bull that is in full service. Give him some nice alfalfa and clover hay, all he will eat up clean. If the clover is mixed with timothy or other grasses it will do fairly well, but grass hays alone are not satisfactory. In the absence of the legume hay use the grain hays, oat hay cut in the milk preferred. For grain use a mixture containing a liberal amount of high-protein feed, such as linseed oil meal or soy bean meal. Three parts ground oats, three parts mill run and one part oil meal will make a good ration; he should have from five to seven pounds of this daily. Feed silage sparingly, usually from 15 to 20 pounds good corn silage each day will be sufficient. It is claimed by some dairymen that the heavy feeding of silage to a bull will injure his breeding power. Kale and root crops may be fed more liberally.

Plenty of exercise is a prime essential for a bull in service. It makes no difference how ugly his disposition, the bull must be provided with a means for exercise. An ample dry paddock with his stall door accessible will take care of the quiet bull. But the ugly one must be securely tied at all times. For him stretch a small cable or heavy wire between a high post outside and a convenient post inside his stall, allowing the wire to pass through the door leading into the paddock. Fasten the bull to this cable by means of a sliding chain. This will give him exercise, even though he is securely tied.

Forced exercise will be found necessary for some bulls. Putting them in a treadmill is one sure way of forcing it. The writer has seen the bull used in a tread power that was attached to the milking machine pump. In this way "the bull was forced to milk the cows." Where such an arrangement is not possible the bull may be driven or led for a considerable distance each day. He may also be harnessed and hitched to a wagon.

Give the bull a good, strong box stall that is light, airy and easy to keep clean. Keep the stall cleaned out and well bedded, and at the same time provide a paddock that is free from mud and filth.

Never trust any bull. Remember that it's the "quiet" ones—the ones that are trusted—that are responsible for the accidents. Always use a strong staff to lead him, and walk by his side rather than in front while leading him.

The breeding power of many bulls is often ruined by too heavy service. A mature bull in good health and properly fed should not be expected to take care of more than 60 cows. Services should not be more frequent than four or five per week, unless he is given complete rest every alternate week, and in that case only one service daily should be allowed. Young bulls should not be used over once a week, and if he is only a yearling, he should be allowed but 10 to 12 services in the year. With proper care a bull should maintain his virility up to 10 and 12 years of age.

### VALUE OF PASTEURIZATION.

Pasteurization of milk has both its advantages and disadvantages. It does not, as sometimes supposed, destroy all the germ organisms, though a heating of the milk to 160 degrees for a period of 20 minutes is considered a practical safeguard against most disease germs that the milk might contain. Some pasteurization is done now at a slightly higher temperature for a period of 30 minutes.

One effect of this treatment is the destruction of a certain bacteria native to the milk that causes normal souring. This means that pasteurized milk does not sour normally, but decomposes instead by the introduction of a germ of decomposition instead of oue of souring.

There is still controversy as to the food or feeding value of pasteurized milk. Some experiments seem to show that it is less valuable as a food or feed than the raw milk.

### EUROPEAN FARMERS MAY COME.

It does not seem improbable that many people from Europe will be inclined to come to America with the close of the war. Already inquiries have begun to arrive. Former Governor Oswald West of Oregon reports that a group of Holland bankers have requested of him information bearing upon the possibilities of land settlement in Oregon. The farmers in whose behalf the inquiry was made are of Holland stock, who have been living in the Ukraine district of Russia, which was some months ago subjugated by Germany.

### PLANS BUG BATTLE.

County Agricultural Agent H. H. Boone of Walla Walla, Wash., has secured 85 pounds of ladybugs, with which he plans to combat the aphis pest in his county next season. The aphis did much damage during the last season to crops of the Walla Walla valley, especially alfalfa. Agent Boone estimates that the 85 pounds of ladybugs that he has in cold storage will be sufficient to populate 650 acres next season. The ladybug is a noted natural enemy of the aphis.

### GIRL IS MULE TEAMSTER.

A report from Kansas claims for that state the champion girl mule-skinner of the world. The alleged champion is Opal Braley, age 10 years, who has been driving four mules on a gang plow during the last season, owing to her father's inability to get help. Neighbors of the Braley family testify that she has done the work as well as any hired man could have done it.

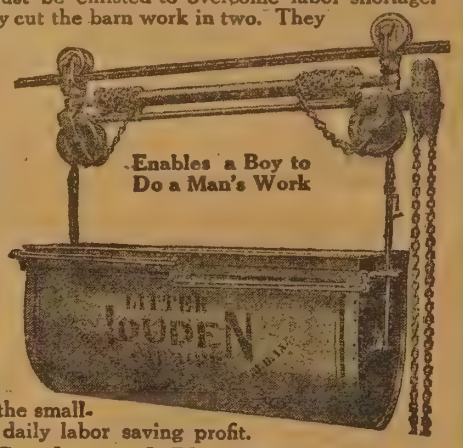
# LOUDEN

## LITTER CARRIERS



WM. LOUDEN
Originator of Modern Labor Saving Barn Equipment

"I wish to congratulate you on your endeavor to help the farmer overcome the farm labor shortage by using your barn equipment. I have in use your Stalls and Litter Carrier equipment and can say it is one of the best improvements I ever made on my farm." John Beemer, Elkton, S. D.

## Save Half Your Barn Work Every Day in the Year

Louden Litter and Feed Carriers are an absolute necessity in these times of stress when every agency must be enlisted to overcome labor shortage. They release man help—actually cut the barn work in two. They make a big saving every single day in the year at one of the hardest and most disagreeable jobs on the farm—barn cleaning and stock feeding.

**Louden Carriers Have a National Reputation** for superior simplicity, safety, strength, working capacity and easy operation. These qualities are attained by discarding all clutches, brakes, ratchets, and other trouble-making parts, and adopting Louden patented features, which insure greatest efficiency and lasting service.

Louden Carriers are built to fit any barn from the largest to the smallest—and they always show a daily labor saving profit.

### Get Louden Catalog and Plan Book

# Time to Get Busy

## Stockmen, Prepare for Winter Now

By Dr. S. B. Nelson.

Winter is not far away now, and it may be a critical time for many stockmen. Now is the time to make preparations.

The man who is bringing his sheep down from the mountain pastures will feed this winter at high cost. He will miss more than ever the cheap roughage of the mountain ranges. In this emergency it might be well for him now to see if there is anything he can do to make his sheep get more energy from the feed they consume than they otherwise would. It goes without saying that one can winter a fine, vigorous, healthy band of sheep more economically than sheep that are ticky and contaminated with some communicable disease. Clean up the band now, get it in good fighting trim for the winter.

The same is true of horses. A man should now examine the teeth of his horses. If the teeth are not in good shape the horse can not get the most out of his feed, which this winter will be high-priced. Therefore, it is merely the part of common sense and good business policy to have the horse's teeth put in good condition now. Some ticky sheep whose ticks are consuming blood the sheep must make out of this high priced feed; several diseased sheep that die after they have eaten some high-priced feed, and communicated their ailments to others who likewise may die; horses with teeth in bad shape all constitute leaks in the feed manger, and we want no leaks there now.

Now is a good time for the hog-raisers to get busy. Be sure the animals have a place to sleep this winter where they will be protected from draughts. Cracks may have opened up in the floor of the hog house the past dry summer. If so, close them now. Otherwise they will cost you pork and high-priced feed this winter.

If the pigs are not thrifty now you are fairly safe in presuming the presence of intestinal worms. Give them one of the standard treatments for this disorder now.

I drove through a man's pasture the other day and saw an animal just recovering from infectious keratitis. This is a very annoying inflammation of the cornea of the eyeball. Out in the pasture this trouble does not spread very much, but when the animals are housed together in close quarters the story is very different.

So observe your animals very carefully, and if you find anything wrong out in the open, correct it before the animals are housed together, when the contagion will have a better opportunity to spread. If you can not cure the disorder now, at least segregate the stricken animals so that it will be less likely to spread through your herds.

One may have a band of cattle to be brought in from the range. On the jaw of one there may be a lump. The owner may try to deceive himself—hopes and tries to believe against his conviction that it is not a case of lumpy jaw. He may argue to himself that the animal has merely been kicked, or injured in some other way.

But the chances are that it is lumpy jaw just the same. The wise cattle man will take no chances. He will segregate the animal at once, and by no means allow it to run with the rest of the band till he knows very certainly what the trouble is.

These are small, simple little things; but in their totality they constitute a large leak in the nation's hay-loft. If every live stock man and every farmer will do his part valuable meat and valuable feed will be saved this winter, saying nothing at all of the money that will be kept where it can buy Liberty bonds.

# VETERINARY

By DR. S. B. NELSON.

**Possibly Inflammation**—I have a 5-year-old cow that has had four good, healthy calves but she lost the fifth one through an accident in which she slipped and almost fell down. I had a veterinarian remove the after-birth after three days and he says there were no signs of abortion. I have not been able to get her with calf since then, and have bred her five times; the last time she threw a bloody discharge the second day after being bred. She is a good eater and seems to be in fine health. Any information with regard to this case will be greatly appreciated.
HARRY HEYER.
Melba, Idaho.

It is quite possible that there is an inflammation of greater or less extent, resulting from the mechanical removal of the after-birth. I am therefore sending you under separate postage, circular letter dealing with the treatment of the possible conditions.

**Bathe Udder With Hot Water**—Am writing to find out what to do about a 2-year-old heifer I have that just came in fresh the 27th, and she has a fine large bag of milk, but when I go to milk her I don't get much milk and her udder is hard, sort of caked above the teats and just a little above the top end of the teat. I put some salve on her udder when I milk, but has no effect on the caked part. I don't know what to do exactly, but have let the calf run with her thinking that it would bunt and work the cake out, but it doesn't do any good. R. S.
Sweetwater, Idaho.

Quite possibly bathing the udder with hot water once or twice daily prior to milking might be of value. Then after you have milked, apply the following liniment to the affected part of the udder. Soap liniment, five ounces; tincture of iodine, three ounces. Apply after each milking.

**Cow Gives Bloody Milk**—I have a cow that gives bloody milk from one teat part of the time. Bag does not seem to be inflamed or sore. What is the cause and treatment? F. L. B.
Leavenworth, Wash.

Try giving your cow a teaspoonful of sodium hyposulphites in a pint of water once daily for a week or 10 days. Watch the bowels to see that they are normal or even a little looser than, or softer than normal. If they are not, give her a slight purge so as to regulate this condition.

## Range or Confinement?

There are quite a number of poultry ranches in western Oregon and western Washington conducted on the close confinement plan. On some of them the fowls have the liberty of a small yard, and in some they are confined entirely in the house. Some of these are doing well under present conditions. To confine the hens in a house and never allow them out on the ground is a development of recent years. This system makes a strong appeal to the labor-saver and the land-saver. It is certainly a saving of land, and where land is high in price that is a considerable item. Whether it will be permanently successful may be open to question. At any rate, there is not a great deal of data bearing on the subject. Poultrymen who have good stock and give them good care are getting a good egg yield from hens confined in houses. The question is, however, whether the same man with the same kind of stock and given the same good care they would not do better on free range.

An experiment conducted at the Ohio station gave results which, though not probably final, were in favor of free range. In a flock of Leghorns kept under observation for 882 days the flock confined had a mortality of 23.23 per cent, and the lot on range 15.52 per cent. The average egg production of the hens on range was 15.4 per cent higher than those in confinement. The cost of feed per dozen was 14.8 per cent higher for the confined lot than the range lot. The value of the range in this experiment was 62 cents a hen. This item would amount to more at present prices of feed, as the experiment was made in 1912 to 1914, when feed was cheap.

Another experiment, which began November, 1913, and continued for 728 days, showed results also in favor of range. The mortality for the range was 12.3 and for confinement 17.5 per cent. The average egg production was 29.8 per cent higher for the range lot than for the lot in confinement. The feed cost for a dozen of eggs was 26.1 per cent higher for the confined lot than for the range lot. The value of range was 86 cents a hen for the first year and 55 cents the second year.

A still later experiment showed a 43.9 per cent higher egg production for the range lot than for the lot in confinement, and the cost of feed for a dozen of eggs was 36.3 per cent higher for the confined lot than for the lot on range.

The hens in confinement in these experiments had access to a small bare yard covered with gravel and on which there was no green feed. J. D.

### WITH THE CHICKENS.

By CARL J. MENZE, Ferndale, Wash.

Gather the eggs often through the winter. If it is freezing there will not be so much danger of them cracking.

Where the weather is cold and the fowls have large combs a curtain made of muslin should be hung up in front of the roosting place on cold nights.

Which is the cheapest, to take the chill off the chickens' drinking water on cold days, or feed them more feed and let them warm it themselves?

Chickens always scratch with their heads toward the light. If the henhouse has windows on one side only, they will scratch all the scratching material in a pile in the dark corner. To remedy this, place windows in the dark part of the house.

At night, chickens will always try to crowd on the highest perch. Place all perches at the same height and the crowding will be avoided.

The hens that are to be used for next year's breeding pens should not be forced for winter egg production. If they are forced through the winter and then used for breeding in the spring the small chicks will not be so strong. The breeding hens should commence to lay a short time before the eggs are wanted for incubators.

The roosters that are to be used in next year's breeding pens should not be allowed to run with the rest of the flock through the winter.

Incubators and brooders should be ordered early so as to be sure to have them on time. In the spring, manufacturers are flooded with orders and your order might not be filled for some time; and again trains are sometimes held up on account of slides and bad weather so it is best to order early.

All small coops, brooders and incubators should be cleaned, repaired and made ready for spring.

If new blood is to be introduced into the poultry flock next spring, the male birds should be bought now. Later on the best birds will be sold.

### CHICKENS' HEADS DROOP.

To the Editor: We are having trouble with our chickens and would like to know the cause. They droop their heads all the time and can't stand up. Their eyes are closed nearly all the time. They have no lice or mites. The chickens are young ones of this spring. They seem to get sick all of a sudden. Their foods is all kinds, for they run loose. They have plenty of green food and grain. When we found them we fed them warmed lard. The first one got well after about two weeks. They eat nothing for four or five days. G. C.

Pateros, Wash.

From this brief description, I can only guess at the trouble. In the case of limberneck, the chicken loses control of its head, which hangs down and is stretched out in front. It is caused by stoppage of the stomach. Give a teaspoonful or two or castor oil or olive oil and feed on soft bran mashes for a few days. Would suggest that particulars be sent to the poultry department of the state station at Pullman or the branch station at Puyallup. J. D.

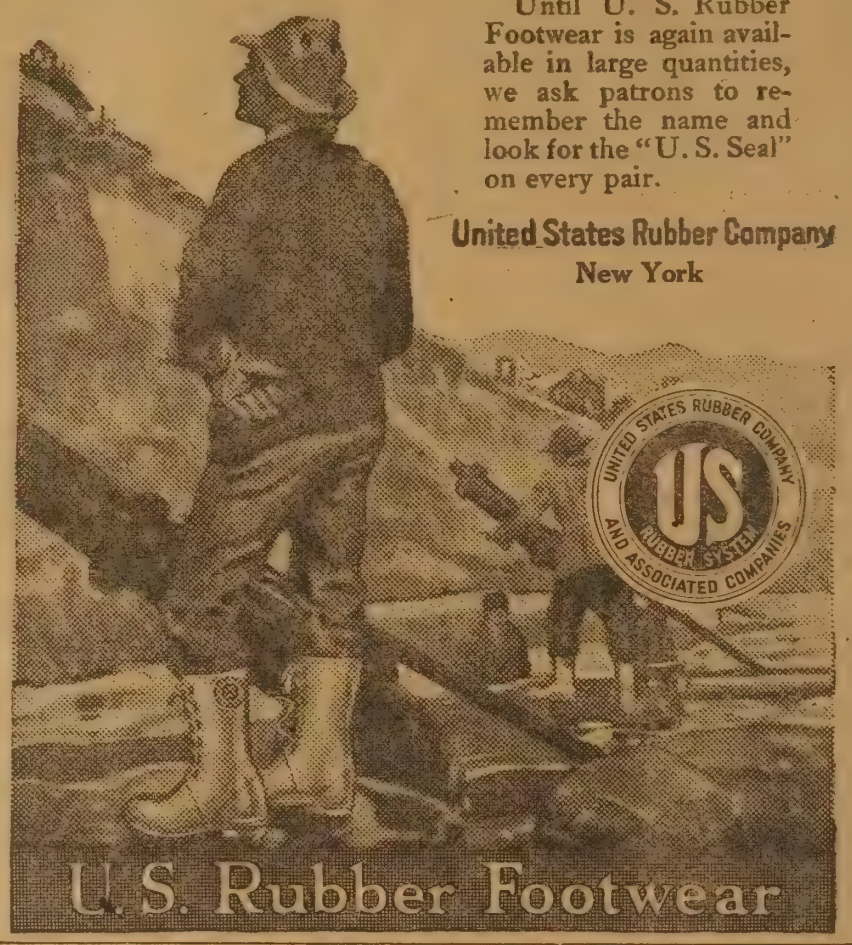
### DON'T KILL THE LAYING HEN.

Eggs are a good price, even if feed prices are very high, and good laying hens should not be killed off. If they are extra good layers they will make a good profit. It is a mistake to slaughter the hens indiscriminately, and I do not think this is being done to any great extent. Keep the layers and cull out the non-layers by methods that have already been explained. When the war is over there will be cheaper feed, and the prospect is that eggs will continue high for some time. Cull out the slackers; give the others more and better feed and you will be serving yourself as well as the country. J. D.

### Y. M. C. A. SPREADS MUSIC.

One of the activities of the Y. M. C. A. in connection with the war is the distribution in the army camps and among the soldiers in Europe of large numbers of leaflets containing songs that are popular or are rapidly becoming popular.

**Rubber Footwear at the "Front"**



In the first line trenches, where the need is greatest, rubber footwear is helping to make life more livable for the doughboy.

Men in the trenches are being supplied before civilians at home. This means limited supplies for outdoor workers.

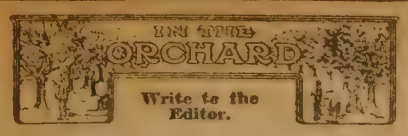
Our customers, we are confident, will cheerfully bear with this situation. We regret our inability at present to meet every demand for "U. S. Protected" footwear.

Until U. S. Rubber Footwear is again available in large quantities, we ask patrons to remember the name and look for the "U. S. Seal" on every pair.

United States Rubber Company
New York

**Building Service into the "Caterpillar" Tractor**

The "Caterpillar" Tractor is built for service—everyday, dependable service, regardless of weather or ground conditions.



That sort of service is insured by correct design, by careful construction, by proper choice of materials—some of manganese bronze, some drop-forged, some case-hardened—each selected for the special work it must do. And into the construction of every "Caterpillar" Tractor goes Holt experience of 35 years in manufacturing.

The results are:—exceptionally low operating and upkeep costs, long life, higher efficiency and bigger profits. "Caterpillar" Tractor owners will testify that the purchase of this tractor is an investment that pays big returns. Send for complete "Caterpillar" Tractor information.

CATERPILLAR
REG. U.S. PAT. OFF.

GRANVILLE LOWTHER,
Editorial Contributor.

# The Apple's Value

By A. E. GIPSON, Caldwell, Idaho.

Writers on health and dietetics are practically agreed as to the wholesomeness of the apple as a food and relish. With equal unanimity they agreed that it would be clearly a beneficial thing if this fruit could become a part of the daily ration of the masses. The doctors say that the apple is not only a food but has a cooling and cleansing effect upon the system, and that the free apple eater is not so likely to have the same craving for intoxicants and narcotics that one often has who does not eat freely of this famous fruit. This is all good testimony, and has been generously given by the health and food experts. Why, then, should not the apple be given greater prominence in the food rations of the war board, especially at the army posts and cantonments? With the apple as comparatively cheap as it is, and within easy reach of so many of the soldier boys, why should not Uncle Sam encourage its use as a part of the daily ration? Such an effort would be in line with the general policy of the government to assist in marketing and to give the soldiers wholesome and appetizing food at a reasonable cost?

Furthermore, could the army commissary do a better thing than to give the fresh apple a prominent place on the bill of fare of the army ration, especially in view of the fact that this fruit is not only easily accessible, but is probably cheaper than any other commodity with anything like its palatableness and value as a food? The dried or evaporated apple is good, so far as it goes, but it does not fill the place of the fresh article, which is the flower of commodities and the most perfect union of the useful and the beautiful that the world has ever known.

While this appeal for a larger use of the apple has particular reference to army consumption, it has also a wider application, and the national government, as well as the states, can render a positive service to the masses of the people by assisting the apple grower and the grower of every other kind of good orchard fruit to find a market for the same at the minimum expense and with the greatest possible facility.

While the apple is well termed the king of fruits, its use is, nevertheless, comparatively restricted from lack of proper distribution, and hundreds of thousands who would like it are denied the privilege under existing conditions.

Since the above was written one of the strongest endorsements of the apple is at hand that we have ever seen, and particularly with reference to its value as a nerve food and corrective agent of the human system. It is by an eminent British physician, Dr. Josiah Oldfield, senior medical officer to the Lady Margaret's Fruitarian hospital, of England.

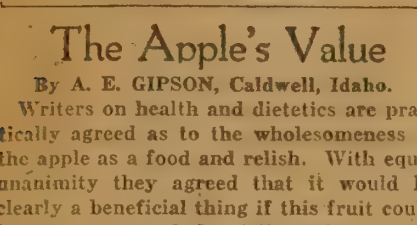
He says, in part:

"The people of Germany are beginning to develop the disease of mal nerve nutrition. There are beginning in Germany already grave manifestations of the basic origin of many diseases. The latest is a widespread oedema in the legs and feet and face, of which particulars are given in a late issue of 'The Lancet.' This will steadily get worse and worse as another winter comes on unless fresh fruit, and salads and seed oils, can be introduced largely into Germany. I have dealt at length with Germany and her fate, to emphasize the great importance of avoiding a similar catastrophe for England. English stamina, courage, endurance and heart for the war depend on complete nerve nutrition. Now for this the calorific values of wheat, or beans, or beef, affords no criterion. The danger is that laboratory scientists will measure the comparative importance of cargoes by calorific values, and will on this ground tend to debar juicy fruits as being very light cargo compared with legumes or cereals. Every effort should be exercised to prevent this, or else, when the mischief is done, there will be a panic importation of anti-scorbutic fruits. I note that a small number of ships are still allowed to run to the West Indies for bananas, and this is excellent, but weight for weight and bulk for bulk, the most important fruit to be imported during the winter and early spring of 1918 is apples. Were I food controller in Germany and allowed the choice of free import of one article of food from November to April, I should select the apple. So, in England, while for importation purposes legumes and peanuts are the most concentrated form of proteid; rice and wheat and maize, the most important of the cereals; olive oil, sesame oil, peanut oil and almond oil, the finest forms of fat; apples, lemons, oranges (and onions) are immeasurably the most important of fruits, which are nerve foods, and without the presence of whose salts physiological functions fail. It will be a grave risk to England's home stamina if her supply of apples is cut off, because during winter conditions in this climate they are superior to either lemons or oranges, and can not be replaced by any other fruit."

## STORING VEGETABLES IN GROUND.

A limited quantity of vegetables can be stored satisfactorily for winter use in a large box or barrel buried in the ground. The container should be set in a hole, the edges flush with the ground, and a layer of sawdust placed between the earth and the sides of the box or barrel, to serve as insulation and to absorb drainage water. If a box is used, it should have a tight-fitting cover hinged on one side, and, to give complete protection, a larger box can be inverted over the one buried in the ground. For storing a few home garden products for winter use, says J. T. Rosa Jr. of the University of Missouri college of agriculture, a small contrivance of this sort may be very useful, especially for root crops and potatoes.

To store parsnips, salsify, rutabagas and other root crops which are not injured by freezing, an outdoor trench is satisfactory. This must be in a well-drained spot and should be three feet deep, three or four feet wide, and as long as desired. The roots are placed in the trench in direct contact with the earth, but at a somewhat later date than when placed in outdoor banks. The roots are piled about flush with the ground line and covered with a six-inch layer of earth and a heavy mulch of straw or manure on the surface, which completes the insulation. Celery and cabbage are stored nicely in shallower trenches of this style, but generally must be used by midwinter. The root crops can be kept to the middle of the spring if the outdoor trenches are in a shaded spot.



## PLANTS KILL EACH OTHER.

Mrs. Minnie Agnes Avery of Ojai, Cal., has a theory that there is a natural law of antagonism among plants, and that where one plant is a pest another can be found that will eradicate it. Further than this, she believes that she has proved that the tomato plant has a natural antagonism for the wild morning glory, which is a serious pest in some parts of the country. She has notified the United States department of agriculture that she has succeeded in eradicating the morning glory from her fields by using the tomato plant, which turns a heavy loss into a profit.

### Patriotic, Nevertheless.

"How did your husband's gardening turn out?"

"Not well, so far," responded the serious woman. "The outdoor work gave him such an appetite that he ate the potatoes instead of planting them."—Washington Star.

BEST is best

TRACKLAYER TRACTORS

are characterized by

Durability and Consistency

made possible by masterful design and construction backed by

EXCLUSIVE "BEST" FEATURES.

Years of successful tractor construction have developed a number of patented "Best" features, which contribute to the long life and distinctive individuality of the "Best." Among these are: The "rocker-joint" (the no-grease, minimum-friction link pin of the track), "oscillating" truck, "screw tube" radiator and the Best valve-in-the-head motor—created and adopted by the Best organization as essentials in a high-grade tractor.

C. L. Best Gas Traction Company,

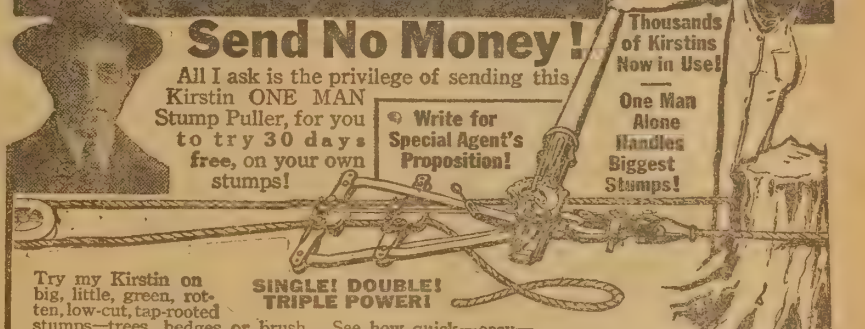
I'll Send This One-Man STUMP PULLER For You To Try 30 Days FREE



Send No Money!

All I ask is the privilege of sending this Kirstin ONE MAN Stump Puller, for you to try 30 days free, on your own stumps!

Write for Special Agent's Proposition!

Thousands of Kirstins Now in Use!

One Man Alone Handles Biggest Stumps!

Try my Kirstin on big, little, green, rotten, low-cut, tap-rooted stumps—trees, hedges or brush. See how quick—easy—cheap—the work is done. How easily one man alone handles and operates it. If satisfied, after 30 days' trial, keep puller. If not pleased, send it back at my expense. You don't risk a penny! *Four easy ways to pay.*

SINGLE! DOUBLE! TRIPLE POWER!

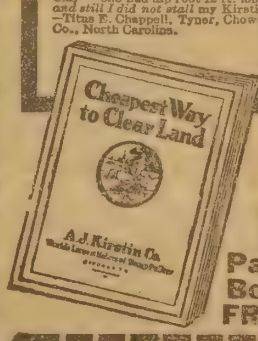
Kirstin ONE-MAN Stump Puller

Single—Double—Triple Power

Weighs less, costs less—yet has greater speed—power—strength—and lasts longer. Clears a whole acre from one anchor! Use it anywhere—steep hillsides, swamps, rough boggy ground or thick timber. Easily moved around field. New patented features give it enormous power and strength. Made of finest steel. Three year guarantee against breakage—flaw or no flaw. Simplest, most practical, most efficient land clearer yet invented.

Cheapest—Quickest—Easiest Way to Pull Stumps!

With Kirstin's new scientific leverage principle, a few pounds pull or push on handle exerts tons on stump! One man alone pulls stubborn stumps in few minutes at low cost. No horses or extra help needed. No digging, chopping or other expense. Several speeds. Use low speed until stump loosens, then shift to high—and rip it out quick! Patented quick "take up" for slack cable—saves time, cable and machine.



Read These Letters

If there is a better machine than the KIRSTIN, it must be a peach. —V. E. Newcomb, Creswell, Ore.

My pine stumps are solid in the ground, and average about 1 1 2 to 4 feet across the top, but the little KIRSTIN takes them all out fine.—Mr. R. J. Stoltz, Washburn, Wis.

Pulled oak stumps up to 88 in., pine stumps up to 24 in., in "Pipe Clay"—one had tap root 12 ft. long, *and still I did not stall* my Kirstin. —Titus F. Chappell, Tyner, Chowan Co., North Carolina.

Send Coupon Today—Get My NEW BOOK FREE

My 84 Page Book FREE

Tells why thousands of farmers prefer Kirstin ONE MAN outfits! Why every single acre of fine, rich stump land can now raise big crops. Labor shortage no longer prevents pulling pesky stumps! The Kirstin quickly pays its cost in BIGGER CROPS—and goes on making money for years! The book describes Kirstin One Man Clutch Model; Kirstin One Man Drum Model; and Kirstin Horse Power Model. Explains four easy ways to pay. Filled with valuable information for farmers. Send Coupon for it quick. Also for Special Agent's Offer. # PAPA QUEERS ANOTHER OF WILLIE'S DEMONSTRATIONS

DEAR TOMMY: I invented this smoke absorber because our cook gets the house full of smoke every time she broils a steak. Papa thought so well of it that he got a promoter to look at it. But while I was getting the broiler ready he put the suction wheel in backward and it sucked about a bushel of soot down the chimney! Yours, etc., WILLIE.

# MEN ARE WANTED

## *To Keep the Torch of Liberty Alight*

The army, the navy, the ammunition factories, the shipyards, the mines and the hundreds of industries which play an important part in war work are calling for men, men—more men. The purpose of each and every one of these branches of war activity is to help keep the torch of Liberty alight. Every effort must be made to release as many men as possible for such employment.

## *The Washington Farmer Subscription Plan Conserves Man Power*

Last year at this time the shortage of man power throughout the nation was already becoming serious. To do its share in meeting the situation, The Washington Farmer decided to do without its usual big force of subscription agents. In place of these we urged our readers to send in their own and their neighbors' subscription orders direct.

We congratulate our readers, therefore, that their efforts during the past year have put our co-operative subscription plan on a basis which enables us to keep it in force for a longer period.

This plan gives the subscriber the benefit of every penny which would ordinarily go toward paying the salary and expenses of the subscription agent. It brings our friends their state farm paper at a fraction of what it used to cost and at a price far below that which other high grade farm and family papers generally are obliged to ask.

In order that our readers may continue to save money on their subscriptions, we ask every subscriber to send in his or her renewal well in advance of the date of expiration stamped on the address label on the wrapper, and that you will also make an effort to send in the orders for your friends and neighbors with your own. Assistance of this kind, so cheerfully given by hundreds during the past year, will assure the success of our second year of cooperation.

**Remember—you receive The Washington Farmer every week—fifty-two great big issues in a year, chuck full of the best of all-around family reading at the remarkably low cost, under our cooperative plan, of only 50 cents for 3 years. Send your orders in today and get your share of the money saved.**

**Rates:-25c For 1 Year 50c For 3 Years $1 For 5 Years**

**The Washington Farmer.** Oct. 24.
Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

# Cardinal Qualities

## Courtesy, Industry and Honesty

By Dr. S. B. Nelson.

I talked to a friend of mine a few days ago, and in the course of the conversation we discussed several questions pertaining to the bringing up of boys—giving them a good start for the right kind of citizenship.

"I impress upon my boys that there are three cardinal qualities they must have to succeed in the right way," said my friend. "They may succeed for a time without one or the other of these qualities—but without all three they can never get to the top and stay here."

The three cardinal qualities my friend mentioned in this connection were courtesy, industry and honesty.

Our daily experiences and observation will prove to us the truth in what this man said. Most of us have met in the course of our lifetime some one who was lacking in one or the other of these cardinal qualities. He may have been a very industrious man and perfectly honest—but he lacked courtesy! Because of this he failed to get from life what should have come to him through his honesty and industry.

Another we may know is honest and courteous, but lacks industry. Admittedly, this would be rather a rare combination, for lack of industry is certainly a first cousin to dishonesty, and usually is linked with it; still, it is conceivable that a person may be courteous and honest but lazy; and just how successful in any undertaking would such a person be? It requires no imagination at all to make a prophecy.

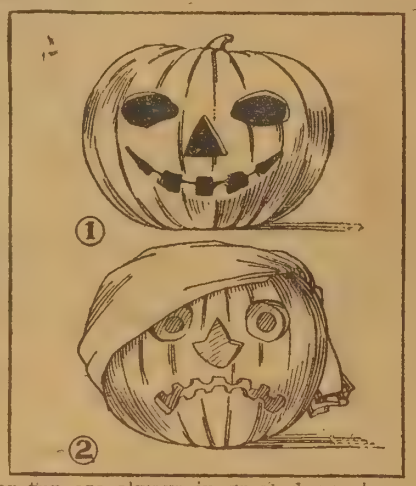
Then we see the man who is industrious and courteous but not a bit honest. This man we presently class as "a smooth tongued rascal," and will have none of him. He reminds us of the story of the Scotchman who made it a rule of his life to speak ill of no one. If he spoke at all concerning a neighbor, it was to speak of the good in that person, and he could always say something good about any man.

A friend asked this Scotchman one day what good thing he could say about the devil.

"Verra industrious," replied the Scotchman. He may have added in truth that the devil is courteous, if being smooth-tongued and subtle can pass for that quality.

So the courteous and dishonest individual is about the last one we desire to have dealings with.

I say that one who is not industrious, honest and courteous can not be a good live stock man. He may not be industrious enough to care for the animals properly; or not honest enough to deal fairly with customers who come to him to buy; or, failing in courtesy, he will mistreat the animals and offend the public with whom he deals. So, lacking any one of these three cardinal qualities, sooner or later he will fail, or, at best, can only struggle along in a mediocre way.



I should say that the parents who put into the lives of their children these three virtues accomplish two important results: They safeguard the future for their children, provide them with a very fine kind of life insurance; and, secondly, they provide for the welfare of their immortal souls. You can not find much in the theologies that is not comprehended in these three words—Courtesy, Honesty and Industry.

### Hallowe'en Fun.

Possibly you have already made your plans for a Hallowe'en party, but ideas

for fun are always in great demand, so I shall give you a number.

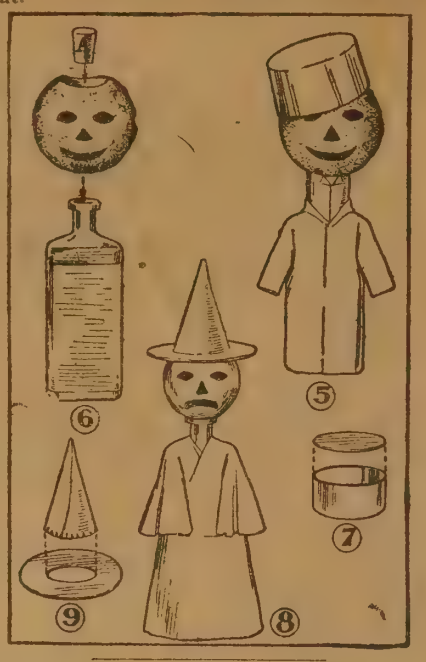
The fun should begin the instant the guests reach your home. A ghost or witch to receive at the door, with a number of lighted jack-o' lanterns placed around her, is the proper idea. A ghost should wear a sheet and pillow case costume, and a witch should have a peaked hat, pair of smoked spectacles, gray dressing gown and a broom.

Figs. 1 and 2 show two forms of pumpkin lanterns. No two of your lanterns should be alike. Fig. 1 shows the ordinary type of jack-o' lantern. The large teeth are an important feature to make a fearsome appearing face. The old pirate jack-o' lantern in Fig. 2 has his eyes, nose and mouth backed with colored tissue paper. Use white tissue paper for the eye openings, pasting a round center of black to one and a center of red to the other, for pupils; then back the nose opening with green tissue paper and the mouth with red tissue paper. A turban of red cloth supplies the finishing detail.

Did you ever hear of this method of fortune-telling? The guests are sent one at a time to a tent in a corner of the room where a witch hands them a mirror, which upon being breathed on tells what the future holds forth for them. This is how the trick is done. The witch writes the fortune upon the mirror with French chalk, then rubs it off with a handkerchief so no trace of the writing can be seen. When the mirror is breathed upon, the moisture makes this writing reappear.

Pinning the tail upon the witch's cat is lots of fun. Upon a sheet or large piece of wrapping paper make a drawing of a witch astride of her broom, with her cat seated behind her. The sketch in Fig 3 will help you in drawing this. Use black crayon or charcoal. Prepare short pieces of clothesline with a small safetypin sewed to one end, as shown in Fig. 4, for tails.

Blindfold the guests, one at a time, and start them across the room with instructions to pin the tail upon the cat.



When the time arrives for ghost stories, alcohol should be poured in a saucer and a match applied. This will produce a blue, ghastly light.

Figs. 5 and 8 show appropriate favors for the table. The head of the goblin (Fig. 5) is an orange hollowed out jack-o' lantern fashion, and a small bottle forms the

body. Fig. 6 indicates how the head should be fastened to the bottle by a cork (A) pushed down through a hole in the orange into the neck of the bottle. Make a collar of white paper, a gown of colored tissue paper and a paper cap as shown in Fig. 7.

Make the witch (Fig. 8) in the same way as the goblin, but with an apple head. Fig. 9 shows how to prepare her peaked hat.

# "Y" Does Not Profiteer

By Charles Dillon.

Don't let any one tell you that the Y. M. C. A. or some other of the seven organizations in the united war work campaign makes your boy pay for the things he gets at the front! There's nothing to it.

In the front line the "Y" sells nothing. Chocolate, fruit, soup and cigarettes are given away for the asking, to the amount of hundreds of thousands of dollars. In the canteens further back tobacco, which is the largest item, is sold at the same prices as in the quartermaster's stores, the "Y" standing the transportation cost, which amounts to a very large total. The "Y," which is the name used by soldiers everywhere for the Y. M. C. A., never has and never will make one cent of profit on its activities.

This is just as true of the Salvation Army, the Jewish welfare board, the war camp community service, the K. of C., American Library association and the other war work organizations. They are not in the war for profit; they are our representatives in camps of this country, and in the other countries where our men are fighting, our representatives sent out to supply the comforts and entertainments and the helpful companionship or advice which will make life worth while living and bring our boys home in better condition than when they left.

### CALIFORNIA SHOW COMING.

The California International live stock show will be held at San Francisco, November 2-10.

# To Cure Children of Stammering

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Dr. Hirshberg.

After recovery from illness children are usually very much petted, and as a result sometimes show signs of affectation by speaking in an unusual way. It is true, on the contrary, that sometimes stammering is the direct result of illness or one of the signs of growth. It is most common among children of 5 and more and is so slight at first that it is hardly noticed by parent or child.

It is absolutely essential to take every possible step to prevent the development of stammering, as it is seldom that the child outgrows such an ailment. Not only does the child not outgrow the stammer without serious efforts on the part of the parent to correct it, but the chances are that this speech impediment will grow and develop as the child advances in years and what at first seemed insignificant may become a permanent defect.

The cure for stammering is gentleness, calmness and careful attention on the part of the parent. Excitement should be far removed from a boy or girl inclined to stutter, for there is nothing more harmful to this state of being, perhaps, than a constant jolting of the emotions.

When a mother seems that her child has the habit of stuttering, she may immediately begin to correct the wrongly pronounced letters and syllables, and urge the child to repeat after her the proper pronunciation.

### Patience and Persistence.

In her effort to correct, the parent should speak quietly and distinctly, and without startling the child by too sudden interruptions. If the child, moreover, has failed to make himself clear about a statement or a wish, it is part of the training by the mother not to try to understand what was said, until each word has been carefully restated. No wish of the child should, therefore, be granted until he speaks clearly, though with effort. The manner of correction, however, should always be kindly and patient, and too sudden or violent commands should not be practiced, for these startle the emotions and, therefore, much damage is likely to be done.

Encourage the child who stutters to take a deep breath before he attempts to speak and to make this a habit. Simple, short stories told to stuttering children is a splendid exercise to correct the trouble. In the midst of the story, pause every now and then, and after taking a deep breath quietly ask the absorbed listener to repeat parts of the story slowly and distinctly. If the story is very short, the child may be asked to repeat the gist of it in his own words, so that those present can understand what he says, word for word.

### Aid for Lisping.

"If, as the child grows older, this habit of impeded speech continues, it will probably be necessary to employ a conscientious instructor who can, as a professional, give systematic training.

Lisping or mispronunciation of certain lingual sounds starts, at times, as casually as does stuttering. This habit is perhaps more of a sign of affectation than is the habit of stuttering, and can more easily be corrected. Sometimes, however, this too has a foundation in abnormal formation of the tongue, which may be too long, too short, too broad or too thick.

Those who are afflicted with the defect of lisping must carefully train themselves or be trained to place the tongue where it belongs, and its tip exactly on the teeth or palate when it is necessary to utter words which demand this position. In the word "sin," for example, the lisper should carefully draw in his tongue and raise the tip. It is better, moreover, to raise the tip of the tongue too high rather than not high enough, and this must be especially stressed at the outset of the correcting exercises.

The word "zone" may be practiced with benefit. Let the mother pronounce the "z" by itself and keep up the buzzing tone for a time and then add the rest of the word, "one." Let the child repeat this exercise for the tongue, and pronounce at length, and in the same way as many words as possible beginning with "z." When the child once learns to keep his tongue inside of his mouth, and contracted, with its tip at the teeth, he will soon learn to pronounce all the dental words correctly.

No child is too young to be taught systematically if due care is taken not to fatigue or irritate him.

## Save Pits and Shells for Uncle Sam

PHOTO TAKEN NEAR CHATEAU-THIERRY SHOWS AMERICANS ADVANCING THROUGH A GAS-FILLED TOWN

Copyright, U. S. Food Administration.

An opportunity for any one and every one to do war work is now offered by the government. This opportunity is the saving of the pits of certain fruits and the shells of certain nuts, which are to be used in the making of gas masks. Receptacles for receiving the pits and shells will be placed in every city and town, at centrally located points. Uncle Sam wants you all to save the pits of peaches, prunes, plums, apricots, olives, cherries and dates, and the shells of Brazil nuts, hickory nuts, walnuts and butternuts. These must be cleaned and dried before being turned in. The charcoal carbon made from these pits and shells has an absorption value beyond anything else known. The greater the absorption of German-made poison gases, the less danger to the American soldier who encounters them. Two hundred peach pits, or seven pounds of nut shells will supply carbon for one mask. Make this your minimum task. Having saved enough for one mask, keep on for a second, a third and then keep on. Bakers, confectioners, wholesale and retail druggists, restaurant keepers, fruit sellers, hotel proprietors—in fact every source from which material for the masks can be got, has been lined up by the government. It only remains for the millions of American homes to join in the work. Housekeepers can either deposit their accumulations of shells and pits in some public receptacle, or can give their offerings to the local Red Cross chapter.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

**SYNOPSIS.**

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected.

## CHAPTER VII.

### Storm-Bound in the Haunted Cabin.

At last we met a horseman and stopped him.

"No, I didn't meet no cattle travelin' along the road," he informed us, in reply to our inquiries. "But I do recollect seein' a spotted steer lyin' in the shade, a good piece off to one side. He had long horns and wore a bell, and there was some other cattle with 'im. I didn't pay much attention to them, though."

"That's Lep and company; no doubt about that, I guess," Frank remarked to me.

"Where did you see them—how far back?" I inquired of the horseman.

"Oh, sever'l miles—I don't recollect. It was durin' the heat of the day."

"And whereabouts on this road shall we find a house?" Frank wanted to know.

"Must be 10 or 12 miles to the first one anybody lives in."

"Is there an empty house closer—one that we could find shelter in if the storm comes down on us?" I said to the man.

"Yes, one. That's five or six miles back. It's half a mile west of the road. But you can see the roof if you look close. You won't want to spend a night in that, though, I guess." The fellow grinned.

"Why not?" demanded Frank.

"Because—well, everybody says it's ha'nted. They call it the ha'nted cabin. Nobody that knows the place would stay all night there for love or money. It hain't been lived in for years and years. Never was lived in much."

"Oh, we'll stay there if we don't find a better place. The ha'nts won't bother us, and we won't bother them," laughed Frank.

"But why do people say the place is ha'nted?" I wanted to know, curiously.

"Had enough to make it ha'nted," the horseman replied. "It was built some 15 years ago; and less than a week after the settler moved into it, the whole family was murdered and scalped by the Comanches. Bloody endin' they come to."

We were both much interested, and Frank said:

"Seems to me now I'd heard of that place before. What kind of ha'nts do people see there?"

The man laughed a shivery laugh. "Some think they see one thing and some another. But it's mostly what they hear that scares 'em into fits—screams and groans and yells and sech like. Enough to make a feller's hair stick straight up, they say."

"Did you ever spend a night there?" I questioned.

"Ever spend a night there? Well, I ruther guess not. Not for $500 I wouldn't. I don't hang around no ha'nt-dens much any time, I can tell you, let alone at night."

He rode on his way and we on ours. Higher and higher climbed the cloud, and thicker and thicker deepened the gloom. At length we looked off to our right and could make out the roof of a house, barely distinguishable among the tree-tops.

"Yonder's the famous ha'nted cabin!" exclaimed Frank. "Glad we got here while there's light enough to see it. No time to lose, either. Bad storm brewing, or I'm a false prophet."

The deeper gloom of night was already settling down, and the utter silence that goes before a storm was in the air as we rode up to that cabin in the woods.

"Gloomy old place, that," Frank remarked. "If there was any other shelter within reach, don't know but I'd vote to give this the go-by. But I'd rather run against a whole caviyard of ha'nts than to get a soaking."

"Same here. It's the ha'nted house or the storm, and I choose the ha'nted house every time. Here goes!" I swung myself out of the saddle.

Frank did the same. "Of course that ha'nt-story is all stuff," he declared, rather loudly, perhaps by way of propping up our falling courage. For in the gathering gloom there certainly did seem to be something grewsome about the place. I did not reply.

We had dismounted at the end of the house, and now lost no time in stripping off our saddles.

"What makes these logs so black?" Frank suddenly burst out, walking up to the wall. But after rubbing his hand over them, he added, wonderingly: "Why, they're charred—burnt. Somebody must have been trying to set fire—"

He looked at me and I at him. Both of us had guessed what we afterwards learned to be the truth. The savages, after murdering the family, had piled brush against the end of the house and tried to burn it; but the logs, being green, had refused to take fire. The charred wall remained, and would remain while the cabin stood, a black reminder of the black deed enacted here.

Neither of us spoke of the matter again. Somehow the discovery had produced a depressing effect on our feelings. The house was in the woods, but rank grass grew among the trees, and crowded close up to the cabin itself. We selected the best spots we could find and lariated our horses there, as close to the house as we could get them. Then we walked around the uninviting structure.

It contained two rooms. One, the larger, was built of logs. The other, a side-room or lean-to, had been made by nailing boards—rived clapboards—to upright pieces. In one gable-end, near the rough-stone chimney, gaped a good-sized hole.

"Not a very cozy shelter, but a long shot better than none," Frank observed. "But we'd better get inside. I felt a drop of rain just now. This storm can't hold off much longer."

Taking up our saddles and other things, we went around to the open front door. Vic had been inside, making a tour of inspection, and now came to meet us.

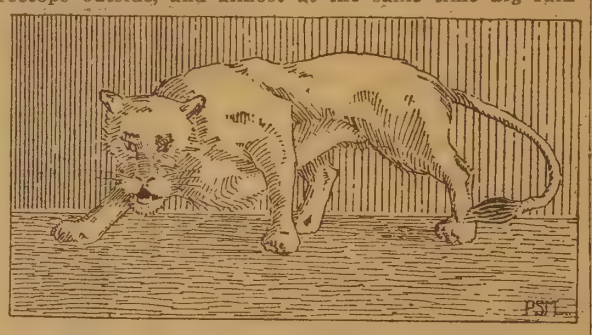
It was already dark within, and before entering Frank struck a match and held it up.

Most deserted houses lose everything that can be carried away, such as floors and doors and windows. But this place's history and uncanny reputation had protected it. The floor, which was of puncheons, or hewn slabs, remained as it had always been. There were no windows. The shutter for the front door was off its wooden hinges, but it was lying inside, and we afterward replaced it. A loft of puncheons, supported by big joists, hid all but one small patch of the roof, and the hole in the gable was not visible from the inside. A wide fireplace occupied a large part of one end. Dirt and leaves littered the floor. The room was rather large and very gloomy, and the corners and the fireplace and the underside of the loft were a black tangle of spider webs.

The match went out and Frank struck another. As he did so there was a whirring and flapping of wings overhead, whether of owls or bats, or both, we could not tell.

A shutterless door connected the two rooms. The leanto had no floor but the ground; and the winds had swept it half knee-deep with dead leaves. An open doorled out of it on the far side. After a hasty view, for the duration of a match, Frank said:

"Not a very inviting place to spend a night."



"Looks like there might be scorpions and centipedes and—spooks around here," I answered, shivering. "No wonder the old house wears a bad name. Let's kindle a fire. That'll liven things up a little bit, maybe."

An occasional drop of rain was spatting the roof, but the long-threatened storm had not yet begun. It was now almost as dark outside as inside; but we went out and groped around a few minutes, then came back with our hands full of sticks and brush. The fireplace, as well as the old chimney itself, was almost choked with spider webs and the trash that had lodged in them; but with a roar the flames soon swept them clean. Now we put up the shutter and closed the front door. The firelight scattered the gloom, but seemed powerless to banish it altogether.

Frank's saddlebags were soon open between us, and though our surroundings had depressed our spirits they had not depressed our appetites.

The storm was still holding off when we began our supper. We talked of everything but "ha'nts." For some reason neither of us cared to allude to them again.

In the midst of our meal came a roaring among the treetops outside, and almost at the same time big rain-

drops began to patter on the roof. Slowly they spattered the clapboards at first, then faster and harder, harder and faster. Present both of us gave a frightened start. Something had struck the roof a resounding whack.

"What was that?" exclaimed Frank, turning a startled, puzzled face toward me.

"Somebody must have hurled a stone," I replied.

Soon another stonelike object smote the clapboards, then another and another, all with deafening violence. Now the storm burst upon us in its fury.

"Hail!" shouted Frank, leaping to his feet. "Come on quick. We're in for a hailstorm!"

Out we both rushed into the darkness; and though the water and ice pelted us frightfully, we soon had our horses safe in the shelter of the shedroom. There we had to stand and hold them to keep them quiet; for the lightnings were now gleaming and the thunders crashing constantly, and the pelting of the hailstones on the roof had turned to a thunderous roar. Soon the lightning-flashes showed the ground white outside with deepening ice.

Soon the hail slackened and ceased, but the rain kept falling in floods. Now we fastened a stick across the door of the leanto and left our horses inside. Having rekindled our fire, we finished our supper. The hail had chilled the air.

It was Vic's fierce growling, almost in my ear, that finally aroused me. Now I became conscious of something or somebody moving about a few feet away. And while I was wondering what it could be the most blood-freezing, unearthly scream or shriek that had ever startled my ears rang out in the very room with us.

Both Frank and I were on our feet instantly, wonderfully wide-awake now.

"Did—did you ever hear the like?" Frank whispered, half gasped.

"No, I never did—in all my born days I never did!" I whispered back. "It must have been that—that—that thing."

We stood still and listened. Again something or somebody began to move about over the puncheons, just where we could not tell. It had been easy in broad daylight to declare our disbelief in "ha'nts." But here in the pitchy darkness, with those mysterious noises close by and that awful scream ringing in our ears our disbelief was very seriously shaken. Vic, backed up against me, kept growling, but in a badly frightened way. Putting my hand down to quiet her, I found every hair on her slim little body standing erect from anger. And I have a strong suspicion that the hairs of my head may have been doing likewise—from a very different cause.

"What could it have been, Frank?" I whispered. But he did not reply. Those mysterious movements had begun again. Then, suddenly, that same blood-curdling scream started up again. And scarcely had it started when another one joined in, and then others, all in the same room with us!

"Let's get out of here!" I cried.

"The quicker the better!" shouted Frank.

And even before that medley of shrieks and screams had died away we had found the door, torn it open and rushed forth into the rain and darkness!

A hundred yards I fled, with my hands held before me to ward off unseen trees. The darkness appeared solid. How much further I might have run in my panic is uncertain, but I was suddenly stopped by plunging headlog over something.

"Frank, where are you?" I shouted, under the impression for the moment that the ha'nts had seized me and that I might need assistance to break loose from them.

"Here I am!" he called back, from thirty or forty yards ahead. Like myself he had not been letting the grass grow under his feet. "What's the matter, Travis?" he called again, this time coming in search of me.

But now I was on my feet and had learned what had happened.

"Nothing serious," I replied. "I just ran over a tree or log or something, and turned a few somersets. What was that—that—those awful things, anyhow?"

"Sounded like—like the people the Comanches murdered."

"Yes, it did," I agreed with him. Our excited imaginations were equal to anything just now.

"Reckon it could have been the ha'nts that fellow told about?"

"I—I—don't—don't believe in ha'nts," was my reply, through teeth that would persist in chattering.

We were barefooted, and the rain, still falling slowly, sent a chill through me.

"Neither do—did I. But what else could it have been, Travis?"

That was more than I could tell him. So we groped our way together, then stood still in the rain and the black night, waiting and listening and shivering. Our horses could be heard snorting loudly. Vic, who had followed me, sometimes barked and sometimes reared up against me and whined anxiously. Still we stood and listened.

Strange sounds were issuing from the old house. Soon they grew louder. Here Frank uttered a half-angry, half-disgusted exclamation.

What a pair of silly cowards we are!" he burst out. "It's just animals—some kind of woods 'varmints.' Don't you hear them fighting?"

He was right. Two or more animals could be heard in furious combat. The battle finally came to an end, but they kept snarling and spitting at each other. Whether they were wildcats or panthers or what they were we could only guess.

"But how did they get into the house?" I wanted to know. "The front dor was shut, and—"

"They might have come in through the shed room," Frank suggested. "Oh, if I just had my old sixshooter and a light!"

The rain, slowly though it fell, was soaking us through, and we groped our way toward the cabin. The unknown "varmints" were still quarreling noisily, growling and screaming and hissing by turns. After drawing near where the house was believed to be—we could not catch the faintest glimpse of it—I made a discovery:

"Frank, they're not in the big room at all; I mean down where we were. Those sounds come from the roof. The varmints must be up in the loft."

"That's just where they are! They crawled in at that hole in the gable-end. Good hiding place for them up there. The hail or rain drove several of them in, and they're fussing for possession. They were screaming at one another when they scared a couple of gumps half out of their senses."

"And wholly out of their shelter, which is even worse this kind of a night," I shivered.

"Something's got to be done," Frank announced. "I don't want much more of this. I've got a match or two in my pocket. Let me see if I can strike a light."

He stood in the door and scratched match after match on the inside of a log, but all his matches were damp and missed fire. The quarreling was still under way upstairs, and he finally stole in, groped about till he found the saddlebags, then sprang back to the door with them. Now we were in possession of both matches and a formidable weapon.

The sixshooter he put into my hands. "Be ready when I strike a light," he whispered. "Might be a panther in there."

I grasped the weapon eagerly, and felt my courage rise with a bound. As the match flared up the noises in the loft ceased instantly. Cocking the sixshooter, I stepped inside, ready to do battle, if necessary, to regain possession of our shelter. But the animals we had heard, whatever they were, were all in the darkness of the loft.

The last stick of our wood had been burned and the fire had gone out; but there were plenty of leaves in the leanto, and we brought in some and started a blaze in the fireplace. Not knowing what might be over our heads, we moved about noiselessly, and spoke only in whispers. Vic, with her eyes fixed on the loft and her sharp little nose snipping the air, kept growling angrily, her hair straight up.

"Travis," Frank said, as soon as we had got our fire started, "we can't stay in here with that pack of varmints up there. We don't know what minute a panther will jump down on our heads. We've either got to move out into the rain and give them possession or drive them out."

"I've had all the soaking I want for one night," I answered, feeling of my dripping clothes. "We'll rout them out."

"But how?"

I flourished the sixshooter. "What's the matter with this? It's big enough to knock over a buffalo or a grizzly."

"Rather risky business, tackling panthers in such close quarters," he objected. "I can shoot pretty well with a gun, but no telling what I'd hit with that old concern."

# Christmas Packages

## For the Soldiers and Sailors

Christmas packages for the army overseas and marine corps detachments serving with the army will be limited to one three-pound box for each man, and that must be sent only in a prescribed container and upon receipt of a label from the man himself. Those labels General Pershing is having prepared and distributed, one to each man, to be filled out by him and mailed to any person he may select.

The containers, which will be available shortly, can be secured upon presentation of the label at the nearest Red Cross chapter, or if there is no Red Cross chapter in the community at the postoffice. The boxes being prepared will give the best protection to the contents, with the least possible weight. The size decreed, 9x4x3 inches, does not admit of either many or large presents, and the box must be packed so that it does not bulge nor weigh over three pounds. It must be mailed November 20 in order to secure delivery by Christmas. Aside from these orders, the only restrictions regarding package or content are against alcohol in any form, liquids, matches, labeled safety or not, and other inflammable substance. This year all packages must be referred to the Red Cross for examination before mailing.

In the navy a smaller and more scattered force permits of greater leeway as regards the Christmas box. The sailor's package may weigh as much as 20 pounds, whether sent by parcel post or express. If directed to a vessel abroad it should reach New York not later than November 15. Boxes must be of substantial material, of wood if sent by express, and must have hinged or screw tops to facilitate opening for inspection. The navy follows the rules of the army regarding explosives and alcohol, and requires perishable food to be packed in cans or glass jars.

Correct addresses of overseas army packages are insured by having each soldier fill out his own label, which is to be pasted on the cover of his box. To this designation should be added the sender's full name and address, placed in the upper left-hand corner of the side addressed. The navy department also urges the return address, and suggests that the package be labeled "Christmas box." According to navy orders, express packages are to be forwarded "Care Supply Officer, Fleet Supply Base, Twenty-ninth street and Third avenue, South Brooklyn, New York." Parcel post is to be sent according to the mail address given by the sailor for letter mail.

# To Cook Rabbit

## Fried, Roasted and Other Ways

It is important to kill and dress your rabbits in a clean, neat manner, so the carcass will look attractive. When cleaned and dressed place in cartons with clean white paper tucked underneath and they will command the highest market price.

When dressing a rabbit, hold it by the hind legs, with head hanging downward, strike a sharp blow with a stick on the head behind the ears, then cut the throat with a knife to allow it to bleed, then commence to take the hide off, beginning at the hind legs, which should be held up firmly by two strong cords. When started the hide pulls off very easily. If in the summer the fur is of very little value, but in winter it should be carefully preserved and a market secured.

Rabbits for fryers should be killed at from 2 to 3 months old, and for roasting or stews up to 1 year, but they are tenderer at a younger age than one year. They should always be well fed on either greens or well cured clover or alfalfa and grain, and when dressed should be plump and attractive.

### Fried Rabbit.

Cut in eight pieces; have your frying pan real hot; put any fat you may have in the pan; when brown add rabbit, sprinkle with flour and keep turning until browned; then add water, pepper and salt and let boil until gravy is smooth.

### Roasted Rabbit.

Lay rabbit in salt water for an hour; prepare dressing as for fowl. Stuff rabbit, cover with thin slices of bacon or a few pieces of butter or any kind of fat; pour a cup of hot water in the pan and bake one hour, basting occasionally. Add a little lemon juice to the gravy. Thicken the drippings with browned flour, to which should be added a few onions and a little of the dressing. Serve on platter garnished with greens and slices of lemon.

### Modern Rabbit.

Cut rabbit in as small pieces as possible. Brown well in a frying pan in hot butter or drippings. Add a few onions chopped fine and some browned flour. Season to taste and boil half an hour, then put in fireless cooker for several hours until meal time. This is delicious.

### Rabbit Stew.

Cut rabbit in pieces, put in stewpan, cover with boiling water and stew for one hour, adding more water if necessary. Season with salt and pepper, also a tablespoon of butter browned with flour. This plan can be varied with onions or any kind of vegetables one may have handy. The quickest and simplest method of preparing rabbit for the table and is unexcelled.

### Rabbit Pie.

Stew rabbit as above, put in deep pudding pan and cover with thick pie crust and bake until nicely browned. This will make a splendid meal for six people.

## WHAT OF THE LATE TOMATOES?

### Ripe or Green, They May Be Put Away for Winter Use.

Ripe tomatoes may be canned, dried, made into paste, marmalade or pickles. Green tomatoes may be brined whole for winter dishes or sliced and brined for pickles or made into marmalade. Save them all. Here are a few recipes from the U. S. food administration:

### Green Tomato Marmalade.

Two pounds tomatoes, 2 teaspoons ginger root, 1 1-2 cups sorghum, 2 lemons cut thin. Cut large green tomatoes in cubes, crush ginger and place in cheesecloth bag. Add sugar and lemon. Cook slowly without stirring until ingredients are tender and mixture is thick. Seal while hot.

### Tomato Butter.

Ten pounds ripe tomatoes, 6 cups sorghum, 3 pounds apples, 3 cups vinegar, 1-2 ounce stick cinnamon, 1-4 ounce whole cloves, 1-2 ounce ginger, 1-4 ounce mace. Tie spices in a bag and boil all ingredients together about three hours, or until thick, stirring frequently. Remove spice bag and seal.

### Tomato Carrot Relish.

One cup ground carrot, 2 cups ripe tomatoes, 1 cup sorghum, 1 teaspoon ground horseradish, 1 teaspoon ginger, 1 teaspoon vinegar, 1 lemon sliced thin. Cook carrot until tender, add tomatoes peeled and sliced and other ingredients. Cook slowly until mixture is thick. Pack in hot jars and sterilize.

### Green Tomato Mincemeat.

Two quarts green tomatoes, 1 1-2 cups sorghum, 1 pound seeded raisins, 1-4 cup citron, 1 1-2 pounds chopped apples, 3-4 cup chopped suet, 1 tablespoon salt, 1 cup cider vinegar, 2 teaspoons cinnamon, 1 teaspoon cloves, 1 teaspoon nutmeg. Chop tomatoes or run through meat grinder using coarse blades and drain off juice. Cover with cold water and let it come to a boil. Scald for half an hour and then drain thoroughly. Repeat until the tomatoes have been boiled three times. Add all ingredients except spices, stir well together and cook until thick. When cold add spices and stir thoroughly. Heat and seal in glass jars.

### Pumpkin Butter.

One gallon cooked mashed pumpkin, 1 quart or less sorghum, 1 gallon boiled cider, spices to taste. Boil about two hours and stir constantly, or cook in stove until proper consistency. Seal while hot.

## APPLE FORECAST VERIFIED.

The prediction of $50 a ton bulk apples, f. o. b. shipping point, recently made by the writer, are being verified at Caldwell. Quite a number of cars have lately been sold at that figure, orchard run, clean stuff, regardless of size.

The forecast on box apples is also being realized, and prices for leading varieties are stiffening each week. Well-informed apple men fear shortage later on, as most of the light crop this season is being rapidly shipped out.

Winter Bananas and Delicious are bringing the grower, boxed, $2 to $2.25, right at home. Good Romes, fancy and extra fancy, combination pack, are held at $2, and other good winter sorts are about the same.

This reflects the condition of the local markets. Culls of any kind, not decayed, are in great demand for manufacturing into byproducts, and so the grower who has anything in the shape of an apple does not have to look far for a customer.

A. E. G.

## TO CLEAN AN OILED MOP.

These oiled mops lose their efficiency when they become too dirty and caked with dust. They may be washed in strong hot suds, but this can be done much better if the mop is first washed in gasoline to cut the oil. Gasoline which has been used for cleaning should be saved for this purpose. After the mop is well washed in gasoline let it dry, then wash in suds. Then when thoroughly dry, oil it again and it is as good as ever. The best way to apply the oil is to pour a little in the tin box the mop comes in and put the mop with the strings down into the can and let it remain for a few days to evenly absorb the oil.

## POSTPONE FARM BOND SALES.

The federal farm loan commission has announced that no more bonds of the federal farm loan bank will be offered for sale this year, owing to the general policy of curtailing bond sales that are not absolutely necessary during the war. The commission announces that the banks have on hand, as the proceeds of the last bonds sold, sufficient money to take care of the applications for loans to farmers up to nearly the end of the present year. Bonds will again be offered probably early next year in order to keep the land bank operating actively.

Cuticura Soap IS IDEAL For the Hands

Soap 25c., Ointment 25 & 50c., Talcum 25c. Sample each mailed free by "Cuticura, Dept. F, Boston."

What 15c will bring You from the Nation's Capital

*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*

The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth. Now in its 28th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

The Pathfinder, Box 89, Washington, D.C.

LILLY'S SEEDS For Fall Planting

BEST FOR THE WEST

To lose a crop or part of a crop these days of food shortage is a calamity. Do not take chances with inferior cheap seeds or seeds not acclimated.

We test our seeds not in a general way but specifically for climate, soil, germination and pedigree. LILLY'S tested seeds, northern grown, are good seeds—by which we mean clean, pure, strong seeds, capable of producing the maximum crop of superior quality.

# A Few War Recipes

By MARGARET PALMER.

The following suggestive recipes have proved very helpful to us in using rice, hominy, eggs, fish and pearl barley.

**Rice and Fish Balls.**

One or two cups of cold rice, one cup of flaked fish, left over fish can be used, one egg. Beat egg until light, add rice, fish, a little salt and pepper. Form into balls and bake until brown. This goes well with almost any vegetable. They are nice for breakfast or supper.

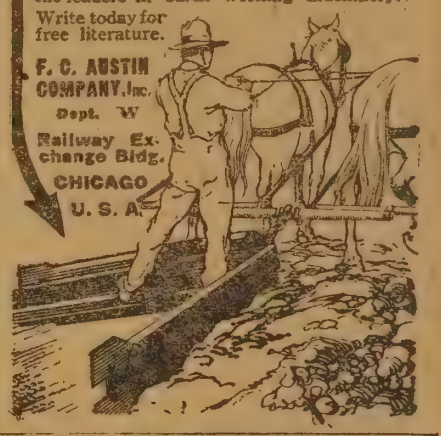
**Rice, Codfish and Eggs.**

Two cups of cooked rice, one and one-half cups of boiled or left-over creamed codfish, one tablespoon butter substitute and four eggs. Have ready a well-greased casserole or a baking dish and arrange in alternate layers the rice and fish, finishing with the rice. Break the eggs on top whole. Season with salt. Dot with the butter substitute. Bake until well heated through and until the eggs are done. This dish can easily be prepared in individual baking casseroles or cups and an egg placed on each.

**Hominy and Eggs.**

A half a cup of boiled hominy, two eggs, one cup of milk, one tablespoon of butter substitute, a little salt. Add the milk to the hominy and beat in the eggs with a fork, add the salt, fat and pour into a well greased dish or casserole and bake 20 minutes. This can be made into a pudding by adding a little sweetening and a few dates or raisins.

**Ditching-Draining Grading**



Farmers who want to make money and save labor, write for our illustrated folder. Learn all about the new and remarkable *Austin Farm Ditcher* and Road Grader—a machine of sturdy, simple construction, wide range of work, and low price. It is revolutionizing farming.

**THE AUSTIN**
**COSTS LITTLE—DOES MUCH**

Cuts V-shaped ditch to depth of 4 feet, grades roads, builds terraces or levees. Reversible, of all steel construction—the supreme tool for digging drainage ditches. Made by firm 40 years the leaders in earth working machinery.

### Dearest of Plamates Is Ella.

Dear Aunt Nellie: I live on a farm seven miles from Wheeler. We have two cows and two calves, many horses, chickens and geese. I have to walk almost one mile to school. When I started to school last fall my dearest little playmate, Ella Behrenda, and I were in the fourth grade, and now we are in the sixth, class A. We both want to go through high school and be schoolteachers. Ella won the gold medal at Ephrata, May 4. I learned a reading, too, but I couldn't go. I'm glad Ella got the prize. She and I sang a song at the county contest at Neppel. The name of it was "When Pershing Gets the Goat of Kaiser Bill." Father and mother have Liberty bonds. I have three sisters. Their names are Barbara, Pauline and Eleanor. I haven't any brothers in the army. Today I made the paper beads that Aunt Nellie showed us. I made them of green paper and strung two white glass beads between each green one. They look very pretty. My birthday is April 4. I was 12 years old. Have I a twin? If so please write to me.—Margaret Ottmer, Box 41, Wheeler, Wash.

### Blue Eyes and Auburn Hair.

Dear Aunt Nellie: I am 13 years old. I have blue eyes and auburn hair. My birthday is July 8. I am in the ninth grade. I live on a 160-acre farm. We have gasoline engine and irrigate about 15 acres of alfalfa and one and one-half acres of garden. We have three horses, two cows, one calf, four cats, two dogs, one pup and several head of sheep. I have eight sheep of my own. Their names are Helen, Bessie, Ruby, Flora, Nora, Shirley, Herman and Flossie. I have one brother and one sister. Their names are Dea and Frances. Our school organized a Junior Red Cross and I am making a scarf. We only have five members. We sold a pig and give a basket social to raise money for the Red Cross. I can crochet, tat and do plain knitting. What is it that has four legs, two wings, is flat on the back and never sings .When is a bed not a bed? When is a dog's tail not a dog's tail? What is the difference between a pie and a pair of pants? I will answer the puzzles next time.—Derla McManamon, Othello, Wash.

### Rivers Beautiful in Springtime.

Dear Aunt Nellie: I am a girl 13 years old. My birthday is December 9. Have I a twin? If so I wish he or she would write to me. I live on a wheat farm about seven miles from Snake river and five from Palouse river. They are very beautiful in the springtime. The Palouse falls are about five miles from here. They are 195 feet high and are situated in some very beautiful rocks. I live seven miles from Hooper. Hooper is a village situated on the Palouse river. It is a small village but has some beautiful buildings. I am in the eighth grade. My favorite studies are geography and history. How many of the cousins like them best? I go to district No. 183. This part of Whitman county is not thickly settled. I would like to correspond with Josephine Wagner, Tekoa, Wash. Papa is haying now. I milk a cow every night and morning and dig weeds out of the potatoes and corn. I hope my letter will be interesting to every cousin. I won $20 worth of war savings stamps. I will write more letters.—Bessie Ross, Box 3, Hooper, Wash.

### Hester Likes the Country.

Dear Aunt Nellie: I was 10 years old September 28. I go to the Waterloo school. We have a Victrola at our school. I have light brown hair and brown eyes. Have I a twin? If so I wish he or she would write me a letter. I have a pet lamb and I like her very much. Her name is Flossie. I live on an 80-acre farm near the Columbia river. I like the country very much. We have six horses, five cows and three calves. I have one war saving stamp and have knitted some wash rags for the Red Cross. I have four brothers and three sisters, Archie, Clarence, Milton, Harry, Helen, Goldie and Sylvia. I have two cousins in France that I know of and some more in the training camps.—Hester Eslick, R. R. 1, Daisy, Wash.

### Cans Fruits and Vegetables.

Dear Aunt Nellie: I am 13 years old and will be 14 next April 21. Have I a twin? If I have I would like to hear from her. I am in the seventh grade. I have four brothers and seven sisters. One of my brothers passed the eighth grade this last year and one of my brothers will go to the army. Three of my sisters are married. We have not very far to go to school. I like spelling the best of any study. There are eight boys in our school and seven girls. I picked strawberries this summer for two days at 40 cents a crate and I earned $2.40. I picked three crates each day. We have organized a canning club for the boys and girls. I belong to it. I have canned some raspberries, corn and beans. I also belong to the Junior Red Cross at school. The girls in our school have made a quilt already for the Red Cross and the boys are snipping old goods to make the soldiers pillows and the women have organized a Red Cross. They sew in a little old house near the school house. This is the first year we have taken the Farmer and we like it very much. I like to read the letters the best of all. I think it is very interesting to find a twin. I will write again.—Bertha Schoepke, R. F. D. 1, Greenacres, Wash.

### Likes All Her Studies.

Dear Aunt Nellie: I live out on a large wheat farm in Adams county about five miles from Benge. I am 12 years old and in the eighth grade. I like all the studies pretty well. We have quite a few horses on the farm. Some of their names are Denver, Nance, Clide and Lady. We have a calf named Nellie and a lamb named Fanny. She drinks milk yet and eats grass. We have four little kittens who are just the size to be cute. Two are blue, one is black and one is gray. We have a dog that we call Joe. Can any one write and tell me what we could do in a patriotic club and maybe we could start clubs in different parts of the country. In each place that one is wanted we could have them choose officers for themselves and then we could see what we could do for the Junior Red Cross. I think it would be nice if my cousins would like to. This is the first time I have written to the Children's Corner, and my sisters and I are sending ours in the same envelope to save paper and stamps. I hope to hear from Aunt Nellie, about my plan and from my cousins.—Lena Duncan, Box 156, Benge, Wash.

### Picks Gooseberries for Canning.

Dear Aunt Nellie: I am the only girl in the family, but I have two brothers whose names are Loran and Oliver. I have light hair and blue eyes. I am 10 years old and my birthday is October 27. Have I a twin? If I have I wish they would write to me. We have a car which is called the thrift car. The boys have a beautiful black saddle pony which we call Black Beauty. She has a white star in her forehead. May I join the Children's Corner? I love to read the letters written by the cousins. We live on the farm and I like it very much better than in town. I know how to knit, tat and crochet, but I don't have time to do any of them. I pick gooseberries for mama to can. We have strawberries and raspberries and vegetables in our war garden. I have a pretty little black and white spitz dog which we call Buster. I have a calf which I think I will sell and buy war saying stamps with the money. I am in the sixth grade at school and I like school fine. I will give some riddles: Why does a miller wear a white hat? Why is a washerwoman like Saturday?—M. Anderson, Garfield, Wash.

### Reva Milks Two Cows.

Dear Aunt Nellie: I am 12 years old and am in in the sixth grade in school. My teacher's name is Miss Rogers. We are going to have her two years. My birthday is May 20. Have I a twin? If I have I wish he or she would write to me. I am five feet three inches tall. If there is no twin, I wish one of the cousins would write to me anyway. I have two miles and a fourth to go to school. We are milking about 20 cows. I can milk a little. We are feeding 15 calves now. I ran a nail in my foot. I just began milking this spring the 1st of May. I milk two cows. At the Red Cross sale if they sold everything they would get about $2000 in everything. I like to go flower picking in the spring.—Reva Lamb, Box 162, Coulee City, Wash.

### Will Come Again.

Dear Aunt Nellie: I live on a 10-acre farm two and a half miles from Kennewick, with my aunt and uncle. I am 13 years old. My birthday is December 28. Have I a twin? If so I wish they would please write to me or any one else who sees this. I read the letters in the Corner and find them very interesting. Today I wrote to Viola Tarbert, one of the cousins. We raise tomatoes, muskmelons, potatoes and a number of other things here. We have 600 little chicks, also a lot of big ones. I have no brothers or sisters, and get quite lonesome sometimes. I would gladly answer any letter. We have a big bulldog whose name is Bull, and a little puppy, whose name is Razz. I will write again some other time.—L. Lita Forslund, Kennewick, Wash.

### Six Dear Little Ducks.

Dear Aunt Nellie: I was so interested in the Corner I thought I would write for the first time. My birthday is July 24. I was 12 years old. Have I a twin? If I have I would like to hear from her. I am in the eighth grade. I have two miles and a quarter to go to school. In spring and fall I have to walk, but in winter my brother takes me to school in a wagon. I live about 30 miles from Spokane. I like to ride in the auto about 30 miles. I'll send my picture to you if you would like to have me. My sisters and I have a little camera and I'll send you a picture of our house, too. We have six dear little ducks, which I think a lot of. Verna Flower, R. F. D. 1, Box 5, Fairfield, Wash. We surely do want your picture, dear. If it is clear, perhaps we could print it. Aunt Nellie.

### Go Riding in Their Car.

Dear Aunt Nellie: I am 9. I have a light complexion, with blue eyes and gold hair. My hair is naturally curly. I am four feet and eight inches tall. I have two brothers and one sister. I am 10 years old. My birthday is May 6. We have eight head of horses and seven colts.

We milk two cows, Roany and Blacky. We have 11 head of cattle and 12 calves. We have four sows and about 29 little pigs. We have a car and go out riding every Sunday. Mama has 18 White Leghorn chickens. I have six little Leghorn chicks and a bantam hen. I live on a 480-acre farm. We have 85 acres of wheat, seven of oats, one and a half of potatoes, 12 of maize and five of alfalfa. Mama is a member of the Red Cross. My two brothers and I have five thrift stamps apiece. For pets I have only one cat. His name is Tom. We have a big orchard. There are apple trees and cherry trees in it. Have I a twin? If I have I wish she would write to me. We bought a tractor and a plow and papa is plowing 120 acres.—Alice Clifford, Greenacres, Wash.

### Drive One Pony to School.

Dear Aunt Nellie: I was 12 years old July 22. Have I a twin? If so I wish she or he would write to me. I have two brothers. Their names are Everett and Shannon. Everett is 13 years old and Shannon is 9. We go three miles to school. We drive one pony to school. Her name is Dolly. I am in the sixth grade. My papa died three years ago, May 29. He was good to me. My mama got married June 5, 1918, to another man, just as good as the one she had before. Mama knew he would be good to us children if she married him. We lived on a 160-acre farm. Mama rented the place to my uncle, and June 10, 1918, our house burned down. It was a seven-room house, so you may know it was a nice big house. We live on a 180-acre farm now. We have five horses and four colts, and we have seven cows. I have a pet kittie named Pet. We have one pig and one dog. The dog's name is Chub. I will write again.—Albert A. Lund, Miles, Wash.

### Jump in After the Fish.

Dear Aunt Nellie: Grandpa takes the Farmer and I enjoy reading the cousins' letters very much. I was 13 years old December 4. Have I a twin? If so I would like very much to hear from her or any of the cousins that wish to write to me. I live on a large farm. For pets I have one black dog, two cats and one black pony named Midget. I like to ride her after the cattle and horses. I used to ride her to school, but last year I went away to school so she had a rest. I am in the eighth grade. There is a creek half a mile from here where some fish live. I go fishing sometimes, but the fish are so smart sometimes I can't catch any. If I can't catch them with the hook maybe I can jump in after them.—Mable Proctor, Route 3, Box 40, Wenatchee, Wash.

### Maude's First Corner Letter.

Dear Aunt Nellie: This is the first time I have written to you. I am 13 years old. My birthday was May 8. Have I a twin? If so I would like to hear from her. We have two incubators setting and we have nearly 150 little chickens. I am in the sixth grade. I live about one-half mile from school. I am going to write again.—Maude Lackey, Fruitland, Wash.

### Dog Goes After the Cows.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. For pets I have a dog, cat and a chicken, but I like my dog the best. He is white with brown spots. He goes with me after the cows. That is why I like him so well. Have I a twin? If so I wish they would write to me.—Hazel Lackey, Fruitland, Wash.

# News for Breeders

Among the awards made by the Holstein-Friesian association of America for the fiscal year ending April 30, 1918, the names of the following Washington breeders appear:

William Bishop, Chimacum, $210; Carnation stock farms, Seattle, $106.25; Charles Eldridge, Chimacum, $130.25; H. J. Evans, Ferndale, $22.75; J. H. Hulbert, Mt. Vernon, $83; C. E. Peabody, Seattle, $18.50; A. E. Smith, Seattle, $07.75; F. S. Stimson, Seattle, $259.75; J. G. Von Herberg, Seattle, $246.50; Yarr Bros., Chimacum, $8.75.

These awards were made on a milk or butterfat basis.

### IS A GRAND CHAMPION.

The picture above shows the grand champion Tamworth sow at the Washington state fair, shown by J. J. Oder of Yakima, Wash. She is of extremely large size, as the picture indicates, and is of true Tamworth type, the "approved bacon hog." H. A.

### HORSEBREEDING WILL GROW.

The blue ribbon stud at Colfax, Wash., received two cars of horses September 27 and another a few days since, making 60 stallions and mares now in the barns. Mr. Metz reports the sale of 70 horses last season and expects to sell more the one coming. He laughs at the idea of the tractor displacing the horse, but says it is a helper, especially in these times when the greatest possible production is needed. He believes farmers are just waking up to the fact that there is a shortage of horses, and thinks horsebreeding will be increased the next few years. H. A.

### SHORTHORNS TOP THE MARKET.

Recently two loads of Montana Shorthorn steers sold on the Chicago market for 18 cents per pound, the world's record for range steers up to that date. The Wisconsin record on the Chicago market was made by a load of Shorthorns. Iowa broke the world's record with a load of Shorthorns at $19.50, and early in October a load of Shorthorn yearlings from central Illinois exceeded this price by 10 cents, making the world's record of $19.60 per hundredweight.

### MUST SHIP MUCH MEAT.

Figures were presented to the recent convention of the American Meat Packers' association at Chicago indicating that America must ship to Europe before July 1 next enough meats and fats to make a total for the year of 2,600,000 tons. This will be an increase over the previous 12 months of about 1,000,000 tons.

### SHIPS MUCH LIVE STOCK.

A report from Myers Falls says that Ike Brady, a cattle buyer, has shipped to the Spokane market during July, August, September and October more than $500,000 worth of cattle, hogs and sheep, bought from the growers tributary to that point.

### Got Results.

Lewiston, Idaho, Oct. 12, 1918.

The Pacific Northwest Farm Trio, Spokane, Washington.

Gentlemen:

I take pleasure in saying that during the past year I ran my small classified advertisement offering Shorthorns for sale in your classified columns. I received 750 replies and made a satisfactory number of sales. When I decided on a dispersal sale at my farm at Fenn, Idaho, September 25, I thus had a list of 750 names, to which I sent catalogs or other advertising matter, resulting in by far the largest gathering of people ever at an auction sale on Camas Prairie.

I believe any one who advertises judiciously in the Trio can not help but get satisfactory results.

WILLIAM MULHALL.

# Silage for Defense

The importance of silage in the win-the-war activities of America is recognized by the Utah state council of defense, which is taking part in a great campaign designed to add 1000 silos to those already on the farms of that state. The council estimates that this number of silos would enable the farmers to care for 50,000 more cattle than they are at present able to carry.

Besides the state council of defense, the farm bureaus, United States department of agriculture, state agricultural college, county councils of defense and similar organizations are enlisted in the movement. Sugar beet tops are urged as good for ensilage, as well as corn and other well-known crops. Particular effort is to be directed toward using parts of crops that are now entirely wasted, such as the peapods, which can be secured from the canneries at little expense, and which are said to make excellent ensilage.

### BOYS AND GIRLS MAY HELP.

America's boys and girls are to have a chance this fall to help win the war. Seven great organizations engaged in providing for the comfort and happiness of our soldiers and sailors the whole world over have joined to give the young generation this opportunity to do its share.

The Young Men's Christian association, the Young Women's Christian association, the National Catholic war council (the Knights of Columbus), the Jewish welfare board, the war camp community service, the American Library association and the Salvation Army, in their united war work campaign to raise $170,500,000 for the continuance of their war activities, will challenge every boy and girl in the country to serve and to sacrifice in the "great cause." A separate division of the campaign, that of the Victory Boys, will have for its goal the lining up of "a million boys behind a million fighters." The girls, too, will have a separate division, to be known as the Victory Girls.

Those enrolling in either division must pledge to earn and give an amount to be individually determined for welfare work among our soldiers and sailors; and this means that no boy and girl can give money he or she has not earned.

The war has called half our workers away from their ordinary peace-time occupations, leaving much work undone in the homes and in the home communities. As the boys and girls will find their tasks in these now neglected fields, their united effort will go a long way toward helping us keep our affairs in order

## High Class Percheron Stallions

### At Breeders' Prices

American bred horses out of the best imported dams and sires carrying the blood of **Moulinet, Calypso, Dragon** and, further back, **Besigue, Brilliant,** and other great Percheron sires.

We have stallions that will suit the most particular, and at prices you can afford to pay. Now is the opportunity to buy.

See them at the Lewiston Stock show, or send for photos, description and pedigrees.

**WM. MULHALL, Lewiston, Idaho**

## JERSEYS

COST GOES DOWN — *the PROFIT breed* — PROFIT GOES UP

WHEN you begin to substitute Jerseys for "beef-makers" you immediately begin to see your feed costs go down and your milk profits go up. The Jersey, while famous for beauty, is even more noted for the profit she yields in rich milk, fancy butter and premium cheese. In these days of high-priced feed the Jersey is supreme.

Write Breeders for Pedigree and prices. Let us send you some eye-opening facts about Jerseys. These facts have started many a man on the road to dairy success.

**THE AMERICAN JERSEY CATTLE CLUB,**
**314 West 23rd St., New York City.**

### Golden Glows Chief 61460

One of two gold medal Jersey bulls west of New England states. Bred by us. Two of his sons in service in our herd. A few animals, all ages, both sexes, for sale.

**IRON MINE FARM, Oswego, Ore.**
W. M. LADD, Owner.
D. BROOKS HOGAN, Mgr.

### All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

**ED CARY, Carlton, Ore.**
Station, La Fayette, Ore.

### Doerfler Farm Jerseys

Have largest herd average in the world considering size. Entire herd of eleven head average 599.42 fat. Herd headed by Gertie's Poppy's St. Mawes. The Cary breeding is our standard.
See us at the state fair.

**F. A. DOERFLER, Silverton, Ore.**
Phone 54 Silverton or 43F24 Salem.

### Anoka Farm Jerseys

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120 lb. granddam. St. Mawes breeding. The Best in the West. Prices very reasonable. Address

**R. B. SEELY,**
**R. 5, Sherwood, Ore.**
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

### Register of Merit Cows

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.

**FOX BROS., Silverton, Ore.**

### LYNDEN JERSEY FARM

Herd sire son of Fororio's Olindes Pegis, of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to

**P. MEENDERINCH, Lynden, Wash.**

### Ready for Service

Young bulls of Golden Glow's Chief, and King Mella Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.

**HENRY STEWART, Albany, Ore.**

### Dairymen, $75.00

buys your choice of two bull calves, both two months old; solid color, good individuals; out of register of merit dams and by bulls with heavy R. of M. backing. If you are looking for a bargain here it is.

**JOHN B. STUMP & SON, Monmouth, Ore.**

### Who Wants This Bull?

A double grandson of Kadia F., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.

**N. H. SMITH, Oregon City, Ore.**

### Goldie's Nehalem Beauty

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring.

**CLIFFORD F. REID.**
Wilcox Bldg., Portland, Ore.

### Jersey Bull for Sale

I am offering at a sacrifice my young herd bull, dropped December 15, 1916. Has blood of Golden Glow's Chief and Majesty's Togo. None better anywhere. Write

**E. F. MARYATT, Grandview, Wash.**

## SHORTHORN CATTLE

# Live Stock Breeders!

## Here Is Your Chance

**Fifty of the great herd of Shorthorns owned by the I X L stock ranch in the Boise valley are to be offered at AUCTION WEDNESDAY, NOVEMBER 13, 1918.**

SOME OF THE COWS TO BE SOLD

Included in sale is the great sire, Diamond Count No. 487809; also 20 cows (10 Scotch), some with calf at foot, others bred; 16 young heifers (8 Scotch) and 14 bulls (4 Scotch).

This herd is of the highest registered type and in splendid condition.

The following registered Percherons are also to be offered at auction during this sale.

**Three yearling fillies, one 2-year-old in foal, six this year's colts.** **Five fillies. One stallion.**

The following farm machinery will be disposed of at auction: One combine, one 12-foot drill, one Smith Form-a-Truck, one self binder, three mowers, hay rakes, one 16 h. p. R. & V. gas engine nearly new, one ensilage cutter, one De Laval separator, one roller mill, one fanning mill, graders, scrapers and all kinds of implements and machinery.

Household furniture for what it will bring.

In addition to the above we are offering at private sale the following registered Percheron horses:

**One 4-year-old stallion**
**Two 3-year-old stallions**
**Five 2-year-old stallions**
**Four yearling stallions**
**Eight imported mares**

Will also offer at private sale mammoth jack Monarch, register No. 12248, 4 years old. This jack is justly considered the best in the state; stands 16 hands high and weighs nearly 1200 pounds. He has taken first prize wherever shown. Works quick and sure.

Also Monarch, the Second, register No. 23010; 1 year old. He has all the earmarks of developing into as good a jack as his sire.

Everything will go at a big sacrifice. The I X L ranch, consisting of 240 acres of highly improved land and excellent buildings, is for sale. It is 10 miles from Boise and five miles south of Beatty station.

It will pay you to travel far to attend this sale.

Write P. A. Sorensen, R. 2, Meridian, Idaho, for catalog and transportation to ranch on day of sale.

COL. E. MARSTERS & SON,
COL. AMOS MILLER,
Auctioneers.

**EDGEWATER FARM**

Young stock for sale, including senior calf, Edgewater Sentinel, grand champion 1918 Washton state fair. Herd government tuberculin tested.

ELBERT M. CHANDLER, Burbank, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Oct. 19.—Anxiety to even up trades rather than to risk surprise happenings over Sunday brought material advances today in the corn market. As a result the finish, although unsettled, was 1 3-8c to 3 1-8c net higher, with November $1.22 5-8 to $1.22 3-4 and December $1.18 1-4 to $1.18 3-8. Oats gained 1-2c to 3 3-4c. The closing in provisions varied from 20c off to a rise of 10c.

Bullish inferences drawn from the delay of the German answer to President Wilson's note had much to do with the evident tendency to reduce open trades in the corn market to a minimum. Shorts covered on a liberal scale as soon as business opened, and the top figures of the day were touched before the end of the first hour.

Reactions, which took place later, seemed to be due to moderate profit-taking on the part of the longs.

Oats followed corn, and after an advance receded somewhat. Country offerings to arrive were light.

Weakness in the hog market carried down provisions. Subsequently, however, the strength of corn led to upturns, but losses in pork, especially, were not altogether overcome.

### Cash Quotations.

CHICAGO, Oct. 19.—Corn—No. 2 yellow, $1.52@1.54; No. 3 yellow, $1.42@1.45; No. 4 yellow, $1.30@1.35. Oats—No. 3 white, 67@68 1-2c; standard, 68@69c. Rye—No. 3, $1.62 1-2@1.63. Barley, 90c@$1. Timothy, $7@10. Clover, nominal. Pork, nominal. Lard, $25.40. Ribs, $21.75@22.50.

### Pacific Northwest Grain.

PORTLAND, Ore., Oct. 19.—Grain, October delivery: Oats—No. 2 white feed, $54.50 bid. Barley—Standard feed, $48.25; asked, $48.50. November oats—No. 2, $54.50. Barley—Feed, $48.25; asked, $49. Oats—No. 3, $48; clipped, $49.50. Corn—Yellow, $55; mixed, $52.50. Eastern oats and corn in bulk: Oats—No. 3 white, $48; oats, 38-pound, clipped, $49.50; corn, No. 3 yellow, $55; corn, No. 3 mixed, $53.

### Minneapolis Grain.

MINNEAPOLIS, Oct. 19.—Flour—Unchanged. Shipments, 88,894 barrels. Barley, 84@92c. Rye, $1.57 1-2@1.58 1-2. Bran, $28.75. Wheat—Receipts, 972 cars, compared with 423 a year ago. Cash, No. 1 northern, old, $2.21 1-2. Corn—No. 3 yellow, $1.35@1.38. Oats—No. 3 white, 63 1-4@64 1-4c. Flax, $3.35@3.39.

## Portland Market.

PORTLAND, Ore., Oct. 21.—The butter market has become easier, but sellers have not reduced their asking prices on cubes. There is evidence of larger production in the country and the influenza closing order has had the effect of cutting down local consumption. With stock accumulating prices would no doubt immediately work lower but for the action of the city creameries during the week in advancing print prices.

Receipts of eggs are very small, and the market is strong and higher.

Poultry continues steady, with moderate receipts.

Dressed meat prices have become very weak with the declines at the stockyards and the lessened local demand.

The apple market is well stocked with orchard run and the cheaper grades, and the demand for fancy and extra fancy fruit is small. Prices range from $3.25 for extra fancy Delicious down to $1.25@1.50 for cooking apples.

Potato prices have not been lowered, but the demand is slow and prices weak. Yakima Gems are selling at $2@2.25 and Oregon Burbanks at $1.75@2.

Wool Administrator Green has resumed grading northwestern wools in storage here, and will value between 1,000,000 and 1,500,000 pounds for distributing orders in hand.

Hops, stagnant since harvest, are again showing signs of life, owing to the presence of an English demand. A few lots have already been bought for London account and will be stored here until they can be moved.

### Quotations.

Eggs—Oregon ranch, candled, 62@63c; selects, 66@67c.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 37c a pound; Coos and Curry, f. o. b. Myrtle Point: Triplets, 35 3-4c per pound.

| Bulls | 5.00@7.00 |
| Calves | 6.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

Quite a heavy run of hogs arrived during the night and early morning. The market was weak, declining 25 to 50 cents. Quality was fair.

| | |
|---|---|
| Prime mixed | $17.00@17.25 |
| Medium mixed | 16.75@17.00 |
| Rough heavies | 15.50@16.25 |
| Pigs | 15.75@16.25 |
| Stockers and feeders | 14.00@15.50 |

Bulk of sales at $17.25.

A light run of sheep arrived overnight. The lambs were good, and sold at $11. The market was steady at the following range:

| | |
|---|---|
| Prime lambs | $11.00@12.00 |
| Fair to medium lambs | 9.00@10.75 |
| Prime yearlings | 8.75@10.00 |
| Prime wethers | 8.50@ 9.75 |
| Best mutton ewes | 6.00@ 8.00 |
| Breeding ewes, 1 to 4 years | 12.00@16.00 |
| Breeding bucks | 25.00@75.00 |
| Bulls | 5.00@ 7.00 |

## Seattle Market.

SEATTLE, Oct. 19.—The average of worm stings in Washington apples is running much higher than early estimates, thereby throwing more bulk to the lower grades of fruit and decreasing the visible supply of fancy and extra fancy by a large percentage. The effect is showing more particularly in the noninspected fruit, for which there is a brisk demand. Markets are steady, but the general movement slow.

The demand for cheap fruit is unprecedented on this market, and jobbers who saw futures with clear vision and bought for cash are taking some good profits while handling the bulk of the business. "C" grade fruit is selling at $2 per box, and fancy stock is moving at $2.25. It is stated that there are more margins in this grade than any other.

Orchard-run fruit, practically free of worm stings, fair as to uniformity of color, but wild as to sizes, is bringing about $2 per box in open lugs of approximately 40 pounds. The unit of sale is 5 cents per pound.

Extra fancy apples are dull, due to high prices and substitutions of "C" grade and orchard run stock, which is plentiful. The retail trade reports quick and easy sale on the box basis, stating that buying for storage by consumers is exceedingly heavy.

Spuds are wobbling slowly and laboriously to some sort of a level, progress being made from the small lot or sack basis to commodity proportions in new quotations by the ton. The supply of Yakima gems is limited, and although some No. 1 stock is being offered, jobbers, selling by the sack out of the stores can not get over $35 to $40. The local market is being demoralized by liberal offerings of many grades and varieties of Puget Sound and island whites, which are moving at $30 to $35 per ton. The bulk of this stock will be cleaned up before a domestic balance is reached. The supply from all sources is today too extensive to bring about any market strength.

Onions are in a demoralized state. The best stock offered is Oregon fannons, for which buyers are bidding 2c per pound, sacked, off the street. Jobbers are holding off.

The demand for root vegetables is heavy. The Yakima valley is able to offer a rutabaga and turnip this season that is free of wire worms, pith and "woody" flavor, and buyers are taking hold vigorously. Colder weather would stimulate the demand.

There was a perceptible unsteadiness in the fresh ranch egg market for the week-end, and jobbers are more inclined to bid a little lower to producers for Monday. Nothing over 64 cents is offered, and there is a strong leaning toward 63 cents.

Butter sales are running on the average seven cubes of storage to one of fresh. The cream supply is diminishing, and will continue to the point of 25 per cent less than last week's average before the minimum is reached, according to jobbing houses, with no relief until April and May.

Poultry will be lower for the coming week. Jobbers are offering 1c to 2c per pound less to producers on hens.

## Seattle Grain.

SEATTLE, Oct. 19.—The unusually high percentage of gluten in Washington grown wheat this year will be the means of winning the bakery trade back to local avenues, according to tests by Seattle millers this week, who say that local wheat gluten is higher than any eastern hard wheat flour yet delivered excepting Dakotas, which have just begun to arrive. Eastern hard wheat flour, because of its better expansive qualities, has almost wiped out the demand for soft wheat flour from bakers, and this is particularly true since substitutes are being used.

Samples of eastern Washington early bart are showing 55 per cent gluten, but an excess of glaidin has shown in spots. The average for eastern flours shows only 40 to 46 per cent gluten. The advantage will, millers believe, enable them to compete with their eastern rivals in a year when the only buyers are the government in small quantities and from families.

Seattle millers assign the cause of their vanished markets to the high terminal wheat price to farmers which, they claim, made such a cost that they are unable to compete with middle western mills for their established trade in the southeast.

Wheat storage space here is filled. This fact, and that of the possible losses entailed to millers should the 1918 wheat price go over into 1919 as has been suggested at Washington, was pointed out to representatives of the grain corporation, who came out from New York this week to confer with local millers and get the viewpoint as to why conditions here were different from any other wheat and milling section, and why grain and flour rules should be modified to suit the manufacturers here.

Millers were advised today of the action of the head of the grain corporation in discouraging increase wheat acreage next year in view of the possible intervention of peace, and anxiety regarding the carrying over of the 1918 terminal price into 1919, with its consequent liability to loss to all buyers, has subsided.

## Portland Grain.

PORTLAND, Or., Oct. 19.—The Merchants' exchange at Saturday's session adopted a resolution denouncing the abuses practiced by eastern grain sellers and declaring that purchases of eastern oats and corn would hereafter be made only on the basis of Oregon and Washington inspection and weights. The so-called Minneapolis terms, under which the eastern trade has been operating, will be ignored by local dealers in the future, as they are declared to be unfair and can no longer be tolerated. The trade here was a unit in taking this action.

The grain market continues quiet, but at the close the feeling was firmer. Sacked oats were held at $54.50, bulk oats at $48@49.50, bulk corn at $52.50@55 and barley at $48.25@49.

# Expect Good Horse Show

The Lewiston stock show will again have a great exhibit of horses. I have seen the carload of Percheron stallions William Mulhall has brought from his ranch at Fenn and do not hesitate to pronounce them a fine lot of American bred horses. Eight of them are 2-year-olds. One of these, Normaneer, weighed 1875 pounds when I saw him. He is a typical old-time Norman, with their size, gray color, good head and kind eye. In only a few generation he goes back to Brilliant, by Coco. Several others are almost as heavy and have even more style. Most of them are blacks, with a few dark grays.

General Funston, a 3-year-old, has been herd sire and has served over half the mares in the herd. He is rather light gray, has a beautiful head and crest, a deep chest, flat, flinty bone and much grace of outline. Archie Robinson, who judged at the International last year, said he was the best horse of the 400 at the Bloomington, Ill., sale last winter and as good as Singmaster's great Keota Jalap. Minet, Mr. Mulhall's other head sire, is by Imp. Moulinet. He is another International winner. He is a little darker than Funston, a little blockier and a great horse of much substance.

Colonel, a black 4-year-old, an intensely bred Brilliant, caught my eye. He has much style, but plenty of size and bone.

Eclipse, a 3-year-old June 20, weighing 2050 pounds, a grandson of Calypo, is a dark bay that Secretary Hendershot pronounced the best horse of the bunch, though he was not expecting to be quoted. But you may watch Eclipse.

These stallions and a fine lot of Percheron brood mares were purchased by Emmett L. Mulhall, Mr. Mulhall's son. He did not spare money, but bought the best he could get. Emmett has now enlisted in the service of Uncle Sam, and Mr. Mulhall expects to dispose of most of the horses, but will retain a foundation herd.

# A Crooked Trail

(Continued from page sixteen.)

especially if I got a little nervous. And it's more dangerous to wound a panther than to miss him. Are you a pretty good revolver shot?"

"Ought to be. I was born where every man went with from one to three of the things buckled around him. I could shoot my father's sixshooter when I was 5 years old. Usually I can drive a nail at twenty or thirty steps."

"Can you? Good! Then you must do the shooting. I'll hold a light for you."

Now we began to discuss ways and means. There was but one opening into the dark, cavern-like loft, and that was at the end, at one side of the fireplace. It was about two feet and a half square. The only way I could think of was to climb up the wall till my head was above the puncheons, then hold to the logs with one hand and shoot with the other.

"But that old blunderbuss is too heavy. You can't hold it steady with one hand," objected Frank.

I agreed with him, and he suggested something else:

"I'll tell you, Travis. You get on my shoulders and let me hold you up. Then you'll have both hands free to shoot with."

The suggestion seemed a good one, and we made hasty preparations to carry it out. Taking some paper from the saddlebags, he tore and twisted it into tapers. Then he squatted down and I got astride his neck, with a leg on each shoulder.

"Now be ready," he said, still in cautious tones, as he struck a match against the floor.

My only answer was the tick-tick of the big sixshooter as I pulled the hammer back.

When the paper began to blaze Frank started to rise up with me. That he could easily do; for he was a broad-shouldered, well-muscled fellow, while I, though rather tall, weighed scarcely 140 pounds. But he suddenly dropped down again.

"I forgot something. Whatever you do, Travis, keep both hands back of the cylinder. That old thingamabob sometimes lets off two or three barrels at a pop."

Most of the old cap-and-ball sixshooters would do this after their tubes got burned out so the caps did not fit closely.

"Risk me to keep behind the thing," I answered.

"And you'd better not hold it too close to my head, either. I don't want to get powder-burned. And whatever you do don't wound one of the varmints, especially if they're panthers. Shoot to kill. Ready now!"

Again he rose up, slowly, this time, till my head was above the loft. It was like a cave up here, and at first I could see nothing at all; but the darkness snarled and growled at me with a chorus of frightful voices. A breath of wind fanned my neck, coming in at the hole in the gable, not far from my back. Then, steadying himself, Frank reached up the light.

For a moment or two the whole loft seemed spotted with fiery eyes. Then, as the blazing taper itself came above the puncheons, I was more than startled to see four good-sized animals of prey in the back part of the loft!

One, the largest, which I recognized as a panther, was crouching on the floor, as if for a spring. But the light, flaming suddenly in his eyes, had blindned and frightened him, and he had started back. Behind the panther, in a corner, stood another animal, a big wildcat, and over in the other corner crouched two more wildcats.

There was not a moment to lose. My hands shook from excitement as I aimed the six-shooter at the panther's head; but I gripped the handle hard to steady them, and sighted at a point between the eyes. The taper had nearly burnt out before I got a satisfactory aim, but those eyes were still glowing like live coals, and I pulled the trigger.

Instantly the whole loft seemed on fire, and heaven and earth crashing together around me!

After that I seemed vaguely conscious that the house was falling to pieces! And a wild, fierce scream rang in my ears as some of the animals rushed by me, making for that hole in the gable!

(To be continued.)

### PORTLAND SHOW NEXT MONTH.

The annual exhibition of the Pacific International Live Stock show will be given at Portland November 18 to 21, according to announcement by A. H. Lea, general manager. Mr. Lea, who is also secretary of the Oregon State fair, expressed the opinion that the Pacific International will have a first class show this year in spite of the handicap due to the war.

### WOOL CLIP WORTH MILLIONS.

Secretary S. W. McClure of the National Wool Growers' association announced recently that the 1918 wool clip in this country totaled approximately 290,000,000 pounds, with a value of $170,000,000.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

**HELP WANTED—Male 3**

SALESMEN—MANY OF OUR SALESMEN have gone to war and we are filling their places with men exempt from draft. Lack of competition and great prosperity of our customers makes sales the best we have ever known. Selling experience desirable, but not necessary. McConnon & Company, Dept. J., Winona, Minn.

**FARM LANDS FOR SALE 651**

SNOHOMISH COUNTY, WASH., FARM LANDS. The greatest proposition on the market for the man who wants a farm. 12,000 acres to select from; 3½ miles salt water front; 20 miles of beautiful lake shore; good towns, railways, steamboats, factories, mills, schools, churches, paved roads; where the largest profits are made, where the great variety of crops and wonderful productive climate makes it the most productive farm section of America. Good lands in good localities, as low as $25 to $35 per acre. 10 yearly payments. Send for maps and literature to the Brownell Land Co., 904 Third ave., Seattle, Wash.

YOUR CHANCE IS IN CANADA—RICH LANDS and business opportunities offer you independence; farm lands $11 to $30 acre; irrigated lands, $35 to $50; twenty years to pay; $2000 loan in improvements; loan of live stock; taxes average under twenty cents an acre; no taxes on improvements, personal property or live stock; good markets, churches, schools, roads, telephones; excellent climate—crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Allan Cameron, general superintendent land branch Canadian Pacific Ry., 30 Ninth ave., Calgary, Alberta.

JORDAN VALLEY PROJECT.
MALHEUR COUNTY, OREGON.
THIRTY THOUSAND ACRES
OPEN FOR ENTRY SOON.

JORDAN VALLEY FARMS.
524 IDAHO BUILDING. BOISE, IDAHO.

ONE OF THE BEST 80S IN MALHEUR VALley; good buildings; well improved; 50 acres alfalfa; 6 miles to Vale; crops last year $4400. Price, $9000. Terms. O. E. Carman, Vale, Or.

VERMILION, ALBERTA—160 TO 5000 ACRES, $16 to $25 per acre. Union Investment Co., 406 Ziegler blk., Spokane, Wash.

**FARM LANDS—WANTED 654**

SELL YOUR PROPERTY. WE PLACE A full description of your property with dealers and possible buyers in every state in union for a small fee. Information free. Real Estate Salesman Co., Dept. 10, Lincoln, Neb.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |
| Castle Rock Independent, Castle Rock, Wash., and The Washington Farmer | $1.50 |
| The Cheney Free Press, Cheney, Wash., and The Washington Farmer | $1.50 |
| Chehalis Bee-Nugget, Chehalis, Wash., and The Washington Farmer | $1.50 |
| Cashmere Valley Record, Cashmere, Wash., and The Washington Farmer | $1.50 |
| The Everett Tribune, Everett, Wash., and The Washington Farmer | $3.00 |
| Puget Sound Mail, La Conner, Wash., and The Washington Farmer | $2.00 |
| The Montesano Vidette, Montesano, Wash., and The Washington Farmer | $2.00 |
| Oak Harbor News, Oak Harbor, Wash., and The Washington Farmer | $1.50 |
| The Morning Olympian, Olympia, Wash., and The Washington Farmer | $4.00 |
| The Weekly Recorder, Olympia, Wash., and The Washington Farmer | $1.00 |
| Puyallup Valley Tribune, Puyallup, Wash., and The Washington Farmer | $1.50 |
| The South Bend Journal, South Bend, Wash., and The Washington Farmer | $2.15 |
| Sumas News-Advocate, Sumas, Wash., and The Washington Farmer | $1.50 |
| Walla Walla Bulletin, Walla Walla, Wash., and The Washington Farmer | $5.00 |
| White Salmon Enterprise, White Salmon, Wn., and The Washington Farmer | $1.50 |
| The Zillah Free Press, Zillah, Wash., and The Washington Farmer | $1.50 |

Papers mailed to Canadian addresses require additional postage of 1 cent a copy.

## EXTRAORDINARY CLUBBING OFFER

A three-year subscription to your state farm paper and a one year subscription to the following papers at the special price for both.

| | |
|---|---|
| Twice-a-Week Spokesman-Review | $1.00 |
| The Bellingham Daily Journal | 3.00 |
| The Sunday Spokesman-Review | 2.50 |
| The Spokane Daily Chronicle | 4.00 |
| The Daily Spokesman-Review | 5.50 |
| Daily and Sunday Spokesman-Review | 8.00 |

Take advantage of these special clubbing rates by sending your order today to your local home paper, or by mailing it direct to

Review Bldg., Spokane, Wash.

## Just What You Want

may be offered in this weeks' Want Ads at a bargain. It's a good idea to look them over every week.

# *How Many Kills to Your Shot Pattern?*

MOST hunters agree that three shot pellets or more are essential to a *kill*. Less than three may mean a *cripple*, no matter what the size of shot or its velocity. Hence uniform pattern, i. e., an even spread of shot is essential to successful shooting, in the field or at the traps.

The secret of good patterns is in the *control* of the powder explosion. Good, evenly distributed patterns are the direct results of a correct system of wadding scientifically adjusted to the bore of the gun and the load. The wadding, like the piston head of a gas engine, must give the explosion something solid to work against, so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance to the explosion so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

## The Winchester system

Winchester Wadding is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the Winchester *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work.

Though the explosion is almost instantaneous, it is none the less *Progressive*, the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle* where it is most needed.

Meanwhile, under the heat and pressure of combustion, the tough, springy, *Winchester Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* the shot evenly.

At the muzzle the shot pellets slip out without jamming while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or

wadding and makes the hard hitting, uniform pattern for which Winchester shot shells are world famous.

***Fish Tail Flash.*** All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.

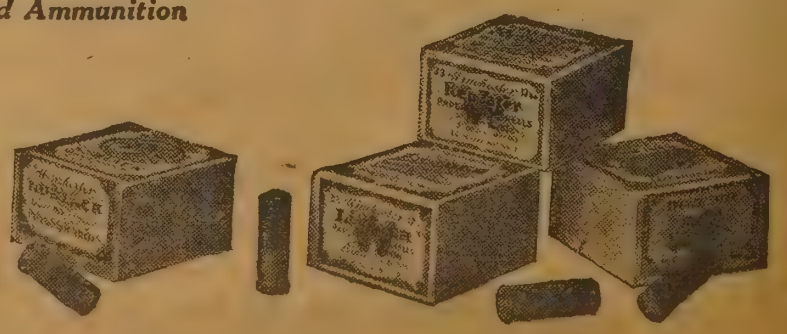
***The Crimp.*** The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

***Waterproofing and lubrication.*** In the cold damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester waterproofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

***Uniform shells.*** From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. $100,000 is spent annually in the inspection and testing of finished shot shells. 25,000,000 rounds of ammunition are fired every year in testing guns and ammunition.

## Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Winchester Repeating Arms Co., Dept. WT-51, New Haven, Conn., U. S. A.**



*The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. Shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431 or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yards*

# Common Cow Must Go; Good Cow Must Come

IT has been said that more men and women dream of some day owning a good cow than of any other one thing in the world. This is probably a far-fetched statement, but this will be a better world when more dream this dream and awaken to put it into reality. And the more emphasis they lay in their dreams on the word "good" the better, for nobody today can afford to own an ordinary cow. The day of the good cow, not alone on the specialized dairy farm, but upon the general farm as well, is at hand.

It is doubtful if the average cow on the general farms of the United States produces more than a gallon and a half of low testing milk daily, approximately 4500 pounds a year. What would it mean to the family of five were this animal supplanted by one that would give 10,000 pounds of milk a year testing five per cent butterfat? It would mean plenty of good milk for every member of that family to drink whenever it was wanted, plenty of good milk for cooking, plenty of good cream for coffee, fruit, cereals and the like, all the butter that the family could use and two or more gallons of skimmed milk every day for the chickens or pigs.

The cow that produces 10,000 pounds of high testing milk is not a freak; she is just a good cow, the equal of which is found on many dairy farms today. To be sure, she is not available for every farm, but the sooner the farm families of the country begin to get rid of the "just cows" on their farms and get 6000-pound cows, 7000-pound cows and 8000-pound cows in their places, the sooner will come the time when every farm can have a first-class producer.

GENESTA'S DUCHESS 266615, THAT PRODUCED 15,293.9 POUNDS OF MILK IN A YEAR.

# Must Get Together on Future Plans

## Farmers Are Reluctant to Be Influenced by the Ideas of Others, but Prefer to Go by Their Own Judgment on Most Matters

GRANDVIEW, Yakima County, Wash., Oct. 21.—Most farmers in the valley have done pretty well this year, but some on the dry land had almost a total failure and can not pay their debts, but are sowing fall wheat and rye. Hay is a fair price here, which helps the farmers. I think the irrigated land has produced well this year. Some of the dry farmers did not sow because it was so dry. We have had a fine rain now and seeding will soon be finished. There is plenty of feed for stock. The pasture is better than usual. I believe farmers would do well to get together and plan for the future. Too many would rather go by their own judgment.

C. H. FAULKNER.

### ORGANIZING FARM BUREAU.

COLVILLE, Stevens County, Wash., Oct. 18.—The harvesting in Stevens county has been completed and on the whole the yields have not been as good as was expected earlier in the season. However, there was very little acreage that did not pay for the harvesting. The financial conditions seem to be only fair and quite a number of the farmers are selling out and getting into other lines of work. I believe this is a mistake, for I think the agricultural interests are soon going to come into a position where they are to be better off than they have for years.

The prospects for next year's crop are not as good as they should be at this time of the year, due largely to the lack of rain at the proper time for the fall planting. The prospects, however, are much better than they were two weeks ago, as considerable grain has been sown since and during the rains of the last three weeks.

The feed problem is still rather serious, due largely, I think, to the lack of proper organization among the farmers. The county farm bureau has been organized to some extent and as soon as we can get it thoroughly organized in every community it is my belief that we can make the feed problem a much easier one to handle. Some cattle are still being sold from the county due to the high cost of feeds.

Better grades of all classes of live stock and a plan of farming which provides for all, or nearly all, of the feeds necessary for the entire year, wherever this is possible, are the things which I believe our farmers should consider seriously.

E. C. DURDLE.

### LIGHTEST CROP IN YEARS.

RITZVILLE, Adams County, Wash., Oct. 18.—The farmers in Adams county have about finished harvesting and threshing one of the lightest crops that have ever been harvested in the county. Massive ricks of sacked wheat, for lack of warehouse space, are not piled, this year, by the side of the railroad tracks. Straw piles are not being burned as a last resort of getting rid of them. And as a result of the light yield, farmers have lost a large amount of money by this year's operations. Especially farmers who increased their usual acreage in response to the nation's call for more wheat have suffered heavy losses, but I have not heard complaint on that account. Even in the face of their losses, they are proud of their efforts.

Hay is being shipped into the county at a high price as are coarse grains and mill feeds. This condition is necessarily throwing much of the stock on the market and the rest is being held only as a result of the belief that it may be almost impossible later to replenish the herds from outside sources. Farmers are hopeful for next year and are taking advantage of the recent moisture by starting their drills. While the amount of moisture is not yet sufficient to carry over fall wheat, many are seeding with the expectation of more rain coming.

A. W. HOLLAND,
County Agriculturist.

### HOGS ON PEA STUBBLE.

FAIRFIELD, Spokane County, Wash., Oct. 20.—There is every reason to think that this community is prosperous. Farmers have met their obligations and have had considerable left to buy Liberty bonds and some other things besides. Fall seeding of wheat is practically completed and a large acreage has been seeded. Prospects are good for a good wheat crop next year. Feed is plentiful, but commands a high price. Several farmers this fall, after the peas were harvested, bought a car of hogs and turned them on their pea stubble. Profits of $1000 and $1100 have been realized from a single car in about six weeks' time. It is safe to predict that next fall will see many cars of feeder hogs here on the pea stubble.

ROY G. ADAMS.

### APPLE HARVEST ABOUT OVER.

OMAK, Okanogan County, Wash., Oct. 21.—The apple harvest will soon be over. The yield is much better than was expected a few weeks ago. With the present good prices most of the ranchers will come out fairly well and can meet all obligations. The lack of sufficient moisture has caused the loss of many trees and will leave some ranchers in some distress. Recent rains have helped the pastures and fitted the soil to go into the winter. Considerable amount of stock has been sold on account of shortage of hay and things in general seem adjusted for the coming winter. Most crops are turning out fairly well considering the weather conditions the last summer.

J. O. WOODS.

### ROOT CROP YIELD HEAVY.

COLVILLE, Stevens County, Wash., Oct. 22.—Except for late crops of alfalfa and oats the harvest is entirely cleaned up in Stevens county. Many of the farmers cut three good crops of alfalfa in spite of the dry weather, and some reported that a fourth crop might have been cut if it had been possible to cure it. The late growth was a great help in eking out the short pastures. Oat fields which were cut at the usual time make considerable second growth, most of which was pastured off to good advantage. Some fields of late oats are still in the shock and the recent rains are making it difficult to thresh them. The feed problem has been somewhat eased by the fall pasturage, but it still remains an acute problem and cattle are being disposed of as rapidly as possible. Few hogs are being kept except for home use. Some good sales of lambs are reported. There is a cleaning up of old and worthless horses and it is likely that a good many such will reach the bonepile before winter. Good horses are not changing hands, although there will be a better market for heavy draft animals as soon as the roads break up and the tractors and trucks have to pull in. Stevens county had the best yield of good corn in its history and the regret of farmers is that they did not plant more extensively. In driving through the country new silos are frequently seen and these will prove missionaries in a good cause and will doubtless stimulate the production of cattle. Fall seeding is looking well. Early sown grain is several inches high and the late seeding is just coming through the ground. Little fall plowing is yet done as the soil is not yet in condition. Farmers are not looking into the coming winter with any degree of satisfaction as the certain shortage of feed is sure to work a hardship, but every effort to conserve feed is being made and they will make the most of a bad season and short crop. Fortunately the garden crops turned out well and the yield of potatoes is surprising. Those who had planted root crops for stock find that it was a profitable venture as the yield is heavy.

E. E. ELLIOTT.

### ARE DIGGING POTATOES.

METHOW, Okanogan County, Wash., Oct. 21.—I do not know of any farmers around here who are not able to meet their obligations. The harvest is all cleaned up and the wheat went from 4 to 10 bushels per acre. With a big rain on October 16 the prospects for next year are reasonably good, as a great deal of fall wheat can be seeded. There is a reasonable supply of feed, the dry land alfalfa making a great stand. The only condition that could be improved on is never to depend entirely on one kind of crop, wheat especially. Diversified farming in this community is the only safe line to follow. Potato digging is now in hand. The potatoes are sufficient in quantity, but knotty, owing to second growth.

CHARLES GRANT.

### British Women in Factories.

In one of the largest British munition factories where 35,000 workers are employed more than 33,000 are women.

# JORDAN VALLEY PROJECT

***20,000 Acres of Rich Farming Land With Full Water Right Now Open for Entry in the Heart of a Great Cattle Range. Nominal Price for Land. Reasonable Price for Water. An Opportunity to Secure a Good Farm at a Low Price.***

Jordan Valley offers one of the few remaining opportunities to secure a home in a new country where the climate is favorable, the water supply ample, the soil deep and fertile, the prospects for profitable farming and the enhancement of farm values unusually favorable, and the general conditions exceptionally good for rapid development and money-making opportunities.

***Jordan Valley Offers You a Home. Don't Overlook the Offer***

Write for particulars to Jordan Valley Farms, 524 Idaho Bldg., Boise, Idaho, or 940 First National Bank Bldg., Omaha, Neb.

Every good farmer will appreciate Jordan Valley project and the project welcomes every good farmer. All the leading farm crops can be successfully raised in Jordan Valley—alfalfa, wheat, oats, barley, clovers, corn, seed crops, root crops, vegetables and fruit.

But the extensive free range for cattle will make Jordan Valley the leading cattle and alfalfa country of the northwest.

## Farmers Must Reach Across Sea

### *rica's New Merchant Fleet Offers Big Opportunity*

United States, least hurt industrially all the great nations of the world, tedly faces an era of exceptional unity as the close of the war ap- es. This opportunity extends to all of industry, including the many es of agriculture. Local markets for ducts of the farm will yet have to plied, but in addition there will be l demand for the products of the an farm in foreign lands and at ne time an unusual opportunity for roducts to reach the countries that nem.

is the gist of the opinion expressed ward N. Hurley, chairman of the States shipping board, under whose n America has developed a real nt marine. When the war is over, rley points out, reconstruction will u the countries of Europe, the in- s of which have been so seriously ined by the war. They must have ls such as those produced in this . Up to this time America's new f ships has been engaged in trans- soldiers, supplies and munitions of The soldiers must be returned to a, but the supplies, if they are to e, must be for the civil population pe and not for armies. The muni- f war will no longer be shipped; it seems possible that vessels re- to Europe for the American army eadily be utilized in carrying the ts of America.

ners must acquire worldly vision epare to take advantage of these hen peace returns," says Chairman , and he urges farm organizations p the situation, realize its possibili- d let the shipping board know im- ly to what extent they will be able ze the vessels that will be available. s upon the live stock producers, the industry, the apple growers, the farmers and every one representing e industry to look abroad for mar- id prepare to avail themselves of he coming peace offers. Not only , but Asia, South America, South and many other districts heretofore ouched, if at all, by many of the ies of America will be good fields e cultivation of markets.

ners everywhere should begin to ess in terms of next-town trade and n terms of world trade," says Mr. "The country merchant can also nstructive factor in his community. his business to look about and see is section produces, then investigate out if there is a chance of develop- export market for local products. that it will be up to the farmers lves to organize for developing trade and advise the government of eeds in ocean transportation."

ers' organizations are urged to uti- lize government agencies such as the federal department of agriculture, the federal bureau of foreign and domestic commerce, the consular service and the federal trade commission. Some of these departments have representatives all over the world and are ready to supply export information and connections, while others, like the federal trade commission, will assist farmers' organizations in forming export corporations.

## nt High Oat Standard

oat producers of the northwest are ntly united in their desire to have standard adopted for grading oats. gs have been held throughout the y during the last few weeks, two gs having been held in the north- one at Portland and one at Spo- the purpose being to secure infor- and the advice of the producers ealers as a basis for fixing govern- standards.

grain supervision section of the States department of agriculture repared a tentative scale for grad- oats which would require that No. e weigh 32 pounds per bushel, No. pounds, No. 3 28 pounds, No. 4 26 , and No. 5 24 pounds.

hwestern interests declare that this would work an injustice to the pro- of the northwest where a much grade of oats is raised than in the part of the United States. It is mended by northwest men that the be increased four pounds for each tive grade, requiring oats to weigh nds per bushel to grade as No. 1 down two pounds per grade, re- that oats weighing 28 pounds per grade No. 5.

dopted, this scale would mean that f a quality to grade only No. 5 be the same quality as would grade under the government's tentative

## Grain Ships

### War Necessitated Their Diversion

In a letter to The Farmer, under date of October 11 M. H. Houser, vice president of the Food Administration Grain Corporation, writes:

"I notice in your issue of October 3d an article in reference to the ship and tonnage supply. True, until recently I had the promise of a considerable number of wooden ships, besides an allotment of steel vessels; but recent developments and conditions at Atlantic ports have made it necessary to use these ships for other purposes.

"I am enclosing copy of a wire sent to me and also the various state administrators which has already been given publicity. I was somewhat in the dark until the last day or two as to the far-reaching effect of this change of program and the withdrawal of some of this wooden tonnage on account of the congestion and activity at the Atlantic ports.

"No one realizes any better than I how annoying it is to the farmer, after raising and delivering his wheat, to be confronted with difficulties in the sale. I have worked through every conceivable channel that I know of, to secure an adequate amount of tonnage to keep the funnel at the terminals open, feeling that by accomplishing this, we would go a long way toward solving the marketing problem. I think we all realize with the ports open, thereby permitting a free movement, and with the fair price basis and regulation, the minor local interior difficulties should more or less regulate and adjust themselves.

"I also realize that the present situation makes conditions rather acute in the later sections where the farmers were unable to profit by the earlier marketing facilities. Just as soon as relief is possible and we can get the embargo lifted, I intend giving these sections all the relief possible. Whatever inconveniences or sacrifices may be necessary just now, if they would make it possible to bring the war to a successful and speedy termination by using this tonnage in backing up General Pershing with the necessities that he requires, I think we all feel they undoubtedly would be made for a very worthy cause.

"I wish to take this opportunity to assure every one that we are doing the best we possibly can under these rather adverse circumstances. From the figures at hand and the amount of wheat taken care of at the terminals and now left in the interior warehouses, I feel that for the most part we are as well, if not better off here, in the percentage of wheat marketed, than they are through some of the other wheat raising sections."

The telegram to which Mr. Houser refers was published last week under the heading, "Wheat Will Be Moved." Every effort is being made to relieve the ship shortage, and success is promised for the early future.

## Stabilize Butter Prices

With a view to preventing undue fluctuations in the market price of butter in the northwest, the food administrators of Washington, Oregon, Idaho and Montana have issued a regulation prohibiting an increase in the price of butter without the dealers first securing the food administrator's permission. This agreement was reached at a meeting in Portland last week, at which Charles Hebberd, food administrator for Washington; W. K. Newell, for Oregon; R. F. Bicknell, for Idaho, and Alfred Atkinson, for Montana, were present.

The plan worked out by the food administrators requires that if the dealers in any city desire to increase the price of butter they must meet in their city at 2 o'clock on any Monday afternoon, agree upon the increase desired, wire the food administrator promptly at 3 o'clock, stating definite reasons for the proposed increase. The increase will be allowed or rejected in time for the publication of butter quotations in the newspapers of Tuesday morning. All price quotations are to be on the basis of solid pack cubes with 1 cent per pound differential for prints. After October 31, according to the food administrator's regulations, no butter will be sold in the northwest in cartons.

### SHIP MANY APPLES.

The Wenatchee district is this year producing about 7000 carloads of apples, according to the report of District Horticultural Inspector Darlington. They have been shipped out recently at the rate of 200 or more cars daily.

**Worth Thinking About.**

**New Fields**—Will farmers of Washington take advantage of an unusual opportunity that the coming of peace is going to bring? Now is the hour to act. We must reach across the sea. Read what Chairman Hurley of the U. S. shipping board says on page 3.

**Cross Breeding**—Is it advisable to stick to one breed of animals or to cross breed? Page 9.

**How Much Mercy?**—Secretary Lansing says there is a limit to the degree of mercy that should be extended the German people. Do you agree with him as he expresses it on page 23?

### BUTTERFAT SEVENTY CENTS.

The highest northwest butterfat price on record was reported from Yakima recently when buyers paid 70 cents a pound. The same report said that approximately 3000 pounds of butterfat are produced daily in the county, which is a decrease from that of last year. This would amount to about $700,000 a year, were the 70-cent price to be maintained that length of time.

### Early Christian Music Greek.

It is declared that the early music of the Christian church was probably in part of Greek and in part of Hebrew origin.

## More Pork Needed; Can We Furnish It?

By PROF. GEORGE SEVERANCE, W. S. C.

Uncle Sam is urging the production of more pork and now is the time to look up brood sows if not already on hand. A small herd of swine kept on each grain farm would fulfill our part and would be the most economical method of meeting the situation. Hogs should be a by-product of the grain farm. When they are kept in such numbers that they are produced largely from salable grain or purchased mill feeds, it is difficult to show a profit under present conditions, and very easy to show a deficit with poor management or a little ill luck.

One of the most profitable methods of producing the main growth on pigs that have been raised cheaply on pasture during the spring is by "hogging off" peas. Peas are one of the very best hog feeds and may be grown on the better portions of summer fallow tracts with no detriment to the succeeding wheat crop. Pea raisers in the Fairfield district of Washington quite generally claim better results from wheat after peas than on bare fallow. There are very few wheat farms in those portions of the wheat belt where the average annual rainfall exceeds 18 inches where one could not have picked out 20 to 50 acres that would have produced 15 to 25 bushels of peas per acre even in this dry year, or 25 to 40 bushels in a good year. They usually make a heavy crop on the lower portions of slopes and the bottom lands if the soil is not water logged.

Pigs feed off the pea crop very clean. The crop will not only show a nice profit "hogged off," but will leave the soil mellow and in condition to put into wheat at a very low cost for preparation.

The highest yielding variety is the best since all varieties have practically equal feeding value. Tests conducted at the Washington experiment station at Pullman, Wash., covering 15 or more years, and including several scores of varieties including the common ones show the Bangalia variety standing at the top in yield. They were originally secured from India by the United States government, and are found to be a particularly drouth resistant variety.

**One Must Inoculate.**

For best results the ground that is to be planted to peas should be plowed in the fall and left rough over winter. A mellow seed bed should be prepared as soon as the soil is fit to work in spring and the peas seeded deep, three to four inches. If the soil has never grown peas before the seed should be inoculated. This is very important.

The hogs may be turned in to good advantage as soon as the pods are well filled. They will be fed off with less waste if the pigs are confined to small portions of the field at a time with a portable fence. The "hogging off" period may continue till time to seed wheat, if desirable, but more waste must be expected if the "hogging off" isn't completed for several weeks after the peas are ripe.

The area required for a given number of hogs will depend upon the amount of growth that you wish to make from the peas for each hog, as well as, of course, upon the yield. Under good average conditions, a bushel of peas should make 12 to 15 pounds of pork. A 20-bushel crop should make from 240 to 300 pounds of pork, or put 80 to 100 pounds of gain each on three hogs. This would probably involve their feeding off the peas for about two months.

Will you aid Uncle Sam by growing a few peas and producing some much needed pork? This form of patriotism is as much needed as the buying of Liberty bonds or aiding the Red Cross.

## Influenza Delays Live Stock Show

Owing to the prevalence of Spanish influenza, the authorities of the state of Idaho last week required the officers of the Northwest Live Stock show to postpone its exposition that was scheduled for Lewiston the week beginning November 11. This action followed the general prohibition of public gatherings throughout the state, which included the schools, the idea being to prevent as completely as possible the spread of the malady. Though much inconvenience is caused the stock show officials by the situation that has arisen, they readily recognized the grounds for the action and sent broadcast a notice that the show was postponed. A meeting of the directors was held, and it was decided to put on the exposition as early after the passing of the influenza epidemic as possible. It is probable that the date will be fixed for early in December.

At this time no definite announcement has been made as to the holding of the Pacific International Live Stock show at Portland, which was scheduled for November 18-25. A movement is under way to revise the entire show schedule so that the Lewiston, Portland and San Francisco expositions will be held in December in regular order. If this is carried out it means the postponement of the Portland show. The San Francisco show has already been postponed indefinitely owing to the prevalence of the influenza in that city.

Further announcements concerning these events will be made in this paper as decisions are reached by the official boards of the organizations.

# WASHINGTON FARMER

VOL. XLI. NO. 44.

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
414 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.
To either of which communications can be sent, but to avoid delay address office nearest you.

C. A. Cour, Fullerton building .....St. Louis
R. R. Ring, Palace building .....Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we will not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Mr. Hoover Issues Sound Advice

Do not allow yourselves to get panicky. Be patient and secure your rights. This is the advice of Herbert Hoover to the wheat growers of the northwest who have not yet sold their wheat.

Mr. Hoover, always alert to serve in the most effective way possible the interests of the producers as well as the consumers, urges wheat growers whose grain is not sold because of the congestion at terminals, due to diversion of shipping to the transportation of soldiers and supplies to Europe, to be patient and not accept from any buyer less than the government's guaranteed price for wheat. He renews the government's pledge to move the farmers' wheat and to pay him the full price agreed upon. Every grower should take the advice in the spirit in which it is given. Delay may be necessary. Some will feel it as a hardship. But this is an age of hardship, and the producer should be glad to wait if, by doing so, he can help in sending food to the army and in increasing the army, the quicker to bring the enemy of us all to his knees.

It is not a sign of pessimism for one to lay up a store for a time of famine.

## Who Feeds the Soldiers?

At a recent meeting of meat packers in Chicago one of the speakers, himself a representative of that great industry, said to those present:

"The feeding of millions today has ceased to be a problem because you gentlemen—the packers of America—have solved the problem, and it is due almost entirely to you that General Pershing's boys in France eat three square meals a day."

Surely the speaker himself did not take that declaration seriously if he thought about it soberly. While there is no desire to minimize the great work that the meat packers, through their vast business organizations, have done to assist this country in feeding its soldiers and those of its allies, this is the first time that it has been brought to our attention that the man who raises the beef and pork and mutton has had only a minor part to do with feeding the army. Likewise, it comes as a surprise that the wheat grower and the dairyman are largely nonessential in the food campaign, for we had thought that bread and butter were a requisite part of the balanced human ration.

In fact, THE FARMER still clings to this belief, and will continue to urge the farmer to produce more and more pork, beef, wheat and other foodstuffs and give him liberal credit for making good at it. Here is what General Pershing says with regard to the farmers' part in winning the war:

"Food is of vital necessity and from the day of our entry into the war America's army of food producers have rendered invaluable service to the allied cause by supporting the soldiers at the front through their devoted and splendidly successful work in the fields and furrows at home."

Isn't it strange that the city folks complain at 15-cent milk but never think of criticizing the 20-cent movie?

## What Must We Do To Be Saved?

One of the so-called socialist papers of Germany recently asked the question on behalf of the people of that country: "What must we do to be saved?"

The asking of the question is a hopeful sign. It indicates that the German people realize, in some degree at least, that they are lost, and it indicates that they are beginning to take their bearings in the hope of finding themselves.

What must they do to be saved? President Wilson has answered that question. They must get a new guide. Their present predicament is due to their blindly following William Hohenzollern. Their salvation lies in ceasing to follow him and in choosing from among themselves a leader with democratic vision and powers of leadership.

With all the blood of this terrible war upon the hands of Germany and the German people, the allies do not desire to destroy them. In so far as it is humanly possible, Germany should pay and will be required to pay for what she has done, but England and France and Italy and America have set their hands not to annihilate her, but to punish and purify her. And let it not be overlooked: Her punishment must be severe or her reformation will be inadequate to guarantee the future peace of the world. Her slave-driving master and his gang of ruffians must go. Their unholy hands must be removed from the earth forever. And the German nation itself, whatever reformation in the way of democratization takes place, must pay the price of its error in the limited degree that price can be exacted. German toil and resource through years to come can rebuild cities and reestablish farms and industries in the lands that the army has devastated, but through no effort can she give back the life she has taken, through no effort right the sickening wrongs her unbridled soldiers have committed against the women and children of the invaded area. But sometime, somewhere, somehow, in the great, relentless movement of nature, compensation will be made.

Until the war is completely won we should use nothing that has to be shipped in if we can get along without it or with a home product.

## War Makes Change in Travel

Say what we may, the elimination of the news agent and vender of numerous articles on the railway trains is noticeable and causes a feeling of something in the nature of an aching void.

To be sure, the fellow who "worked the trains" was more or less irrepressible, but he at the same time helped to relieve the monotony of a long trip, to say nothing of what he had to sell, which the traveler was often glad to get. In any event, those who are planning the long trips in particular should provide themselves in advance with reading matter and anything else that they used to look to the news boy to furnish.

In a railway trip of any considerable distance one notices an increasing number of people of those who are evidently comfortably off who patronize the chair cars or the tourist sleepers. This is due quite likely both to the desire to avoid the "penalty" visited on the Pullman patron and to carry out the general plan of conservation. So, likewise, more lunch baskets are in evidence, and other things that indicate a consistent effort to avoid being too heavily penalized for any indulgence in luxuries or nonessentials.

With reference to railway travel, it is in order to say that while the cars, as a rule, are reasonably comfortable, and perhaps in most respects are as sanitary as existing conditions permit, yet in the matter of ventilation they are wofully lacking, not to say vile. One has but to pass through a crowded day coach or chair car to sense this fact very strongly. Some way should be devised to correct this menace to the health and comfort of the traveling public. A. E. G.

## He Has Condemned Himself.

Back in the hills in the shade of the firs was great stream of clear, cold water. It ran dow through a worn channel and out on a fruitf plain. There a dweller caught it as a fisherm nets a fish, and cunningly distributed it throu his fields by ditches and canals; and the fiel yielded abundant crops without fail.

But the dweller cast his eyes on the forest a translated it into dollars and cents. He cut t trees with ax and saw, and the harsh voice of t mill filled the sweet silences. The dweller w jubilant and jingled the money in his pockets.

And after that the money was a prey t thieves, to bank failures, to foolish investmen to fire and flood and a thousand unforeseen po sibilities that lurked and lay in wait for it.

In March the spring ran full, but it was n clear any more. In May it dwindled to a trick In July it failed altogether. The crops we stunted and turned yellow and they failed, too.

He preferred cash to the source of prosper and life, and he suffered ruin for his foo choice.

So with the man whose short-sighted greed p fers to stint and hoard when the country ca on him, who will buy no Liberty bonds, w turns a deaf ear to the appeals of the Red Cro who shrugs his shoulders when he hears the cry French and Belgian babies for milk.

We need not condemn him, for he has co demned himself. His punishment is that t money he clings to will parch his heart a shrivel his soul. He has wrought a curse for hi self. The man who has done a wrong in the he of great passion may repent and offer himse as a sacrifice for his sin. He who hardens hi self against the suffering of others and will nothing to right a wrong has dried up the spri that might have saved him.

The man of Galilee said: "He that shall sa his life shall lose it." Let us forget ourselves a serve others that our living may be justified.

## Collectivism or Individualism?

Any one possessing even a limited understan ing of the philosophy of government usually r ferred to as socialism and undertaking to inves gate its scope under American conditions can n help being struck by some unexpected revelatio He will discover early in his search that its wide support is being secured, not in the towns a cities, nor from that class usually referred to industrial workers, but from among farmers a country residents. Another discovery he w make: Most of these self-termed socialists a land and home owners. Many of them are ca talists, frequently only in a small way, but oft owners of considerable property. They have ga nered this by their own individual efforts, throu the plannings of their own brains, the sweat their own brows, the labors of their own han the tightening of each individual pocketbook. has been a personal and not a collective fight t each of them. Not all have considered themselv successful. The struggle has been strenuous a failure has been the lot of many, but for mo there is a cherished rooftree and a bit of soil th can call their very own. Why should such man choose the way of the socialist? Why shou he prefer the collective system of industry to t individual?

It is to be feared that few so-called socialis among the farmers have anything like a clear co ception of the real meaning of this question. Ha they read Kant or Karl Marx or do they grasp t real significance of the final outcome of all su reasoning if given practical application under o conditions here in free America? Are they willi to surrender their individual interest in "t means of production" and their moderate hol ings of capital goods to a common pool of indu try and wealth in which they would be mere e rected agents and little above hirelings? Th American farmer with his educational advantag and his ability to think straight ought to s through to the end of these fallacies. His own e periences ought to help him to distinguish b tween false theory and practical results. Josh Bi ings once said: "The trouble with many fol is not that they know too much, but that th know too much that ain't so." E. E. ELLIOT

# Peace Situation Is Uncertain

## *Allies Require the Unconditional Abdication of Kaiserism*

Whether peace is near or far away is problematical. elopments of the week just passed make its coming re and more certain within the comparatively near fu-, but whether it is to come this winter or next summer ct a matter for speculation. The events of the last weeks as they have stood out most prominently in development are about as follows:

1) The continued advance of the allied forces, which the immediate cause of the unrest in Germany out of ch peace desires have developed.

2) The unconditional surrender of Bulgaria, Germany's an ally.

3) The peace feelers sent out by Austria and Turkey.

4) The first actual note from Germany to President son stating that that country was ready to accept president's 14 conditions of peace as a basis for otiation, and asking for an armistice.

5) President Wilson's reply asking for evidence of the erity of the German note and a statement of whether not the new chancellor, Maximilian of Baden, repre-ed the Kaiser or the German people; and stating that armistice could be considered until Germany evacua-all occupied territory.

6) A second note from the chancellor claiming that the man government was being reorganized so that it rep-nted popular sentiment, reaffirming his statement they would accept the president's terms, and agree-to the proposed evacuation of invaded territory.

7) A second reply from President Wilson stating that armistice could be considered while Germany con-ed to destroy villages, sink passenger vessels and mit other atrocities, and declaring that no negotia-s could take place with a government representing the er and his staff.

8) A third note from the chancellor promising to cease ing passenger ships, denying the charge of atrocities reaffirming the statement that Germany was under-g the transformation from a monarchical to a demo-ic government.

9) A third reply from President Wilson agreeing to mit all the peace correspondence to the other allied ernments, but declaring that the terms of any armis-agreed upon must be dictated by the allied military ers. He also stated unequivocally that no negotiations ld be entered into until the present German rulers supplanted by popular government under adequate stitutional guarantees. A part of this note reads as ows:

t does not appear that the heart of the present diffi-y has been reached. It may be that future wars have brought under the control of the German people, the present war has not been; and it is with the ent war that we are dealing. It is evident that the man people have no means of commanding the ac-scence of the military authorities of the empire in popular will; that the power of the king of Prussia ontrol the policy of the empire is unimpaired, that determining initiative still remains with those who hitherto been the masters of Germany.

eeling that the whole peace of the world depends on plain speaking and straightforward action, the ident deems it his duty to say, without any attempt often what may seem harsh words, that the nations he world do not and can not trust the word of those have hitherto been the masters of German policy, to point out once more that in concluding peace and mpting to undo the infinite injuries and injustices his war the government of the United States can not with any but veritable representatives of the Ger-people who have been assured of a genuine consti-nal standing as the real rulers of Germany. If it deal with the military masters and the monarchical crats of Germany now, or if it is likely to have to with them later in regard to the international obli-ons of the German empire, it must demand, not peace tiations, but surrender. Nothing can be gained by ng this essential thing unsaid."

10) A fourth note from Germany, reaffirming the that popular government is being adopted, and sta-that further action awaited the statement by the allies e terms upon which they will grant an armistice. This was received at Washington Sunday night, and at writing has not been considered there officially. It is erstood, however, that the allies have their armistice s practically worked out.

11) General Ludendorf's resignation as military leader ermany. This is looked upon by many as one of the actual steps toward the abdication of the German ary power, which is headed by the kaiser, who, it ated, has announced the acceptance of the general's nation.

### T TERMS ARE ACCEPTABLE?

rmany is feeling the allies out for their terms, for wants peace. What the terms are; expressed in con-form, is conjectural, though many suggestions have made. It is generally agreed that no cessation of ighting can be considered until such concessions are by Germany as will absolutely prevent her taking ntage of the cessation for her own military improve-. It is suggested that she surrender all the arms munitions now on invaded soil; that she place Helgo-which is her seacoast base for military and naval ation, in the hands of the allied forces; that she over to the allies sufficient of her warships and arines to guarantee her naval impotency until peace s are agreed upon, and that she turn over to the d forces a sufficient number of her fortresses in ern Germany to prevent their use in continued war-It is also being urged as one of the terms of final e that German vessels of all kinds be turned over he allies to replace those that have been destroyed iermany during the war, the idea being that unless is done it will enable Germany to rebuild her foreign faster than the allied nations can rebuild theirs.

### GERMANY ACCEPT THE TERMS?

rmany can accept the terms that will be imposed when she is practically ready to make an uncondi-l surrender. She may be near that point now, or distant from it. Certainly she knows that defeat ts her ultimately. One of the important develop-s of recent days is the probability that Turkey is preparing to accept the allies' terms of peace. Reports that she has made a definite offer of peace are unconfirmed at this writing, though it seems probable that her surrender will come soon. Continued evidences are seen that Austrian and Hungarian unrest is increasing. Reports have come from Austria that the newspapers of Vienna have published statements that plans were being drawn up for the demobilization of the Austrian army. The failure of her allies, the increasing unrest among her own war-weary people and the continual and successful pounding of the allied armies at her western gates are the things that compel Germany to consider making peace. Unquestionable certainty that his dynasty must ultimately fall is all that can make Kaiser William abdicate, and it is certain that the German throne must be relieved of him before the allied nations of civilization will conclude peace.

### WILSON ASKS SUPPORT AT POLLS.

In a formal statement issued to the public last week addressed "To my fellow countrymen," President Wilson urged upon the voters that they elect democrats to both the senate and the house of representatives in congress at the election next Thursday. He argued that the presence of a republican majority in congress would handicap him in the conduct of this country's share in the war and convince the enemy and the allies as well that this country was not unitedly behind the administration in its war program. Republican party leaders made statements, following the publication of the president's appeal claiming that the republicans have been even more loyal in supporting the administration in the vigorous prosecution of the war than have democrats, and expressed regret that the president saw fit to thus bring partizan politics into the situation.

### INFLUENZA EPIDEMIC IS PASSING.

While the Spanish influenza epidemic is still of serious proportions and is actually increasing in some sections, still it is believed to be beginning to recede in the country as a whole. Conditions in the army camps are improving.

### OVER TWO MILLION ARE ACROSS.

General March, chief of staff at Washington, reports that there are now more than 2,000,000 United States soldiers "over there." The transportation of a quarter of a million a month continues. This would make the total in France by March 1 approximately 3,000,000, and 4,000,000 by July 1, if peace is not agreed upon prior to those dates.

### AMERICAN WHEAT SUPPLIES.

In his letter to Senator Hitchcock of Nebraska Mr. Barnes, head of the United States Grain corporation, overlooked the fact that the evacuation of northern France and Belgium will add about 10,000,000 people who will be dependent on wheat supplies from America. This will tax American supplies heavily as there is a decrease of 422,000,000 bushels of corn against an increase of 200,000,000 bushels of wheat. Mr. Barnes expresses the opinion in his letter to the Nebraska senator that our prospective wheat surplus was becoming burdensome and that production ought not to be further increased in this country. It is a short-sighted point of view. No one can tell what crop conditions may be in 1919. There might be a very sharp falling off both in wheat and corn. Every consideration of prudence points to the wisdom of close adherence to Mr. Hoover's original judgment that wheat production should be fostered in every way possible so that the United States and her allies will not be taking desperate and unnecessary chances in 1919.

# Eight-Hour Farm Day

## With Saturday Half Holidays Thrown in

Washington correspondents hear that President Wilson may proclaim a universal eight-hour day for all United States industries beginning November 1 in order to eliminate all disputes that are now retarding necessary production. We wonder what would happen to the great agricultural industry if it were reduced to an eight-hour basis. If the farmer and his household, his man-servant and maid-servant, his ox and his ass, should resolve and put that resolution into action not to work at any time more than eight hours a day with Saturday half holidays thrown in we fear the American people would face real food deprivation. There is no probability of that being attempted, but there is a lively probability that after this war is over there will be a growing determination in the minds of the American farmers that farm life in the future shall not be held to the dragging conditions that have governed it in the past. We do not think that the consumers of this country would ever again see the low prices of farm products that they enjoyed in the period of the civil war and this great conflict. Those low prices were made possible only by the farmer himself working excessive hours and, in many cases, necessitating the labor of members of his own family with long hours and with scant recompense.

The great dairy industry in particular, as recent searching surveys have shown, has only been kept going by the dairy farmers working the members of their own families long hours and with scant or no compensation. The consumers have been the beneficiaries of the ridiculously low prices of farm products in the past and the farmers and their families have borne the burden. A way must be found to put an end to that injustice.

### Where the Battles Are Being Won.

Herewith is the Farmer's weekly map showing the position of the battle line on the western front. Comparatively slight changes are noted since last week, though movements have been made that probably will result in more rapid advances in the near future. General March, chief of staff, cites figures to show that the allies have recaptured 7000 square miles of territory since they started their drive last summer. It is practically certain that Germany will make no attempt to hold a line again until a line is reached that would pass through Antwerp, Brussels, Sedan and just east of Verdun. If she decides to continue the war it is probable that she will make a desperate stand along this new line. If driven from it it is hardly possible that she could prevent an invasion of her own territory, as the next strategic line of defense lies somewhat within her own border.

## *Washington Gleanings*

The grade school at Chewelah has four barrels of peach pits ready for shipment to the Red Cross.

Recent rains have put the ground in fine condition for seeding fall wheat in the Palouse country—the first time in three years.

The Chehalis cannery has been busy recently canning corn, and the cannery is making a good showing for the first year of this product.

The Northwest Fruit Products company of Wenatchee has purchased for $12,000 a five-acre tract and will erect a storage plant immediately.

Yakima valley beet growers estimated that the increase in the price of sugar beets from $10 to $12 a ton will add $340,000 to their profits next season.

About 20 cars of Canadian potatoes are being loaded at Danville for shipment to the drying plant at Vancouver, B. C., for use of the allied armies.

W. A. Hately has closed up his realty business at Pullman and has left for Richland, Ore., where he will engage in the stock business with his brother-in-law, W. H. Stout.

The directors of the Columbia irrigation district held a meeting at Kennewick recently and voted to advertise for bids for the sale of $250,000 worth of bonds November 8.

R. F. Stubblefield of Enterprise, Ore., who purchased a large stock ranch near Ringold, Franklin county, is planning to bring a large number of sheep from Oregon to his Washington ranch.

Oscar Abbey of Waitsburg has purchased 500 acres of raw wheat land on the Tucannon, in Columbia county, the consideration being $20 an acre. There is a running spring of water on the place.

Imports valued at $5,703,531 and exports valued at $9,461,507 were handled through the port of Tacoma in July. Collections for the month totaled $100,944.35, a gain of more than $40,000 over June.

A. H. Kelly of Monroe recently purchased the 40-acre tract in Park Place owned by the late Wesley Clark. This piece of land is entirely cleared, and can be farmed very conveniently with the 15 acres already owned by Mr. Kelly across the road.

The White-Dulaney warehouse and elevator was damaged last week by a derailed flatcar passing on the warehouse side of the building. The corner of the flatcar went the whole length of the building. All the foundation on the side of the building was taken away and 50 bales of new sacks crushed in the floor.

Government orders for over $2,500,000 worth of lumber have been awarded western Oregon and Washington mills. The railroad administration wants 80,000,000 feet of fir, worth $2,400,000, for building cars, and the war department desires 2,000,000 feet, worth $216,000, for cantonment buildings at Camp Mills, New York.

District Horticulturist Darling says that the apple crop of his district, including the Okanogan, Chelan and Entiat territory, will approximate 7000 cars of commercial apples. One factor that is operating to offset the loss by worms is the fact that the late apples are proving to be much larger than usual. This is attributed to heavy pruning last year.

O. E. Brashears, Yakima county engineer, has filed his report for the national highway council, in which he estimates that the 1919 highway maintenance and construction work in Yakima county will cost $300,000. About half of this will be spent for construction work, which will include two miles of permanent highway and 16 miles of gravel roadway.

# Why Time of Sowing Wheat Affects Smut

## *Threshing Machines Sow Smut Spores Which Germinate According to Definite Laws*

By J. L. ASHLOCK

Last year enough wheat was produced in the United States to load two freight trains reaching across the continent from New York city to San Francisco. Enough smut was produced to fill one train reaching from New York to Cleveland, Ohio.

These estimates, compiled by the bureau of plant industry, convey a notion of what wheat-smut means in the wheat-producing industry of this country.

Stated in other terms, the wheat loss due to smut last year amounted to more than 21,000,000 bushels. Oat smut destroyed over 91,000,000 bushels. Annually the nation loses about 600,000 bushels of perfectly good rye, on account of smut.

There is an organization of American plant pathologists now at work in this country that is striving its utmost to drive this dusky plague from the nation's grainfields. The work is national in scope, is headed by Dr. H. B. Humphrey of the bureau of plant industry at Washington, D. C., and reaches every principal and lesser wheat-producing region from the Atlantic to the Pacific.

Washington's share in this nation-wide move to save wheat from this destructive ally of the kaiser's is now organized under the direction of George I. Zundel, assisted by W. F. Nehrling and W. E. Green, and is conducted under closely cooperating terms with the state college extension service department, the Washington experiment station, and the college department of plant pathology headed by Dr. F. D. Heald.

The most perplexing phase of the smut situation which confronts the investigators is the wide diversity of opinions regarding it. Not only are there differences of opinion among the scientists, but there are differences of opinion among farmers, neighbors living side by side. What to one man seems a solution of the plague to another seems an encouragement of it in its worst form. Obviously, among the many methods in use for preventing smut, some one is best of all; and the work of the plant pathologists and affiliated agencies and institutions throughout the country amounts in reality to a hunt for the one best method.

Mr. Zundel says that as the work progresses and as facts are accumulated, it is becoming increasingly evident that injuries to seed wheat have a good deal to do with the prevalence of smut—much more than was suspected at the outset. Wheat threshed in a high-speed separator comes through with injuries so slight that they can not be detected by the naked eye; yet, when the grain is treated the formalin gas or copper sulfate solution enters these tiny cracks and reduces or destroys completely the life of the wheat kernel.

Many poor stands of wheat are due to this cause. There is evidence to show that a weak, spindling wheat plant that develops from an injured kernel is more susceptible to smut attack than the thrifty, vigorously growing plant. There came recently under Mr. Zundel's observation, the case of a man who sowed 500 acres of wheat which, on account of the injured seed he sowed, had to be replanted. Approximately 800 bushels of wheat which could have been made into perfectly good flour, thus went the way of oblivion when the world is hungry for bread.

The Washington work for the immediate future includes wheat planting in different sections of the state accompanied by the use of 10 different solutions of hot water, formaldehyde and copper sulfate. From this work it is desired to ascertain the effect on seed injuries on yield and smut control. A line of study supplementary to this and of fully as great importance will be to learn more of the smut-resistant characteristics of different varieties of wheat.

The work as above outlined for fall sowings of wheat will, next spring, according to present plans, be undertaken for the spring varieties.

Enough is now known of the characteristics of smut to make it plain that the annual "summer smut showers" are of vital importance in carrying the plague forward in the wheat crop of the succeeding year. By "smut shower" is meant the clouds of smut which are liberated at threshing time and on the wind float for miles and eventually settle to the ground.

The smut-shower is of fairly recent discovery, and, up to the present time, it has not been known definitely how widespread it was—that is, how far the smut-dust would float; but it is now known to float scores and even hundreds of miles.

Obviously, wheat seeded in soil which had previously been showered with 10,000 or 500,000 smut spores would be in grave danger of soil infection, regardless of the smut-killing treatment applied to the seed previous to sowing.

Herein, according to Mr. Zundel and others who have worked on this problem, lies one of the secrets of smut prevention. The summer temperature, the late summer or early fall temperature, rather, is too high to favor the germination of smut spores; so wheat sown then has a good chance to start its growth ahead of the smut. This, likely, is one of the reasons why this year, throughout the state, early sown fall wheat was comparatively free from smut.

Second, the late autumn temperatures are generally too low to favor the germination of smut, though often permit the wheat to get a start ahead of the winter freeze-up. So, in the experience of wheat-growers, the early fall sowings and the late sowings show the smallest percentage of smut.

Unfortunately, the wheat growers find it quite convenient to follow their threshing with fall sowing of wheat, at the time when smut spores are lying on the soil 10,000 to a million to the square foot.

Third, the smut spore in its process of growth must attach itself to a tender wheat sprout, or other suitable host-plant — or die! It can not grow by itself alone.

It follows, then, that when half a million smut spores drop from the clouds to a square foot of summer-fallowed land, many of them are doomed to die for lack of nourishment. All of this dusky horde can not thrive at the expense of the few wheat plants starting in this area.

But if no wheat at all is there, the smut spores fare much worse. When the warm, fall rains come they germinate, and send forth their microscopic tentacles in quest of the tiny wheat sproutlet that, if reached, will give food and nourishment to the growing smut. Finding no such wheat sproutlet, the smut spore merely germinates and dies there in the ground—and next spring, the whole half a million smut spores will have perished.

This is why spring sown grain is ordinarily so free from smut. If the seed of spring sowing is clean of smut when put in the ground, it is not apt to be contaminated by the soil smut, which does not ca through the winter alive except in unb ken balls which may be broken up by spring cultivation accompanying the pla ing of the wheat.

Some facts are now known about t dusky enemy of the flour bin; but pathologists are not yet satisfied. Mr. Z del says this: That wheat men sho realize, at the outset, that in combat this plant disease they must be just careful, just as attentive to the treatm prescribed, as is the phy cian in writing his p scription for the tre ment of a human ailme and the druggist in f ing the physician's ord Until this care is exerci the plague will continue levy its toll of millio npon the flour bins the world.

Wheat growers have en felt discouragement their fight against sm While afraid to put th seed in the soil with first treating it with bl stone or formaldehy they have actually many cases expres doubt as to whether ei er had any real effect. a group of wheat grow together and listen them. One has tried method and succeede another tried the sa method and failed. has trusted to luck a succeeded; one trusted luck and practically his crop. One has preve ed smut while across road the same treatm failed to win.

There is a reason every failure and a r son for every succe Nothing happens. Ev effect has a cause and ery cause has an effe The state college expe ment station in its w in cooperation with government has been, these years, trying identify the causes of failures when the rec nized smut preventi is abundant evidence t success is about to cro their efforts.

**Fig. 1. Various stages in the germination of spores of stinking smut. (a) Spore surface showing characteristic ridges; (b) spore in early stage of germination with young smut plant protruding from the ruptured spore wall; (c) a later stage in the formation of the smut plant; (d) mature smut plant with a tuft of H-shaped sporida (s) borne at its summit; (e) a separated sporidium which has produced secondary sporida (ss); (f) a separated sporidium which has given rise directly to an infection thread (in); (g) several secondary sporida which have started to germinate or have produced infection threads.**

# Common Cow Must Go

(Continued from page one.)

The dairy record books are filled with records of performance, the keeping of which has inspired much of the effort that has developed the dairy breed to a point where plain folks can have big producers. No one breed has monopolized the honors; each excels in its particular line. Some produce a maximum of milk with lower butterfat test; some produce a maximum of butterfat with a lesser flow of milk; some are hardier than others and require less care; others require less feed, it is claimed by some of their partisans.

On page 1 is the photograph of a typical Jersey, a breed that claims many of the top records. This particular animal, Genesta's Duchess, is at home in the northwest, which, while an honor in itself, scarcely compares with the additional honor of having produced 15,293.9 pounds of milk in one year, having a butterfat content of 902.5 pounds, equal to over 1128 pounds of 80 per cent butter. This record was made in the year ending March 2, 1918, on the Waikiki farm near Spokane, Wash., and is officially reported by Ira P. Whitney, manager of the farm, who gives much credit to the Waikiki herdsman, C. L. Batcheldor, for the cow's performance. Her record is claimed to be the highest of any cow ever imported from the Isle of Jersey, the native home of the breed. She was imported by Harry West of Scappoose, Ore., in 1911, and was brought to Waikiki farm in 1912.

Another Jersey that has made fame for the state of Washington as well as for her breed is Olympia's Fern, a Grays Harbor county cow, that, when just under 5 years old, produced 16,147.8 pounds of milk with a butterfat content of 937.8 pounds. She was developed by E. L. Brewer of Satsop. Still another Washington cow, among the many that this state boasts, is Eminent Jimps Owl, owned by T. S. Griffith of Glen Tana farm, near Spokane. This animal produced, for the year ending May 14, 1918, at the age of 4 years, a total of 16,728.1 pounds of milk with 708.8 pounds of butterfat.

A few other American Jersey records, compiled up to May, 1917, are as follows: Lass 66th of Hood Farm, just under 4 years old, 17,793.7 pounds of milk, with 910.6 pounds of fat: Eminent's Bess 209719, in the class of 5 years old or over, 18,783 pounds of milk, with 962.8 pounds of fat; Sophie 19th of Hood Farm, 189748, in the class of 5 years old or over, 17,557.8 pounds of milk, with 999.1 pounds of fat.

The honors of the Twelfth National Dairy show at Columbus, Ohio, just held, were clearly carried by the Jerseys, says the Breeders' Gazette. Measured by any yardstick this is true. The stall count of 205 Jerseys was almost half of the total of 485 cattle in the barn; in average merit, in attendance of breeders and in enthusiasm the dominance of the breed on this occasion was pronounced.

### IS A MIGHTY BIG AND GOOD PAPER

To the Washington Farmer, Spokane, Wash.: Enclosed please find 25 cents in stamps, for which kindly send publication, adding my name to your subscription list. To judge THE FARMER by the issue of October 10th, just at hand, it is a mighty big and good paper for the money. It ought to have a place in every home, in town and country, in the Pacific northwest.

State Marketing Bureau,
MOSES FOLSOM, Sect'y.
Jacksonville, Florida.

### PRIVILEGE EXPIRES NOVEMBER 9.

Secretary McAdoo has issued the following statement to holders of 4 per cent bonds of the first Liberty loan converted and 4 per cent bonds of the second Liberty loan: The privilege of conversion which arose in consequence of the issue of 4 1-4 per cent bonds of the third Liberty loan will expire on November 9 and under existing law can not be extended or renewed. Holders of these 4 per cent bonds lose nothing by exercising the privilege of conversion and gain 1-4 of 1 per cent interest per annum. Holders of 4 per cent bonds should not wait until the last moment to exercise the privilege of conversion, but proceed to do so promptly. Delay will result in overburdening the banking institutions of the country and the treasury department

# Wheat Growers

## Relief in the Drouth Districts

Of the $5,000,000 congressional appr priation for the financial relief of wh growers in drouth districts $1,650,000 w alloted to the Pacific northwest. The pub is now advised by President D. G. O'Sh of the Spokane Federal Land bank, t disbursement of financial assistance fall planting is now virtually ended a indications are that only about $300,000 the northwest allotment has been borrow by the farmers. This leaves approximat $1,350,000 for the purchase of seed spring planting in the northwest. Prac cally all of the $300,000 so far taken gone to Montana. Reports from the Gr Falls office up to October 19 show t said loans have been made to 1435 farm in that state, aggregating $291,988. The fi applications from Washington farm have only just reached Mr. O'Shea.

We are not surprised at the failure this legislation to carry adequate relief wheat growers in general who need su relief. The government's conditions we so restrictive that only farmers in d distress could get loans under the la Applicants had to show that he had su fered two consecutive total crop failur and even then could only borrow up to $3 The farmers pointed out at the time t law was passed that these restrictio made the law substantially inoperative the great majority of cases where practic broad-gaged relief should be extended.

Acknowledgment of the ineffectivene of the law is partially made in new regu tions which will permit farmers who ha suffered two consecutive failures to borr up to $500 for spring seeding. That is on a slight alleviation. We insist that co gress, at the earliest possible mome ought to pass broad, helpful legislation th will meet real conditions in the Paci northwest. Unless that is done producti is bound to be lessened in this region and great many deserving farmers, the ve class, in fact, that would be capable seeding extensive areas if they had liber assistance from the government, will unable unless liberal aid is granted to forward with wheat production in 1919.

### Mobile Infirmaries Behind Line.

Mobile infirmaries, operated by wome are to be established behind the Unit States lines in France.

# Miss Babcock Farms

## "Keeps the Books and Pays Bills"

**Dr. S. B. Nelson.**

Miss Bess Babcock is a farmerette whose farming is done on the scale characteristic of the wheat and cattle kings of the west. In the transaction of business in the management she has of several large wheat farms and herds of cattle and sheep in western Whitman county she has run her own little automobile a trifle over 13,000 miles since the first of last December.

"Very few pleasure trips are included in this mileage," she says. "Occasionally, of course, it is possible to work pleasure and business together."

Miss Babcock in recent months has telephoned across Whitman county to the state college of veterinary science for more than 800 doses of blackleg vaccine. I received many of her calls myself, and began to wonder what she was doing. Eight hundred doses of blackleg vaccine means 800 calves somewhere, and 800 calves means somewhere else 800 cows at least. I began to wonder what Miss Babcock had to do with them all, and made inquiry to find out. Here is her explanation, written from Ewan, Wash., a few days ago:

"I have your letter of inquiry, but owing to the fact that I have been away from home lately I am just catching up in our correspondence. I am afraid my position is rather uninteresting, but know you are interested in what we girls are doing to help the country along at this time.

"Father, as you know, raises considerable stock, but about all I have to do with them is to pay the men and keep them fed. Father and I had 1000 sheep this last year. It was our first venture in the sheep business, and we found that mixing the sheep business with other stock was not the best plan. We had, principally, high-grade blackfaces, and sold them about a week ago. We have found it hard to get herders this year; then, too, pasture is short, and sheep ruin pasture for cattle. I did most of the overseeing of the sheep.

"It is rather hard to describe my position. We have three different places to buy food for always, and sometimes five. It is my business to buy the food and see that the supplies are kept in stock. Then we have quite a large acreage of wheat in. I see the renters whenever anything comes up, and if I do not know about the matter

Miss Bessie Babcock.

at hand I talk it over with father and settle it. I do the secretary work, keep the books and pay the bills. Also I do most of the telephoning, and that is the reason you have had such frequent calls from me for blackleg vaccine.

"I have my own little car, and use that on my trips. Just in order that you may know how much I travel in my work, will say that I got the car the last of last November and have since then driven it 13,100 miles. There have been few pleasure trips in this mileage, though often it is possible to work business and pleasure together.

"If you are really interested in seeing the sort of work I am doing, would be very glad to have you come down.

"You ask what sort of work I had in college. I was graduated from the normal school at Cheney. Later I entered the state college and was graduated from the department of economic science and history, with especial emphasis on social economics. Later I took special graduate work along this line at the University of California."

# Avoid Sweeping Orders

To the Editor of The Washington Farmer: In reading the article, "Save Mill Feed," I fail to see the logic of Mr. Hoover's explanation unless English and French industries and babies are more precious than our own. He or his advisers seem to have not even the least data of the needs and difficulties of a strictly wheat producing area. If there is any man that is wilfully wasting feed or anything else let him be singled out and be dealt with justly. But do not make a mistake by making a sweeping order that injures nine men to get at the tenth. It appears to me that the producer is getting it both going and coming. The administration forbids him to use certain feeds and food. His hired help refuses to work without them. I ask what can he do? Patriotism first, last and all the time, and accept nothing but an unconditional surrender of the central powers; but it takes the foundation of everything to hold up the weight of heavy structures and feed is the foundation of the heavy structure of production. S. G. NOBLE.
Peach, Wash.

### Trains Stand Still.

Trains that were on time Sunday night at 12 o'clock stopped where they were and stood for one hour, this being the time when the clocks were set back one hour to the old time schedule.

TO the Editor of The Washington Farmer: Please find enclosed check for $1, and 15 cents in postage stamps, the $1 to pay for The Washington Farmer and The Twice-a-Week Spokesman-Review, the 15 cents to pay for a cotton felt war flag. I am a new subscriber.

# Alfalfa or Bran, Which?

By A. B. Nystrom.

With mill feed as hard to get as it is this year, it is interesting to learn about an experiment recently conducted at the Nebraska North Platte experiment station, and reported in their general bulletin No. 164.

Most feeders have known for some time that the general composition of alfalfa hay and bran differs only slightly. Henry gives the following analysis of these two feeds:

| | Dry matter in 100 lbs. | Digestible nutrients in 100 lbs. | | |
|---|---|---|---|---|
| | | Crude protein | Carbohydrates | Fat. |
| Bran | 89.9 | 12.5 | 41.6 | 3.0 |
| Alfalfa hay | 91.4 | 10.6 | 39.0 | .9 |

This shows bran to be slightly superior so far as composition is concerned. However, it does not follow that the feeding value differs in the same ratio, for having recently read of the findings of Dr. McCollum of John Hopkins university, we come to the conclusion that the compositions of the different nutrients in a feed is a factor quite as important as the weight of them.

Six pairs of cows were selected for each test, says the Nebraska bulletin. "Each pair was matched as closely as possible in respect to breed, lactation period, previous record, milk flow, percentage of fat, and other factors that would be expected to affect production. One cow from each pair was put in group A, the other cow into group B. The six cows of group A were fed a grain ration consisting of 4 parts ground corn, 2 parts bran, and 1 part oil meal during the first period of 15 days, while the six cows of group B were fed a grain ration consisting of 4 parts ground corn, 2 parts chopped alfalfa and 1 part oil meal. During the second 15-day period the A group received the alfalfa ration, while the B group received the bran ration. The tests were extended through four 15-day periods, during which time the bran ration and alfalfa ration was alternated between the two groups."

### Results of the Test.

"Bringing together the results of the first test from both groups we find that the 12 cows, while eating the bran mixture during two 15-day periods, produced 8216 pounds of milk containing 303 pounds of fat, and gained 96 pounds in weight. The same 12 cows, while on the alfalfa mixture during similar periods, produced 8284 pounds of milk containing 302.3 pounds of butterfat, and gained 224 pounds in weight.

"Combining the results from the two groups in the second test we find that the 10 cows while being fed the bran mixture during three 15-day periods, gave 14,669 pounds of milk containing 491 pounds of fat and lost 128 pounds in weight. The same 10 cows while being fed the alfalfa mixture during three 15-day periods gave 14,456 pounds of milk containing 484 pounds of fat and gained 16 pounds in weight.

"When we combine the two tests for both groups we find that 22 cows, while being fed a forage ration of silage and alfalfa hay, and a grain ration of 4 parts ground corn, 2 parts bran, and 1 part oil meal during an average period of 75 days, gave 22,886 pounds of milk containing 794 pounds of butter-fat and lost 32 pounds in weight. The same cows during a similar period, and under similar conditions, and fed the same ration, excepting that chopped alfalfa replaced bran in the grain ration, gave 22,741 pounds of milk containing 786 pounds of butter-fat and gained 240 pounds in weight.

"During these tests with 12 cows for two months and 10 cows for three months chopped alfalfa was substituted for bran in the grain ration without any appreciable unfavorable effect. The slight decrease of 145 pounds of milk and 7.5 pounds of fat production while the alfalfa was fed was more than overcome by the gain of 272 pounds in the weight of the cows. It is evident that in these tests alfalfa was fully equal to bran. If these results are the same as are found in general practice, then alfalfa fed in this manner has the same feeding value as bran."

# "Burned" Clover Hay

By A. Claudus Krittur.

Accidents and their resulting circumstances often lead to profitable discoveries. Such was the experience of F. M. Roseman in Yamhill county, Ore., when he attempted to put some green clover hay in the barn.

By spreading this green hay in thin layers over the mow floor area, Mr. Roseman figured that no injurious results would follow, and doubtless such would have been the case had the plans worked out. But the extra weight from insufficient curing prevented the fork from operating properly and resulted in most of the green hay being dumped together just inside the mow door. Since this part of the mow was to be fed out almost immediately Mr. Roseman did not take the time to tear the pile apart and spread it around, but simply covered it intact with other hay that was being hauled in.

A striking contrast both in the appearance and texture of this hay was noted when the pile was opened in the course of feeding. It had all burned to a golden brown, while the sweat and heat of the process had converted the stems from hard, dry sticks to a soft pliable product retaining all the original leaves.

This hay was fed to dairy cows, and the most gratifying results in production followed its consumption. The milk yield amounted from one-third to one-half as much again as had been secured prior to feeding the burned hay. As there had been no other changes either in kinds or amounts of feed Mr. Roseman could attribute the greater milk flow only to the difference in the hay being fed.

With this experience in mind Mr. Roseman expects if possible to "burn" all of his clover hay next year before feeding it.

Other experiences with this kind of feed, indicating the results, good or bad, will be welcomed by this paper—Editor.

### Burning Candle at Both Ends.

You are burning the candle at both ends when you sell uncleaned wheat.

TO the Editor of The Washington Farmer: Enclosed please find 50 cents, for which kindly send your paper for three years and also please find five cents in payment for one Farm Service Flag to me. Please enclose five smaller stars for helpers.

MRS. S. H. THOMPSON.
Winlock, Wash.

### CLEAN UP THE GARDEN PATCH.

A fall clean-up in the garden is important in the control of insect pests and diseases next year. Removing and burning the trash will destroy cucumber beetles, cabbage worms and squash bugs. Plowing the garden this fall will destroy potato bugs, grub worms and wireworms.

### USE SELF-FEEDERS.

Not only because the hog can feed himself as well as the farmer can feed him, but because a farmer has not time these days to look after him, the use of self-feeders both as to water and grain feed, are urged by many hog authorities.

### Rice in Japan.

Twelve thousand square miles—7,680,000 acres—constitute the rice land of Japan, which feeds a nation of about 50,000,000 people on an average of a pound a day for each person. It takes 135 days to grow a crop of rice, and in Japan the laborious work of cultivation is done almost entirely by hand.

## Stick to One Breed

"I have a type of hog which I have not seen surpassed anywhere. I believe in pure blood, but these hogs are the result of crossing breeds. They are a combination of Poland China, Berkshire and O. I. C., and they appear to have the good qualities of all. Perhaps it was the result of individual mating, but the result is all that I could ask for. They are all white.

N. H. Smith, a well-known breeder of Oregon City, Ore., made the above statement. It was referred by this paper to Dean E. J. Iddings of the college of agriculture, of the University of Idaho, who discusses cross-breeding as follows:

"I am not surprised that good results have been had in cross-breeding, since the mingling of different blood lines is responsible for the foundation of most of the modern popular breeds of swine in America. The Poland China, Duroc Jersey and Chester White are the result of systematic mingling of blood lines, and later the exertion of careful selection in order to secure uniformity of type.

"It is thought by many men who cross breed that increased vigor and growthiness is the result. It is very hard to either support or deny this assertion. It is a belief held widely, and the average man gives credence to it. It would seem to me, however, that it would be confusing to have two or three different breeds of hogs on the farm, and to have to take into account three different blood lines in planning for one's future operations in breeding swine. The question always meets the man sooner or later who cross-breeds as to what is the best to do in the future. He must either systematically go from one of these breeds to another until he has introduced a certain percentage of each one of them, or he must introduce the blood of one largely to the exclusion of the others.

"I feel, from the standpoint of convenience, that he will probably decide to use more largely one breed. On the whole, I think he will be far better satisfied. It will render it easier for him to get his breeding stock, and furthermore will give him uniformity in shape, conformation, and color marking of the hogs that he has to sell from the farm. It is a belief of many close students of live stock management and feeding that uniformity secured by holding to one breed or strain is in the long run worth more to the farmer than such results as may be secured by cross-breeding."

## Grind Alfalfa for Hogs

Careful test by the department of agriculture indicates the value of grinding alfalfa hay, soaking it for 24 hours in barrels containing hot water, adding a little salt, and possibly one-half bushel or more of shorts to a barrel of feed and giving the mixture to hogs in the form of a thick slop. It is suggested that the preferable time for feeding this slop is the morning, so that during the balance of the day the animals can rustle about for other feed. Good alfalfa hay should also be available in convenient racks so that they can eat this roughage as they please.

One of the most important matters, and undoubtedly the one which is most commonly neglected in the proper handling of hogs, is to supply the porkers with an abundance of clean, pure drinking water. For this purpose some automatic watering device or home-made convenience of this nature should provide the hogs constantly with water. Without question, water is the cheapest material used in pork production, and the importance of having it supplied in quantity and proper quality can not be overestimated. Hogs should not be forced to drink from an icy tank nor should they be provided with only a limited supply once or twice a day.

## VETERINARY

By DR. S. B. NELSON.

**Possibly Lumpy Jaw**—I have a steer 10 months old that had a swelling come under his jaw and afterwards broke on both sides in red bunches full of mattery tubes. These bunches hang on him in the shape of big warts. He also has one on his flank. Is it caused from drinking water that has stood a long time or is it some kind of a fly sting? Is it contagious? What can I do for it? E. G. J.

South Bend, Wash.

Your description of the symptoms affecting the steer is somewhat indefinite, but I gather from your description that it possibly may be lumpy jaw. I do not think that the lump on the flank has any relation to the one on the jaw. If the disease should be lumpy jaw I would suggest the following treatment. Surgically the lump should be removed, the bone scraped if attached to the bone, and the wound dressed daily with tincture of iodine. At the same time the animal should be given one and one-half drachms of potassium iodide in a pint of water once daily for a week, then the next week stop treatment, repeat the third week, stop the fourth, and repeat the fifth week. This treatment has given good results in many cases of this kind of trouble.

**Milk has unpleasant odor**—After standing several hours the milk of our cows has a very unpleasant odor. Was not noticeable till they were fed alfalfa hay from new seeding, the hay being mixed with barley and watergrass. The cows are on pasture part of the day. One cow's milk is more affected than the others. She has been giving milk about 17 months. I am not sure she is with calf. Have noticed her crewing dried strawy manure a few times. Can you give an opinion as to the cause of the trouble? C. L. S.

Emmett, Idaho.

Oftentimes the milk of cows that have been in lactation and giving milk for a long period of time takes on the bitter and unpleasant taste. That may account for the character of the milk of the cow that has been in lactation for 17 months, an exceptionally long period of time. Regarding the other cows it is quite possible that it is due to some condition about them, just what, of course, I am not able to say from the limited information you give in your letter. I would suggest that you change the feed of your cow, and before doing that give the cow from one pound to a pound and a half of Epsom salts in two quarts of water. That may change the character of the cream. Of course, you can drive away the unpleasant odor by heating the milk, not to boiling, but just prior to boiling.

**Examination Will Determine**—We have a mare 17 years old that seems to have something in her throat that bothers her breathing. She is all right when walking slow, but if urged she breathes heavy and seems to choke. She has to stop and cough. She runs a little at the nose. She is in good condition and eats well. She seems to have a lump just back of the jaw bones in the soft part of her throat. Could this be caused from feeding orchard hay? Some seem to think it is caused from the lead spray. Is there danger in feeding the same hay to a cow? It is first cutting alfalfa. Please advise through the columns of the Farmer what to do for the mare. L. E. C.

Grandview, Wash.

Last week I had an opportunity to go into your valley and see the horses affected with the symptoms which you describe in your letter. I do not think it is a mineral poison. Whether or not it is, I am not certain. I made arrangements to have specimens sent to the chemist at our station, so that he might definitely determine whether there is present in the various tissues of the animal's body sufficient lead or arsenic to cause the chronic symptoms of mineral poison. As soon as these specimens arrive and can be examined and the information is obtained, it will be given publicity.

**Treatment for warts**—I have a three-months-old heifer which gives bloody milk from one front teat. She came fresh in June and was bred about two weeks ago. She has been hurt in no way that we know of. She runs at large on wild pasture without grain or other feed. There are also warts on her teats. Could you tell me what to do for her in regard to the bloody milk and also what will remove the warts without hindering her from being milked? N. M. S.

Westmond, Idaho.

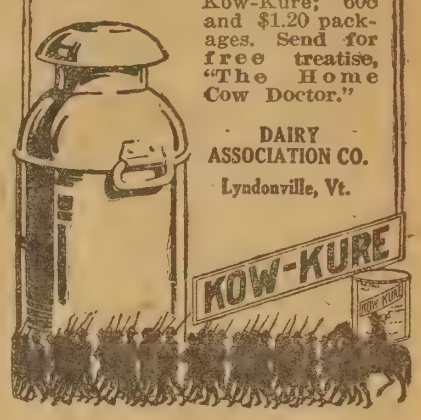
I would suggest to you that you give the heifer one pound of Epsom salts in three quarts of water. Twenty-four hours later begin giving her one teaspoonful of sodium hyposulphite of soda in a pint of water once daily. Regarding the warts on the teats, you will find the following sometimes to be of considerable value: Chloral Hydrate, 1 1-2 drachms; acetic acid, absolute, drachms, 1 1-2; salicylic acid, drachm, 1; spirits of ether, drachms, 1; collodion, 4 drachms. Apply to the warts twice daily.

**Growth Under Colt's Jaw**—We have a 2-year-old colt that has some kind of growth under his jaw as large as a baseball, and hangs by cord or skin the size of a finger. It is raw all the time and bloody when hurt. Has another on neck near collar the size of hickory nut. Have a 3-year-old that has one coming just in front of the hip-bone. Some call them warts. Can you tell from the description what they are and the cure for same? Also are they contagious? O. D. M., Wheeler, Wash.

Cut off the growth very close to the skin, as closely as it can be done, with a dull instrument, if possible a dull pair of shears, and then apply to the bleeding wound tannic acid until the bleeding stops.

**MILK** ..... and WAR TIME

In these days of high prices for dairy products, the "poor milker" is more than ever a liability.



But before you sell the cow that is not producing well, try to improve her condition. Her milk value is much greater than her meat value.

Most poor milkers are non-productive because of some defect of health, which can be quickly remedied by intelligent treatment.

Kow-Kure is a medicine that acts quickly on the organs of digestion and milk production. Its widely known tonic and curative qualities have made it the standard cow medicine for the prevention of disease and the treatment of Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches.

Give Kow-Kure a trial; it will do for you what it is doing for thousands of others. Feed dealers and druggists sell Kow-Kure; 60c and $1.20 packages. Send for free treatise, "The Home Cow Doctor."

JAMES DRYDEN, Editorial Contributor.

## Five-Cent Eggs

Consumers have now been introduced to the five-cent egg, and in a few days they will likely form the acquaintance of the six-cent egg. But this is a very moderate price compared with what our allies in Great Britain and France have to pay. There it is the 10 and 12-cent egg. It would be more here if ships were available for carrying eggs across the water.

And yet, five and six-cent eggs do not mean big profits for the poultry producer. Six cents will not buy any more feed than three or four cents bought a few years ago. The poultryman, however, with a good strain of layers is making a good profit, more than before the war. The average flock, the flock that produces the great proportion of the egg crop of the country, is not making as much money. In fact, the average hen that lays 100 eggs or less in a year is not making money, because of the high price of feed. J. D.

## Buttermilk for Fowls

To the Editor: I am writing for information as to the value of buttermilk and meat scraps. We have to buy nearly all of our chicken feed. You state in one of your articles that 100 pounds sour milk or buttermilk is equal to 5.4 pounds of meat scraps. We pay 25 cents for five gallons milk and six and a half cents a pound for meat scraps, making 100 pounds of buttermilk cost about 55 cents and 5.4 pounds of meat scraps about 35 cents. Unless the milk is necessary to the chickens, the meat would be much cheaper. Does Dr. McCollum's test apply to chickens as well as mankind and stock?

MINNIE MAY SPICER.

Colville, Wash.

The value given for sour milk as mentioned in this letter was taken from a bulletin of the Missouri university station and was computed from the results of an experiment on sour milk and meat scrap for laying hens. It was found in that experiment that 100 pounds sour milk had a value of 5.4 pounds of meat scrap in rations for egg production.

It will be noted that this value is given as the result of the experiment, and the experiment was carefully conducted. I am inclined to think, however, if the experiment was repeated under varying conditions it would be found that milk had a greater value compared with meat scrap.

If the relative value is computed from the chemical analysis alone 15 pounds of buttermilk is worth about one pound of meat scrap, judging from protein content; in other words, 100 pounds milk would be equal to 6.6 pounds meat scrap.

But milk has a greater value than its protein content would show. It has been shown by Dr. McCollum and other investigators at the Wisconsin station that the protein of milk is not only valuable in itself, but it increases the efficiency of the proteins of the grains fed. Pound for pound the dry matter of milk is worth more in the feeding of poultry than meat scrap.

The prices given by the correspondent for buttermilk as well as for meat scrap are high. He should be able to purchase both of them at a lower rate.

Dr. McCollum's tests apply to chickens as well as to livestock and children. Nothing responds more rapidly to milk feeding than chickens. J. D.

## Prevent Poultry Disease

Poultry raisers who wait until disease appears in the flock and then prepare to make a defensive attack are likely to be successful only in rare cases. By far the best plan, say poultry specialists of the United States department of agriculture, is to care for the flock in such a way that disease will not appear. The aim in controlling the disease of poultry is, they add, to learn how to prevent them rather than how to cure them. To enlighten poultry owners as to the characteristics of the more important diseases in order that they may intelligently use the most improved methods of combating them, Farmers' Bulletin 957, "Important Poultry Diseases," has recently been published by the department. The causes, symptoms and treatment of poultry ailments, from brooder pneumonia to worms, are given in this publication.

As all poultry is susceptible to many diseases, some of which are highly infectious and resist all efforts of treatment, the bulletin suggests that when birds become sick it is often the best plan to kill them. The greater the number of birds kept upon any farm or plot of ground, and the more they are crowded together, the more important are the measures for excluding, eradicating and preventing the development of the causes of disease.

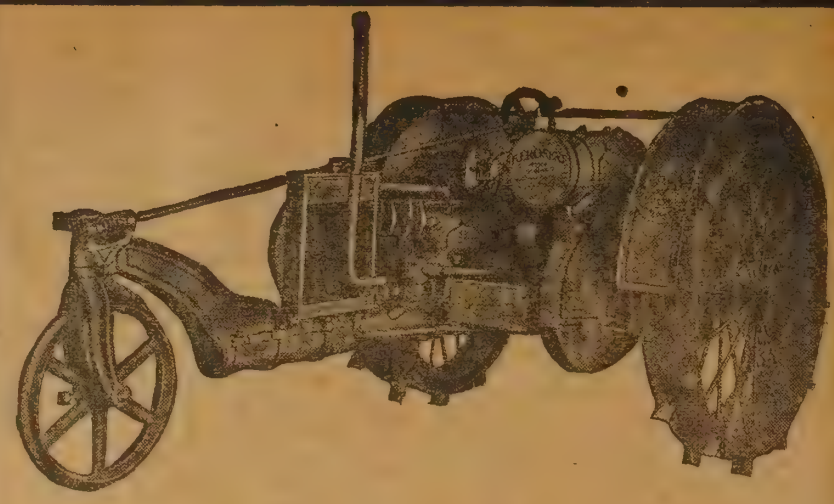
When disease appears among poultry the fowls should be removed from the poultry yard and a good coating of freshly slacked lime be applied to the entire surface of the ground, according to the bulletin. After a few days it should be plowed and then cultivated three or four times at intervals of a week and finally sowed with oats, rye or other grain. It is best to leave the ground unoccupied by fowls until the winter has passed. After the fowls have been returned the premises must be frequently cleaned and occasionally disinfected.

The drinking fountains and feed troughs must be washed every week with boiling water or other disinfectant, and if any lice or mites are found on the birds or in the house, the roosts and adjoining parts and walls should be painted with a mixture of kerosene, one quart, and crude carbolic acid or crude cresol, one teacupful. The house may be whitewashed with freshly slacked lime or sprayed with kerosene emulsion. In case of an actual outbreak of a virulent disease it is well to add to each gallon of the whitewash six ounces of crude carbolic acid. Good disinfectants destroy the germs of contagious diseases, the external parasites such as lice and mites, and in some cases the eggs of parasitic worms, and should be used frequently in and about the poultry house.

### PLANT GRAIN CHICKEN YARDS.

On the diversified farm, where a small flock of laying hens are kept, they are usually confined in the yard during the summer months when they will do great damage to growing, cultivated crops, and are given the run of the farm during the winter months. When they have the run of the farm they pick up a great amount of food which would otherwise go to waste. In the spring, when they must again be confined, there is a notable decrease in the number of eggs produced, unless they are supplied with the foods which they gathered when they roamed the farm. A good way to supply some of the green food for early spring feed and also help to disinfect the ground in the yard is to seed it down in the fall with a winter cereal like winter rye, oats or wheat. This will grow practically all winter in the Coast district and make a good, early green feed and at the same time helps to incorporate the hen manure into the soil. C. J. M.

### LET THE TURKEY GROW.



Turkeys should be allowed to reach maturity as nearly as possible before marketing, in the opinion of Thomas G. Farrell, head of the poultry and dairy products division of the Oregon food administration. Mr. Farrell is urging poultry dealers not to buy turkey hens that weigh under seven pounds live weight, nor gobblers that weigh under 10 pounds.

# Alfalfa and Cows

## One Good, One Bad for the Orchard

I have been advocating alfalfa in the orchard because it has a strong root that penetrates more deeply than the tree roots and aerates the soil. Besides, it lets the water down to greater depth, and tears up, in some degree at least, any hardpan near the surface. Then, too, it nitrogenizes the soil, for it takes nitrogen from the air, deposits it on the roots, where bacteria are formed that break down the small particles of sand, leaving the chemical qualities so that the water dissolves them and the roots of the trees drink them up. So much for alfalfa.

Now about cows in the orchard. I have invariably noticed that they damaged the trees. A few days ago I was passing an orchard where about half of the old trees had been dug out and new ones planted in the spaces from which they had been taken. A cow was staked out with the view that she would eat the alfalfa. This view was fully realized, for she had eaten it close to the ground. But she had browsed among the branches of the large trees, broken down some of the small ones and eaten off all the foliage of others. The cow was doing well; but it was damaging the orchard. I thought of a story I once read of a man who, after the death of his wife, had engraved on her tombstone, "Here lies the body of Mary Ann. She rests in the bosom of Abraham. 'Tis very good for Mary Ann, but very hard on Abraham." G. L.

# Protect the Bees Well

For the successful wintering of bees proper stores are essential, but good hives and thorough packing as protection from the elements are also necessary. A colony properly protected will winter with a much larger force of workers and really consume less stores than a colony unprotected. While considering feeding, therefore, also consider giving all colonies protection from the elements.

The bee specialists of the United States department of agriculture advise packing stands in units of fours. Two face west and two east. The packing case consists of a movable bottom, sides and cover. The stands are raised upon two-by-fours, allowing for four inches of packing beneath. Six inches of packing is given on all sides and eight inches on the top. Dry leaves, sawdust, fine excelsior or broken and packed straw may be used. The cover and sides should be made waterproof. Each colony is wintered in two hive bodies, the second one being placed on as a super. An exit is provided, so that on warm days the bees can take flights and so that necessary ventilation may be had. Bees do not hibernate, but keep up a certain amount of activity all winter. They consume stores in order to produce sufficient heat to keep the cluster from freezing, so do not neglect to help them conserve food by giving them the best winter protection possible.

# Store Manure in Yard

Farmers who are confronted with the problem of maintaining soil fertility—important in carrying out increased food production—will find it profitable, the United States department of agriculture suggests, to study the methods of handling barnyard manure practiced in parts of eastern Pennsylvania, where excellent results in adding to crop yields have been secured. These methods are described in Farmers' Bulletin 978, recently published by the department. For over a century it has been the custom in this region to store stable manure in a walled manure yard, partly or wholly covered, in which the stabled animals are allowed to exercise during the day. Manure thrown into such a yard and thoroughly tramped by stock, according to the department's bulletin, loses much less through heating and leaching than does manure piled in the open.

Nearly all manure produced on the farms in the region to which the bulletin refers accumulates in the manure yards. All cornstalks, straw and other roughage not used as bedding are added as needed to take up excess liquids. In this way the covered portion of the barnyard not only affords a dry and comfortable shelter for the live stock during the winter months, but it protects the manure so that no leaching occurs. In some instances the cornfodder is run through a cutter, which increases its power of absorption and makes the manure easier to handle. The tramping of the stock packs the manure, so that an even temperature is obtained, which seems to favor proper fermentation, as is evidenced partly by the strong odor of ammonia in the vicinity when the manure is being removed and partly by absence of dry combustion or "firing," so common in manure piles exposed to the weather.

The manure is hauled to the fields twice a year on the majority of farms. Many farmers apply it during the winter, when the ground is frozen and hauling is easier, and when there is more time for this work, but this method should not be done on hillside land or where there is danger of the manure being washed away when the snow melts and before the ground is sufficiently thawed to allow the soluble material to sink in. In general practice the sod is usually manured in the early spring at the rate of eight to 10 tons an acre, and is immediately plowed and rolled.

# Belgians Need Help

A state and nation-wide drive is now in progress to get funds for the work of the commission of relief in Belgium. Herbert Hoover has issued an appeal to the American people to send money immediately, and to their utmost possibility, to the Belgians, who face a severe winter entirely denuded of even the commonest necessaries of life. The Spokane committee for Belgian relief will be glad to accept sums of money, either down or in monthly instalments. All that is necessary is to address a postal money order or check to W. Dick, treasurer of the Belgian relief fund, Bank of Montreal, Spokane, Wash. The drive has been indorsed by the county council of defense. Not one penny goes in salaries or in expenses. The funds are distributed by the committee for relief in Belgium by voluntary workers. The need is great and urgent.

### FUR EXCHANGE SALE.

The autumn auction of the international fur exchange closed at St. Louis with sales for the six days aggregating $6,400,000. Approximately 3,500,000 pelts were sold. Fur buyers purchased $2,500,000 of Liberty bonds during the week and contributed $10,000 to war charities.

### NO "BEST" STUMP METHOD.

There is no one "best" method of clearing land of stumps. The kind of stumps, the kind of land and other local conditions require different methods on different farms.

Any friends or relatives who happen to have a birthday this year I am going to give them as a present a subscription to The Washington Farmer, which will be a present all the year and will be greatly enjoyed.
MRS. GEORGE W. DOUGHTY
Spokane, Wash.

### MAXIMUM COLD STORAGE RATES.

A schedule of maximum rates which applies to all public cold-storage warehouses having a capacity of 150,000 cubic feet or more has been announced by the United States food administration. All charges for storage which exceed those promulgated will be deemed unreasonable or exorbitant within the meaning of the food control act and the regulations of the food administration. Public cold-storage warehouse men are also warned that the maximum rates are not to be regarded as allowable rates. Licensees whose rates are lower will not be permitted to increase them unless justified by actual increase in costs. The purpose of this provision is to prevent those warehouse men whose operating costs are low from unjustifiably increasing their charges.

### FIRST TESTING REPORT.

Following is the first month's report of the Lewis County Testing association:

| | | |
|---|---|---|
| Number of cows tested | | 45 |
| | Milk. | Fat. |
| Highest production | 1743 | 49.7 |
| Average production | 713.6 | 25.4 |
| Lowest feed cost | | $4.50 |
| Average feed cost | | $6.77 |
| Highest feed cost | | $15.07 |
| | Milk. | Fat. |
| Highest herd average | 1119.9 | 40.43 |
| Number of cows producing 40 lbs. or over | | 3 |

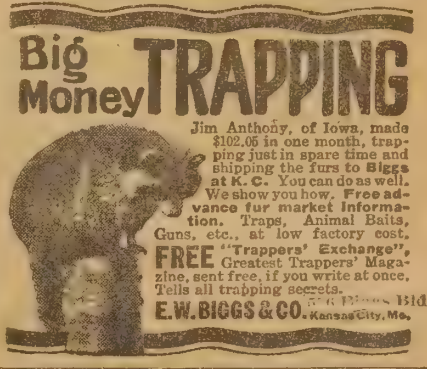
### ALLIES CAPTURE WHEAT.

During the recent few weeks the allies have captured approximately 2,000,000 bushels of wheat grown in territory that has been held by the Germans. The grain was intended by the German army for use back of their lines. Considerable foodstuffs of this character are being taken by the allies in their advances.

### NEED MORE LOCUST WOOD.

The United States shipping board, through its representative in the northwest, is endeavoring to secure more black locust wood for use in making "tree nails," which are used extensively in shipbuilding. The shipping board is paying about $15 a cord for the wood from which they are made.

### PRUNES BRING $110 A TON.



Prunes in the Walla Walla valley this year netted the growers approximately $110 a ton, according to figures given out. The total crop of the valley is worth approximately $700,000.

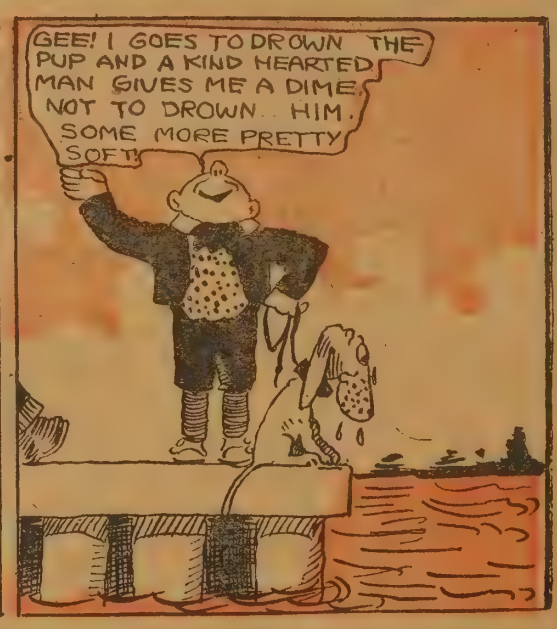
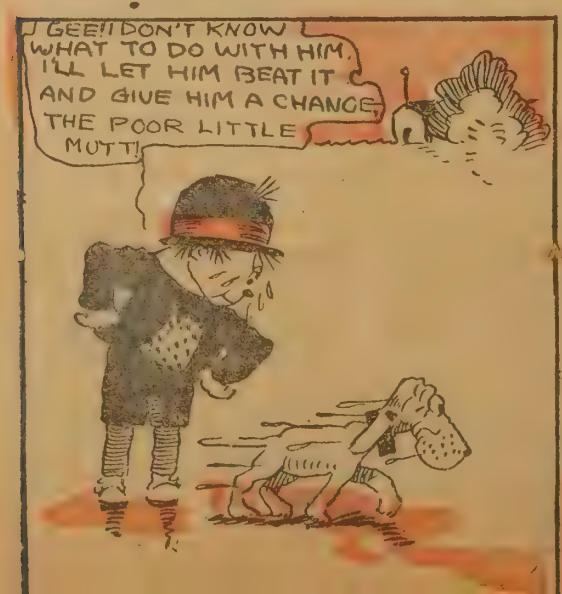
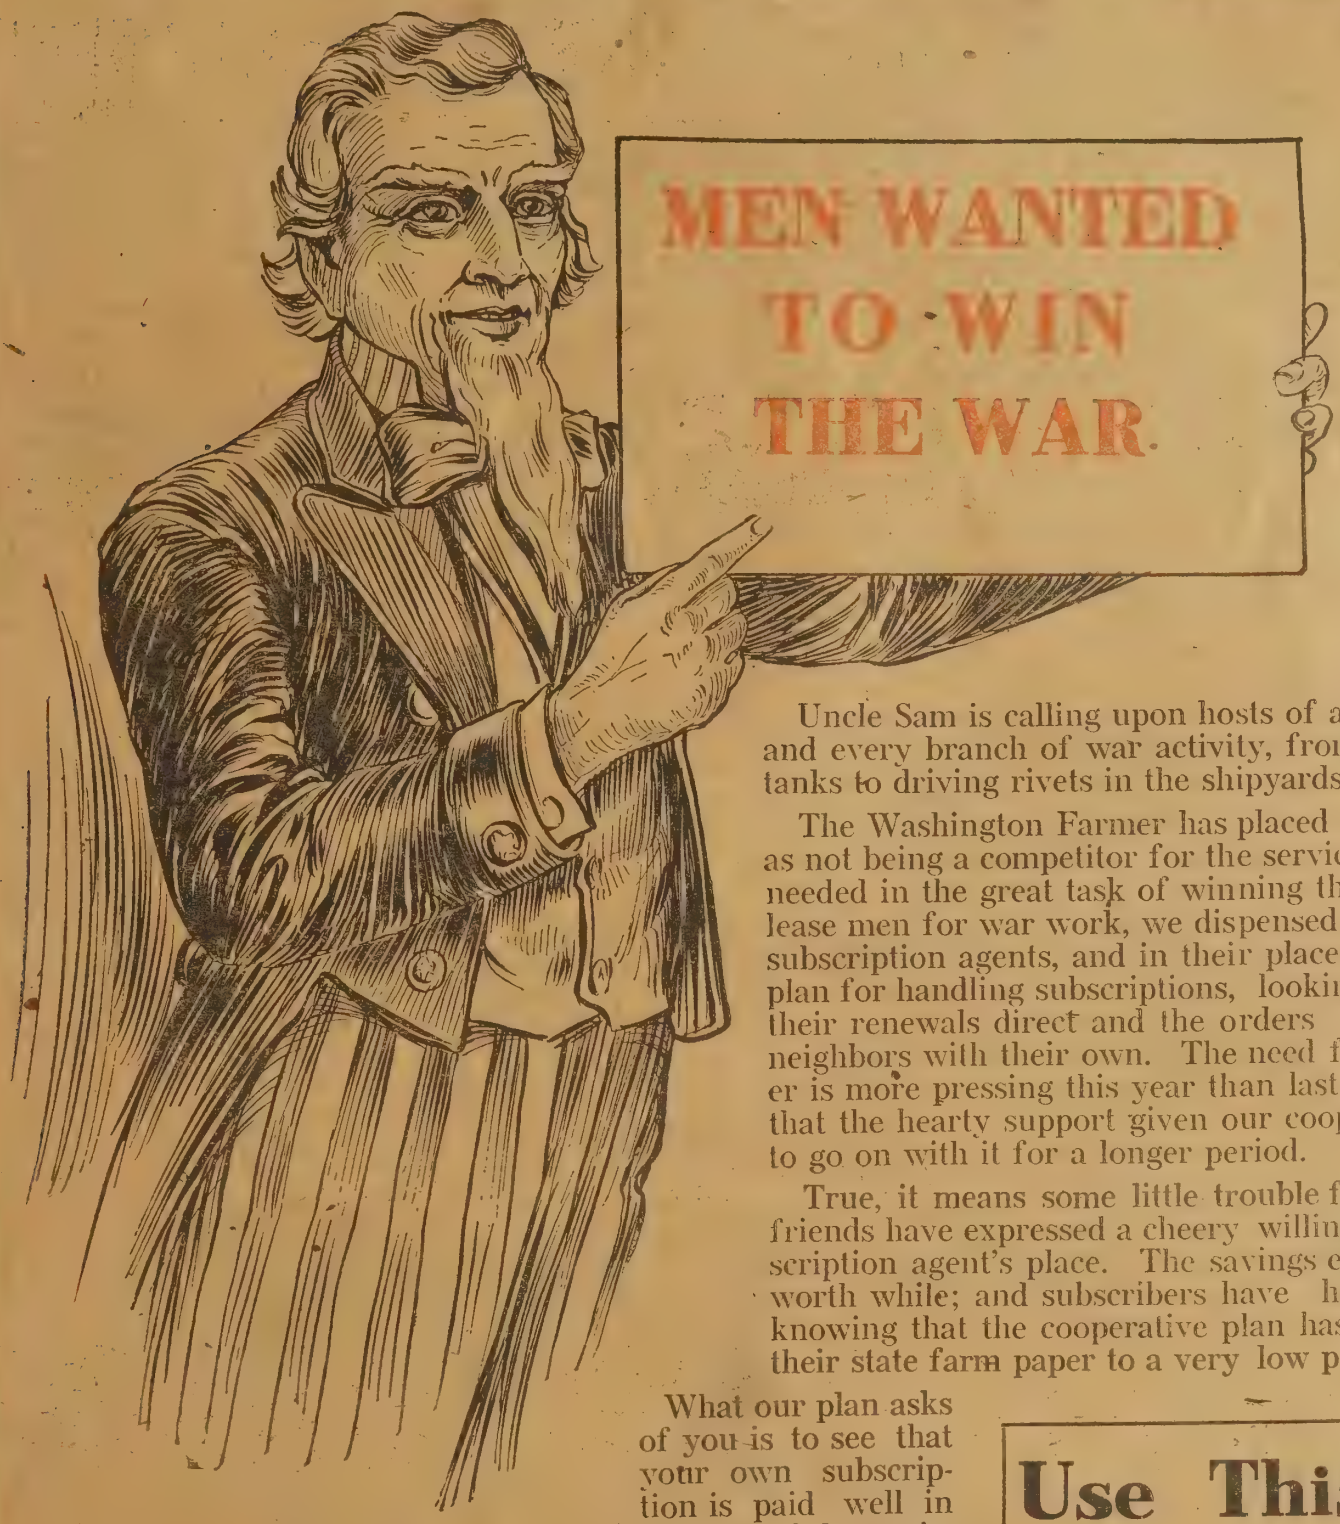
# BROTHER REGGIE BUTTS INTO WILLIE'S WAR GAME

DEAR TOMMY: Johnny Jones and I had a lot of fun trying to land an aeroplane model on the beach through a battery of these mines. Then Brother Reggie came along and got in the game. He pulled a balloon way down before exploding the bomb, and you can imagine what his white flannels looked like, for the bombs were filled with lampblack! Yours, etc., WILLIE.





# BOOT AGAIN ARRANGES FOR PUP'S DESTRUCTION



# We're Not Competing With Uncle Sam!

Uncle Sam is calling upon hosts of able-bodied men for each and every branch of war activity, from manning the monster tanks to driving rivets in the shipyards.

The Washington Farmer has placed itself squarely on record as not being a competitor for the services of these men who are needed in the great task of winning the war. Last year, to release men for war work, we dispensed with our big force of subscription agents, and in their places adopted a cooperative plan for handling subscriptions, looking to our readers to send their renewals direct and the orders of their friends and neighbors with their own. The need for conserving man power is more pressing this year than last; so we are glad to say that the hearty support given our cooperative plan enabes us to go on with it for a longer period.

True, it means some little trouble for our readers: but our friends have expressed a cheery willingness to take the subscription agent's place. The savings effected have been well worth while; and subscribers have had the satisfaction of knowing that the cooperative plan has brought the price of their state farm paper to a very low point.

What our plan asks of you is to see that your own subscription is paid well in advance of the expiration date stamped on the address label on the wrapper of your paper; and to make an effort to send in the subscriptions of those in your neighborhood who will be interested in their state farm paper with its live information, helpful departments, and entertaining stories.

Remember, you receive The Washington Farmer every week brimful of helpful information and entertaining features. The price is only 50 cents for 3 years, which amounts to but 17 cents per year.

## LOW RATES

**Made Possible by our Cooperative Plan.**

For the Washington Farmer, 1 Year. **25c**

For the Washington Farmer, 3 years. **50c**

For the Washington Farmer, 5 years. **$1**

## Use This Coupon

**The Washington Farmer.** **Oct. 31.**

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

# Putting the Glands to Rights

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Dr. Hirshberg.

A thoroughly frightened person can not expectorate. The "bad" man or "tough" tries to show his bravado and absence of fear to "all comers" by spitting sharply and forcibly. If you have read the researches of modern physiologists presented in my various articles, you know that the emotion of fear is associated with the overflow of the thyroid, adrenal, intestinal glands and a cessation of action of the salivary glands.

Those chronic triplet offspring of fear, doubt, despair and cowardice, have been found by physiologists to abide in those whose grandular tissues are diseased, weak, fatigued or otherwise below par. One of the happy results of training camps, setting up exercises and physical deeds of daring, is in the elimination of the emotions of fear, timidity, despair, doubt, hesitation and cowardice.

The thyroid, adrenal and other glands are in this way disciplined to supply the human personality with only the exact amount of its substance necessary to combat and counteract the influence of weakness or ill health.

"A Settled Anger."

When you are angry your adrenal glands pour forth more than the normal quantity of adrenalin. Whether the sensations or perceptions aroused by the outside impression moves the glands to work first and thus initiates the physical emotion called anger, or whether anger starts an instant sooner, was in doubt until experiments proved that the emotions of anger, fear and others could be reproduced by artificial inoculations of these gland substances.

The flushed face, tense skin and muscles and elevated blood pressure, all signs of anger, are part and parcel of the effects of adrenalin and its allied glands. "Hatred is a settled anger." When an individual suffers this chronic sort of madness you may suspect that his adrenal or some similar glands are overactive. At any rate, they should be investigated.

Look to the Glands.

Just as "passion seeks aid from its opposite passion," so physiologically, nature attempts to combat the overflow of those glands which generate fear, anger, excitement or other emotions. Love is sometimes disguised in hate; fear and admiration become intermingled with envy and hypocrisy. The braggadocia of the cowardly braggard is of the same sort. The adrenal glands are then summoned and stimulated artificially to overcome the overproduction of the thyroid, thymus and other glands.

If the various lymph glands, the thyroid, pituitary, thymus, adrenalin, pineal and arathyroid glands are healthy, the emotions will be stable and not nuisances to you and your friends. On the other hand, if you are inclined to exaggerate, to be hypersensitive, to overdo the sympathy and martyr act for yourself, to be psychaesthenic, neurasthenic, neurotic, nervous, irritable, jealous, easily angered, see to it that you do not overwork your glands and allow them to become tired or diseased or in some fashion overstimulated.

# His Monument

By Carl G. Menze, Ferndale, Wash.

I walked leisurely along the road outside the cemetery. I noticed the many monuments of different sizes and shapes. On some I read names and dates of school friends whom I had played with in my youth. And as I loitered along, reflecting o'er the past and introspecting into the future, I wondered why all those monuments were there. Would they help us to remember friends of bygone days or will their purpose be in vain.

I walked on and left the cemetery with its sepulchral silence. But I still thought about the monuments and if those departed ones would be remembered by those who did not know them well. So content was I in my meditation that I had walked some distance and was in front of the Hans Schmit place before I knew it. When I had passed the cemetery I had forgotten Hans Schmit. He lay in an out-of-the-way corner and did not have a tombstone on his grave. I remember he had often told me that he did not want a tombstone to mark the place where he lay.

Hans Schmit came to our part of the country when it was covered with a virgin forest, except now and then a cleared spot which was the home of another pioneer settler. The other settlers cut all their timber, but not Hans Schmit. Where he had decided to locate his permanent buildings he had left groups of strong trees standing. I once asked him why he did this. He straightened up from his bending position and said, "My boy, when I am dead and gone thees trees will stand and people will ask for the one who had the vision to read the future and leave them." At that time I thought it very odd, as there were so many trees.

When he had cleared the land along the road in front of his place he planted a row of shade trees and patiently coaxed them to grow. In time the people elected him director of the school district. Immediately after election he insisted on starting to beautify the school grounds; and he was persistent, he had his way and was given charge of the work.

All his farm work was sound and practical. His land was well tilled, his stock was well cared for, and his buildings were attractively painted. His crops always had a healthy look; his fields were free from foul weeds.

One day, in his old age, I found him supervising the damming of a large ravine, which was to be converted into a miniature lake. Although old in years, he had the enthusiasm of youth. "My boy," said he, "probably this will be my last active work when this pond is finished. On its banks I shall plant trees and flowers and a lawn. And then in my old days I shall spend my time in ease, satisfied that my mission on earth is finished. All these works which you see on my farm will be my monument when I am gone. By my farm people shall judge me."

I did not take his remarks seriously at that time. Years, however, have changed my opinion. Today Hans Schmit's shade trees stand proud and stately. The groups of trees around the buildings give shade in the summer time and wind protection in the winter. The school yard does not have that bleak and barren look like that seen around neighboring rural school grounds. The yields of his acres have been constantly increasing. Where once his ideal types of farm stock was a vision, they are now a reality. His place bears the unmistakable stamp of his individuality, for his children now own it and they have unconsciously assimilated his philosophy of life.

In the cemetery there is no monument in honor of Hans Schmit. In fact, I know he did not want one. But to my mind he is not forgotten. I have had a new revelation of his exemplary character. His work as a broad-visioned farmer will be appreciated more and more in the future when other farmers realize the lesson he will have given them. His monument is his service to his fellowmen.

And as I stood there that day looking over the change Hans Schmit had wrought of the virginal forest a large touring car came up the road and stopped near me. The driver was the monument salesman.

"It is funny," he said, "why I can never sell these Schmit people a monument for old man Schmit. They can easily afford one, I guess."

"You will never sell them one," I replied. "This is old man Schmit's monument," and I waved my hand in the direction of his model farm.

# Be a Victory Girl

By Carrie D. McComler.

"Every girl pulling for victory." This is the slogan of the Victory Girls.

To be a Victory Girl, a girl must pledge herself to earn and give to her utmost for war work. Many communities are making $5 the goal. In multitudes of other places the mark is much lower.

How can a school girl earn money? All over the land the girls are asking it. Some of them are already involved in enterprises that are bringing in much more than $5.

When President Wilson requested seven national organizations to combine in one campaign for the funds which they would need for their war work during the coming year, everybody throughout the country was automatically lined up, girls and boys with the rest.

Six of the societies uniting are working directly with soldiers, sailors and aviators who are in training camps here and abroad and also in actual warfare. They are the Y. M. C. A., the National Catholic War council and Knights of Columbus, Jewish Welfare board, American Library association, War Camp Community Service and Salvation Army. The remaining one, the Y. W. C. A., concerns itself with women friends of the men in the service and with girls who are employed in government work in offices and factories. The organizations together make a gigantic concerted movement to keep the spirits of the fighters and workers at their best in order that the Hun may the sooner be defeated.

The Victory Girls and Victory Boys are the "earn and give" division of the United war work fund campaign for $170,500,000. Miss Gertrude Gogin, girls' work secretary of the National Y. W. C. A., is secretary of the girls' division.

Every farm has some product that the girls can utilize in some money-making scheme. Just now thousands of bushels of good apples in many parts of the country are going to waste because the farmers have not time to gather them. Here is a chance for the girls to do double service—earn money for the big campaign, and also help the food administrator by saving the apples.

Every girl who lives in a bean section knows about sorting the good beans from the gravel and the broken and discolored ones. Here is a chance for the girls.

The poultry yard is a never failing source of revenue under normal conditions. Many farmers can not take the time to get the retail price for eggs by selling them in small quantities. A daughter might work up a special list of customers through the telephone and see that the eggs are delivered. After paying her father the wholesale price, which he is accustomed to receive, she would have a balance for her war fund. Some of the poultry would bring better prices if they were dressed and special customers can be found. The reward for the work involved would be the difference between the usual and the dressed price.

Nearly all farms have more or less junk lying around which, in these times of help shortage, no one has time to dispose of. The old iron, automobile tires and all of the rest of the unsightly rubbish can be assembled, sorted over and sold.

Old broken furniture not infrequently yields fine timber for which cabinet makers and lumber yards would gladly pay well if they knew of it. Many an attic in the farm house has cast-off clothing put away that might be brought to the air and disposed of to peddlers or to persons who are making rag carpets.

Whatever enterprise a girl adopts to earn her part of the big fund, a few good old rules should be remembered. First of all, use all the resources at hand. Girls who have felt the most delicate about selling farm products in their home communities are doing it now for the war fund's sake.

**What 15c will bring You from the Nation's Capital**

*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*

The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

The Pathfinder, Box 89, Washington, D. C.

**Live Stock Breeders!**

**Here Is Your Chance**

**Fifty of the great herd of Shorthorns owned by the I X L stock ranch in the Boise valley are to be offered at AUCTION WEDNESDAY, NOVEMBER 13, 1918.**

Some of the yearling stallions to be sold.

Included in sale is the great sire, Diamond Count No. 487809; also 20 cows (10 Scotch), some with calf at foot, others bred; 16 young heifers (8 Scotch) and 14 bulls (4 Scotch).

This herd is of the highest registered type and in splendid condition.

The following registered Percherons are also to be offered at auction during this sale.

**Three yearling fillies, one 2-year-old in foal, six this year's colts. Five fillies. One stallion.**

The following farm machinery will be disposed of at auction: One combine, one 12-foot drill, one Smith Form-a-Truck, one self binder, three mowers, hay rakes, one 16 h. p. R. & V. gas engine nearly new, one ensilage cutter, one De Laval separator, one roller mill, one fanning mill, graders, scrapers and all kinds of implements and machinery.

Household furniture for what it will bring.

In addition to the above we are offering at private sale the following registered Percheron horses:

**One 4-year-old stallion**
**Two 3-year-old stallions — Four yearling stallions**
**Five 2-year-old stallions — Eight imported mares**

Will also offer at private sale mammoth jack Monarch, register No. 12248, 4 years old. This jack is justly considered the best in the state; stands 16 hands high and weighs nearly 1200 pounds. He has taken first prize wherever shown. Works quick and sure.

Also Monarch, the Second, register No. 23010; 1 year old. He has all the earmarks of developing into as good a jack as his sire.

Everything will go at a big sacrifice. The I X L ranch, consisting of 240 acres of highly improved land and excellent buildings, is for sale. It is 10 miles from Boise and five miles south of Beatty station.

It will pay you to travel far to attend this sale.

Write P. A. Sorensen, R. 2, Meridian, Idaho, for catalog and transportation to ranch on day of sale.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals.

## CHAPTER VIII.

### Cut Off by a Wall of Water.

A few moments later I was down on the floor, with the smoking six-shooter still in my hand. Frank was putting leaves on the fire, and Vic was barking. The beating of hoofs could be heard in the distance. The air reeked with burnt powder.

"What happened, Frank? I thought the house was blowing up."

"Did sound like it, Travis. And I could have made oath I heard some of it fall."

"Why didn't you tell me I was to shoot a cannon?" grumbled I, as I stooped down and began to examine the weapon by the light of the blazing leaves, turning the cylinder with my fingers. Presently I straightened up. "No wonder!" I exclaimed.

Frank looked up at me questioningly.

"Every barrel went off at once! With six bullets crashing through it, it's a wonder the house didn't tumble to pieces."

"And what did it do to the varmint you shot at?"

"That's what I'm going to find out."

"Better reload first."

He got a little powder-horn, some bullets and a box of caps out of the saddle-bags; and while he fed the fire with leaves, I reloaded three barrels.

"Now we're ready to investigate the loft," I remarked. "I can't hear anything up there."

"No. Guess they've all escaped by this time—those not shot or scared to death. You light that piece of paper and hold it up, and I'll climb the wall."

Up he went, and I held the blazing paper high.

"What do you see, Frank?"

"Nothing alive." He took the paper out of my hand and held it still higher. "But there are two dead varmints up here. One's a panther, and the other looks like"—he moved the paper about—"like a big wildcat. And that's what it is." He climbed down. "Pretty good for one shot, Travis."

"One shot, do you call that? I'd call it a volley. Why, I ought to have killed all four."

"You would, I guess, if you'd had them all in range like you did those two. But we'd better see about our horses. Think I heard them running off. They must have got out. That was enough to scarce them out of their hides."

Sure enough, both horses were gone. In their panic they had plunged through the narrow door, perhaps at the same time, and had knocked down the rotten outer wall and run over it.

"I thought I heard something falling," said Frank. "The rain has about stopped. Guess we'd better stir out and try to round them up while we can."

I took a look outside. "It's frightfully dark. Why not wait till morning?"

"Well, Bob might be somewhere close by when daylight comes, but he's more likely to be 20 miles on the road towards home. And as we're situated now, the loss of a horse would prove a serious matter."

"Yes, it would—mighty serious," I admitted, thoughtfully.

"Must confess, though, that I don't know how to go about finding them, dark as it is now. We might pass a dozen yards from them without suspecting it."

"No, we won't," I told him. "If I can get within calling distance of Dick, he'll answer me every time."

"Will he? That's good! Then we'd better get out right away."

Before starting, however, we found a few dry sticks to kindle with, then put on our boots and slickers and brought in some wood from outside—enough to make a good fire in the fireplace. Now we lost no time in getting out after our horses.

We had left the door open, that the light might guide us back. But before we had gone 20 steps the darkness was like pitch. We groped our way along, holding our hands before us. All the time I was calling Dick at the top of my voice.

Presently I heard a crash, and Frank, a few steps ahead of me, uttered a half-startled, half-frightened exclamation. Then came a splash, seemingly from the depths of the earth.

Believing that something dreadful had happened, I stopped suddenly.

"What's the matter, Frank?" I called out.

"Matter enough!" came back, seemingly from far away or from far down.

"Where are you?" I called again.

"I'd like to know myself! I'm in some kind of a hole. Better look out! You may tumble in on top of me."

"Are you hurt?"

"No. But I'm in water up to my arms. This must be an old well."

And that was just what the hole proved to be. Years before it had been covered over with rails, or poles, to keep anything from tumbling into it. But these had become rotten with age, and when Frank stepped on them in the dark they had snapped like twigs and let him drop through. The place had been a veritable pitfall.

Cautiously I approached, feeling every inch of my way. Just how deep the well was we could not tell in the dark. But undoubtedly Frank was several feet down.

"If we just had a rope!" I exclaimed. But the only ropes we had with us were trailing from the necks of our horses. Rapidly I studied the situation.

"Wait a minute!" I called out. Hurrying back to the cabin, I found our bridles, and after fastening their reins together, returned and let them down into the darkness.

"I can hear them hitting the bank up there somewhere," Frank called up. "But they're not half long enough."

Again I returned to the cabin and came back, this time with half a dozen blazing sticks in my hand. The rain had now ceased, and I kindled a fire for light, on the very brink of the old well.

"That looks cheerful up there!" cried Frank. "Wish I could start up a fire down here, to warm this water."

"Anyhow, we can see something now," I answered, as I moved round to the other side, where I could look down. The light fell poorly, but I could make out Frank's head and shoulders, set in a background of water, 20 or 25 feet below. The well was just as it had been dug, never having been walled up. It was very large—five or six feet across—and there was not ever a possibility of Frank's climbing out.

Again I tried the bridles, to see how much too short they were. Then I ran to the house and brought all our girts—there were two on each saddle—and after fastening them together and to the bridles, lowered them into the well. By lying flat on the bank, and reaching as far as I could, I got the lower end of my improvised rope within a few inches of Frank's fingers. But even if he could have reached it, it would have been impossible for me to pull him out, heavy as he was; nor could he have held on long enough if I could.

"Can you think of anything else, Frank?"

We discussed every plan that seemed even half-way possible.

Among them was the cutting of an "Indian ladder"—a long pole with short limbs left on it. But that would require an axe.

"You can't get me out of here without a rope," was Frank's conclusion, and mine as well.

"Then I must find our horses. Can you wait till I make a round, Frank?"

"That I can," he replied. "In fact, it's the only thing I can do just now. But find them as soon as possible, Travis. This water must have run in after the hail-storm, and it's chilling me faster than I'm warming it."

Frank rose suddenly in my estimation. I have always loved cheerful people.

"Never fear; I'll get you out!" I called down, rather rashly perhaps. "A fellow that can joke after taking the tumble you took, and after being in ice-water as long and as deep as you've been in it, is too valuable to lose."

The wall of water.

I started off at a run, but soon got beyond the circle of light and had to move cautiously. As I advanced I kept calling, so loudly that the woods rang with it: "Co'up, Dick; Co'up, Dick! Co'up, pony! Co'up! Co'up!"

After getting so far away that I was in danger of losing the light, I began to circle about it. And as I circled I kept calling, anxiously calling, tremulously calling.

Having made what seemed to me a complete circuit, without receiving the slightest response, I had almost concluded that I should have to return without a rope. But to go back and tell Frank that I had failed was little less than dreadful. So I pushed out further into the darkness. At length my perseverance was rewarded by hearing a faint nicker.

As fast as possible I groped my way toward it, and finally came upon Dick. The other horse may have been near, but I did not hear him, and I could see nothing at all. Even the firelight was no longer visible. Leading Dick, I groped my way toward it till it glimmered through the trees. Then I moved faster.

"Here I am! And here's a rope, Frank!"

"Good for you, Travis!" came up, more cheerfully than could have been expected, out of the gloomy hole.

The rope was quickly let down. It reached well enough; but drawing Frank up, without windless or pulley, proved a practically impossible task. And when he attempted to climb the rope, after I had secured it to a tree, he was no more successful.

"My hands are too numb to grasp it," he said, the first note of discouragement in his voice.

"Make a big loop and sit in it, and I'll have you out before you can wink twice," I called down, as I started for the house at a run.

When I came back, my saddle was in one hand and a big puncheon under my other arm. The puncheon I threw cross the well. And I was careful to smear one edge with wet clay, to keep it from wearing the rope. Then I clapped the saddle on Dick. The girts were off, and a minute was lost in getting them in place. But they were soon fastened hard, and I bridled Dick, tied the end of the lariat to the saddle horn, and sprang into the saddle.

"All ready below?"

"Wait till I find my hat," came from the well. Then a minute later: "Pull ahead!"

"All right! Hold hard, and up you come!" I shouted, as I started Dick straight away from the well.

It made the little horse pull, for Frank was a solid fellow. But the lariat slipped rapidly over the muddied puncheon, and soon a wet, bedraggled, unrecognizable head thrust itself up into the firelight.

A minute or two later I had my soaked, half-frozen traveling-companion in the house, steaming before the fire. And I kept lugging in sticks and chunks and short logs till the fireplace, big as it was, was roaring like a furnace.

After getting his clothes partly dried, Frank stripped them off and hung them before the fire, on some sticks, while he himself crawled between our blankets to sleep. I piled fresh fuel on the roaring, crackling heap, and was soon sleeping by his side. The sun was shining when we awoke.

Up we sprang, eagerly. I was feeling remarkably fresh and vigorous. Frank's clothes were dry, but stiff and yellow with clay. He declared himself none the worse for his unlucky experiences of the night.

We dressed and hurried out in search of his horse. The storm itself had utterly disappeared, and the hail had all melted, but its ravages were visible everywhere. Most of the leaves were beaten off the trees, and here and there we noticed a dead bird.

"It will surprise me if we find Bob," Frank remarked, when we were well out in the woods.

But we did; and that before we had gone a hundred yards further. The trailing lariat had got caught in a root and held the horse fast, though it left him free to graze.

"Well, now, wasn't that a lucky accident?" exclaimed Frank. "If we'd had to make a trip back home, those runaway cow-brutes would have got a long start of us."

After breakfast, thinking it prudent to let our horses graze a little longer, we climbed up into the loft and threw down the dead panther and the dead wildcat. Vic sniffed around them suspiciously.

"Do you suppose those varmints were hiding up there when we first came in last night?" asked Frank, after we inspected them.

"No, I know they were not," was my answer. "Vic would have scented them instantly. They'd been up there before, I've no doubt, and the storm drove them to shelter."

"Yes, that must have been the way of it. But we've got to skin them. Nobody will ever believe you killed both at one shot if we don't have some proof. We can leave the skins at the first house, and get them as we come back by with our cattle."

"All right," I agreed. And we soon had the dead animals stripped of their hairy coverings. The skins we tied behind our saddles, the carcasses being thrown out for a breakfast for the buzzards. A little later we were riding on our way.

After a mile or two we found some new cattle-tracks in the road, and felt hopeful that our runaways might have made them. Our horses were fresh, and we pushed on rapidly.

At length we came to a house—the first house since the deserted one—and stopped to make inquiries.

"Yes, them very three brutes passed here not more than a hour ago," the bearded settler informed us. "They was follerin' the road, like they knowed whur they wanted to go. And they was trampin' a good, steady gait, too. You ought to overhaul 'em some'r's over about the river. Camped out last night, did you? Must have had a ruther lively time."

"No, we didn't camp out, but we had a lively time just the same," laughed Frank. "We spent the night in that old house a few miles back."

"What! Not in the ha'nted house?"

"That's the place."

"And what did you see?" The settler came closer.

"Oh, we saw sights," Frank assured him.

"But what did you see—and hear? Did any of the ha'nts show theirselves?"

"Indeed they did," I spoke up. "We saw four, and we killed two of them and skinned them."

The man stared at me in hopeless, incredulous bewilderment.

"That's right," indorsed Frank. "We've got the proof here with us." He related our experiences with the wild animals, and displayed the two skins.

The settler was greatly surprised. "Well, now, I wonder if that's what's been scarin' folks clean out of their wits all these years. It might have been, or it might have been their imaginations—who knows? I never did take a great deal of stock in them wild tales."

The man readily agreed to keep the skins for us till our return, and we left them with him. After talking a few minutes about the dreadful event that had occurred, so long before, at the deserted house, we rode on.

"Well, our chase is nearing its end," my companion remarked, as we trotted along. We were out on the prairie now. "It has been a rather short one, but we had a lot of fun while it lasted."

"Yes, it seems to be about over. Old Lep can't well dodge us any longer now," I agreed. "But he would if he had half a chance."

Every time we turned a rise we expected to catch sight of our cattle. But we had still not discovered them when we looked down into a valley and saw the timber of a stream, which we knew to be the Cowhouse river.

"Wonder if it will be up," Frank was saying, when our ears detected a faint roar.

"Shouldn't think it would be much, yet, but that sounds like it," I replied.

The noise seemed all in one direction—upstream. We rode faster. Our horses pricked up their ears and gazed toward the roar, which kept growing louder. Soon, wondering, we struck a gallop.

The Cowhouse is a deep, swift stream—deep as to its channel, with a rocky bed and high, rocky banks. Much of its course, if not all, lies in a broken, half-mountainous country. On the near side, at the place we were approaching, there was no timber, the prairie terminating in a high, overhanging bank.

As we reined up near the edge of this bank, the first sight that greeted our eyes was our three runaway cattle, just emerging from the stream at the farther side. The river, which was about 150 yards wide here, was slightly swollen, and the water extended from bank to bank. But it was not deep. Lep and his companions had waded it.

Eager though we were to overtake our cattle, we little more than noticed them as they climbed the farther bank. For that roar, coming from somewhere upstream, had swelled deafeningly, alarmingly. Our horses pranced about and tried their hardest to run.

We kept staring toward the awful sound, and our eyes were soon rewarded with a sight that made our hearts stand still.

"A head rise! A wall of water!" shouted Frank, excitedly.

And that was just what we saw coming. Around a bend in the river it rolled, with a voice of thunder, foaming, boiling, raging, roaring!

(To be continued.)

# Dogs or Sheep?

## Are They Incompatible on Farms?

In a recent booklet published by the agricultural division of the International Harvester company on the subject, "A Bunch of Sheep on Every Farm," H. S. Bobley takes the dog to task as an enemy of the farm flock. He says:

"At the time when the woods and plains were inhabited by wild animals, some useful as a source of food and clothing, and others a menace to his safety, man found the dog a most useful and dependable aid in the chase or as a sentinel and defender. Thus originated a racial attachment that continues to the present.

"But these old time conditions are changed. Man now has recourse to breeding and raising the domesticated animals, the cow, the horse, the hog, the goat, and the sheep for a large part of his meat and clothing supply. Regarding this combination the dog has reversed his former position until now so far as sheep and goats are concerned, he has become a menace and disadvantage where he was formerly a most efficient helper. His value now is almost wholly sentimental on account of his past service.

"The question to be decided now is, does his past services as a helper give him sufficient value to justify his ravages of the flocks of sheep and goats which now are so necessary to man as a source of food and clothing?

"The irresistible conclusion is that since the sheep and the goat are producers of food and clothing, and the dog produces nothing, but is a consumer of and a destroyer of one of the most important food resources, man must deny his sentimental appreciation of the dog in favor of his more pressing need of meat and clothing and substitute the sheep and the goat for the dog."

The compiler of the booklet claims that the scarcity of sheep on the farm is due to the dog menace. He gives the following facts and suggestions relative to them:

"In a review of 5000 farmers in all parts of the United States, all but 18 gave 'dogs' as the main reason for the scarcity of sheep.

"The dog is a carrier of hog cholera, stomach and tape worms, lice, ticks, fleas, rabies, and foot and mouth disease.

"He brings contagious diseases home to the family.

"He runs at large, practically unrestrained, enjoying undisputed rights, and all for what?

"What has the dog family ever done that they should have more rights than their owners?

"All states have 'dog laws' that if enforced would lessen dog troubles, yet dog laws are nearer dead letters than anything on the statute books.

"What is the remedy?

"First—Enforce the laws already passed until better ones are enacted.

"Then—Unqualifiedly put the dog on the same legal status as sheep, hogs, horses and cattle. Take away the right to run at large day and night.

"Compel every dog owner to keep his dog on his own premises or under his control when away from home.

"A dog to be of any value to his owner must be about his owner's business.

"How long would law or public opinion allow a 100-pound shote or a three-months old calf to follow its owner to town, down the street, into the store, blacksmith shop, postoffice, and on the way home gallop through the neighbors' fields, yards, sheep folds, and feed lots?

"Any one has a right to own a dog, but no one has a moral right to maintain a nuisance.

"Dog-proof fences are all right, but let the dog owner build them. A fence that will keep dogs out will keep dogs in.

"Dog chains and muzzles are inexpensive.

"The use of both can be prescribed by law.

"The dog problem is not solved by license.

"Licensing a dog, requiring the owner to buy a collar for him, or to pay a heavy tax on him, does not keep the dog from killing sheep or being a worthless cur.

"Require the dog owner to be responsible for the whereabouts of his dog.

"Back this requirement with public sentiment and officers with backbone, not of gristle, and sheep will come to their own.

"A medium sized cow bell on every tenth sheep will help to frighten dogs away and alarm the owner and neighbors. Don't use little dinky sheep bells. They don't make enough noise. Use cow bells."

# Rabbit Skin Market

Several readers have written regarding the marketing of rabbit skins with felt manufacturers, as well as asking how the skins should be prepared. The following letter from R. A. Ward of Redmond, Ore., will be of interest to these inquirers:

"The skins for felt manufacture must be skinned flat and not cased. This is best accomplished by spitting the hide up the belly and tacking it out on a shingle. They may also be cased and afterwards split. This is not so satisfactory, however, if drying has set in, as the skin does not lie flat. As the pelts are laid on skiving or shaving machines which shave the hair from the skin itself, it is necessary that they be dried as flat as possible. The skins should be prime, but in the northwest our rabbit skins are prime in ordinary years from October 15 to February 15, or even later. It is not essential that the heads and feet be left on. They may be clipped from the skin providing the general rectangular shape of the skin is not injured.

"The skins can be marketed through the Hatters' Fur Exchange of New York city. There are also a number of private firms that will buy them. It is possible that Funston Brothers of St. Louis will take all that your correspondents have for sale."

# Plan Wool Institute

An interesting feature of the Lewiston stock show will be a wool exhibit under the supervision of J. L. Chapman, who is again in charge of the sheep department. Wool will be shown in its various states from the time it leaves the sheep's back until it becomes finished cloth or other material. The Columbia Basin Wool warehouse of Portland, of which L. W. Alt is the Lewiston representative, will make the principal exhibit of wool. Local exhibitors will include John Moran, who will make an extensive exhibit of Rambouillet fleeces.

W. T. Rich of Salt Lake, recognized as a wool expert, and others will hold a wool institute all week and deliver lectures. They will explain the proper method of sorting and packing, and show why the mixing of coarse and fine or middle wool in the sack and the inclusion of tags, etc., reduce prices.

### MORE CALVES SOLD THIS YEAR.

Figures show that for the first nine months of this year, 4524 calves were received at the Portland Union stock yards as against 4072 during the same nine months last year.

### Wire Frame Holds Cup.

A wire frame to hold a cup securely on the edge of a plate has been invented for use where refreshments are served informally.

### Seeing Is Believing.

To see is to believe, but who ever saw faith or hope or ambition or love? Yet who ever denied the existence of these things?

REPUBLIC TRUCKS
Modernize Farming

The Internal Gear Drive is simple as well as powerful. Owners say that it is practically trouble proof.

WITH a Republic Truck on your farm, you can get the same speed and efficiency in your hauling that are making profits for successful business men in every other line.

Republic Trucks are built by the largest manufacturers of motor trucks in the world, who build nothing but motor trucks and know just how to build them to insure their giving constant dependable service at a minimum cost. Last year more than twice as many Republics were produced and sold as any other make.

The Internal Gear Drive used on all Republics, gains extra leverage by applying the power near the rim of the wheel. That gives greater pulling ability under all conditions. The load is carried on a separate I-beam axle of solid forged steel and the driving mechanism has nothing to do but to drive the truck.

45% greater road clearance makes this the ideal truck for country roads and there is less unsprung weight which means a big saving in tires, gasoline and all upkeep expense. Republics are also remarkably easy riding.

More than 1300 Republic Service Stations, distributed all over the United States, make quick service everywhere available.

Investigate Republic Trucks now. Find out their reputation for uniformly dependable service and ask the nearest Republic dealer which Republic will best do your work.

# Household Record

## Supplement to Farm Accounts

The modern farmer's wife is no longer satisfied with the old accepted idea that "the farm gives us a living," but she gets out her pencil and paper and asks, "How much of a living does it give us?"

Household expenses on the farm are very intimately associated with the business of the farm itself. The farm normally supplies much material which otherwise would become a household expense. The household, in turn, very often furnishes board for farm labor, which would otherwise be a farm expense. Merely from the standpoint of keeping track of household expenses as related to the farm business, household accounts are desirable and should serve to supplement and round out farm accounts.

There are two methods of keeping a record of household expenditures, says the weekly news letter of the United States department of agriculture. One is to record the purchases or money paid out without classifying the expenditures. The other is to classify when the record is made.

The first method is very simple, requires no special form, and gives all necessary information regarding expenditures. At the end of the month or at the end of the year the total expenditures readily may be determined. In order, however, to know the totals for each kind or class it will be necessary to make up a monthly summary in which the items will be distributed in different columns, by classes. This extra work at the end of each month (or at the end of the year) may cause discouragement and neglect of classification, with the result that the greatest good that could be derived from the records is not realized.

Under the second method, in addition to being entered all together in one column, the items are classified in separate columns. This method has the same advantages as the first method and the additional advantage of allowing for the distribution of the items of expenditure to the proper classes without the inconvenience of turning to some other page. The distribution may be left to moments of leisure if the farmer is busy at the time the entry is made. When the page is filled the next page is begun, the top line next to the heading being reserved for the total carried forward from preceding page. The items may be totaled at the end of the month and these totals carried to the summary page at the end of the book.

The kind of book to use is not important. An ordinary blank daybook or ledger book with a stiff cover may be bought at a reasonable price. If the vertical rulings in the book do not serve the purpose others may be inserted with a pen or pencil.

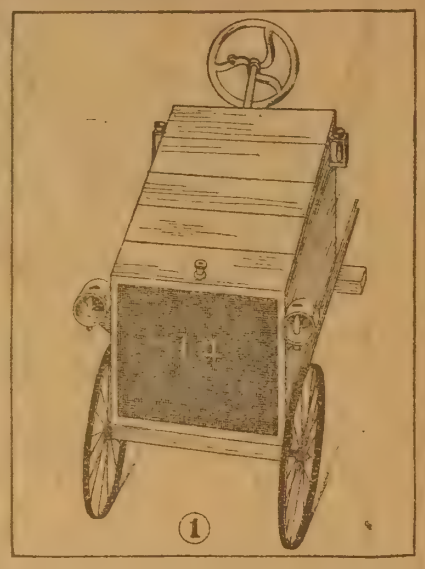
In order to simplify accounts it is well to group expenditures. If all individual items were listed in separate columns it would require a great amount of detail work. The distribution of the different household expenditures into groups is largely a matter of individual viewpoints.

# Handicraft for Boys

By A. NEELY HALL.
(Copyright by A. Neely Hall.)

### HOME-MADE LAMPS FOR THE PUSHMOBILE.

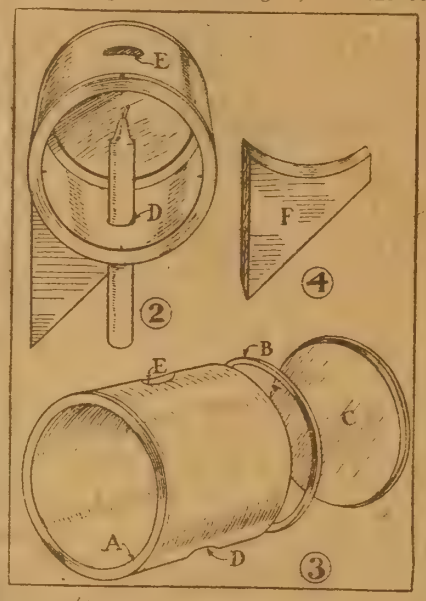
Every boy who builds a pushmobile wants it as complete as possible, and lamps are part of the equipment that ought not to be overlooked.



There should be two headlights and two sidelights (Fig. 1); also a tail-light.

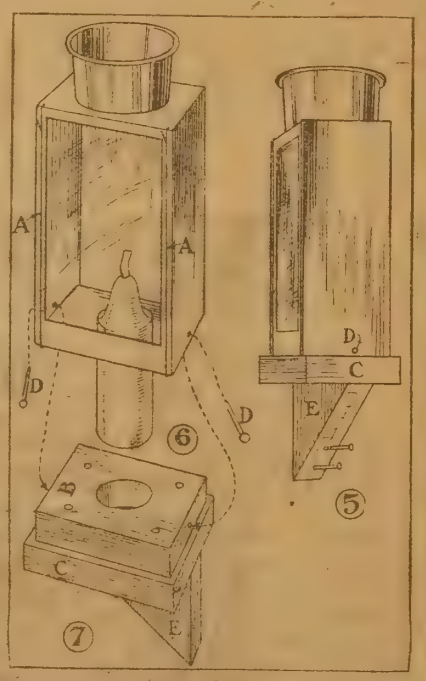
The headlight shown in Fig. 2 is made from a syrup can, the kind having a flanged cover that fits inside of the rim. The bottom will be the front of the lamp, therefore it must have all but a rim of the tin removed (A, Fig. 3). Cut the tin with a can opener.

If you can find an old alarm clock of the right size, the glass from it will be just the thing for the front of the lamp. If not, and you haven't a glass cutter, you can get a circular piece cut at a paint store for 5 or 10 cents. Use a measurement that will make the glass fit fairly snug in the end of the can. To get the glass inside of the can, it is necessary to remove the rim on the top, which can be done by holding the can over a flame for a few seconds, and then knocking off the rim (B, Fig. 3). When the glass has been slipped into the can, replace rim B. Cover C, fitting inside of rim B, will be left removable for the purpose of lighting the lamp. Fasten the glass close against the front of the can by means of short nails driven through holes punched through the side of the can, just inside of the glass (Fig. 2).



With a can opener cut a hole a trifle smaller than a candle through the side of the can (D, Figs. 2 and 3) for the candle to stick through, and another directly opposite it (E) for a chimney.

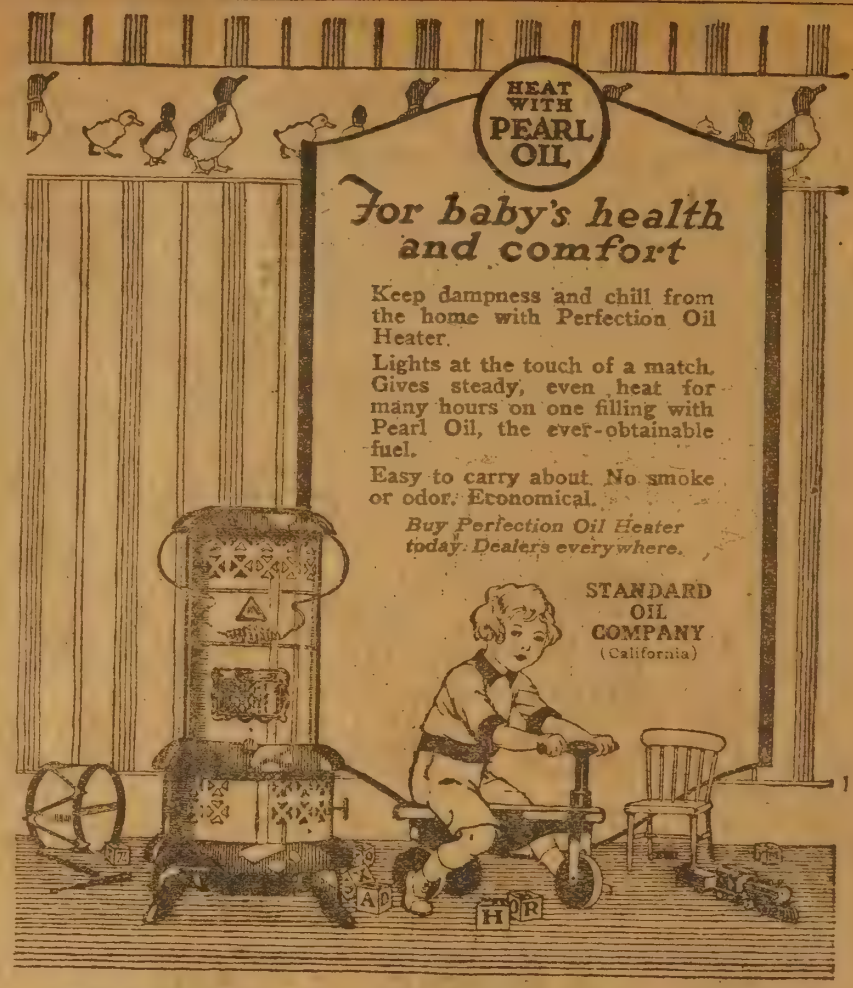
Cut a bracket block with its upper edge



curved to fit the can (F, Fig. 4), nail the can to the curved edge, and then nail the block to the side of the pushmobile (Fig. 1).

The lamp shown in Fig. 5, is made out

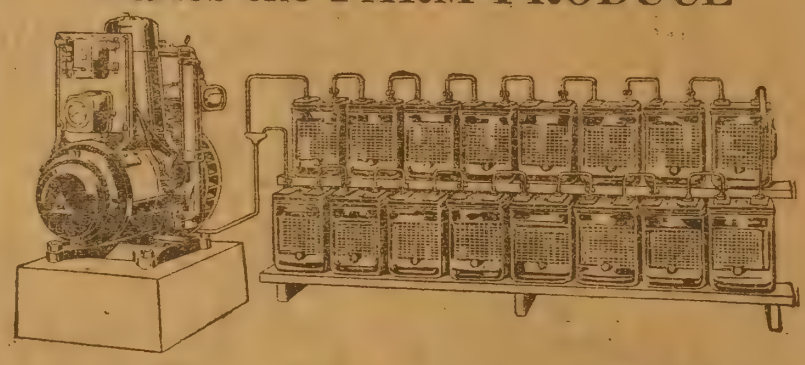
by means of two pieces of wire run around it and the outside of the can as shown at A (Fig. 6).



Cut the block (Fig. 7) enough smaller of a pint or half-pint varnish can. Remove the bottom, and cut away all but a narrow rim of one side for the glass front (Fig. 6). Cut a piece of glass to slip in back of the opening and fasten it in place

than the can so the can will set down over it, bore a 3-4-inch hole through its center, and nail to a block a trifle larger (C, Fig. 7). The candle sets in the hole in block B. The can sets down over block B on to block C, and is pinned to B by two short nails D slipped through holes made in opposite sides of the can and block B (Figs. 6 and 7).

Fasten the triangular bracket E to the under side of base C, as a means for bracketing the lamp to the side of the body of the pushmobile.



A taillight may be patterned after either the sidelamp or headlight.

PERFECTION OIL HEATER

DELCO-LIGHT

Makes the FARM PRODUCE

DELCO LIGHT will help make YOUR farm produce by adding an extra hand to your working force.

A hired man will put in about 2300 working hours in the 7 or 8 months that he works for you.

A DELCO LIGHT plant will actually save you over 1700 hours in a year; 1700 hours to be devoted to PRODUCTIVE work.

DELCO LIGHT makes this saving by turning kerosene into ELECTRICITY.

### Heroic Disgust.

He was a choleric doughboy, who had been invalided home, and the thought of what he was missing on the other side, coupled with sundry and incessant questions directed at him by thrill-seeking visitors to his hospital ward, had told on his never-too-placid temper.

"Oh, what a charming cane!" one of them gushed as he limped across the ward. "What is it made of?"

"Wood, ma'am," he replied, briefly, but courteously.

"And the notches in it," she exclaimed, not dampened in the least. "I'm just sure that they are for the Germans you've killed!"

"Not Germans, ma'am," he replied, grimly. "Cooties!"

# WAKE - UP -

Wake up that unused upright piano of yours. Have a little music in the house again. YOU can play a Chopin ballad or a new War Song if you want to on that very piano you now never use, without taking a single music lesson.

We can make your upright piano over into a new model 88-note player-piano, and do it without disturbing the mechanical perfection of your instrument, without altering its design or appearance.

If you have an upright piano you can have a player-piano and retain the same instrument with its associations and sentiments.

We will gladly show you how the change is made, even if you are not interested, Write TODAY for complete data, illustrations, descriptive matter and prices.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

"I have no twin yet," writes Alice Fredickson of Northport. Sam, Dick and Gerie are three little calves. Alice has a little arden of her own.

Earla Lower of Box 62, Pullman, was 11 ears old March 26. She is in the seventh rade and wants a twin very badly. This s her first Corner letter.

Eva Priddy of Touchet reads the letters the farmer every week. What goes round the house and leaves only one rack? We wish Eva to write again?

Carl Jones of Winthrop writes for the rst time and wants to be a cousin. He is the second grade and has two rabbits. eith and Wanda are his brother and sister.

On washday Lena Bailey keeps house hile mama washes. Lena lives near Yakia and she has a bridle for her colt so she n ride. She is in the fourth grade this rm.

Clara Grunden of Route 6, Box 40, Yakia, is 9 years old and her birthday is ... 19. She is in the fifth grade. On eir farm there are the three pigs, two rses and one cow.

"Frost damaged lots of the early fruit, t we have a good crop of apples, pears d grapes," writes Mildred Webler of Hanrd. Mildred is in the sixth grade. She ll be 13 October 14. She will write again on.

One of Clyde Braden's brothers is a maie. Clyde's address is Box 87, Route 1, randview, Wash. He was born in 1908 d has blue eyes and brown hair. Clyde n swim and skate and likes to do both. you are his twin, please write to him.

Gerda Ekholm of Rockford has been knitg. She has made a sweater and two ttlcoats for the Red Cross. Mother and ter do lots of sewing for the Red Cross. hat is it that turns but never walks? Milk ns, but never walks. Gerda was 12 years d, May 11, and is looking for a twin.

A part of a quilt, two wash rags, four rfs, two towels and two hospital bags the things that Alma Hensen of Box Route 1, Ray, Wash., has made for the d Cross. Alma was 13 September 30, and wishes to hear from her twin. Her other and she had a war garden which ned out fine:

One time the flames from a forest fire t way up in the tops of the pine trees l one of the buildings on the Smith m caught on fire and so Cousin Hazel it out. Hazel Smith lives on a 40-acre m in Colbert. Minnie Meloy is her twin. ey are both 12 years old and their birthis May 8. Hazel works hard on the m.

A little long-haired, yellow kitten named bby, and a puppy with a black spot on back and called Spot, are the pets of her Grunden of Yakima. Esther says t her puppy and kitten play together. her was 11 years old June 23 and she nts a twin. She has nine thrift stamps l will soon have a war saving stamp. She crochet and feather stitch.

Helen Hager of Mabton is in the fifth de and she goes to the Wendell Phillips h school, which is two miles from ere she lives. The school, Helen says, is ice concrete building three stories high. re are five teachers who teach from fifth grade to the last year in high ol. Helen has six rabbits, four Giant gian hares and two Belgian hares. She joined the Red Cross and has a Lib bond. She lives on a 120-acre farm ut a mile north of the Yakima river.

has been quite a long time since el Rosenkranz of St. John has written is and we have missed her letters. All ng and summer Gazel caught squirrels papa. She is buying war stamps to help the war. One of her uncles, who is a ier, got a furlough this summer to help father on the farm. Thank you, , for the picture. Aunt Nellie would e loved to have put it in the paper, but as not clear enough to make a good Will you send us another, some time?

ttle Gena Baumbart has been sitting wheel chair for some months, and she very tired and lonely, so she hopes e of the cousins will write to her. She try and answer all the letters that can. Gena's address is Box 72, Cunningham, and will be 11 years old, December 13. She has a few pet chickens and one of them will fly in the wheel chair and let Gena hold it. We are glad to have dear little Gena for a cousin and we hope that she will write to us again.

### Has a Pet Chicken.

Dear Aunt Nellie: My papa has taken the Farmer for two years. I was 13 September 21. I am five feet two inches tall, have red, curly hair and blue eyes and a fair complexion. Have I a twin? If so, I would like to correspond with her or him. The other day I was feeding mama's chickens and I saw a little chicken with her bill deformed. I thought I would take pity on her, so I did. I picked her up and looked at her bill, and it was crossed so she could hardly eat. I took her for my pet, and in a few days she was following me around the yard. I just love chickens and rabbits. We have got over 300 chickens. Now I will tell you about my brother at war. He just went over a while ago and he wrote home and said he liked Camp Lewis fine. He said he was a real soldier boy because he had his suit. Then he sent us his picture of his regiment.—Libbie Latimer, Plaza, Wash.

### Knows How to Swim.

Dear Aunt Nellie: The last time I wrote I had $7.25 in war savings and thrift stamps, but now I have $102.50. I have no relatives in this war, but I hope what I am giving will help some poor soldier out. I know all the children that write to this Corner are trying to do their bit. I have learned to swim and I expect some day that it will come in handy. I might be glad that I do know how to swim. Sometime when I write I will send you my picture. I have quite a few pictures of myself, as my sister has a kodak. To write to the Children's Corner teaches me how to write letters, or, I mean, it is good to practice how to write, although I don't know how to write yet. — Hazel Agnes Land, Cheney, Wash.

### Working in the Field.

Dear Aunt Nellie: I am 13 years old and my birthday is November 24. If I have a twin, I wish they would write. I have been working out in the field hoeing and shocking hay. I am five feet and two inches tall. I have a dog and five cats. One of my cousins is in the war, and I think my brother will have to go. I have nine thrift stamps and got $2 more to get some more. I have seven brothers and two sisters. Four of my brothers are in Idaho.—Sophia Havlicak, Odessa, Wash.

### Reading Fairy Tales.

Dear Aunt Nellie: I am 9 years old and in the fourth grade. Have I a twin, and may I join? If I have, I would like her to write to me. I was 9 years old June 7. I knit for the Red Cross. We have 12 horses and two colts. We have nine head of cattle and five calves. My brother has about 100 rabbits. Mama has about 50 chickens. Some of them are big enough for friers. I have a fairy-tale book for children I am reading. It has all kinds of stories in it. My brothers' names are Lowel, Arthur, Francis, Laurence and Rue. My sister's name is Nora Bessie.—Mary Tagarden, Wapato, Wash.

### Takes Care of the Garden.

Dear Aunt Nellie: I was 13 years old September 27. I am in the eighth grade. I expect to finish school next January. I have two brothers and one sister. My oldest brother is 18 years old. He finished school two years ago. My sister is 16 years old and finished school a year ago. My youngest brother and I walked to school most of the time last year. I live on a 160-acre farm. We have a large garden and I like to take care of it.—Lillian M. Hadford, R. F. D. 6, Box 89, Spokane, Wash.

### Helps With the Work.

Dear Aunt Nellie: I had a good time this summer. I have to dry the dishes and help set the table and milk one cow all alone. I had two little kittens, but I gave one to a little friend. She didn't have any, so I shared mine with her. My little brother helped me put two of the dogs in the watering trough, and then they got in a fight while they were in there, and my goodness! the water did splash! I have an old rooster, and his name is Crook. His bill has grown crooked and he can't eat with it. He has to eat soaked bread. My soldier brother was at Camp Lewis for nearly 10 months. Now he is at Camp Mills. I will write again soon.—Goldie Miller, Box 63, Mayview, Wash.

### Junior Red Cross School.

Dear Aunt Nellie: Have I a twin? I am 10 years old, and my birthday was April 15. I am in the fourth grade. We have 11 horses and one colt, two cows and two calves. All of our school joined the Junior Red Cross. I have two brothers. Their names are Evert and Bertie. I have two sisters, Berenice and Edith.—Clark Tyrrell, Box 504, Kennewick, Wash.

### Hear Coyotes Howl.

Dear Aunt Nellie: I am 9 years old. My birthday is May 11. Have I a twin? Papa takes the Farmer. I like to read the little letters. I have four brothers: Milo, Rowe, Harry and Oren, and one sister, Grace. We live on a 40-acre farm. We have two horses, Molly and Dollie, and two cows, Bruin and Queen. We call her Bruin because she is the color of a bear. We have 22 old hens and 51 little ones. We have two cats. Their names are Rex and Tom. I like to take care of chickens and go to school. We often hear the coyotes howl, sometimes very close to the house.—Ethel Strausbaugh, Winthrop, Wash.

### Ellensburg Cousin Writes.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I would like to join it. I am 10 years old and will be 11 May 30. Have I a twin? Father is sick and has the lockjaw and is in the Seattle sanitarium. I am in the fifth grade and have one brother and a sister. My brother is 12 and my sister 17 years old.—Alga Shermer, Ellensburg, Wash.

### To Get the Kaiser's Goat.

Dear Aunt Nellie: I will be 14 June 27, 1919. Have I a twin? If so will he or she please write to me. I have two sisters and one brother. Their names are Gladys, Dorothy and Donald. I have a cat and a rabbit and I did have a dog until last spring when papa gave him away. The cat is a year older than I am. He catches lots of squirrels and gophers every summer. My uncle gave me the rabbit a few days ago. We had a Red Cross sale in town that brought $2750, which will help get the kaiser's goat. We had a red Cross war drive and raised $2000, and money still came in until we got $3504.50. I have not seen hardly any boys writing and I wish more of them would write.—Arnold J. Taylor, Box 216, St. John, Wash.

### Some Sidelights.

Dear Aunt Nellie: I am 11 years old. My birthday is October 19. I am in the sixth grade. I have two thrift stamps and I am going to get some more. I hoe in the garden. I can crochet, tat, knit, sew, cross stitch and hemstitch. I like stories and I have read a good many. I am sending you some funny sidelights to put on the Corner page. Well, dear Aunt Nellie, I think I must close, but I'll not forget to write again.

Bill—He always said he'd never marry until the right girl came along. Jill—Well, how does he know that the one he is about to marry is the right one? Bill—Oh, she told him she was.

What sort of neighbors have you? The usual sort. Costs just a little more than I earn to keep up with 'em. What a happy world this would be if every man spoke as well of his live neighbors as he does of his dead ones.—Ida Irmer, Withrow, Wash.

### Will Buy the Baby a Present.

Dear Aunt Nellie: I am very busy. I picked five boxes of cherries. I did not pick the Royal Anns, just the Bings and Republicans. My friend, Ardelle Carsner, was picking with me. She began before I did. My mother is in the hospital. I have a baby sister named Caroline. She is very sweet and has blue eyes. I live 13 miles from town, but now that my mother is in Yakima, I am staying with my aunt and live 20 miles from town. I have bought a $100 Liberty bond with my own money. As soon as I get my cherry money I will buy the baby a present and then I will spend the rest for thrift stamps. I hope we will win the war. If we are patriotic and eat less wheat we will. The pro-Germans don't care how much wheat they eat.—Helen Mehl, Naches, Wash.

### Wild Flowers in the Mountains.

Dear Aunt Nellie: I was 10 years old August 2. I have been to school three years and am in the fifth grade. I have a pony. I do not know her right name. We just got her last week. I call her Lady. She is very gentle. I live six miles from town and in the mountains where there are lots of wild flowers, tiger lilies, honeysuckles and tulips. I have no brothers or sisters. My mother died when I was a baby. I was born in Holland and came across the ocean when I was 5 years old. There are rattlesnakes here. I went to Spokane to see my auntie. Have I a twin? If I have I wish he or she would write to me.—Trina Westendorf, Box 124, Chewelah, Wash.

### Gladys' First Corner Letter.

Dear Aunt Nellie: May I be a cousin? I am 10, and my birthday is August 26. Have I a twin. If so may he or she write to me. I broke my arm. It is all right now. We have four rabbits, two horses, two cows, one dog, one cat, three canary birds, four pigs. I have two sisters and two brothers. We live on a 20-acre farm.—Gladys Strong, R. F. D. 1, Box 58, Deer Park, Wash.

### Makes Clothes for Belgian Babies.

Dear Aunt Nellie: I am 12 years old and in the sixth grade at school. My birthday is May 12. Have I a twin? If I have I wish that she would write to me. I will answer her letter. I have a little nephew, Dale Nickerson. He is a year and a half old. He can walk and say a few words. My pets are Pup, the dog; Put, the horse, and Tillie the cat. Mississippi is a hard word, but you can't spell it? If a mule was on one side of the creek and a load of hay on the river how would the mule get to the hay? He couldn't jump; it was too far. He couldn't swim; it was too deep. There was no bridge. Now, how is he going to get the hay? What goes to the river and sticks its head in but never drinks? I joined the Junior Red Cross. I have knitted for the Red Cross. I have made Belgian baby clothes. I have knitted a pair of wristlets and part of a scarf. I live on a 420-acre farm. I like to live on a farm. Augusta Chevalier wrote to me.—Beatrice Giles, Marengo, Wash.

During the last two weeks Aunt Nellie has received letters from the following cousins: Dorothy Callaway, Letha Peterson, Lucile McKinley, Beatrice Clay, Zella Coad, Bonnie Beck, Augusta Lewis, Lura Herrick, Vivian Kidwell, Emma Pohle, Alta Howsden, Christina Grant, Mildred Riley, Della Crumpacker, Alice and Alma Root, Ula Brown, Mildred Tormey, Marie Christiansen, Jeannetta Simpson, Mary Sawyers, Mildred Smith, Fannie Sheppard, Fay Sheppard, Orleana Easterling, Ruth Clement, Verona Faulkner, Evelyn Kiehn, Mildred Wentz, Ethel King, Ruth Harbison, Edna Webb, Olive Ervin.

**Tommy Tumbles**

## News for Breeders

Among the northwest breeders who are booked to exhibit at the California International Live Stock Show November 2 to 10 at San Francisco, are Congdon & Battles of Yakima, Wash., and J. G. S. Hubbard of Monroe, Ore. The former will exhibit some of their well-known Aberdeen Angus cattle, while sheep of several breeds will be shown by Mr. Hubbard.

### AIDS THE RED CROSS.

The lamb shown in the above picture is the little grade Southdown that was sold in the sheep sale at the Washington state fair for $1000 for the benefit of the Red Cross. The little girl holding it is Jeanette Olney, who gave the lamb to the Red Cross society, which in turn donated it to the sale. Jeanette is an Indian, 5 years old, whose home is at White Swan, some 15 miles from Yakima, on the Indian reservation. Jeanette held the lamb while the sale proceeded, and patiently posed for her picture to be taken.

### IMPORTS PUREBRED SHEEP.

While visiting the Panama-Pacific exposition Stock show at San Francisco, E. F. Benson, now commissioner of agriculture of Washington, became interested in the exhibit of the Romney breed of sheep. He finally came home with two Romney rams. After two years of breeding he purchased 10 more and one year later, or this season, the firm of Benson & Nye purchased and imported from New Zealand 25 ewes and one more ram; also one Corriedale ram.The ewes were purchased from Alfred Matthews, president of the Romney breed association; the ram from William Perry, one of the leading breeders, and the Corriedale from C. H. Ensor. Mr. Benson reports all his importation as satisfactory. Eleven of the ewes dropped 14 lambs. The plan of the firm is to breed Romneys on Rambouilett ewes, which is the manner in which the Corriedale breed has been developed in New Zealand. H. A.

### BECOMING HOLSTEIN CENTER.

Four purebred Holstein heifers were purchased recently by W. J. Galvin of Centralia. Three of these came from William Bishop's herd and one from Yarr Brothers, both of Chimacum. All the heifers were bred by Mr. Bishop. They are from cows with exceptionally high yearly records. The average yearly production of the dams and sires' dams being close to 1000 pounds. With such stock coming into the county it will not be long before Lewis county will be known as a Holstein center. A. B. N.

**Don't Know What It Is.**

Nobody knows yet what electricity is.

## HOLSTEIN CATTLE

**Registered Holsteins**

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

H. R. BOOMER, New Plymouth, Idaho.

**HOLSTEINS**

Well bred young bulls for sale.

THOS. CARMICHAEL, Gaston, Ore.

## SHORTHORN CATTLE

REGISTERED SHORTHORN COWS.

Young bulls and heifers, sired by Scotch bulls; liberal terms.

CALDWELL CATTLE CO., Caldwell, Idaho.

## HEREFORD CATTLE

**Highland Stock Farm**

offers for sale Hereford bulls, 1 or 2 years old. One or a carload.

PLATT BROS. Genesee, Idaho.

## GUERNSEY CATTLE

**GET GUERNSEYS**

Tabulations made by the U. S. department of agriculture show that the average income over cost of feed from one cow that produces 450 lbs. fat is equal to the average income over cost of feed from 20 cows that produce 100 lbs. each. The average of all official Guernsey records is 450 lbs. fat. Learn more about these profitable cows. Ask for our free booklet, "The Story of the Guernsey."

THE AMERICAN GUERNSEY CATTLE CLUB.
BOX W, PETERBORO, N. H.

## POULTRY AND RABBITS

**Walter Hogan's Famous White Leghorns**

hatched by Hogan on April 3d. Pullets $2; cockerels, $3. S. C. R. I. Red pullets, two to ten dollars; cockerels, five, ten and fifteen dollars. I can guarantee these pullets and cockerels to be from pens headed by cockerels from a trap-nested 289-egg hen—the females in these pens being sisters to my pen in the All-Northwest Egg-Laying Contest at Pullman, Wn. These birds have good shape, color and undercolor, plus wonderful winter egg blood.

MRS. ROMINGER, Underwood, Wash.

**Rhode Island Red Cockerels**

Both combs, pedigreed and line-bred. Best color and quality I ever raised. Rhode Island Whites, both combs. Get your breeding stock in fine, large Toulouse geese and Bronze turkeys. Pedigreed Belgian hares and Flemish Giant rabbits—the large kind.

HIGHLAND FRUIT AND POULTRY RANCH.
J. NONNENMACHER.
R. F. D. 3, Yakima, Wash.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |

Review Bldg., Spokane, Wash.

# Market Quotaions

## Chicago Grain.

CHICAGO, Oct. 26.—Reports that Turkey ad made an offer which virtually nounted to surrender brought about a cided setback today in the value of corn. The market closed heavy, 1 1-2c to 2 1-2c et lower, with November $1.25 3-8 to .25 and December $1.20 3-4 to $1.20 7-8. ats finished 1-8c to 1 1-2c down. The tcome in provisions was an advance nging from 50c to $1.50.

Corn closed at nearly the lowest figures the day, regardless of announcements at minimum hog prices for November ould be advanced, and of the likelihood erefore that demand for corn to feed gs would be much enlarged.

Oats weakened with corn. Provisions ent soaring on account of a big lift ven to minimum hog prices for ovember. The advance was agreed upon conferences at Washington between od administrators and representatives of oducers, commission men and packers. ie resulting advance was $3 on the Jan- ry delivery of pork. Topmost quotations the day, though, were not maintained.

### Pacific Northwest Grain.

PORTLAND, Ore., Oct. 28.—Grain—Octo- r delivery bids: Oats, No. 2 white feed, 3.50; barley, standard feed, $48.50. No- mber bids: Oats, No. 2, $53; barley, feed, 8@49; oats, No. 3, $47; clipped, $49; corn, llow, $56.50; mixed, $55. Eastern oats d corn in bulk: Oats, No. 3 white, $47; -pound clipped white, $48.50; corn, No. 3 llow, $53; mixed, $57. Sales, 100 tons ovember feed barley at $48; 100 tons tober feed barley at $49.

### Minneapolis Grain.

MINNEAPOLIS, Oct. 26.—Flour—Un- anged. Shipments, 81,178 barrels. Bar- y, 86@95c. Rye, $1.58@1.59. Bran, 7.94. Wheat—Receipts, 274 cars, com- red with 431 cars a year ago. Cash—No. northern, old, $2.21 1-2. Corn—No. 3 llow, $1.45@1.48. Oats—No. 3 white, 1-2@66 1-2c. Flax, $3.78@3.82.

## Live Stock Quotations.

### At Chicago.

CHICAGO, Oct. 26.—U. S. Bureau of Mar- ts.)—Hogs—Receipts, 6000; market tive, unevenly 50c to $1.25 higher than iday's opening, mixed and packing ades advancing most. Butchers, $17.25 18; light, $16.75@17.75; packing, $15.25@ 25; rough, $14.65@15.25; pigs, good to oice, $13.50@14.50.

Cattle—Receipts, 2000; compared with a ek ago, good to choice western and na- e steers, 75c to $1 higher, with instances more; light, 50c up; butcher cattle, 50c $1 higher; canners, steady; calves, 50c gher; feeders, 25c higher.

Sheep—Receipts, 1000; compared with a ek ago, market 50c to $1.50 higher; most vance on medium grades of killing and eding lambs.

### At Portland.

PORTLAND, Ore., Oct. 26.—Cattle— eak; receipts, 164. Steers, prime, $12@ 50; good to choice, $11@12; medium to od, $9.75@11; fair to medium, $8.25@ 5; common to fair, $5.75@8.25; cows and ifers, choice, $8@8.50; medium to good, 75@8.25; fair to medium, $4.75@5.75; .n.s, $3@4; bulls, $5@7; calves, $9@ ; stockers and feeders, $6@8.

Hogs—Lower; receipts, 322. Prime mixed, @17.10; medium mixed, $16.85@17; igh heavy, $15@15.10; pigs, $14@15; lk, $17.

Sheep—Slow; no receipts. Prime lambs, @12; fair to medium, $8@10; yearlings, @11; wethers, $9@10; ewes, $6.50@8.50.

### At Seattle.

| lls | 5.00@ 7.00 |
| ckers and feeders | 6.00@ 8.00 |

## Spokane Markets.

SPOKANE, Oct. 26.—The following are ces obtained by Spokane wholesalers in ir sales to retailers, hotels, mining mps, etc., in this city and tributary ter- ory, as reported by the federal bureau markets in Spokane:

Pears—Winter Nellis, D'Anjou and Win- Bartletts, per box, $2.50.

Grapes—Malagas, $2.50; Red Emperors, od quality and condition, $3.25 per lug; gon Cornishons, holdovers, in lug boxes, d quality and condition, $3.25; Wash- ington Concords, in six-pound Climax bas- kets, 45@50c for best.

**Apples**—Jonathans, wrapped and packed, home grown, $1.85@2; good quality, jum- ble pack, $1.50; Winter Bananas, fancy, orchard run, $2.50; extra fancy, wrapped Wageners, few sales, jumble pack, $1.50; Wageners, few sales, jumble pack, $1.75; Wenatchee Delicious, fancy, wrapped and packed, $3.25; extra fancy, no sales. Small sizes, $2.50@2.75 for fancy; medium or- chard run, wrapped and packed, $2.75@3.

**Onions**—Yellow Danvers, sacked, per cwt., $2.50@3; mostly small lots at 3c per pound.

**Potatoes**—Very slow demand and move- ment. Sales in small lots, sacksd. per cwt., Washington white varieties, $1.50, few at $1.75.

**Sweet Potatoes**—Crated Californias, Tur- lock section, 3@3 1-2c per pound.

**Garlic**—Demand and movement good at 17c per pound.

**Peppers**—Home grown supply adequate, demand and movement slow. Best Green Bells, packed in peach boxes, 60@75c; Red Bells, mostly 75c; Red Hots, $1 per box.

**Eggplant**—Locals, $1.25; best Prossers, $1.50.

**Cabbage**—Home growns supplying mar- ket. Danish Ballhead, trimmed and crated, $2.50 per cwt.

**Beets, Turnips, Radishes and Carrots**—Local gardeners' supply adequate. Sacked stock, per pound, 1 1-2@2c. Small lots, per dozen bunches, generally 20c.

**Celery**—Local and home growns supply- ing market. Medium to large white, per dozen bunches, 85c@$1; yellow, $1@1.25. Small sizes and mediums, local gardeners, mostly 60@80c per dozen bunches.

**Lettuce**—Fancy home grown, gardeners' head lettuce, per dozen, 60@75c; small size, 40@45c per dozen; five-pound boxes leaf lettuce, 75c.

**Hubbard Squash and Pumpkins**—Home grown supply ample, quality and condition good, demand and movement moderate, mostly 1 1-2c per pound, few at 2c.

## Seattle Market.

SEATTLE, Oct. 26.—Heavy offerings of stock from the intermountain territory and uncertainty as to what the food administration may do regarding further marketing restrictions was the cause, it is stated, of the decline of 2 and 4 cents in the creamery butter market today. Dealers who are handling only city creamery extras or California butter take the position that quotations fell only 2 cents, as the outside stock, which was the primary cause of the slump, could not, in any event, sell higher than 2 cents under the city creamery market.

The egg market is firm, but a majority of the houses will refuse to lead or follow it to any greater heights and have omitted their weekly advance quotations to pro- ducers for the first time in their history.

Poultry is steady. Cold storage reserve stocks for the later winter are ample and fresh receipts normal. There is a slightly increased demand for fat, young tom tur- keys. Jobbers predict a jobbing price around Thanksgiving at 40 cents, with 45 cents per pound to consumers and 33 to 35 cents to producers, 6 to 7 cents higher than last year.

With conceded change of hands of the bulk of the good keepers in the Wenatchee and Yakima valley, apple interests are giving serious attention to Winesaps, which at this date are regarded as the best buy of the season and likely to be moved on the most substantial market of the year. Field surveys show that the fruit is a record breaker in color, size and keep- ing qualities, so that holders will be able to live down any erratic tendency of the later California orange market as a com- petitor.

The crop of Rome Beauties is light and is ready for shipment. Unsold Spitzen- bergs are scarce.

The onion market is weak. Carload op- erators are storing heavily of well selected keepers, approximately 200 cars now being held out here as reserves after the "junk" has been cleaned up and prices and de- mand stabilized. The storages consist al- most exclusively of Oregons, which have demonstrated their keeping qualities to the satisfaction of all. Oregon fannos are moving at 2 1-2 cents, against 2 cents for Walla Wallas, in direct competition with strong flavored Australian browns, not popular on this market.

Quotations f. o. b. White River valley are $25 to $30 for white spuds and $35 to $40 f. o. b. for Yakima gems. A little No. 1 gem baking stock was placed on this market during the week at $34. There are a few sales of valley spuds at $25, but farmers are storing heavily and will hold for $30, against free bids of $25 today.

## Portland Grain.

PORTLAND, Ore., Oct. 26.—The week closed with an easier feeling in the grain market, except for barley, sales of feed grade being made at $48 and $49. Corn bids at the Merchants' Exchange were re- duced 50 cents and $1 and oats were 50 cents and $2 lower, the greatest cut being made in sacked northwestern, for which $53 and $53.50 was bid.

### Butter and Eggs.

PORTLAND, Ore., Oct. 26.—Butter— Prints, extras, 60@65c; cubes, extras, 59@ 60c; prime firsts, 58c; dairy, 56c; butter- fat, Portland delivery, No. 1 sour cream, 62@67c.

SAN FRANCISCO, Oct. 26.—Eggs—Fresh extras, 56c; fresh extra pullets, 76c.

# WORLD'S VISIBLE WHEAT SUPPLY

## Portland Market.

PORTLAND, Ore., Oct. 26.—A butter war has broken out between the city cream- eries. After the 2-cent decline earlier in the week one of the larger firms made a further cut of 3 cents, which is being gradually met. There is a considerable accumulation of butter on the street, and it would occasion no surprise if the mar- ket went lower.

Eggs are holding firm, as receipts con- tinue very small.

Poultry of all kinds is also firm, but dressed meats are weak and dragging.

There are indications of lower prices soon in the local apple market. Stocks are quite heavy, and except for the cheaper grades the movement is slow.

Potatoes and onions are steady and un- changed, with fair receipts of home-grown stock.

The federal wool administration is val- uing a lot of 2,250,000 pounds of wool. About 4,000,000 pounds, mostly mixed clip, remain to be graded later. Shipments of fine wool to the east will be resumed about the first of the year.

### Quotations.

Eggs—Oregon ranch, candled, 65c; se- lects, 67c.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 36c a pound; Coos and Curry, f. o. b. Myrtle Point: Triplets, 35 3-4c per pound.

Poultry—Hens, 26c; broilers, 26@30c; ducks, 25@30c; turkeys, 31c; geese, 16@ 18c.

Pork—Fancy, 21@22c.

Veal—Fancy, 18 1-2@19c.

Potatoes—Oregon, $1.75@2 per hundred.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30 per ton; val- ley timothy, $29; alfalfa, $27; valley grain hay, $25@27; clover, $28; straw, $9@10.

Butter—Cubes, extras, 59c; prints, 60c; butterfat, 64@67c, delivered at Portland.

## Seattle Grain.

SEATTLE, Oct. 26.—Price cutting among the mills that are grinding semi-hard wheat flour continues along the Coast, but it is not known that any new avenues of sale have been opened thereby. Seattle millers are advised that interior mills lo- cated in the bluestem and bart sections of Washington have been indulging in this form of marketing.

The government has requested bids for the November allotment of Washington flour, and the volume will be the same as that of October, it is reported, at 35,000 to 40,000 tons, practically all of the club wheat varieties. Millers take the govern- ment's rejection of all hard-wheat flour bids in October to mean that this grade is not to be used on any export flour con- tracts. Should this be the case bluestem and bart may be held by farmers of east- ern Washington for an indefinite time, as there is little movement and only a small quantity has been ground. Complaints at the delay in getting the wheat into the terminals are being heard. Scarcity of ocean tonnage is the reason for the small flour purchases by the government. Pur- chases not to exceed 25 per cent of the mill capacity on Puget sound are outlined.

The millfeed situation is acute. Millers say they could deliver 10 tons on orders for every ton they are turning out if they had the stock.

Eastern hard wheat flours, particularly Montanas, are plentiful. Many obscure mills of Montana, never before heard of here, are wiring quotations. This flour is actually selling under the market of Seat- tle soft wheat flours.

So far as millers see it here the higher grades of wheat may remain in the coun- try for some time, possibly as a reserve for the grain corporation. In the meantime holding charges will be paid by the farm- ers in storage, insurance and interest.

### FIX NOVEMBER HOG PRICES.

CHICAGO, Oct. 28.—A minimum of prices of hogs for November has been fixed at $17.50 as the daily average for packers' drives. A minimum of $16.50 has been fixed for all other hogs under 130 pounds, stags, boars, sows and skips.

As packing house products have been selling on a basis of $16.50 for hogs, the announcement today at Washington of the new basis for November resulted in a big jump of prices for pork, lard and ribs.

The prices have been agreed upon here at a conference between food administra- tors and representatives of producers, com- mission men and packers.

### CAN BUILD ON FARMS.

Notwithstanding many regulations that have been placed about building construc- tion during the war, the war industries board has announced that new construction for farm purposes may be done where the total cost does not exceed $1000. This regu- lation is for the purpose of enabling farm- ers to build much needed farm equipment, such as silos, granaries and the like.

### The First War Fleet.

The first war fleet ever possessed by a British overseas dominion consisted of four thinly-armored boats purchased and equipped by the New Zealand government more than half a century ago.

# Mercy Must Not Destroy Justice

Robert Lansing, United States secretary of state, in a public address recently warned the people of this country against showing too much mercy toward the German nation as its surrender approached.

"Let us not forget that, while stern justice without mercy is un-Christian, mercy which destroys justice is equally un-Christian," said Mr. Lansing.

"When the time comes to balance the account—and it seems to be drawing near as the vassals of Germany seek refuge from the day of wrath—the authors of the frightful wrongs committed against mankind should not be forgotten.

"The period of readjustment and restoration which will follow the disorganization and destruction caused by the war will tax human wisdom to the uttermost.

"In a conflict so universal as to involve the whole earth, new impulses of human action have been set in motion, not only in the political, industrial and commercial spheres, but in the structure of society and in the spiritual life of mankind.

"Many of the fundamental principles of the present social order will be threatened; some will be changed; some discarded; while novel and possibly extravagant and dangerous doctrines will find earnest and honest advocates. With all this we must reckon.

"The American people ought not, after the war is won, cherish a pitiless hate for all those who have served the military dictators of central Europe. We should discriminate between the ignorant and the intelligent, between the responsible and the irresponsible, between the master and the serf.

"The new era, born in blood and fire on the battlefields of Europe, must be a Christian era in reality and not alone in name. The years to come must be years of fraternity and common purpose.

"International injustices must cease. Unreasoning class hatreds and class tyrannies must come to an end. Society must be organized on principles of justice and liberty. The world must be ruled by the dominant will to do that which is right."

## Farmer's Efficiency

### Take a Look at His Back Yard

By CARL J. MENZE.

To judge a farmer's efficiency take a good look at his back yard.

I have yet to see the farmer that can afford to work like a slave to clear up a piece of land and then let it lie idle or grow up to weeds and trees again, like in fence corners, around buildings and in pastures. When a piece of land has been cleared it should be made to grow a crop on every square inch of ground every year.

Go through the pasture about once a year and cut down the small trees that have started to grow. In localities where the alders grow it takes only three or four years for a pasture to grow up to trees again if it is not cut over.

Remove the large stumps that have been left in certain fields. If they are not removed the weeds and brush will crowd out a little farther each year until there is no field left. After they are removed a great deal of time will be saved that was lost trying to plow and cultivate among the roots.

Parsnips may be left out in the field through the winter, digging them as they are needed. The frost does not hurt them; it improves them.

## Horse Thieves of War

By Charles Dillon.

If the boys in your neighborhood were to form a posse to run down a horsethief you would not be likely to lose interest in them and go about your ordinary work because the report had come in that the criminals were eager for peace, but intended to keep the stolen horses until terms were arranged. You'd be suspicious. You would be likely to assure yourself first that the boys were safe, and then demand that the live stock be returned before any peace talk was allowed.

Your boys in France are chasing a lot of criminals right now who would like to go on stealing and murdering while asking for peace. You can't afford to stop, look and listen. You will have to go ahead doing your part, supporting the army and navy with food and money. You will have to carry on the program just as if Germany had never let out one solitary yap for peace.

Your boys will be in France a long time yet, and you can not expect the government to provide much of anything for them except food, clothing and arms. The seven organizations that have cared for the soldiers and sailors in this country and abroad, spiritually and physically, will have to go right on with the work. They are the Young Men's Christian association, Young Women's Christian association, the Knights of Columbus, the Jewish Welfare board, the War Camp Community service, the American Library association, and the Salvation Army. They are making one campaign to raise money for their work.

The field army of these seven great agencies comprises more than 15,000 uniformed workers on both sides of the water, and General Pershing is asking that additional workers be sent at the rate of at least 1000 a month.

It will take money—$170,500,000. That is about $1 a week for every soldier we have in Europe and this country. More than 500 tons of supplies for our boys leave American ports every week under the direction of these seven organizations. They provide just what the boys need, the things they had at home, the comforts and the guidance they must have. Don't turn down the solicitor who asks for your contribution. He is trying to do something for your boy or your neighbor's boy, or some other American boy marching under the Stars and Stripes.

The campaign begins November 11 and continues for one week.

### E-E-E-Yah-Yip!

To the Editor: I have just received with surprise and pleasure a copy of The Washington Farmer for September 12, carrying our E-E-E-YAH-YIP poster as a cover design in color.

The interest you have shown in the Marine Corps by honoring this poster in a conspicuous manner is very much appreciated, and doubt not that the publicity accruing to the corps from the large circulation of The Washington Farmer will have a material result in advancing public interest in sea soldier service.

A. S. M'LEMORE.
Colonel, Asst. Adjt. and Inspector, U. S. Marine Corps.

Headquarters U. S. Marine Corps, Washington, D. C.

## SIDELIGHTS

**Not the Idea.**

"That pretty young widow has such taking ways."

"Yes, I hear she was something of a kleptomaniac."—Baltimore American.

**A Good Proposition.**

First Clerk—How many people work in our office?

Second Clerk—Oh, I should say, roughly, about one-third of them.—Ellery Haines, Indiana.

**A Thing of the Past.**

"You don't seem to take much interest in history?"

"I'm afraid I'm too busy," replied Senator Sorghum. "You see, history is publicity that comes too late to be any good in a campaign."—Washington Star.

**A Tragedy of War.**

John McCormack, the famous tenor, tells a story which he claims graphically illustrates the horrors of war. On returning from a Red Cross concert he was amazed to find his wife laboriously trying to remove the spots from a palm beach suit. "Where's Norah?" demanded the amazed songbird. "She's in the kitchen. I thought I'd do this myself, because the poor girl simply can't bear the smell of gasoline since the chauffeur enlisted."

**Well Fitted.**

Campaign Manager—I hear poor Jobb has lost his memory. Can't remember a thing from one day to another.

Secretary—Wouldn't he be a good man to take charge of the campaign contributions?—Baltimore American.

**Will Have to Sleep Home.**

A new jury box has been completed for the circuit court room at the Macon courthouse. "We've got it big enough now so the jurymen can't lean against each other and go to sleep," boasts a county official, proud of the improvement.—Kansas City Times.

**Immaterial Either Way.**

Mrs. Hashleigh (to boarder)—How is it you are taking your medicine after dinner? I thought the doctor told you to take it before meals. Boarder—He said it didn't make any difference as long as I took it on an empty stomach.—Boston Transcript.

**Slightly Different.**

An old negro went to the office of the commissioner of registration in a Missouri town and applied for registration papers.

"What is your name?" asked the official.

"George Washington," was the reply.

"Well, George, are you the man who cut down the cherry-tree?"

"No, suh, I ain't de man. I ain't done no work for night onto a year."—Everybody's Magazine.

**Yet They Talk About Women.**

"I say, Brown, can't you manage to pay me that $10 you owe me? I need the money."

"Awfully sorry, old man, but I can't do it."

"I notice you manage to go to the theater two or three times a week, though."

"That's just it. The thought that I owe you money is worrying me so that I have to do something to help me forget it."—Boston Transcript.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

**HELP WANTED—Female** 1

LEARN TO DO MATERNITY AND CHILD nursing—Christian women, 18 to 50 years, wanted for girls' institutions and baby homes. Write Pacific Coast Rescue and Protective Society, Portland, Ore.

**HELP WANTED—Male** 3

SALESMEN—MANY OF OUR SALESMEN have gone to war and we are filling their places with men exempt from draft. Lack of competition and great prosperity of our customers makes sales the best we have ever known. Selling experience desirable, but not necessary. McConnon & Company, Dept. J., Winona, Minn.

**AGENTS WANTED** 9

POWERINE IS EQUAL TO GASOLINE AT 5C a gallon. Salesmen and agents wanted; exclusive territory granted. Powerine is guaranteed to be harmless, to remove and prevent carbon, doubling the life of all gasoline motors, saving repairs, adding snap, speed and power. An amount equal to 20 gallons of gasoline will be sent to any address in the United States, charges prepaid, for $1.00. W. Porter Barnes, Santa Rosa, Cal., dept. 8K.

**EDUCATIONAL** 45

IN BUSINESS OR ACTUAL LIFE THE BEST is none too good for you. Write Gooding college, Gooding, Idaho, Charles Wesley Tenny, president, today.

TELEGRAPHY—YOUNG WOMAN'S POPULAR vocation; good paying positions available. Write for booklet. Pacific Telegraph Institute, Spokane.

SEND NEWS NOTES TELLING OF THE work of your school today. Address the Educator, Gooding, Idaho.

**HONEY, BEESWAX—Wanted** [illegible]

SEND SAMPLES OF YOUR HONEY AND beeswax. State quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

**EGGS AND BUTTER WANTED.** 59

WE ARE ALWAYS IN THE MARKET FOR good eggs and dairy butter. Send us your next shipment. Oregon Farm Products Co., 386 Halsey st., Portland, Ore.

WE PAY HIGHEST PRICE FOR LARGE, clean infertile eggs not over one week old. Honey also wanted. J. B. Chaney, Spokane, Wash.

**FARM LANDS FOR SALE** 651

SNOHOMISH COUNTY, WASH., FARM LANDS. The greatest proposition on the market for the man who wants a farm. 12,000 acres to select from; 3½ miles salt water front; 20 miles of beautiful lake shore; good towns, railways, steamboats, factories, mills, schools, churches, paved roads; where the largest profits are made, where the great variety of crops and wonderful productive climate makes it the most productive farm section of America. Good lands in good localities, as low as $25 to $35 per acre. 10 yearly payments. Send for maps and literature to the Brownell Land Co., 904 Third ave., Seattle, Wash.

VERMILION, ALBERTA, FARM LANDS. FREE transportation to inspect these lands. This district has never had a drouth or crop failure. We have just returned from Vermilion with first hand information about this year's crop. First class land for $16 and $25 per acre. Union Investment Co., 406 Ziegler block, Spokane, Wash.

ONE OF THE BEST 80S IN MALHEUR VALley; good buildings; well improved; 50 acres alfalfa; 6 miles to Vale; crops last year $4400. Price, $9000. Terms. O. E. Carman, Vale, Or.

IMPROVED FARM, STOCK, HAY, MAchinery; near Seattle, Tacoma. For particulars write owner, Box 57, Graham, Wash.

**FARM LANDS—WANTED** 654

SELL YOUR PROPERTY. WE PLACE A full description of your property with dealers and possible buyers in every state in union for a small fee. Information free. Real Estate Salesman Co., Dept. 10, Lincoln, Neb.

WANTED—CATTLE RANCH IN THE NORTH west. W. D. Campbell, Lebanon, Ore.

When answering advertisements don't fail to mention this paper.

# My K Hand Stump Puller

# Gives Your Hand 96,000

## Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

# K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

### How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

### A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not work.*

### Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

**Special Offer** I am making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write me today for full information and for free book on Land Clearing.

**Walter J. Fitzpatrick**

Box 32 182 Fifth St. San Francisco, Cal.

H. G. Hunzicker of Foster, Wash., pulling a 24-inch fir stump with deep tap roots out of hard ground, without using powder or cutting any roots.

**Tear Out and Mail Today**

Walter J. Fitzpatrick
Box 32 182 Fifth St., San Francisco, Cal.

Send me full particulars on your special offer and your free booklet on Land Clearing.

**LEWIS E. KREPS, Hooper, Wash.**—On the 25th of March, 1918, Lewis enlisted in the U. S. army service as a truck driver. He trained at Fort Myer, Va., and on July 4 sailed for France. Before his enlistment he was a student at W. S. C. and lived with his uncle, Alfred Eccles, near Hooper.

**ARTHUR HOWE, Cheney, Wash.**—In May, 1918, enlisted in the navy and is now training at San Diego, Cal. Before entering the ranks of Uncle Sam he and his brother, Herman, ran a farm in the Rock Lake district. He is 21 years old and the son of Mr. and Mrs. Tom Howe of Cheney.

**ROY L. WATSON, Pomeroy, Wash.**—On August 28, 1918, was called to the colors and is now training at Camp Lewis. He was assigned to Company H, First U. S. infantry. He has a brother who is now in France. Mr. and Mrs. George Watson, farmers near Pomeroy, are his parents.

# Teach Agriculture

## Under Terms of Smith-Hughes Law

By HORACE ADDIS.

The public school at Colfax, Wash., is one of the few in the state that is giving agricultural education under the terms of the Smith-Hughes law, and with Professor E. E. Elliott in charge of the work much is being accomplished. While there are quite a few schools attempting to teach more or less agriculture there are only about 10 systematically operating under this law.

The Smith-Hughes law, passed by congress February 23, 1917, requires agriculture, domestic science, or trade and industry to be taught on a certain standardized plan, in which case half the expense of the teacher is borne by the government. The Colville school teaches only agriculture, and most of the schools receiving the appropriation confine themselves to the one science.

Professor Elliott was at one time head of the agricultural department of the Washington State college and later was dean of the Idaho university. To a natural aptitude for teaching he adds a personal interest in his pupils. He makes companions of them and leads in a way that fully gains their confidence.

Both laboratory and project work are required. The plan calls for 90 minutes for project work and 90 for class, every day, though the project work may be finished by devoting more time to it, and work may be done outside of the regular school term. The school must conform to the work outlined by the government. This year Professor Elliott is teaching two courses in agriculture, with civic biology as an allied science. These courses the students are expected to take, devoting the balance of their time to supervising their projects. Eighteen pupils are enrolled, which is almost the limit of what an instructor supervises, as the pupils are compelled to take project as well as laboratory work.

It is the desire of all teachers, as well as the framers of the law, to fit the courses to the needs of the community, and a review of the projects being worked out indicates the success with which Professor Elliott is doing this.

One boy bought three goats in April, paying $27 for them at a sale. He took care of them on his father's place during the summer. The two does had three kids. He sheared the goats himself, though he had never used sheep shears before, afterward selling the three goats for double what he paid, and has the kids yet.

The project taken by one of the girls is the preservation and storage of food for the family. She has done much canning, but her work includes the care of meat butchered on the place and the storage of eggs and vegetables. This is not a project on which a profit in dollars and cents can well be calculated, but its value is great and the young lady has learned much, besides doing good work.

One boy started with 21 day-old chicks. He made quite a profitable venture, but his report was not in when I was at Colville.

Several of the boys are carrying on individual cow-testing work for local dairymen. The dairymen weigh their own milk, when the milking is done, but the boys make regular visits, probably every week, and do the testing in the well-equipped laboratory at the school, under Professor Elliott's direction. They make the reports and Professor Elliott certifies them to the dairymen.

One boy took a project of beans. He planted a dozen varieties. The dry season cut down the yield and some varieties were complete failures, while others have clearly shown their value by making a good yield. The beans will be studied in the laboratory when school opens.

One young lady plans revival of an old orchard. She will prune, spray and properly care for about 15 trees out of 60, and thus demonstrate the effect of proper care.

Professor Elliott has a demonstration tract in town, for instructional work. He had about 70 varieties of farm crops. Some of the students helped in preparation of an exhibit at the county fair.

# Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste—(Atomic Sulphur)—and for dusting.

For Lime Sulphur Solution, use our DIAMOND S Brand refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur.

It has been proven that sulphur has increased various crops up to 350 per cent.

# DELCO-LIGHT

## Increases Farm Efficiency

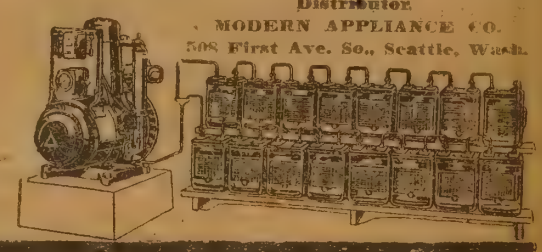
IT'S no hardship to do the chores after dark these long evenings if you have Delco-Light.

Plenty of bright, clean, safe light, in house, barn and yard.

Running water everywhere.

Electric power to operate the churn and cream separator, the washing machine, the vacuum cleaner and the milking machine.

Delco-Light is making farm life attractive and profitable on over sixty thousand American farms.



Delco-Light is a complete electric light and power plant for farm or country home.

**It is self-cranking.**
**Air cooled.**
**Ball bearing.**
**Has thick plate, long lived storage battery**
**No belts.**

## How to Winter Bees Safely

### *Good Protection Is Necessary, but It Is Easily Given*

By George F. York, Sandpoint, Idaho.

The wintering of bees is one of the most important problems that confront beekeepers in almost every part of our great country, and especially in the northern or colder portions.

There are a number of methods of preparing bees for successful wintering, any one of which will likely prove satisfactory if directions are carefully followed.

For the coldest portions of the north probably the best wintering method is that of the bee-cellar, specially made for the purpose; though cellars under dwellings are sometimes used, and with good results, says Farmers' Bulletin 1014, which has recently been issued by the department of agriculture. Bee-cellars must be insulated so that the temperature within the hives does not fall below 52 degrees F. A sidehill is a good location for a special bee-cellar. It should be entirely underground, and the top covered with a good insulating material, such as sawdust. The sides and floor may be of concrete, or the floor may be of earth and the sides made of boards. A good height is 6 1-2 feet in the clear, high enough to allow the operator to work comfortably. The hive bodies containing the bees should be piled four deep, with say two-inch space between them, up and down. The cellar should be kept dark, else there is danger of the bees leaving the hives and flying or crawling al over the cellar.

A bee cellar in a sidehill under a building gives excellent results in wintering the bees.

The hives with bees should be removed from the cellar to their summer stands in time for the earliest honey-flow. This does not mean the honey-flow for surplus honey, but in time to allow the bees to avail themselves of any nectar or pollen that may be secreted by such early-blooming plants as pussy-willows, the fruit blossoms, dandelions, etc.

For wintering bees successfully in the warmer parts of the country the hives may be left out of doors, in cases, with good insulating material around the sides, top and bottom. (Complete directions are given in Farmers' Bulletin 1012, recently issued by the department of agriculture.) The packing should not be delayed too long, October being the best time in the north central states. Four colonies of bees are kept on one foundation, according to the bulletin, and are enclosed in one case. Insulating material, such as cork chips, fine shavings, sawdust, dry leaves and other substances, should be packed closely six to eight inches thick about the hives. The entrances are kept open by what is known technically as a tunnel. The size of the opening is made smaller as the winter grows colder. The apiary should be protected from wind as much as possible, and the case made rainproof.

Some beekeepers prefer the easy way (and also very simple) of preparing their bees for winter right out on the summer stands, and thus avoid the extra work and expense of placing them in a bee cellar.

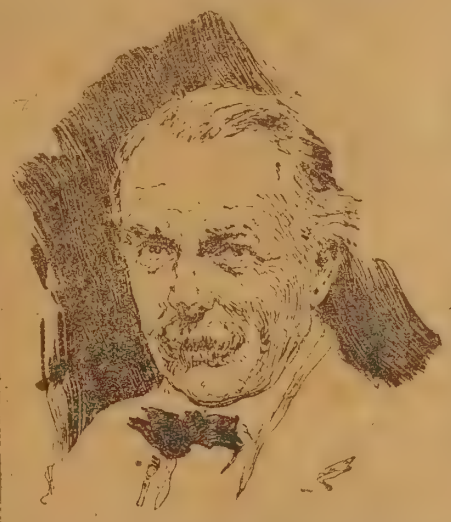
In the first place, see that each colony has ample stores of honey for their winter need—say about 30 to 40 pounds. If it is less the bees should be fed sugar syrup sufficient to make the necessary amount or weight of winter stores. This feeding should have been done, if needed, during the warm days of October. But if cold weather has come sooner than expected, and it is too late to feed the bees in the regular way, then sugar cakes can be made and placed directly over the brood frames in each hive. This can be done even in midwinter, if the bees are found to be short of stores.

Bees wintered on their summer stands should have from six to eight inches of packing over them, in empty supers. This packing may consist of burlap, felt or small sacks filled with cork chips, leaves, sawdust or any other absorbent material. Before putting the packing in the empty supers it is well to place six or eight half-inch square sticks crosswise of the brood frames and about two inches apart, so that the bees can pass over the tops of the frames containing their winter stores. In cold weather bees can not break their winter cluster and go down to the bottom of the hive and pass around the cold lower edges of the frames, but they can "go over the top" of the frames, for the heat that they generate rises, and so the air above the cluster of bees is likely to be warm enough for the bees to move if necessary to reach a new supply of food.

Sometimes the snow becomes, in colder climates, so drifted over the hives that they are utterly covered and out of sight. There is no danger of the bees smothering if the hive entrances are left so that they could not become clogged with snow or ice. Perhaps a good plan would be to stand up a short board slanting in front of the hive entrance. It might also be well to shovel the snow away when the bees have been covered over for about a month. It will usually be found that there is quite a space around the front of the hives thus covered where the snow has melted, and the bees found in good condition, especially if they had plenty of winter stores and were in good condition when entering the winter season.

All details for wintering bees are given quite fully in all of the best bee books. Every beekeeper should own and study carefully one or more of the standard text books on bee keeping. As in all other lines of work, the beekeeper can not learn too much about his business if he really desires to have the largest measure of success with bees.

## May Feed Wheat



### To Live Stock as Before War

**The rules of the food administration prohibiting the use of wheat for feed purposes have been repealed, effective November 4, according to a telegram received by Charles Hebberd, federal food administrator for Washington, from Herbert Hoover.**

**This makes possible the return in the Inland Empire of pre-war feeding conditions, but the food administration expresses the hope that while this privilege has been extended it will not be taken advantage of and that farmers will continue to make use of a balanced ration, all those using wheat mixing coarse grains with it as much as possible.**

## D. Lloyd George

### Says War Work Is Indispensable

**It gives me the greatest pleasure to testify that the work has been conducted upon the broadest lines of service, not merely to the gallant soldiers of the army of the great republic of the west, but to all they could assist. The high quality of character of those conducting this work needs no praise, but I affirm that in my opinion it would have been impossible to have afforded the boys that inspiration and succor they need—and which they so richly deserve—without your efforts—D. Lloyd George, Prime Minister of Great Britain.**

Next Monday, November 11, there begins in every locality of this country a remarkable campaign, that of seven humanitarian organizations in a joint effort to raise $170,500,000 for war work. Religious creed is forgotten—Protestants, Catholics and Jews are one in the campaign. The seven organizations, with the proportion of the total amount each will receive, are as follows: Y. M. C. A., $100,000,000; Y. W. C. A., $15,000,000; National Catholic war council, $30,000,000; war camp community service, $15,000,000, and the American Library association, the Jewish Welfare board and the Salvation Army $3,500,000 each. The campaign is being waged jointly at the request of President Wilson, it being believed that greater success could be attained in one campaign than in several for the smaller amounts. The campaign continues for one week, ending November 18.

### Election Returns.

There are many interesting features to this year's election, which was held this week too late for returns to be published in this issue. Results of vital interest will be published in next week's paper.

## Spanish Influenza

### Good Home Treatment Important

With Spanish influenza sweeping the country, physicians overburdened and unable in many cases to respond to calls from farming communities, clear knowledge of home treatment becomes of vital importance.

Prevention is better than cure, and on that subject we have seen nothing better than these rules, recommended by Surgeon General Gorgas of the United States army:

**1. Avoid needless crowding; influenza is a crowd disease.**

**2. Smother your coughs and sneezes; others do not want the germs which you would throw away.**

**3. Your nose, not your mouth, was made to breathe through. Get the habit.**

**4. Remember the three Cs—a clean mouth, a clean skin and clean clothes.**

**5. Try to keep cool when you walk and warm when you ride and sleep.**

**6. Open the windows always at home at night; at the office when practicable.**

**7. Food will win the war if you give it a chance; help by choosing and chewing your food well.**

**8. Your fate may be in your own hands; wash your hands before eating.**

It is vitally important that we should learn to distinguish the symptoms of influenza and those of an ordinary cold. While there are some points of similarity, the trained physician has little difficulty in diagnosing the two ailments.

Influenza comes on without warning, it strikes as by an unseen hand, it comes with definite chills and marked fever, the appearance of both more or less sudden. The patient has a feeling of profound, sudden and continued prostration. Water discharges begin at once, with little or no dry stage preceding. There is a marked flow from the nostrils and the eyes.

On the other hand, the onset of a cold is not so sudden; it usually passes through a warning stage. Where there is frequently a sensation of chilliness, the hard definite chills that are characteristic of influenza are lacking. Usually in colds there is little or no fever. Prostration is not so profound as in influenza. The patient has just a general "good-for-nothing feeling." The water discharges come on gradually, preceded by a dry stage lasting a few hours to several days.

In Spanish influenza headache is usually severe, often in the eyes or at the back of the head, and is hard to control. It is often described as a splitting headache. Severe backache is nearly always characteristic, accompanied by marked and severe pains in the legs and bones.

In ordinary colds headache is not so profound, the eyes are not so affected, backache is not usually present—only a feeling of weakness; nor is there much evidence of pain in the legs or in the bones.

Fever runs high for several days with influenza, from 100 to 105 or 106 degrees in severe cases. In colds, fever is absent or runs low, and usually comes on more gradually.

In Spanish influenza the lungs are usually affected and severe complications often make an early appearance. In colds the lung complications appear later, generally as the third or last stage of the attack.

In Spanish influenza the nervous symptoms are very marked, in some forms resembling meningitis, the patient is restless and sleepless, and in severe cases

(Continued on page thirty.)

## Wenatchee Fruit

### Harvest Is Nearing Completion

About 6400 carloads of marketable apples are estimated for the Wenatchee district by P. S. Darlington, horticultural inspector for the central Washington, or Wenatchee, district. His headquarters are at Wenatchee. He estimated 600 cars of culls to ge shipped to byproducts mills. In addition to these he says there are about 600 more cars that will probably be utilized at home for byproducts. Mr. Darlington divides the total product among the counties of the district as follows: Chelan, 5600 cars; Okanogan, 985; Douglas, 775; Grant, 150.

Prices, Mr. Darlington says, are better than last year, and growers generally are fairly well satisfied. Most of the orchards are in full bearing, but the trees are still growing, and the output is therefore increasing.

A good share of the crop is packed cooperatively, and apple growers' associations own many well equipped packing plants. Cooperative packing has been a success, but cooperative selling agencies have not all been successful. It has been hard to keep growers together in them.

On October 30 Mr. Darlington estimated 85 per cent of the picking to be completed, and he thought the balance of this crop would be picked by November 10. The fall has been rather favorable for picking, which is fortunate, as the fruit was late in coloring up and put on its color very rapidly when it did start.

Immediately after picking fall pruning will begin, and in many orchards continue most of the winter. The season is farther advanced than last year. H. A.

## Stock Show Dates Fixed

Believing that the Spanish influenza will have abated sufficiently to permit the holding of the live stock shows of the northwest the latter part of this month and early in December, the officials have set the dates as follows:

Northwest live stock show, at Lewiston, Idaho, November 28 to December 4, inclusive.

Pacific International live stock show, at Portland, Ore., Dec. 9-14, inclusive.

Other of the leading shows are to be held as follows: At Los Angeles, November 2-14; at San Francisco, November 16-25; at Chicago, December 2-10.

This puts these five shows in the following order, with time enough in some instances for shipment of stock from one to the other: Los Angeles, San Francisco, Lewiston, Chicago and Portland.

Speaking of the schedule of dates, Secretary O. P. Hendershot of the Lewiston show says:

"This mutual cooperative plan which we have now adopted for the western part of the United States is the best plan possible and will prevent conflicting dates, giving a chance to ship from one show to another and plenty of time to make exhibits at all four shows.

"This will certainly strengthen every show on the circuit. There is every indication now that we will have a great show at Lewiston, the best that we have ever put on."

It is not definitely decided yet where the Portland show will be held, a difference of opinion having arisen over possible sites. It was at one time agreed that it should be held uptown at the ice rink, but a protest was made by those desiring it held at North Portland, where it has previously been held under the auspices of the stockyards.

## Wool Shipments

The following communication has been received from Lewis Penwell, chief of the wool section of the war industries board:

The information coming to the wool section of the war industries board would indicate that there is still an appreciable amount of wool in the hands of the growers, particularly in the fleece wool sections throughout the United States.

It is desirable and necessary that this be gotten in to the wool centers as soon as possible, in order that it may be taken over by the quartermaster general, to be used for the military and naval needs of the government. The farmers are urged to send this wool in as quickly as possible, for the above reasons.

The wool section of the war industries board would be glad to answer inquiries from farmers or others as to the manner of marketing wool.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## A Worthy Cause Asks Your Aid

The people of the United States are to be given an opportunity to do something mightily worth while next week. They are to be allowed to lend definite aid in giving comfort and cheer to the soldiers of America, France, England and the other allies as they face the hardships and perils on the battlefield or in camps preparing to face the foe.

Seven organizations, not including the Red Cross, which operates independently, have united in one campaign to raise $170,500,000 during the coming week for war work. They are the Y. M. C. A., the Y. W. C. A., the Knights of Columbus, the Jewish Welfare board, the War Camp Community service, the American Library association and the Salvation Army. Each is a worthy organization, doing a wonderful work for the soldiers. They ask an average of $1.70 from the people of the United States. It is a small amount to give compared to what the boys who face the enemy are required to give. Those of us at home should seize this little opportunity to help.

Distraction is a means as well as a cause.

## Get Ready for Soldiers' Return

There is much discussion these days about preparing for the return of the soldiers who have gone ahead to fight this country's battles. There must be more discussion and then action. They have left good positions, in most cases. Those positions have been taken in many instances by others. Women have taken many places formerly held by men, and all of them will not quit the field when the war is over. Many of the plants in which the boys were employed will have ceased business. Conditions will have changed in a multitude of ways. The whole industrial problem will be different.

It is the big opportunity for the back to the soil movement, for the returning men will need the soil, and the soil will need the men. No plan can be too well worked out to meet the condition. It is a question that deserves the best thought of the best men and women of the country. The land must be available and placed in a condition that will invite its occupancy and produce from the beginning a first class living.

But never let it be thought that the soldier boys are going to return expecting a gift or something easy. Never let it be thought that they will return expecting, or willing to accept, a pension in the form of an easy living. Boys that shouldered arms and marched away to the battle front do not want a snap. All they want is an opportunity. They are not afraid of a fight. They have learned to shoot big guns and to face the fire of big guns. Give them the opportunity to get hold again when they return, and they will give those of us who remained at home a bit of the healthiest competition that American industry has ever known.

The line between self-reliance and self-importance is better imagined than drawn.

## If the German People Knew

If the people of Germany knew that under the terms of peace the allies will grant them they will be enabled to develop more in the next generation than they have in all their past history as a people, they would rise as one man, overthrow the kaiser and kaiserism and surrender unconditionally. While Germany must pay a just penalty for the crimes that she has committed, the allied victory means that popular government will take the place of despotism, that light will shine where darkness has been and that right will take the place of might. Germany is a benighted land and her people a benighted people. Germany's masters have forced a system of education and thought upon her that civilized nations banished decades and decades ago, a system that has been a stone wall about a great people shutting from them the light of modern thought. That is why they have run amuck of all civilized law; that is why they have brought the present awful cataclysm upon the world. Away with her masters! Away with her system of thought! Let the civilization of America and England and France shine in upon and redeem her. Thus only, can Germany, through the years to come, be enabled to compensate for the sins she has committed.

## Danger Point for Dairy Butter

With creamery butter selling at 70 cents a pound, and oleo at 45 cents, there is danger that the latter may come into more general use than it ever has. This danger is intensified by the announcement that there is likely to be a still greater advance in the price of dairy butter.

People, as a rule, are loyal to the dairy cow and to her product, and for that reason would prefer good butter, even at a considerable advance over former prices, and in keeping with the advance in other food products. They certainly will expect, and be willing, to give the dairy article the preference, at a wide margin in price, over oleo, butterine, or whatever it may be called. But will they do so if the creamery article continues to advance in price?

Even now dealers in butter say that they are selling a good deal of oleo, and some of them say that the demand is rapidly increasing.

Where this article is put upon the market on its own merits, for what it really is, with the fraud eliminated, so that it isn't masquerading under false colors, there can be no valid objection to it. And so, if people know what they are getting, and are willing to use it, or feel that they ought to get get along with it rather than to pay the much greater price for the real butter, it is not easy to question their position.

So here is the danger to the dairy industry at the present time, especially if prices go higher.

If anything can be done to safeguard the business cow from this danger it should be done. There is no doubt but that the dairy industry has a real menace confronting it in the present situation. It would be a calamity to one of the great agricultural industries to have it thus handicapped and imperiled by prices which the people look upon as prohibitory.

A. E. G.

## The Family Question Box

The Farmer will be glad to help you answer all sorts of questions; will be glad to answer them for you. Make this paper your Family Question Box. Write to the editor. There is no doubt at all but what you can give points of valuable experience in your own life which will answer the questions of other readers of this paper. While writing out your own question to send us, see if there is not something you can add in the way of helping some other farmer, some other farmer's wife or some other boy or girl on the farm.

The one who lives to himself alone leads a beggarly life. The one who is continually helping somebody else finds life worth while.

You have answered more than one question in your own life; somebody else is just at the point where they would like to have that question answered. You can help them. You can make the Family Question Box of the Farmer a medium for doing this.

Send in your questions. Write to the Editor. This is your paper.

## Vital Need of More Food for Shipment to Europe

We said two weeks ago that the American people would want to hear from Mr. Hoover before accepting and acting upon the opinion of Mr. Barnes, head of the grain buying corporation, that the time had come to discourage wheat production and that our present stores of that cereal had become a burden to the government.

Judging from the earnest utterances of J. W. Hallowell and R. W. Boyden, who are now in the Pacific northwest as Mr. Hoover's personal representatives, the food administrator does not indorse Mr. Barnes' amazing statement. These representatives of Mr. Hoover come direct from Washington and are holding conferences with the state and county food administrators. In a public statement, Mr. Hallowell said: "There is such a vital need of more food for shipment to Europe this year than last that he has sent us out to meet the workers personally and present the magnitude of the task at the same time that we learn the problems in the various states. Mr. Hoover brings back the word that the United States must send 17,500,000 tons of food to Europe in the coming year, or 50 per cent more than last year, when we shipped 11,800,000 tons. Last year we shipped 6,800,000 tons of bread grains, 1,500,000 tons of sugar, 1,500,000 tons of meats and fats and 2,000,000 tons of feed grains, mostly oats for horses. This year we must increase each item 50 per cent. Last year we sent enough food to feed 20,000,000 people; this year we must send enough to feed 30,000,000."

If we increase our shipment of bread grains 50 per cent, we shall have to send to Europe 10,200,000 tons the coming year, preferably wheat. That will mean exports of 337,000,000 bushels.

The greatest wheat crop ever grown in the United States was that of 1915. That year we exported 260,000,000 bushels, or 7,000,000 bushels less than Mr. Hoover says we should have for export the coming year. In 1916 and 1917 we exported respectively 173,000,000 bushels and 150,000,000 bushels of wheat. We are now called upon by Mr. Hoover to export twice that quantity.

In the light of these authentic official statistics, the country can only wonder what prompted Mr. Barnes' remarkable letter to Senator Hitchcock of Nebraska, actually deprecating an increased production of wheat in 1919.

America has just raised some $6,000,000,000 for the conduct of the war. Let every one now put his shoulder to the wheel to raise $170,000,000 for the organizations whose duty it is to bring relief and comfort to the soldiers over there.

## The Best Is None Too Good

No producer should be content with the ordinary. He should strive always for the best. It is the easy way, the lazy way, or the more-than-you-can-do way to put in a crop in a second class fashion and let it do what it will. It is easy to do poor plowing and poor harrowing and poor seeding. It is easy to let the weeds grow and easy to let the ground get hard and dry, which cuts down the yield both in quantity and quality. Usually it is easy to harvest the crop that is produced that way, for there is less of it to harvest. Invariably it is easy to spend the money received for it, for there is little received for a small and inferior crop.

The day of the ordinary thing is rapidly passing. The day of the common cow is giving way to the day of the strictly first class producer. The day of the second class crop of wheat or corn or barley is gone from the successful farm community. The day of the catch-as-catch-can root crop is ready to be counted out. A little extra effort in preparing the land, a little extra effort in cultivation mean No. 1 grain, big yields of potatoes and mangels of high quality. There is a remarkable difference between 20 bushels of wheat and 25 bushels of wheat per acre. It is a difference of 800 bushels to the quarter section, or about $1500 in market value these days. There is a great difference between $1.90 a bushel and $1.95 a bushel. It is a difference of $200 on a quarter section crop of 25 bushels per acre, but it is a difference easily made between wheat that grades high and wheat that grades low.

In everything, the best is none too good. Slack methods of farming must go. Profit demands it.

# Germany Loses Her Last Friend

## *Both Austria and Turkey Lay Down Arms on Allied Terms*

Austria has surrendered. Turkey surrendered a week ago. Bulgaria had already given up the struggle more than a month ago. Germany, therefore, stands alone fighting a hopeless battle against a group of allies whose power is daily increasing. The fate of Germany is to be decided by herself, and two courses are open to her: (1) Surrender unconditionally or (2) fight on until her armies are weakened to a point where they can no longer put up battle.

**THE TERMS GIVEN TO AUSTRIA.**

The terms granted Austria are little short of unconditional surrender. The leading points in the conditions are as follows:

Complete demobilization of Austrian forces.

Surrender of one-half of all artillery and military equipment.

Occupation by American and allied forces of such strategic places as may later be selected.

Use of Austrian railroads for operations against Germany.

Evacuation of all invaded territory, leaving behind all equipment and supplies, including coal.

Surrender of a portion of the Austrian surface and submarine fleets and disarmament of others under American and allied control.

Surrender of all German submarines in Austrian waters.

Repatriation of allied and American prisoners without reciprocity.

**THE TERMS GIVEN TO TURKEY.**

Among the vital points in the surrender agreement with Turkey are the following: (1) The opening of the Dardanelles; (2) demobilization of the Turkish army; (3) release of all allied prisoners; (4) surrender of all warships in Turkish waters; (5) cessation of all relations between Turkey and her former allies; (6) surrender of all strategic points to the allies; (7) disposal of Turkish prisoners held by the allies to rest with the latter; (8) adequate safeguards against violation of all allied rights by the Turks.

It is to be remembered that these terms are subject to revision and additions by the allies at the time of final peace settlement, when details are considered.

**TERMS TO BE MADE TO GERMANY.**

All these things point unerringly to the liberation of Germany from the rule of the kaiser and his family. The surrender of Bulgaria and Turkey destroy absolutely the possibility of a great chain of territory ruled over by Germany from the North sea to Persia. It opens the Dardanelles for the passage of world commerce without the arbitrary control of Turkey for the first time since that country secured her grip on that vital waterway. It relieves the allies of all necessity for a campaign against any enemy except Germany.

The supreme allied war council has been in session all the last week drafting specific terms upon which they will grant Germany's application for an armistice. Those terms are being withheld in strict secrecy until such time as they are ready for presentation to the German authorities and people.

Word is given out, however, that all the allies are in accord in the terms that are being framed, and that they will adequately safeguard the interests of the allies. It is also understood that they will amount to a complete surrender by Germany. It is suggested that one of the terms may be that Germany must leave all her arms and supplies where they are and withdraw her army unarmed to a line 30 miles behind the Rhine. The significance of this is realized when it is remembered that the Rhine river is the great frontier line of fortifications on which Germany has always depended for protection on the west. A withdrawal behind this line would leave the railroads and this line of fortifications in the hands of the allies, with nothing but an unarmed army to defend the interior of Germany. It is probable that the complete terms will be announced within a few days.

**MANY OF THE ENEMY CAPTURED.**

It is unofficially stated that since the allied drive began in July there have been nearly 500,000 of the enemy captured. This number is probably increased by the most recent successes on both the Italian and western fronts. The losses by killed and wounded have not been officially estimated.

**MANY MORE DRAFT MEN CALLED.**

The draft officials announce that during the first three weeks of this month approximately 290,000 new men will be called in the draft to go to the camps for training. This will bring the total number of men inducted into the service through the draft up to 3,000,000, which, with those already in the various branches of the service under voluntary enlistment, will make the total men in service or in camps about 4,000,000.

**FOURTH LIBERTY LOAN OVERSUBSCRIBED.**

Final figures have been announced on the fourth Liberty loan, showing the total subscriptions reached over $6,866,000,000. This is an oversubscription of more than $866,000,000, and constitutes the largest war loan ever floated by any country at one time in the world's history.

**HOLD VICTORY "SING" ON THANKSGIVING.**

Patriotic songs that will be heard around the world will be sung by the people of America on Thanksgiving day, according to the plans of the National Council of Women. It is planned to arrange a program of songs to be sung in every community of the nation at the same hour on the afternoon of Thanksgiving.

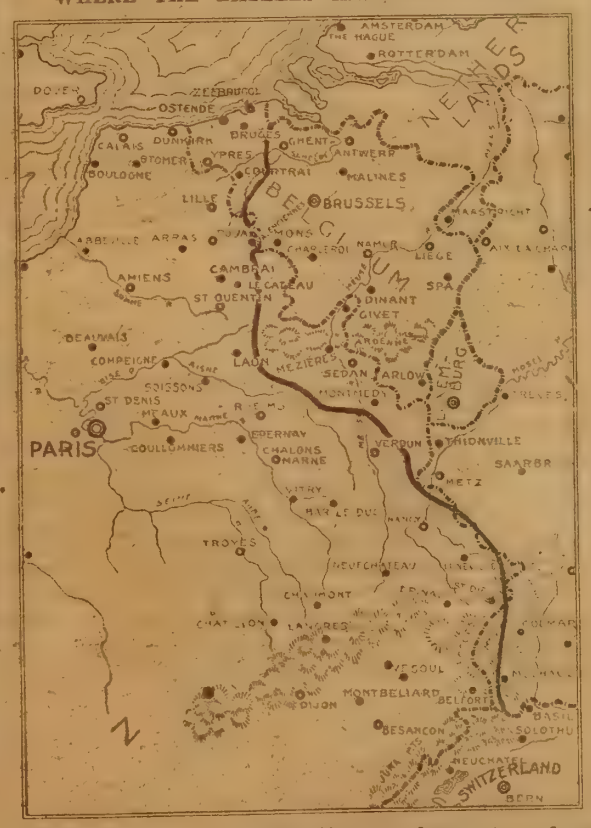
**ELECTIONS ARE BEING HELD.**

Election returns from the voting of November 5 come in too late to appear in this week's issue. In fact, some of them will likely be incomplete for several days. Great interest is manifested in the outcome, due to three things: The fight for and against the recommendation of President Wilson that only democrats be elected to congress, the question of the "Americanism" of the candidates, and the effect of the nonpartizan league in the campaigns of the various states, especially the state of Idaho, where a full state and congressional ticket has been supported by a vigorous campaign for the first time.

# Australian Wheat Surplus

## Will Have Over 200,000,000 Bushels for Market

When the war ends Australia and New Zealand will be able to get ships to transport their large accumulations of wheat to the open markets of the world. Undoubtedly there is a great deal of wheat unsold. The British government contracted for 3,000,000 tons, 112,000,000 bushels, of 1915-16 and the 1916-17 crops at $1.16 f. o. b. A large part of that still awaits delivery. In addition there is still unsold a part of the 1916-17 crop, all of the 1917-18 production and the prospective crop of 1918-18, harvest of which will begin about December. The guarantee for the 1918-18 crop is 97 cents a bushel and for the 1919-20 production $1.05. The official preliminary estimate of the Australian wheat crop is 123,000,000 bushels. The comparison of the two preceding seasons is as follows:



| | 1917-18. | 1916-17. | 1915-16. |
|---|---|---|---|
| Victoria | 37,737,552 | 51,162,438 | 58,521,706 |
| New South Wales | 37,843,930 | 36,598,000 | 66,764,910 |
| South Australia | 28,692,594 | 45,745,064 | 34,134,504 |
| Western Australia | 19,304,995 | 16,103,216 | 18,236,355 |
| Queensland | 1,405,664 | 2,463,141 | 414,438 |
| Tasmania | 252,383 | 348,330 | 993,790 |
| Total Australia | 115,237,118 | 152,420,189 | 179,065,703 |
| New Zealand | 7,800,000 | 5,083,227 | 7,108,360 |
| Grand total | 123,037,118 | 157,503,416 | 186,174,063 |

If the war should end this winter Australia and New Zealand would probably have for market between 200,000,000 and 300,000,000 bushels. That is a large quantity, but there is reason to believe that it would be quickly absorbed by the hungry peoples of the earth. Russia alone, once a great wheat exporting country, will need many hundreds of millions of bushels from outside sources. An American traveler who came out of Russia a few weeks ago doubts if that country has grown this year one-tenth of its usual harvest. Everywhere, he reports, from St. Petersburg across Russia and Siberia to the Pacific he saw overwhelming evidence that the peasants have grown only enough wheat for their own consumption. They saw that any production beyond their own needs would be confiscated by the bolsheviki government and paid for in worthless paper currency. All over Russia the peasants are standing guard over the scanty wheat stacks with rifles and machine guns. The coming winter will be the blackest and most devastating that Russia has known in hundreds of years. Unless the war should end quickly and relief be gotten to the distressed people millions will perish of starvation.

The world is hungry for wheat, and if given an opportunity will revel in it. We predict that when the war is over the accumulated stocks wherever available will be absorbed almost as quickly as the August sun sucks up the dews in the morning.

For a while, at least, after the war is over our government should continue its guarantee of prices. By doing that it will stabilize agriculture, insure our growers a reasonable profit through the period of world reorganization and prevent a violent price fluctuation one way or another.

**WHERE THE BATTLES ARE BEING WON.**

The changes in the battle line on the western front this week are not particularly striking, though some vital changes are noticeable. One of the important features is the capture of Valenciennes, one of the last remaining strongholds between the allied armies and the German frontier. The allies are gradually advancing to the outskirts of Ghent, which likely will be taken before many days.

## *Washington Gleanings*

Shannon Shafer of Vancouver has sold his dairy and pasteurizing plant to C. W. Horton and W. W. Hamilton.

The Superior Milling company at Winona, after overhauling its mill, has started on the season's run. The capacity is 100 barrels a day.

Daniel Hay of Spokane has sold to Karl Janson 140 acres of land for $12,600. The land is southwest of Latah in Whitman county and is all in cultivation.

Tieton water users will meet in the commercial club at Yakima November 18 for their annual meeting, according to the call sent out by R. H. Hayden, secretary of the association.

The Stegenwald Dairy company of Portland has bought the stock and equipment of the Gerlinger dairy ranch at Washougal, the price being about $100,000. There were 450 dairy cows.

C. A. Kohler has rented his farm at Saxon and has rented a larger farm in the Ferndale neighborhood, and has moved his family, stock, household and farm belongings to the new home.

Walla Walla county and the municipalities of the county plan to spend $212,000 in road, bridge, street and sidewalk maintenance and to use 13,436 days' work in so doing, according to information gathered by G. C. Cookerly, county engineer.

Emerson Woods and his mother, Mrs. Viola M. Woods, have purchased the H. M. Hoover place, two miles northeast of Waitsburg, from Wilfred Beechinor. The ranch consists of 480 acres of wheat land. The consideration was about $120 per acre.

Grays Harber County Game Warden Jack Winslow has been notified by the state game and fish commissioner that that county will receive 125,000 cutthroat trout fry for streams in the county. About 100,000 are also to be received from federal hatcheries.

Total municipal, state and county tax levies have been fixed for Grays Harbor county cities. Aberdeen's rate is .05707, as compared with .076 last year; Hokuiam, .0478, as compared with .05439; Montesano, $05349, last year, .05592; Elma, .05294, last year, .05592.

Five thousand bushels of seed wheat were disposed of last week at the Mansfield farmers' elevator. Many who, on account of the dry weather, did not summer fallow are now preparing the land by first pulling, raking and burning the weeds that are proving a menace.

The apple crop of the Kennewick district will be off the market in excellent shape in a very short time. In spite of the shortage of labor, the shortage of box materials and the general disorganization of shipping facilities, the harvest is progressing very satisfactorily.

Christmas Nancy, a cow owned by Roy Dobbs of Washougal, produced within two ounces of 60 pounds of butterfat in September. She stands at the head of the list of cows giving the most butterfat in Clarke county for the month, according to L. Lauderdale, official tester.

Fruit men from four states and the province of British Columbia are expected at the general growers' conference to be held in Spokane December 10-13, in connection with the Washington State Horticultural society's annual convention and the grade and pack conference of the Pacific northwest.

Asotin county farmers are raising more beans this year than was ever believed could be grown there, and as it is a crop that is grown on summer fallow ground, whatever the returns are will be that much to the good. Indications are that the yield will run from 300 to 400 pounds to the acre.

Fire last week destroyed the plant of the Yakima Evaporating company at Selah, owned and operated by Mr. and Mrs. Edward Myers of San Francisco and Mr. and Mrs. P. V. Davis of Seattle, and three hop kilns belonging to Henry Schott of Yakima, together with part of this season's crop of hops.

Potato growers of the Yakima valley are considering the formation of a potato sales agency, a project which is sponsored by Asher Hobson, state director of the bureau of markets. The movement is the outcome of the decision made by the potato growers' association to hold potatoes of first class at $40 a ton.

An essay contest in every one of the 2650 grade schools in the state of Washington, on the subject of "Earning and Giving," has been authorized by Mrs. Josephine Corliss Preston, state superintendent of public instruction, to stimulate the efforts of the Victory Boys and Victory Girls. The schools have been divided into 500 community centers.

Several farmers and citizens residing near Lyman met with the Skagit county commissioners at Mount Vernon recently and argued the question of whether or not Lyman should maintain a herding district. The farmers wanted it maintained and the citizens wanted the herding district abolished. The county commissioners decided to continue the district as it is now.

King county will receive $77,993.52; Pierce, $31,887.98; Thurston, $5874.57; Whatcom, $14,420.63; Grays Harbor, $10,061.73; Lewis, $11,147.74; Mason, $1496.34, and Spokane $37,033.04 of the apportionment of the current school fund for October by Mrs. Josephine Corliss Preston, state superintendent of public instruction. The total amount to be apportioned among the counties is $330,688.94.

The Pierce county food administration wishes information from every farmer or dealer who has or will have this season any surplus stock of mill feed. They have organized a committee under Charles T. Plass as chairman, to handle this matter, and will arrange to buy all such surplus stocks and see that they are distributed to the owners of cattle and poultry in Pierce county, especially in need.

# City Builds Wharves and Warehouses

## *Seattle Port District Only One of Its Character in the United States*

By PAUL E. TRIEM

As I ride down to work every morning, my car takes me within easy sight of a massive concrete building which bears the enigmatical sign, "Port of Seattle." For a long time that building was just a landmark to me, indicating that half of my long ride was over. Now, with the knowledge of what it stands for and what it is a part of, this great concrete warehouse, built and operated by the port district of Seattle, has become symbolical of a new order of community thinking and doing—almost of a new era.

In 1911 the Port of Seattle district and the machinery of port commissioners, etc., necessary for its administration were created by an act of the state legislature. The enabling act was a very general and flexible one, and left to the voters of the district much of the working out in detail of this revolutionary scheme. The general idea was that Seattle itself, that theoretical and loosely knit unit which comprises a typical modern American city, should become a builder of wharves and warehouses, of "terminals," and should either operate these terminal facilities or should get some private concern to operate them.

Before considering more closely the way in which this idea was carried into execution, it is necessay to turn for a moment to a matter of social psychology. This northwestern empire in which we live represents the last trek in a pilgrimage which has been continuing ever since Columbus discovered this continent. And always it has been the conservatives who have stayed in the old home, and the restless and discontented ones, the cranks and kickers and idealists, who have pulled themselves up by the boot-straps and undertaken the next lap of the journey. So, by a process of social selection, the men and women who have finally reached these northwestern states are very similar in one respect, diverse as they may be in every other detail; almost without exception they are "initiators," iconoclasts, the sort of people who are willing to cut loose from the known and to take a chance on the untried and experimental.

It was the great mass of this sort of voters who conceived, under the guidance of skillful leaders perhaps, the idea of not only building, but of operating, the wharves, warehouses, cold storage plants, etc., necessary to the upbuilding of Seattle. And it was the scattering of conservatives, of precedent worshipers, who opposed the plan as socialistic and contrary to the principles of good business. Up to the present time this latter class, among whom are many fine citizens, has been waging a losing fight.

The Seattle port district is under the executive charge of three commissioners, one of whom is elected each year. A port manager is in direct charge, but he is responsible to the commissioners. This port commission is what Port Manager Hamilton Higday calls a "unique institution." "It is the only one of its character in the United States," explains Mr. Higday. "It fixes its rates without there being any appeal or review by state or local authorities; levies taxes, and, with the approval of the voters, issues bonds, entirely independent of the city, county or state governments. Its sole purpose is the development of the water-borne commerce of Seattle."

You can imagine what a blow at the settled order of political institutions this Seattle experiment was. The fact that it was the logical outworking of a doctrine found safe and sound in private business—the idea of giving one man or a few men absolute authority to do certain definite things, and then demanding 100 per cent efficiency from them—did not comfort those whose faces were turned toward the past rather than toward the future. They predicted that private business would be driven from the Seattle water front; that it would be throttled by unfair competition, initiated by the city itself.

Nothing of the kind has happened. All of us who live in the state of Washington—all who are not blind and deaf, at any rate—know that Seattle has become the second port in the United States, in its volume of foreign commerce. At least part of the credit for this wonderful growth is due to the comprehensive system of terminal facilities created and organized by the port commissioners. During its seven years in business, the commission has built up properties costing about $6,000,000. Measured by present prices for material and labor, these wharves and their adjuncts are worth at least double that sum. There is one pier given over principally to fish and fishermen, located on Salmon bay, and wharves, warehouses, etc., at Bell street, Stacy, Lander, Hanford and Spokane streets. The Smith's Cove terminal is half a mile long by 310 feet wide, and is provided with a huge sheer-legged crane, tanks for vegetable oil, automatic sprinkling system, etc. Other auxiliaries, connected with the various piers, are cold storage plants, a hay compressing plant, grain elevators, and a fish icing and packing equipment. All of these things have been created to meet an actual or potential demand, and when once created have been sold to the logical consumers of such equipment and services through the consistent efforts of an up-to-the-minute sales department. That old brick under the hat salesmanship has not been allowed to April fool the port commission.

Against the present order of things along the Seattle water front, two objections have been raised. First, said the critics, the whole thing was impractical. It might be well enough for the Port District of Seattle to build the terminals, but for a community to undertake to operate so vast a business would be suicidal. The public's money would be hopelessly squandered by long-haired theorists. The reply to this objection may be taken from the books of the commission today. The investment is on its feet, and not only is paying, but promises to pay still better as the results of present and past industry roll up.

The second objection put forward by political and economic recalcitrants is that the Port of Seattle, operating as a business concern on the Seattle waterfront, dominates this class of business and puts private firms under a handicap of unfair competition. A sufficient reply to this charge would seem to be that recent months have demonstrated the wisdom of a community or a state or a nation doing collectively for its citizens those things which can be done most effectively on a large scale and from a community rather than from a personal standpoint. Moreover, the Port of Seattle does not really "dominate" the water front business—it merely serves as a pace-maker, insuring good service at reasonable rates to such shippers as choose to patronize it.

In the long run, here as elsewhere, the proof of the pudding is in the eating. Seattle has had a nibble at this community-owned enterprise, and during the next decade or so she will have full opportunity to pass a leisurely judgment upon it. Certainly the case of private ownership vs. the public should not be decided upon any imaginary a priori grounds—there is no reason in the nature of things why this class of business should not be handled partly or even entirely by the public, through its representatives, if such a system is found to work out to the best advantage of the community as a whole. At the present time the burden of proof would seem to be distinctly up to the advocates of the old order of things—in the eyes of most of those citizens who judge the tree by its fruit, Seattle's community-owned port facilities would seem to have made good beyond the shadow of a doubt.

# Wheat Lessons of 1918

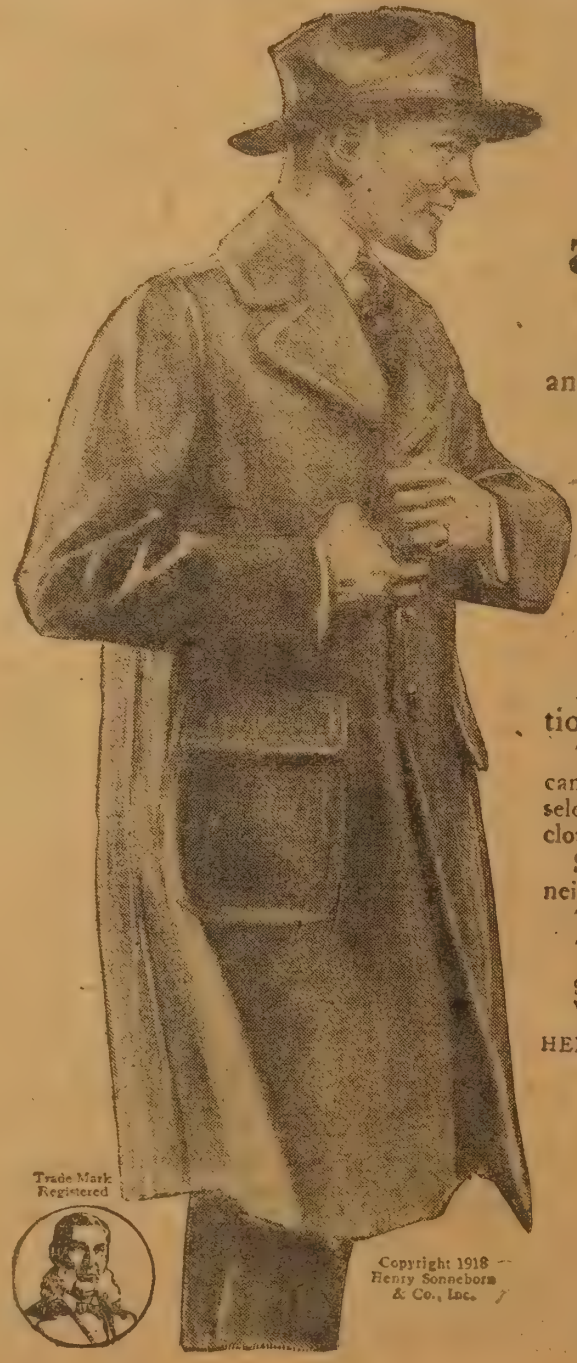
## *Good Job of Summer Fallowing Pays the Grain Grower*

By BYRON HUNTER, Agriculturist U. S. Department of Agriculture.

While the 1918 crop year was hard and many grain growers suffered financial loss, it never theless teaches many valuable lessons.

The federal government strongly urged us to increase our acreage of wheat in 1918. To meet this appeal, and possibly to profit by the high price of wheat as well, considerable wheat was planted on stubble-plowed land. In practically all instances such crops were very poor and in most cases they were failures or nearly failures. The season of 1918 has thus forcefully reminded us that it is a mistake, under strictly dry farming conditions, to deviate from our well-established system of alternating wheat and summer fallow and to attempt to grow a crop annually on the same land. Thirty or more years of experience in farming in the Inland Empire has shown that as much or even more wheat can be raised by doing a good job of summer fallowing and growing a crop on alternate years than can be produced by growing a crop annually.

There are certain conditions under which a farmer, except in the very dry districts, might be justified in planting a crop on stubble-plowed land.



1. If the crop can be planted in the early spring.

2. If the soil contains an abundance of moisture at the time the crop is planted (this can be determined with a spade or posthole digger).

3. If the price of wheat is reasonably certain to be high, a farmer may be justified in taking the chances.

Of these three conditions we only had the promise of a high price of wheat in 1918, the soil moisture being very deficient and the spring not extra early.

Farm experience and the results of our dry land experiment stations show that winter wheat, when a good stand is secured, outyields spring wheat about 20 per cent. For this reason all farmers should attempt to grow winter wheat. In some localities winter wheat may be successfully planted almost every autumn. In much of the Inland Empire, however, there is often an insufficient supply of soil moisture to properly germinate fall sown wheat. In summer fallowing the aim should be to prepare a seed bed in which winter wheat may be sown and properly germinated with the minimum amount of autumn rain. To do this the land must be thoroughly worked in the early spring and kept free from weeds during the summer fallow season. The stands of winter wheat planted during the fall of 1917 were very uneven and irregular. This was due, in the main, to the difference in the thoroughness with which the land had been handled in summer fallowing.

# Reasons why Styleplus Clothes are worn everywhere

*Because* they are stylish in appearance—designed and tailored by experts.

*Because* they are built for service—carefully constructed of good materials that can be depended on to wear well.

*Because* they are moderate in price—enable you to dress well and practice thrift.

Styleplus are manufactured on the standardized plan—a few grades in big volume, with costs reduced and clothing values increased.

At the price, each grade is always an exceptional value.

There is a big advantage in buying clothes at a store. You can *see* the different styles, try them on, and make the best selection. You can be certain of the fit *before* you order the clothes.

So make your pick today at the Styleplus Store in your neighborhood.

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. S) for Styleplus booklet and name of local dealer.

# Short Crops Mean Short Money

## Finances Are Strained in Some Sections, But in Most Cases Farmers Are in Good Condition to Enter Winter

CENTERVILLE, Klickitat County, Wash., Oct. 28.—On the average, Klickitat county is only in fair condition financially. A third of the usual crop usually means a strained financial condition, to some at least. A few have had better crops. We have borrowed through the government farm loan system in the last few weeks upward of $100,000, thereby relieving the high interest condition to some extent. I do not hear any complaint of unpaid accounts. There is still a great effort being made to get tractors to do more farming easier and somehow those needing them are making the raise for what is necessary. With our present crop condition outlook, which is better than for nearly three seasons, the average farmer believes there will be some profit in next year's crop. Our fall seeding has been finished for some time and nearly all grain is up and in good shape, with moisture sufficient to carry it through for some time. I should think that a great part of the grain was in the elevators along the railroad. I hear some complaint with regard to selling grain. The grain feed is short, but, having to rely on our own resources, I guess we will get through. Hay of all kinds is bringing about $25 a ton. Stock are not being sold especially on account of a shortage of feed here. There is at present a good deal of plowing being done by those wanting to get their next season's work ahead. Stock are in good condition and winter pastures look good. There is only a fair crop of potatoes, probably enough for home consumption. The apple crop was short and the apples are very wormy. C. A. LESTER.

### PLENTY FEED FOR STOCK.

PROSSER, Benton County, Wash., Oct. 22.—We are having good fall weather. The first hard frost came the 22d of October. The farmers are busy putting in their winter wheat. The ground is in good shape and some wheat is up. Most of the farmers in this community can meet their obligations. The farmers are putting in more winter wheat this fall than for years. This year's harvest is all cleaned up. Wheat went from three to 10 bushels to the acre. There is plenty of feed for stock in the valley and most of the farmers have enough to winter their stock. G. W. WILGUS.

### GOOD POTATO CROP.

CHIMACUM, Jefferson County, Wash., Oct. 28.—This community is not very prosperous this year, as very few farmers have enough hay and feed for their stock to be wintered on, and they have to buy hay and grain. Many farmers are butchering the inferior stock to save wintering. The potato crop looks good, as the harvest is now on and some very good yields are reported. Fall plowing is in progress where land is fit, but, like everything else, shortage of men makes it so that most of the land will not be seeded in time.

JOHN VAN TROJEN Jr.

### SOIL TOO DRY FOR SEEDING.

OTHELLO, Adams County, Wash., Oct. 26.—Not much rain has fallen here and the farmers in this immediate vicinity have done but little seeding. A good many horses have died from the eating of green thistles and all efforts by the farmers have failed in most cases to save any that sicken. A. O. LEE.

### SOW MORE WHENT AND VETCH.

MONTESANO, Grays Harbor County, Wash., Oct. 26.—The potato harvest is now taking place. A normal yield is reported by a few farmers. Other crops, of course, are harvested and the threshing is almost completed. There will be quite an increase in the seeding of fall wheat on lands adapted to that purpose. Especially is more wheat and vetch being seeded to be used for silage and hay for dairy stock. The Agricultural council has been instrumental in securing seed for this latter crop. Wheat and vetch is popular because a crop is generally assured to the man who seeds it, while spring-sown crops are not always a success, as was the case this year, due to dry weather and crop pests. The recent agreement reached between the Grays Harbor Dairymen's association and the milk distributors of the county, whereby the producers receive 30 cents per gallon for 4 per cent milk, with a differential of a half cent per gallon for milk testing above or below the stated percentage, will perhaps check somewhat the selling of dairy cows. O. T. M'WHORTER.

### FEED BEETS TO DAIRY COWS.

PACIFIC CITY, King County, Wash., Oct. 29.—The dairymen are getting good prices for milk here on the Coast. Of course, if they have to buy any hay for their cattle it takes off most of the profit. Hay is $40 per ton; alfalfa and native grass hay. There are lots of beets raised here for stock feed. The sugar beet is fed to cows with good success. Corn does better here than in a dry climate. It grows so rank that it makes the best of silage. There is good pasture here nearly the year round, and the big dairymen always keep two pastures. They let the stock run on one until the grass is eaten off and then turn them in on the other one. There is a good market for milk and cream, as the condenseries take most of it. The dairy stock here, for the most part, is the best in the state.

MRS. O. ALLENBAUGH.

### URGE FEEDING OF BARLEY.

SPOKANE, Spokane County, Wash., Oct. 26.—Threshing is entirely completed in Spokane county and the grain crop generally has been rather disappointing. As a general rule, winter wheat has given much better returns than spring wheat, and while the yield has been only about 50 per cent normal, yet with the high prices our farmers have very little reason to feel discouraged because of planting it last fall. Owing to the drouth there was very little wheat planted in

(Continued on the following page.)

HIDES

WOOL, PELTS, MOHAIR, CASCARA BARK

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day as goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not inflated values.

THE H. F. NORTON COMPANY
206 Third Ave. So., SEATTLE, WASH.
PORTLAND, ORE.
NAMPA, IDAHO.

Save Fuel and Help Win the War.

The Caloric Saves 35% to 50% Fuel.

Saved 12 Tons of Coal

IN his beautiful home in Idaho Falls, Idaho, H. C. Lyon, a leading merchant, told a wonderful story of the economy of the patented Caloric Pipeless Furnace:

"Two winters have clearly shown me Caloric superiority. My house has eight large rooms, two halls and two bathrooms, and I had installed a hot water system of heating that cost me over $1,000.

"I added the Caloric for use in milder cold weather, when I did not want to heat the whole house with the hot water system, but since we realized the advantages of the Caloric system we have never had fire under the boiler.

Heats the House Perfectly

The Caloric heats the house perfectly, upstairs and down, at a wonderful saving of fuel.

"During the winter of 1915-16 I burned twenty tons of coal with the hot water system. I kept fire continuously in the Caloric all through the winter of 1916-17, a most severe winter in Idaho, and used only twelve tons. Last winter I guess we learned how to manage the furnace properly, for we kept the house comfortable with only eight tons of coal.

"A saving of twelve tons of coal a year with my home even more comfortable makes me an enthusiastic advocate of the Caloric Pipeless Furnace. Five new pressed brick houses I am building this year will all be equipped with the Caloric, and I will be glad to tell any inquirers how well it has satisfied me."

Equally satisfactory has been the written experience of thousands of other home owners among the 50,000 who are delighted with the Caloric. Your heating difficulties, in either an old or a new house, may be solved by this wonderful furnace.

See our dealer, who will courteously show you the furnace and discuss your problem. Get our new catalog, which tells of the revolution in house heating, and we will send with it the names of users in your section, so you may investigate for yourself. Write us today.

## IMPORTS GOOD STOCK.

That Lewis county, Wash., dairymen are wide awake and progressive is shown by the fact that they are rapidly getting in better stock, and recently some especially high record stock has been shipped into the county.

The accompanying photograph shows the $1200 bull recently brought from Ohio by Bouchard brothers in the Hanaford valley. This young bull is sired by Friend Hengerveld De Kol Butter Boy, and is out of a full sister to Highlawn Hartog De Kol, a cow with a record of 1247 pounds of butter in a year. The sire of the dam is Pontiac Aggie Korndyke, a bull of national fame.

With such blood as this coming into the district, the dairy industry is sure to advance. Bouchard brothers have but six pure bred females at present, but they expect to gradually weed out their herd of 30 grades until they have only pure breds. A. B. N.

## PREDICT INCREASE IN DAIRYING.

The Farmers' Mutual creamery of Tonasket, Wash., is two years old November 15, and is a healthy infant. The last dry year its business has been fully equal to the one preceding. Fine crops of alfalfa are grown, even on the benches, and corn makes a big yield. A big increase in dairying is predicted as soon as times are normal. About 200,000 pounds of butter were made during the year.

This creamery, unlike some cooperative enterprises, got a good plant at a very fair valuation, and has been well and conservatively managed. M. Iverson is manager, secretary and butter maker, and performs all his duties well. The building has concrete floor and walls, is sanitary, and the machinery is up to date and in good condition. Only butter is made. Seventy cents a pound was paid for butterfat for the month of October. Butter is not stored, but is sold as soon as practical after making, so that payment is made the middle of the month following delivery of cream. Most of the butter is sold in the Okanogan valley, though at times small quantities are shipped to Seattle. Members of the association receive 1 cent a pound more for fat than do outsiders, which causes nearly all shippers to be stockholders. One cent a pound from stockholders goes into the sinking fund and is paying for the plant, which was purchased largely on credit, the First National bank of Tonasket, of which Arthur Lund is president, having financed the venture. The real cooperative spirit seems to prevail. H. A.

## PROF. WM. M. RIDER.

### Now in Holstein Extension Work.

Professor William M. Rider has recently accepted the appointment of director of extension service of the Holstein-Friesian Association of America, and will be located at the secretary's office at Brattleboro, Vermont. Professor Rider, at the time of his appointment, was professor of animal husbandry and dairying at Syracuse university, Syracuse, N. Y., and has served in that capacity since 1915. Professor Rider took up his work at Syracuse in the fall of 1913, and taught during the college year of 1913-14, also superintending the university farm. He was retained at Syracuse for the college year 1914-15, and during that period raised to full professorship, and occupied the summer of 1915 in work on a master's degree in dairying at the University of Wisconsin at Madison. He returned to Syracuse university, taking up his duties for the college year of 1915-16, and was acting as the head of the animal husbandry and dairy departments and as manager of the university farm at the time of receiving his present appointment.

## SPOKANE LAND BANK LEADS.

During September $7,056,700 was loaned to farmers of the United States by the federal land banks on long-time first mortgages, according to the monthly statement of the farm loan board. The Federal Land Bank of Spokane leads in amount of loans closed, $1,079,625, with the Federal Land Bank of St. Paul running second, $930,400. October 1 the total amount of mortgage loans closed since the establishment of the federal land banks was $131,903,634, numbering 58,202.

## DAIRY INDUSTRY GROWS.

W. A. Acorn, manager of the Colville, Wash., creamery, says the dairy industry in the Colville valley is growing. In spite of the crop shortage and labor conditions his creamery is putting out just a little more butter than a year ago. Dairymen, Mr. Acorn says, are improving their herds and weeding out the poor cows. Some purebred cattle are being brought in, Holsteins and Jerseys.

## Short Crops; Short Money

(Continued from the preceding page.)

1917. Some of the best reports coming in now from threshermen show that the winter wheat on pea ground has given us the best returns of all. In fact, in one field of 50 acres where peas had been grown for two years in succession, wheat planted on pea stubble in 1917 made a yield of 34 bushels per acre this year. On ground planted to peas in 1917 only and cropped to winter wheat for 1918 harvest, the yield was 25 bushels per acre. This shows the accumulative effect of two years' cropping to peas. In looking forward to next year's crop it is very encouraging to note the large acreage being planted to fall wheat at this time. Much of the land that has been used for growing peas in the southeastern part of Spokane county for two years or longer will be planted to fall wheat for next year's harvest. This will mean a very much increased yield, if the season is satisfactory, over what normal summer fallow conditions could yield, as has been demonstrated during the last few years by using pea ground for wheat. Since pea-growing has been established the farmers are keeping quite a lot of stock hogs and are also reserving a few additional brood sows over what they have normally kept. These farmers, however, are wanting to know what to feed these animals after their stubble fields have been gleaned. So far as possible, we are going to recommend them to buy barley for this purpose. Very few men realize that they can get barley in carload lots in Spokane county at $52 per ton in sacks. It is necessary for them to arrange for a cooperative system in buying this feed, so that they can take it in car lots. If the farmers will prepare to handle this feed locally and get the banker to guarantee the payment, for the barley when it is received, they can get it at the above figure. I look for this kind of an organization for feed buying to do much in saving the breeding stock and dairy cattle in this county. Plans are also under way for working out a system of handling hay and getting it to the farmers at wholesale price. We expect to have an announcement of the details of this plan in the near future. J. R. SHINN,
County Agriculturist.

# Two Record Makers

THE cow at the extreme left in the above picture is the new California State champion two-year-old Holstein, K. P. Tola Joe, who recently made the fine record of 27.15 pounds of butter in seven days, from 459.1 pounds of milk, testing 4.73 per cent fat. Like many other famous record cows of all breeds, K. P. Tola Joe is milked by an Empire Milking Machine.

These two record makers, the Empire Milker and K. P. Tola Joe, have succeeded in breaking all State records for two-year-old milk production among Holsteins. Empire Milking Machines will help you to increase the production of your cows; they will safeguard the health of your cows and solve your labor problem; they will cut down costs and increase profits. Read what Mr. Karl A. Gotshall, of Gotshall & Magruder, the owners of K. P. Tola Joe, says about the Empire Milking Machine—his letter is reproduced above. Then consider that the following successful dairymen and hundreds of others in the State of California are using Empire Milking Machines with equal success.

F. W. Helm, Fresno; F. W. Kiesel, Sacramento; H. E. Vogel, Fresno; A. W. Morris & Sons, Woodland; Minor & Thornton, Fresno; Millbrae Dairy, Millbrae; M. J. Schoonderwood, Chowchilla; Cotati Company, Cotati; Johnson & Jepson, Ferndale; Ole Oleson, Ferndale; Hopland Stock Farm, Hopland; A. Meister, Sacramento. (Write for a full list of California users.)

You cannot afford not to follow the example of these successful men. We will be glad to send you full information about Empire Milking Machines without obligation to you. Write at once for Catalog No. 48

**NOTE: The commercial use of by-products increases profits. The scientific combining of skimmed milk and vegetable fat to produce a nutritious, palatable food for certain specified uses, is of primary importance to the farm people of America and to all Agricultural Extension Workers.**

# HEBE

## —and its benefits to the Dairy Farmer

The growing scarcity of staple food supplies has led to curtailments and restrictions in the distribution and use of many foods. Here is shown the value to humanity of the inventive minds of science, which selects the proper combination of raw materials and out of them creates new alternative foods—thus adding to the food supply of the world.

Up to a comparatively recent time the edible fats used as human food were derived solely from herbiverous animals. Through the invention of processes for the purifying of and making edible certain vegetable fats, science has enlarged the supply of fats for human use.

One of these is cocoanut fat, pronounced high in food value by the U. S. Bureau of Chemistry. By the scientific combining of cocoanut fat with evaporated skimmed milk—the alternative food product HEBE is made.

HEBE is sold under its trade name "HEBE" for just what it is. It is properly and plainly labeled—"a compound of evaporated skimmed milk and vegetable fat."

The manufacture of this product is in no sense an endeavor to gain large profits by replacing butter fat with vegetable fat, for HEBE is a licensed product and its profits are regulated by the U. S. Government.

The manufacture of HEBE opens a new and more important market for a portion of the skimmed milk which heretofore has either been fed to live stock or wasted. The importance of utilizing skimmed milk for human consumption is emphasized by a bulletin of the U. S. Department of Agriculture as follows: "By converting this partial waste to use as human food, many million pounds of meat may be saved."

HEBE converts this Dairy by-product into a tasty, wholesome, alternative food. Skimmed milk, large in quantity, but comparatively small in net returns, thus becomes a more important factor in the Dairy Industry. HEBE is recommended principally for cooking, baking and for coffee—its use for these purposes will widen the market and serve to stabilize the demand for skimmed milk—which is of real importance to the Dairy Farmer.

A booklet telling the interesting story of HEBE and its value to the Dairy Industry will be sent free on request. Ask for it. Your name and address on a post card will bring it postpaid. Address The Hebe Company, 3110 Consumers Bldg., Chicago.

# Live Stock and Beets

By RICHARD HAMILTON BYRD.

Sugar beet growers should raise more live stock, according to experts in the department of agriculture. The stock utilizes by-products of sugar beet growers—the tops and pulp—and increases the growers' profits, but there is another reason—the nation needs more meat as well as sugar. The combination of stock raising and sugar beet growing, while beneficial to the farmers, will also benefit the nation.

Live stock on the sugar beet farm constitutes an important factor in success of beet growing from two standpoints—the utilization of beet tops and pulp to the best advantage and the production of stable or barnyard manure which can be used to enrich the soil.

Sugar beet tops, the experts say, are good feed for many kinds of live stock, including chickens, hogs, sheep, cattle and, to some extent, horses. Generally the tops and pulp are fed to sheep and cattle. They may be pastured off, a process which consists in turning the live stock into the beet field after the beets have been harvested and the roots removed. The tops are left scattered over the ground, and this method of feeding results in the ground being more or less trampled. Sheep, especially, are inclined to travel more generally in paths, thereby trampling the ground unevenly. Animals can not be finished for the market on the beet byproducts alone, and unless other feed is available it will not be advisable to purchase animals for feeding purposes with a view to turning them on the market later. If the farmer is provided with dairy cows it is advisable to furnish them with one or two feeds of tops or pulp each day. The tops, when cured or pitted, will keep for several months; the pulp, when left in a large pile, will not spoil for feeding purposes, except in a thin layer on the surface. If the tops or the pulp are fed heavily to dairy cows a distinct increase in the flow of milk marks the top and pulp feeding period, and there will generally be a distinct falling off in the flow of milk when this feed is discontinued.

ARE YOU A MEMBER?

The Holstein-Friesian Association of America—the organized breeders of cattle of that name, was organized in 1885, then having 275 life members. Today it has nearly 12,000 members, and is recording 80,000 Holstein-Friesian cattle per year, giving employment to 150 clerks, and has a reserve fund of nearly a quarter of a million dollars. It spends nearly $50,000 per year for publicity and extension work, promoting the interests of its membership. The Holsteins are prosperous and popular. If interested in

## SAVE CATTLE FROM DROUTH.

To prevent hundreds of thousands of beef-producing cattle from being slaughtered and removed from the country's sources of meat the United States department of agriculture has begun work of the same nature as that carried out last year to aid in the removal of breeding stock from the drouth regions of Texas to good grazing grounds in other states.

An agent at the Fort Worth, Texas, cattle market locates and grades good breeding cows and heifers being offered for sale in that territory. He notifies beef-cattle specialists in the states where feed is abundant, and farmers who want to buy beef-breeding stock are told by county agents of the opportunities for purchase. A 75 per cent freight rate for such cattle has been announced from Texas to points east of the Mississippi river.

It is estimated that from 150,000 to 200,000 head of beef-breeding cattle were removed from Texas last year through the efforts of the department of agriculture, and that at least as many more, of which the department has no record, were taken to good grazing land in other states.

## SHORTAGE OF DRAFT HORSES.

By Wm. T. Tracy.

There is a shortage of draft horses; the real lack of good, heavy teams was never so great as at the present time. The eastern and southern states do not produce enough draft horses to supply their own demands, and the same is true of the states west of Nebraska. The shortage of farm labor makes necessary the use of heavier horses in order that more work may be accomplished per day with fewer men. On every well managed farm enough colts should be bred and reared to keep up the farm stock so that one or more good teams could be sold each year. Those who are aware of the true situation and breed their mares to the best stallions are certain to profit greatly by producing all the good draft horses they can.

Drafters of quality sold on the Chicago market recently at from $250 to $325 each, but they must have quality. There never was a time when quality in draft horses was so essential.

## PURE BRED SIRE DEMONSTRATION.

Some years ago at his farm near Kansas City, Mo., the late W. R. Nelson, founder of the Kansas City Star, began the practice of using pure bred white Shorthorn bulls on red cows, such as he could obtain at the Kansas City market. He had well-founded faith in the value of white bulls to sire roans of good quality when mated with red cows, although at that time white bulls were not generally used, nor were they in popular favor. The heifers from the first cross were retained in the breeding herd and now females of the second cross are producing on the farm.

An invitation was extended to the public to visit Sni-A-Bar farm October 10 and make a study of the results. Nearly 2500 people responded to the invitation. More than half a dozen states were represented. One of the comparisons was had in two lots of steers, one representing the first cross, the other the second cross. The first cross steers averaged 850 pounds in weight; the second cross steers 965 pounds. A difference of 150 pounds. But here is the striking difference: The first cross steers were given a valuation by a stockyards salesman of 14c per pound, and the second cross steers a valuation of 17c per pound—a total per head valuation on the first lot of $119, and on the second a valuation of $164, a difference of $43.

The Light Allwork Tractor Burns Kerosene

Get Your Money's Worth In Work Every Season

THE Light "Allwork" Tractor is built for all around work in any season of the year. Powerful for heavy plowing—light enough to get out on wet land in early spring or on a soft seed bed for harrowing and seeding—low enough for orchard cultivating—plenty of power for belt work. Here is the *practical* light-weight, high-power farm tractor. Free from freakish features—runs on four wheels; carries the largest 4-cylinder engine we know of on any 3-plow tractor. It sets crosswise on the frame, thus giving direct spur gear drive—no bevel gears. Belt pulley is on direct line with crank shaft.

*4 cylinders, 5 in. bore, 6 in. stroke, 750 R. P. M., develops 28 H.P. at belt and 14 H.P. at drawbar. Automobile type front axle, roller bearing rear axle—self-oiling steel gears thoroughly protected from dust. Weighs 5000 lbs. Develops 3000 lbs. drawbar pull and 4000 lbs. on low gear. Burns kerosene. Turns in 12-foot radius—pulls three plows (will pull four under favorable conditions)—will run 18-inch silage cutter, 28-inch separator—pull an 8-foot road grader. Gasoline or kerosene fuel. Two-speed transmission working in oil.*

**Write for Our Catalog** and learn how the "*Allwork*" can make tractor farming pay big dividends on your farm. It's built by a company with an established reputation—satisfied customers everywhere. Let us refer you to "Allwork" owners near you. Write today.

PEYTON BRAND
Real Gravely Chewing Plug
10¢ a pouch—*and worth it*
P. B. GRAVELY TOBACCO CO., DANVILLE, VA.

# VETERINARY

By DR. S. B. NELSON.

**Some Form of Mange**—I have a dog that had a breaking out come first in the flanks just in small pimples. It seems to itch for he chews it continually. Then the hair falls out leaving the skin bare and chapped looking, sometimes it even bleeds in the places where it cracks. It has now spread to his front legs. Please tell what to try. A SUBSCRIBER.

Manette, Wash.

Your dog probably has some form of mange. Which one it is I could not tell without making or having a microscopical examination made of the parasite causing the trouble. It seems to me that the best thing you could do would be to send your dog to the college of veterinary science, State College of Washington, Pullman, unless you have a veterinarian handy and close to you who can treat the dog for you. In an emergency send it to the college. In the meantime if you do not care to do this you might try applying a 10 per cent solution of any of the coal-tar disinfectants, treating a part of the body daily, so that you can get over the dog about once every four days. If he shows any signs of poisoning wash the drug off immediately by giving him a bath.

**Mare Has Trouble**—I have a mare that about four weeks ago began to feel dull and seemed to get a little stiff as time went on. Last week she began to drag her left front leg, and leg swelled up very large at muscle, also some swelling back of fore legs under belly. Today left hind leg is swelling some. Mare is getting thin, but seems to have a fairly good appetite. About four weeks ago she got into a corn field and probably filled up, but did not show any bad results at that time. She is not a glutton by any means, but is always in good condition. What is the matter and what can be done? We do not have a good veterinarian near here.

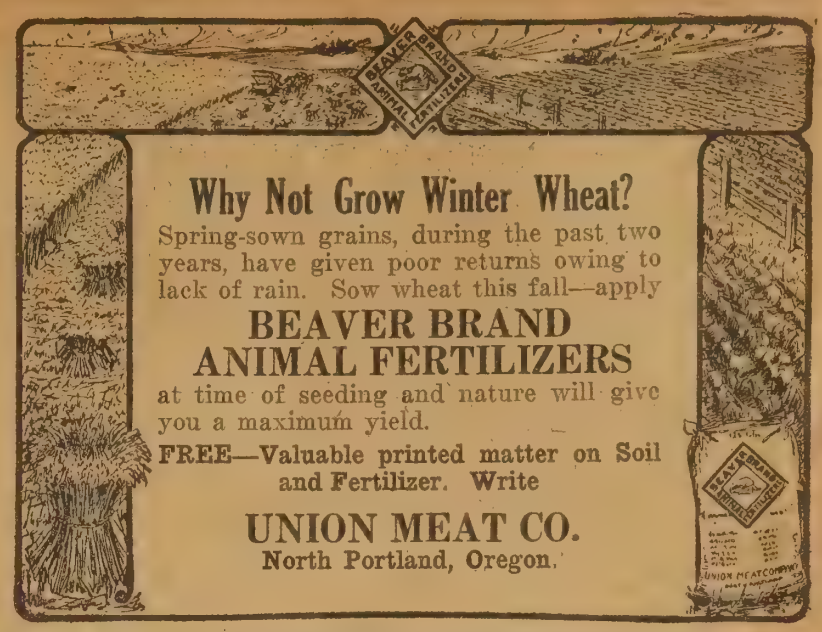
CHARLES H. BROWN.

Malott, Wash.

I would suggest that you give your mare a purge of one ounce of aloe and two drams of ginger mixed into a ball and given to her. Two days later, begin giving her one dram of potassium iodide in a pint of water at noon, and give her one full ounce of sodium salicylate in a pint of water morning and night for two or three days. The potassium iodide you can give a week or 10 days.

**Sheep Have Trouble.**

I have a small flock of sheep that are badly affected by what seems to be a cold in the head, their noses discharge a thick, yellowish pus. In some cases same seems to dry on until the nose is almost stopped up. Can you advise me what the trouble is and suggest a remedy. E. B. S.



Priest Rapids, Wash.

The treatment of your sheep would depend entirely upon what the cause of the discharge from the nose might be. If it is a catarrh due to disturbance of the circulation, like catching cold, then probably a little tar smeared on the nose and around the inside of the nostrils would be about as easy a thing as you could do. If the trouble should be the result of infestation from the bot-fly then treatment is very difficult. About as good a treatment as any in this case is to bore into the head and take out the grub, if it is only small, but with large bunches this is entirely impracticable. They have also been snared with fine wire snares, and some authors recommend pouring olive oil with a little snuff mixed with it down the nose of the sheep. The snuff causes sufficient irritation so that the sheep will blow out a number of the larvae. However, in the latter case prevention is a very fine treatment, and at the time that the flies are on wing—June, July and August—the edges of the nose should be well smeared with tar. With a band like yours you could do that by boring large holes in the planks and smearing the edges with tar and filling up the holes with salt for the sheep to lick.

**Milk Is Watery**—We have a cow that was purchased before she came fresh last time and supposed to be a sound cow, but when she came fresh, milk from one of her teats was watery and we have milked it on the ground hoping it would come out all right. It is the left front teat. She is due to come fresh in January. She is a Jersey cow and is tuberculin tested. We have had hopes when she came fresh this time she would be all right. Can you tell us what is the matter and if there is anything we can apply now to help it or if there is any cure or is it best to dry up the teat and let it go? C. B. P.

Grandview, Wash.

Try painting the affected quarter of the udder with tincture of iodine once every three or four days. I think it would be wise for you to try to save it, and therefore keep on milking it for a while.

How the packers have helped to develop good stockyards

—and how this has benefited you as a producer

WHOSE job is it to provide and maintain stockyards, or markets, for the open buying and selling of cattle?

Who shall see that these markets have good pens where your stock can be properly watered, fed and taken care of until sold?

Stockyards, in early days, were not efficiently managed, and were not financially attractive to investors, except in the largest markets.

As the packers built their big-capacity plants at the various live-stock centers, they naturally became interested in helping to develop adequate stockyards facilities, where stock raisers could ship their animals.

The present high efficiency of most of the principal stockyards is due largely to the time, the effort, and the money the packers have put into them.

All stockyards, including those in which packers are interested, are conducted as *public* market places for the benefit of all.

They are open to all—to producer, commission man, dealer, speculator, the packer's buyer—and with exactly the same rights to each.

Packer-ownership gives no special advantages to the packer and no control over live-stock prices.

These spot-cash markets have been a factor of very great importance in promoting the growth of the live-stock industry.

If stockyards efficiency can be increased by Government ownership and operation, all well and good. Swift & Company is content to stand on its record of having helped the live-stock industry by the part it has played in developing these market places.

# POULTRY

Write to the Editor.

JAMES DRYDEN, Editorial Contributor.

## Advertise Egg Records

An examination of two poultry papers published at Sydney, Australia, shows that the utility idea in poultry-keeping has made a healthy growth in that far-away country. One of these journals is called the Australian Hen, published twice a month, and the other paper, "Australia's Weekly Newspaper on Poultry Husbandry." Both papers are well edited and contain a large amount of advertising. The striking thing in both papers is the fact that in practically all the advertisements the egg record is played up. There are this and that strain with records of so and so, at certain government competitions. There are very few advertisements that do not contain reference to egg records made at Hawkesbury Agricultural college, at Burnley and Roseworthy government schools. The breeders who have won contests at the various competitions have prominent display advertisements, and other breeders who have stock from the winners advertise the same strain. The advertising pages make up an interesting chapter of poultry history. They show that the utility hen is paying in Australia, as it is paying in America, otherwise so much money would not be paid out for advertising.

There is very little advertising of the fancy or of prizes won at poultry shows. There are utility shows, however, and they seem to be in the majority so far as the pages of these papers give evidence. But the big talking point in the advertising pages are the egg records made at laying competitions.

The egg-laying competition really started in Australia more than a dozen years ago, and they have been growing in interest every year. Wonderful egg records have been secured.

There have been some things doing in this country also in utility poultry breeding, but our poultry papers, most of them, judging from the preponderance of advertising in their pages of show specimens and of winnings made for fancy, rather than utility, get their financial support largely from the fancy, or from the breeders of show stock.

But even in those papers the utility breeder, the man who has a strain of heavy layers, is beginning to exhibit a little daring and is throwing his hat into the ring to compete with the old-time advertisers. There is no doubt but that the poultry buying public is now placing more importance on the egg record than on the blue ribbon in the poultry show.

Poultry breeders who have a good egg-laying strain, with official trapnest records behind them, have splendid advertising material and they should not hesitate to make the world acquainted with the fact. The more of that kind of advertising the better for the poultry industry. The farmers everywhere are looking for that kind of stock and don't know where to find it.

There have been, however, glaring abuses in this kind of advertising. It has even been said that men have advertised a 200-egg strain and they never used a trap nest. That kind of thing is dishonest and discourages the reputable breeder. J. D.

### LIMBERNECK IS REPORTED.

To the Editor: There is some disease starting among our chickens. The first symptom seems to be a weakening of the neck and they finally squat to the ground with their necks outstretched. They live only about half a day. Can it be the food they are eating? They have had no wheat, only corn. Might this be limberneck? LON ANDREW.

Conconully, Wash.

This correspondent has diagnosed the case correctly as limberneck. A tablespoonful of castor oil or olive oil will frequently cure the trouble. It is due to a stoppage or impaction of the stomach. Dissect one of the fowls and it is possible that the cause of this stoppage may be found. J. D.

### ALL-NORTHWEST CONTEST.

The report for the eleventh month of the Pullman contest shows a production of 40.6 per cent, which, as stated by the director, is a very good production for the month of September. Further, he says: "I am pleased to report that, up to October 1, there was 67 per cent of the contest flock having laid 150 eggs or over, and to the same date, there are 136 birds in the contest which have laid 200 eggs—a very remarkable performance."

During the month Paul B. Towne's pen of White Leghorns passed the pen of the Oregon Agricultural college, the latter pen having held first place for several months. The Towne pen had a lead of four eggs at the end of the month. Both these pens have made remarkable records.

The highest pen record for the month was made by White Leghorn pen owned by Carl Caverley, Chehalis, Wash., 107 eggs; second, Bliss & Bliss, R. I. Reds, 105 eggs. The highest individual record for the 11 months was 287, by C. F. William's White Leghorn hen; second, Rhode Island White hen, owned by H. J. Kingsbury, Twin Falls, Idaho, 264 eggs.

This contest closes October 31, and a new one begins November 5.

### FARM MARKETS PREVENT WASTE.

Experiments with community markets in Massachusetts have resulted in the prevention of waste of important perishable foodstuffs, according to the United States department of agriculture. The markets enable the farmers to place their products on an open market, where they receive more than they would from middlemen in many instances, and at the same time enable the townspeople to purchase them for less than the middleman charges and secure them in better condition in many cases as well.

**Chickens Sick or Not Doing Well?**

**An Extraordinary Offer:** Germozone is a standard remedy everywhere for chicken troubles, roup, colds, cholera, swelled head, bowel complaint, chicken pox, canker, not doing well, non-laying, etc. Now our proposition: If no dealer there handling Germozone and you will agree to use it and pay if satisfied, we will send you a 75c package without a cent in advance. No pay if not satisfied. Can we do more? And we will send free 3 poultry booklets. Write today.

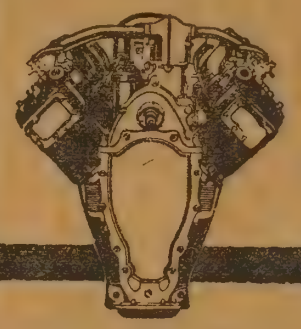
Local dealers handling Germozone will do the same.

GEO. H. LEE CO., Dept. 421 OMAHA, NEB.

**The Choice of Those Who Know**

Manufacturers and leading motor car distributors *recommend* ZEROLENE. The majority of motorists use ZEROLENE. ZEROLENE reduces wear and gives more power because it keeps its lubricating body at cylinder heat. Gives less carbon because, being refined from selected California asphalt-base crude, it burns clean and goes out with exhaust. ZEROLENE is the correct oil for *all types* of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.

*At dealers everywhere and Standard Oil Service Stations.*



STANDARD OIL COMPANY (California)

**ZEROLENE**

*The Standard Oil for Motor Cars*

**Correct Lubrication for the "V"-Type Engine**

This, the "V"-Type of automobile engine, like all internal combustion engines, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

HAPPY FARMER LA CROSSE TRACTOR CO.

**La Crosse Happy Farmer TRACTOR**

"THE best buy on the market!" That is the opinion of tractor buyers everywhere about the 12-24 horsepower of the La Crosse Happy Farmer Tractor for $1150. In its big power and low price the La Crosse Happy Farmer Tractor is in a class by itself. It offers you much more power for the money than you can get in any other tractor.

Only a company of ample capital, immense manufacturing facilities and a strong sales organization, with the simplest, most practical machine, could build and sell a tractor of the power and quality of the La Crosse Happy Farmer for $1150. The low price for which the La Crosse Happy Farmer is sold is the direct result of the buying power and skill of the great La Crosse organization and the simple, practical design of the tractor itself.

**The Perfect Kerosene Burner**

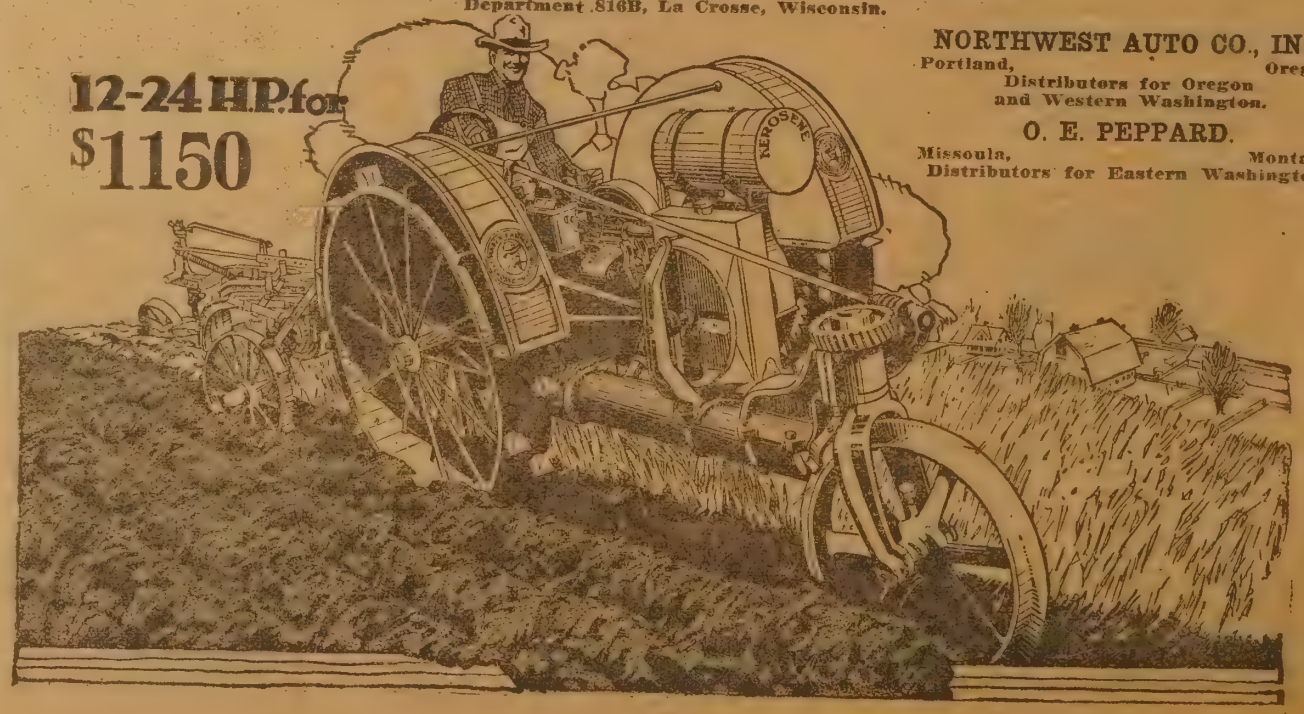
Men who are looking for the perfect kerosene burning tractor buy the La Crosse Happy Farmer. With its specially designed motor, it burns kerosene without carbon or smoke. While it is rated at 12-24 horsepower, the La Crosse Happy Farmer is the tractor which can "dig in its toes" and develop even more power when you need it.

One big reason for the great popularity of the La Crosse Happy Farmer is its simplicity. It has only two-thirds the number of parts found in the ordinary tractor and every working part of its engine can be reached from the driver's seat.

The La Crosse Happy Farmer is the one-man tractor, with the short turning radius of less than 9 feet. Think of the time and work it will save you to be able to do every power-farming job single-handed.

**Happy Farmer Tractor Implements**

You can be sure of securing equal satisfaction from your La Crosse Happy Farmer Implements as from your La Crosse Happy Farmer Tractor. These well-made tractor implements live up to the La Crosse Happy Farmer standard of leadership. La Crosse Happy Farmer Moldboard Tractor Plows can be handled from the driver's seat on the tractor by simply pulling a cord. The La Crosse Happy Farmer Disk Harrow is made unusually strong and heavy for tractor work. In the La Crosse Happy Farmer Drill you have the only one with patented Automatic Power-Lift and Power-Pressure, which can be operated entirely from the driver's seat on the tractor.



**Happy Farmer Demonstrations**
